PROCESS FOR PRODUCING EBSELEN IN HIGHLY PURE FORM

Bernd-Rainer Günther, Bergheim; Rainer Losch, Bonn, and Klaus Steiner, Pulheim, all of Fed. Rep. of Germany, assignors to A. Nattermann & Cie, GmbH, Koln, Fed. Rep. of Germany

Filed Aug. 9, 1989, Ser. No. 391,890
Claims priority, application Fed. Rep. of Germany, Aug. 10, 1988, 3827093
Int. Cl.[5] C07D *293/12*
U.S. Cl. 548—121 **4 Claims**

1. Process for the production of 2-phenyl-1.2-benzisoselenazole-3(2H)-one (Ebselen) by reduction of metallic selenium by means of sodium formaldehyde sulfoxylate (Rongalit) in aqueous alkaline solution to yield sodium selenide, subjecting of the resulting sodium selenide to reaction with diazotized anthralinic acid in alkaline reaction medium to yield the sodium salt of o-diselenosalicylic acid, subjecting to reaction of the resulting the diseleno salicylic acid with an excess of thionylchloride to yield o-chloroselenobenzoic acid chloride, subjecting to reaction of the resulting chloroselenobenzoic acid chloride with aniline in an organic solvent, wherein
(a) the reduction of the metallic selenium in soda lye with Rongalit is effected at a temperature between 20° and 50° C. and the reaction mixture, after having added all reaction components, is kept at the applied reaction temperature for another 0.5 to 2 hours,
(b) the resulting alkaline solution of sodium selenide immediately thereafter is subjected to reaction with diazotized anthranilic acid at a temperature between 0° and 10° C. for 1 to 2 hours; the resulting alkaline solution of o-diselenosalicylic acid is mixed with acetic acid to a pH between 7.5 and 8.5, the thus resulting solution is clarified as soon as it becomes turbid and thereafter is treated with activated charcoal and thereafter, for seperating the activated charcoal, the solution is mixed with acetic acid to a pH between 5 and 6, and the precipitated separated pure o-diselenosalicylic acid still moist with water is mixed with 1.2-dichloroethane, and is heated to boiling with a cyclic water separator for such a time, until or of the water has been distilled off azeotropically,
(c) the o-diselenosalicylic acid resulting from step (b) and suspended in the used solvent in finely divided form is subjected to reaction with thionylchloride in the presence of catalytic amounts of dimethylformamide; the solvent and the excess thionylchloride is distilled off from the reaction mixture; possibly still present thionylchloride is removed by adding at least twice the used solvent and distilling it off and
(d) the purified o-chloroselenobenzoic acid chloride obtained in step (c) is dissolved in 1.2-dichloroethane, and, with careful stirring, the resulting solution is added to a suspension of aniline in dilute soda lye; and the precipitated reaction product is separated, washed until neutral and is dried.

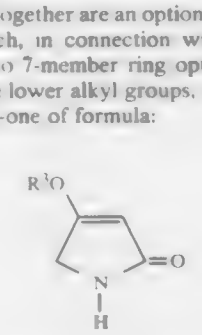
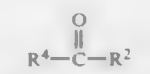
PROCESS FOR PRODUCTION OF 5-ALKYL TETRAMIC ACIDS

Thomas Meul, Visp, Switzerland, assignor to Lonza Ltd., Basel, Switzerland



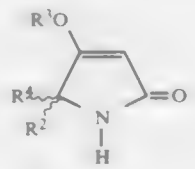
Division of Ser. No. 402,356, Sep. 5, 1989. This application Mar. 22, 1990, Ser. No. 497,718
Claims priority, application Switzerland, Sep. 6, 1988, 3337/88
Int. Cl.[5] C07D *207/36*
U.S. Cl. 548—544 16 Claims

1. Process for the production of a substituted tetramic acid of formula



(I)

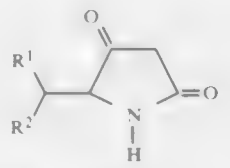
or a tautomer thereof, wherein
(a) R^1 is a straight-chain or branched alkyl group having 1 to 6 C atoms or a cycloalkyl group having 4 to 7 C atoms or a group of the form—$[CH_2]_n$—Q with n being 1 or 2 and Q being one of the above-mentioned cycloalkyl groups or a phenyl group, and R^2, independently therefrom, is hydrogen or a straight-chain alkyl group having 1 to 4 C atoms, or
(b) R^1 and R^2 together are an optionally branched alkanediyl group, which, in connection with the linking C atom, forms a 4- to 7-member ring optionally substituted with one or more lower alkyl groups, comprising (i) reacting a 3-pyrrolin-2-one of formula:



(II)

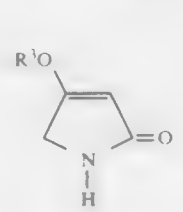
wherein R^3 is a straight-chain or branched alkyl group having 1 to 4 C atoms or a benzyl group optionally substituted with one or more lower alkyl groups, with an aldehyde or ketone of formula:

(III)



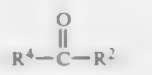
wherein either R^2 and R^4 have the meaning mentioned above for R^2 and R^1 or R^4 or the optionally substituted alkanediyl group, formed by R^2 and R^4 together, differ from R^1 or from the alkanediyl group formed by R^1 and R^2 together by the presence of one or more double or triple bonds not belonging to any aromatic system and not conjugated with the carbonyl group, in the presence of a strong base in a polar, protic solvent to form 5-alkylidene-3-pyrrolin-2-one of formula:

(IV)



wherein R^2, R^3 and R^4 have the above-mentioned meanings, (ii) cleaving radical R^3 from the 5-alkylidene-3-pyrrolin-2-one of formula IV, and (iii) catalytically hydrogenating the exocyclic double bond as well as the multiple bonds optionally present in radical R^4 of the cleaved 5-alkylidene-3-pyrrolin-2-one with a palladium catalyst to provide the substituted tetramic acid of formula I.

12. Process for the production of a substituted tetramic acid of formula.



(I)

or a tautomer thereof, wherein
(a) R^1 is a straight-chain or branched alkyl group having 1 to 6 C atoms or a cycloalkyl group having 4 to 7 C atoms or a group of the form—$[CH_2]_n$—Q with n being 1 or 2 and Q being one of the above-mentioned cycloalkyl groups or a phenyl group, and R^2, independently therefrom, is hydrogen or a straight-chain alkyl group having 1 to 4 C atoms, or
(b) R^1 and R^2 together are an optionally branched alkanediyl group, which, in connection with the linking C atom, forms a 4- to 7-member ring optionally substituted with one or more lower alkyl groups, comprising (i) reacting a 3-pyrrolin-2-one of formula:

(II)

wherein R^3 is a benzyl group optionally substituted with one or more lower alkyl groups, with an aldehyde or ketone of formula:

(III)

wherein either R^2 and R^4 have the above-mentioned meanings, and (ii) catalytically hydrogenating the 5-alkylidene-3-pyrrolin-2-one of formula IV using a palladium catalyst whereby radical R^3 is cleaved from the 5-alkylidene-3-pyrrolin-2-one and the exocyclic double bond as well as the multiple bonds optionally present in radical R^4 are hydrogenated.

where R^0 is hydrogen, alkyl having 1 to 6 carbon atoms, phenyl, a group of the formula

or a group of the formula

(wherein X an acetal or ketal group); and R^1 is an alkyl or alkenyl group having up to 22 carbon atoms which may be substituted with phenyl or alkoxy having 1 to 22 carbon atoms, which comprises reacting a compound of the formula (I):

(I)

wherein R^0 is as defined above, with a compound of the formula (II):

$$R^1-Y \qquad \text{(II)}$$

wherein R^1 is as described above; and Y is halogen or optionally substituted sulfonyloxy, in the presence of a compound of the formula (III):

$$RO^-Z \qquad \text{(III)}$$

wherein R is hydrogen, or primary, secondary or tertiary alkyl having 1 to 10 carbon atoms; and Z is an alkali metal or an alkaline earth metal.

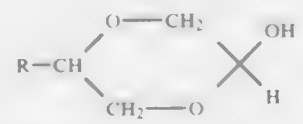
HEMIACETAL COMPOUNDS AND THE APPLICATIONS THEREOF

Guy Vanlerberghe, Claye-Souilly; Alexandre Zlysman, and Henri Sebag, both of Paris, all of France, assignors to L'Oreal, Paris, France

Division of Ser. No. 874,006, Jun. 13, 1986, Pat. No. 4,827,003. This application Apr. 20, 1989, Ser. No. 340,754
Claims priority, application Luxembourg, Jun. 14, 1985, 85952
The portion of the term of this patent subsequent to May 2, 2006, has been disclaimed.
Int. Cl.[5] **C07D** *231/08*
U.S. Cl. 549—378 **2 Claims**



1. Compound corresponding to the formula

(ID)

in which R denotes
(i) a linear or branched hydrocarbon radical which has 1 to 32 carbon atoms and can contain one or more oxygen atoms in the chain or bear one or more OH groups or
(ii) a (C_8–C_{18} alkyl)phenyl radical.

2. Compound corresponding to the formula:

(IE)

in which R denotes
(i) a linear or branched hydrocarbon radical which has 1 to 32 carbon atoms and can contain one or more oxygen atoms in the chain or bear one or more OH groups or
(ii) a (C_8–C_{18} alkyl)phenyl radical.

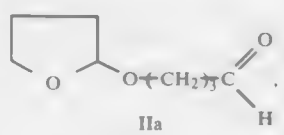
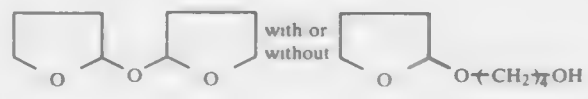
PREPARATION OF 1,4-BUTANEDIOL AND TETRAHYDROFURAN

Rolf Fischer, Heidelberg; Juergen Frank, Schwetzingen; Franz Merger, Frankenthal, and Hans-Juergen Weyer, Ludwigshafen, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany



Filed Mar. 7, 1990, Ser. No. 489,709
Claims priority, application Fed. Rep. of Germany, Mar. 22, 1989, 3909485
Int. Cl.[5] **C07D** *307/08*
U.S. Cl. 549—429 **7 Claims**

1. A two-stage process for preparing a mixture which contains 1,4-butanediol and tetrahydrofuran, which comprises:
(a) heating 4-hydroxybutyraldehyde of the formula



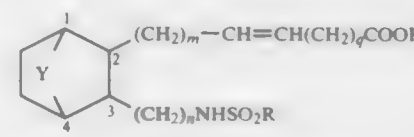
Ia

at 20°–300° C. in the presence or absence of 1,4-butanediol, and in the presence or absence of an acidic agent; and
(b) after removing the water of reaction and any acidic agent, subjecting the resulting acetals of the formulae

IIa

IIb IIc

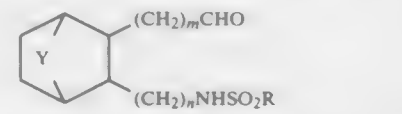
to a catalytic hydrogenation at 50°–300° C. and 1–350 bar.



5,008,409

PROCESS FOR PREPARING 1,4-BRIDGED CYCLOHEXANE CARBOXYLIC ACID DERIVATIVES

Masayuki Narisada, Ibaraki; Mitsuaki Ohtani, Nara; Fumihiko Watanabe, Kitakatsuengi, and Kyozo Kawata, Hirakata, all of Japan, assignors to Shionogi & Co., Ltd., Osaka, Japan



Filed Dec. 7, 1989, Ser. No. 447,513
Claims priority, application Japan, Dec. 14, 1988, 63-315970
Int. Cl.[5] **C07D** *307/00;* **C07C** *311/16, 311/20*
U.S. Cl. 549—463 **5 Claims**

1. A process for preparing a compound of Formula (I):

(I)

wherein R is phenyl or phenyl substituted with hydroxy, lower alkoxy, halogen or lower alkyl; Y is unsubstituted or substituted methylene, ethylene, vinylene or oxygen; m is 0 or 1; n is 0, 1 or 2; and q is 1, 2, 3 or 4; with proviso that when m is 0, n is not 0, and when m is 1, n is not 2, which process comprises:
(a) reacting an aldehyde of Formula (II);

(II)

wherein R, Y, m and n are as defined above, under reaction conditions for the Wittig Reaction with a ylide of Formula (III):

$$(R^1)_3P{=}CH(CH_2)_1COOM \qquad \text{(III)}$$

wherein R^1 is C_1–C_8 alkyl or aryl, M is an alkali metal and q is as defined above;
(b) treating the reaction mixture of step (a) with an alkaline earth metal halide under alkaline conditions to form the alkaline earth metal salt of the carboxylic acid of Formula (I);
(c) extracting the alkaline earth metal salt of the carboxylic acid of Formula (I) in an organic solvent; and
(d) recovering the free carboxylic acid of Formula (I) from the organic solvent.

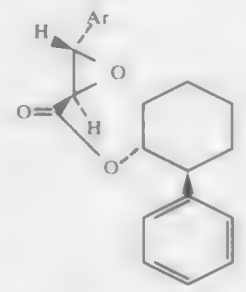
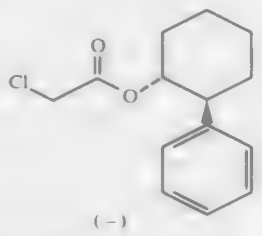
GLYCIDIC ACID ESTER AND PROCESS OF PREPARATION



David L. Coffen, Glen Ridge; Pradeep B. Madan, Edison, and Alan Schwartz, Montclair, all of N.J., assignors to Hoffmann-La Roche Inc., Nutley, N.J.

Continuation-in-part of Ser. No. 197,934, May 24, 1988, abandoned. This application Oct. 2, 1989, Ser. No. 416,295

Int. Cl.[5] **C07D** *306/13, 301/02*



U.S. Cl. 549—519 **5 Claims**

1. A process for preparing the compound of the formula

III

wherein Ar is p-lower alkoxy phenyl,
which comprises reacting the compound of formula

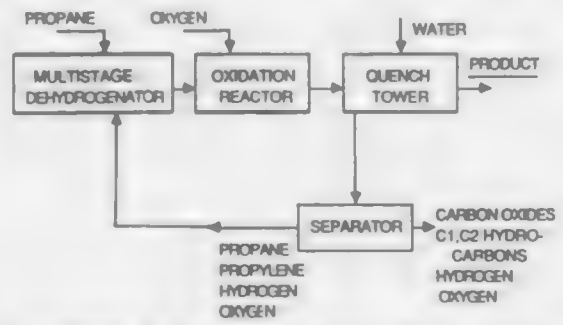
II

with the compound of formula

Ar—CHO

wherein Ar is as described above,
in a solvent in the presence of a basic reagent.

5,008,412



PROCESS FOR THE PRODUCTION OF OXIDES

Ramakrishnan Ramachandran; Donald L. MacLean, both of Annandale, and Donald P. Satchell, Jr., Summit, all of N.J., assignors to The BOC Group, Inc., New Providence, N.J.

Continuation-in-part of Ser. No. 215,859, Jul. 6, 1988, Pat. No. 4,859,537, which is a continuation-in-part of Ser. No. 154,157, Feb. 9, 1988, abandoned. This application Jul. 6, 1989, Ser. No. 376,331

Int. Cl.[5] **C07D** *301/04, 301/08, 301/10*

U.S. Cl. 549—523 **22 Claims**

1. A process for the production of alkylene oxides comprising:

(a) forming an alkene from a gaseous alkane by passage through a multistage catalytic dehydrogenator, comprised of a series of at least three discrete catalytic reactors, wherein a dehydrogenator product stream containing said alkene and unreacted alkane is withdrawn from a reactor intermediate the first and last of said reactors, wherein the gaseous flow between all of said reactors in sequence, up to and including the reactor from which the product stream is withdrawn, is passed through a heating means to raise the temperature thereof, and wherein the catalyst in the dehydrogenator is passed through all of said reactors, regenerated and recycled to the first reactor;

(b) introducing said alkene stream and an oxygen source selected from the group consisting of pure oxygen, air or a gas enriched in oxygen relative to air into suitable oxidation reactor for reaction in the presence of an oxidation catalyst to about 100° to 500° C. 0 to 1000 psig, and a residence time from a few seconds up to 1 hour to produce a gaseous effluent containing said oxide;

(c) quenching said gaseous effluent in a liquid to form a liquid phase containing said oxide and a gas phase;

(d) recovering said oxide from the liquid phase;

(e) introducing the gas phase quench effluent under pressure into a pressure swing adsorption unit to thereby form (i) a waste stream, and (ii) a gaseous stream comprising said unreacted alkane, alkene, a minor amount of oxygen, and nitrogen when air or oxygen-enriched air is introduced as the oxygen source into the reactor in step (b);

(f) introducing said gaseous stream into the reactor in said dehydrogenator which immediately follows in sequence the intermediate reactor from which the product stream was withdrawn, thereby removing substantially all of the oxygen contained in said stream;

(g) recycled the effluent from the last reactor of said dehydrogenator to another reactor of said dehydrogenator

CATALYST FOR OXIDATION OF ETHYLENE TO ETHYLENE OXIDE

Kintoken H. Liu, Park Ridge, N.J., assignor to Scientific Design Company, Inc., Little Ferry, N.J.

Filed Oct. 23, 1989, Ser. No. 424,932

Int. Cl.[5] **C07D** *301/10*

U.S. Cl. 549—534 **18 Claims**

1. In the process for the production of ethylene oxide by contacting ethylene with molecular oxygen in the presence of a solid catalyst wherein the improvement comprises using a catalyst prepared by a process comprising the steps of:

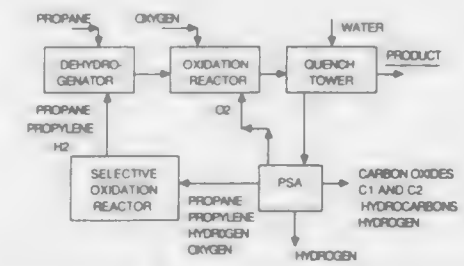
(a) impregnating a porous support having a surface area of about 0.2 to 2.0 m^2/g with a hydrocarbon solution of a silver salt of a neo-acid having 7 or more carbon atoms sufficient to provide 3 to 25 wt % silver on the support, and separating the impregnated support form said solution;

(b) activating said impregnated support by heating in air for sufficient time to produce an active catalyst;

(c) impregnating said activated catalyst with a solution containing an alkali metal compound in the range of 650 to 8000 wppm in an amount sufficient to depress the activity and selectivity of said activated catalyst to produce a catalyst precursor, said alkali metal being selected from the group consisting of sodium, potassium, cesium, and rebidium and

(d) heat treating said catalyst precursor in a substantially inert atmosphere at a temperature of at least 450° C. for between 0.1 to 4.5 hours at a steady state to reactivate the precursor to produce an active catalyst.

5,008,414



PROCESS FOR THE PRODUCTION OF OXIDES

Ramakrishnan Ramachandran, Allendale; Donald L. MacLean, Annandale; Donald P. Satchell, Jr., Summit, and Virginia A. Malik, Linden, all of N.J., assignors to The BOC Group, Inc., Murray Hill, N.J.

Continuation-in-part of Ser. No. 281,581, Dec. 8, 1988, Pat. No.

Int. Cl.[5] **C07D** *301/10, 301/08, 301/32*

U.S. Cl. 549—538 **27 Claims**

1. In a process for the production of alkylene oxides comprising:

(a) forming an alkene from a gaseous alkane in a catalytic dehydrogenator;

(b) introducing a gaseous stream comprising said alkene and an oxygen source selected from the group consisting of pure oxygen or a gas enriched in oxygen relative to air into a suitable oxidation reactor and reacting them in the presence of an oxidation catalyst at about 100 to 500° C. 10 to 1000 psig, and a residence time from a few seconds up to 1 hour to produce a gaseous effluent containing said oxide;

(c) quenching said effluent in a liquid to form a liquid phase containing said oxide and a gaseous phase;

(d) recovering said oxide from said liquid phase;

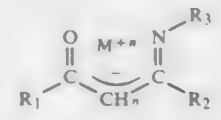
(e) introducing the gaseous phase under pressure into a separator to thereby form (i) a waste stream, (ii) an adsorbed stream comprising said unreacted alkane and alkene, a minor amount of oxygen, and nitrogen when oxygen-enriched air is introduced into the reactor as the oxygen source in step (b), (iii) and a hydrogen-enriched stream;

(f) introducing said adsorbed stream into a catalytic selective oxidation unit to remove the remaining oxygen in said stream; and

(g) recycling the effluent from the selective oxidation unit to the dehydrogenator, the improvement wherein the separator also forms a oxygen-enriched stream, with nitrogen when present, which is at least partially recycled to the oxidation reactor.

5,008,415

VOLATILE FLUORINATED β-KETOIMINES AND ASSOCIATED METAL COMPLEXES



John A. T. Norman, Whitehall, Pa., assignor to Air Products and Chemicals, Inc., Allentown, Pa.

Continuation-in-part of Ser. No. 270,719, Nov. 14, 1988, Pat. No. 4,950,790. This application Sep. 22, 1989, Ser. No. 411,275

Int. Cl.[5] **C07F** *1/08, 15/06, 7/08, 7/18*

U.S. Cl. 556—32 **7 Claims**

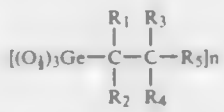
1. A thermally volatilizable, β-ketoiminato metal complex having the structural formula:

wherein R_1 and R_2 are independently linear or branched, perfluorinated, C_1-C_8 alkyl groups, R_3 is an unfluorinated, partially fluorinated or fully fluorinated phenyl or C_1-C_8 alkyl, hydroxyalkyl or ether group, M is a metal which is capable of forming a complex with a ligand as shown above, and n = 1, 2 or 3.

5,008,416

ORGANOGERMANIUM COMPOUND, PROCESS FOR THE PREPARATION OF SAME AS WELL AS USE THEREOF

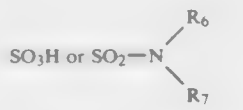
Masayasu Kurono; Yasuaki Kondo; Takahiko Mitani; Yutaka Baba, and Kiichi Sawai, all of Aichi, Japan, assignors to Sanwa Kagaku Kenkyusho Co., Ltd., Aichi, Japan



Filed Jun. 19, 1990, Ser. No. 540,535

Claims priority, application Japan, Jun. 20, 1989, 1-155585; Nov. 20, 1989, 1-299636

Int. Cl.[5] **C07F** *7/30*



U.S. Cl. 556—89 **2 Claims**

1. An organogermanium compound of the formula

(I)

wherein R_1, R_2, R_3 and R_4 are hydrogen atom, alkyl, substituted alkyl, phenyl or substituted phenyl, and R_5 is a radical of

n is an integer of 2 or more, and R_6 and R_7 are hydrogen atom, alkyl, substituted alkyl, phenyl or substituted phenyl, and a salt thereof.

5,008,417

HALOALKYLATION PROCESS

G. Patrick Stahly, Baton Rouge, La., assignor to Ethyl Corporation, Richmond, Va.

Filed May 21, 1990, Ser. No. 525,827

Int. Cl.[5] **C07F** *7/22, 7/30, 9/02*

U.S. Cl. 556—104 **29 Claims**

1. A process for preparing haloalkyl-substituted compounds said process comprising treating a compound selected from the group

R_xSnZ_y, $R_{x1}{}^1PZ_{y1}$, and $R_{x2}{}^2GeZ_{y2}$

wherein R, R^1 and R^2 are the same or different and are C_1 to

C_6 linear or branched alkyl, phenyl unsubstituted or substituted with C_1 to C_6 linear or branched alkyl or halo; amino unsubstituted or having at least one hydrogen substituted with C_1 to C_6 linear or branched alkyl or phenyl unsubstituted or substituted with C_1 to C_6 linear or branched alkyl; Z is halo; and x, y, x_2 and y_2 are integers from 1 to 3; and x_1 and y_1 are integers from 1 to 4, with the proviso that the sum of x and y and the sum of x_2 and y_2 is equal to 4 and the sum of x_1 and y_1 is at least 3 but not greater than 5 with a haloalkylating reagent comprising an admixture of a haloalkyl halide with a tris(di C_1 to C_6 linear or branched alkylamino)phosphine and forming a compound selected from the group

$R_xSnZ'_y$, $R_{x1}{}^1PZ'_{y1}$, and $R_{x2}{}^2GeZ'_{y2}$

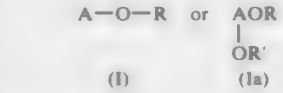
Z' is a haloalkyl group and where R, R^1, R^2, x, x_1, x_2, y, y_1 and y_2 are as previously defined.

5,008,418

TRIS(ISONITRILE)COPPER(I) ADDUCTS FOR PREPARING RADIONUCLIDE COMPLEXES

Tahir Iqbal, Lowell, Mass.; John H. Cain, Jr., Merrimack, N.H., and Jack J. Slosky, Shrewsbury, Mass., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of Ser. No. 95,124, Sep. 11, 1987, Pat. No. 4,885,100. This application Aug. 23, 1989, Ser. No. 397,529
Int. Cl.[5] C07F *13/00, 1/08;* C07C *119/02*
U.S. Cl. 556—112 3 Claims



1. A process for preparing a tris(isonitrile) copper (I) adduct of the formula:

$[Cu(R'')NC_3]X$

wherein

X is an anion selected from BF_4, PF_6, ClO_4, I, Br, Cl and CF_3COO; and

R'' is alkyl of 1–20 carbon atoms or has the formula:

(I) (Ia)

wherein

A is a straight or branched chain alkylene group; and

R and R' each independently is a straight or branched chain alkyl group or taken together are a straight or branched chain alkylene group, provided that:

(1) the total number of carbon atoms in A plus R in formula (1) is 4 to 6, provided further that when the total number of carbon atoms is 6, then the carbon atom alpha to the isonitrile group is a quarternary carbon, and

(2) the total number of carbon atoms in A plus R plus R' in formula (Ia) is 4 to 9,

comprising

(1) reacting in a suitable solvent about one equivalent weight of:

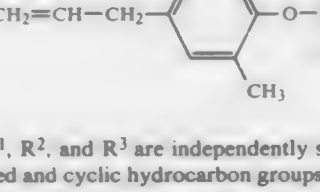
(a) a tetrakis(acetonitrile)copper(I), BF_4, PF_6, or ClO_4, or

(b) cuprous iodide, bromide or chloride, with about three equivalent weight respectively of:

(a) a tetrakis(isonitrile ligand)copper(I), BF_4, PF_6, or ClO_4, or

(b) an isonitrile ligand; and

(2) removing the solvent to provide a solid tris(isonitrile)-copper(I) product.



5,008,419

NOVEL PLATINUM COMPLEX

Koichi Yokoi, Kashiwa; Kazuhiko Irinoda, Chiba; Hidehiko Kohya, Narita; Susumu Sato, Shisui, and Tatsuhiko Katori, Tone, all of Japan, assignors to SS Pharmaceutical Co., Ltd., Tokyo, Japan

Filed Dec. 18, 1989, Ser. No. 451,637
Claims priority, application Japan, Dec. 27, 1988, 63-330251
Int. Cl.[5] C07F *9/68*
U.S. Cl. 556—137 2 Claims

1. A platinum complex having the formula (I):

(I)

wherein R^1 and R^2 may be the same or different and each independently represents a methyl group or an ethyl group, and the configuration of 1,2-diaminocyclohexane is either cis-, trans-l-, trans-d-, or trans-dl-.

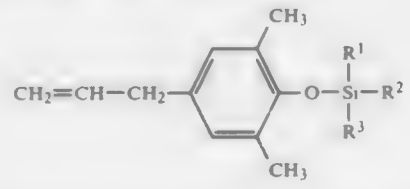
5,008,420

NOVEL SPINEL PRECURSORS

Carl C. Greco, Garnerville, N.Y., and Kelly B. Triplett, Stamford, Conn., assignors to Akzo nv, Arnhem, Netherlands

Filed Sep. 18, 1990, Ser. No. 584,549
Int. Cl.[5] C07F *5/06*
U.S. Cl. 556—182 12 Claims

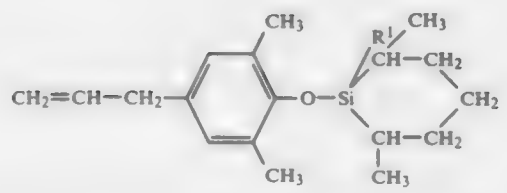
1. An alkylaluminum alkoxide-magnesium alkoxide coordination compound containing an amount of aluminum to magnesium such that the molar ratio of aluminum to magnesium is substantially 2:1.



5,008,421

SILYL DERIVATIVES OF 2,6-DIMETHYL-4-ALLYL PHENOL

George L. Brownell, Pittsburgh; Mary K. Hays, Turtle Creek, and Andrew J. Sivak, Edgewood Boro, all of Pa., assignors to Aristech Chemical Corporation, Pittsburgh, Pa.



Continuation-in-part of Ser. No. 375,644, Jul. 5, 1989, Pat. No. 4,916,248. This application Oct. 10, 1989, Ser. No. 418,602
The portion of the term of this patent subsequent to Apr. 10, 2007, has been disclaimed.
Int. Cl.[5] C07F *7/08, 7/18*
U.S. Cl. 556—406 4 Claims

1. A compound of the formula

in which R^1, R^2, and R^3 are independently selected from linear, branched and cyclic hydrocarbon groups having from one to about eight carbon atoms, and at least two of R^1, R^2, and R^3 are connected to form one or more substituted or unsubstituted rings.

3. Compound of the formula

in which R^1 is selected from linear, branched and cyclic hydrocarbon groups having from one to about eight carbon atoms.

TRIFLUOROMETHYLATION OF CARBONYL COMPOUNDS

G. Patrick Stahly, Baton Rouge, La., assignor to Ethyl Corporation, Richmond, Va.

Continuation-in-part of Ser. No. 177,153, Apr. 4, 1988, abandoned, and a continuation-in-part of Ser. No. 196,680, May 20, 1988, Pat. No. 4,871,877. This application Apr. 12, 1989, Ser. No. 337,186
The portion of the term of this patent subsequent to Oct. 3, 2006, has been disclaimed.
Int. Cl.[5] C07F *7/08, 7/18, 7/10*
U.S. Cl. 556—436 13 Claims

1. A process which comprises reacting under substantially anhydrous conditions a perfluoroalkyltrihydrocarbylsilane and

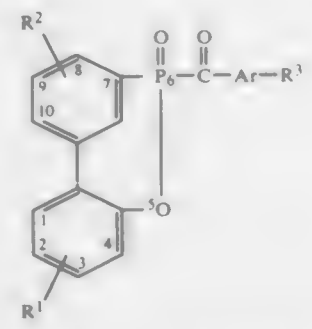
a carbonyl compound in the presence of a catalyst such that the carbonyl compound is perfluoroalkylated.

5,008,426

NOVEL 6-ACYL-(6H)-DIBENZ[C,E][1,2]OXAPHOSPHORIN 6-OXIDES, THEIR PREPARATION AND THEIR USE AS PHOTOINITIATORS

Hans-Jerg Kleiner, Kronberg; Joachim Gersdorf, Wiesbaden, and Udo Bastian, Ratingen, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

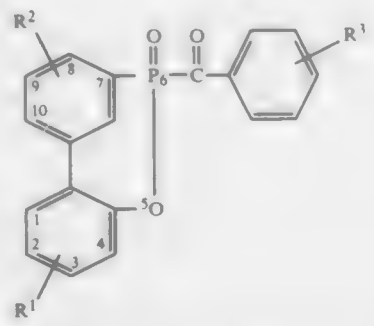
Filed Aug. 22, 1988, Ser. No. 235,004



Claims priority, application Fed. Rep. of Germany, Aug. 24, 1987, 3728169; May 26, 1988, 3817860

Int. Cl.[5] **C07F** *9/32;* **C09D** *3/727;* **C08F** *2/50;* **G03F** *7/10*

U.S. Cl. 558—82 **17 Claims**



1. A 6-acyl-(6H)-dibenz(c,e)(1,2)-oxaphosphorin-6-oxide of the formula

(I)

wherein each of R^1, R^2 and R^3 are present once or more than once, wherein R^1 and R^2 represent hydrogen or chlorine, R^3 represents hydrogen, chlorine or alkyl or alkoxy each having from 1 to 6 carbon atoms and wherein Ar represents an aromatic hydrocarbon group having from 6 to 10 carbon atoms.

11. A 6-acyl-(6H)-dibenz(c,e)(1,2)-oxaphosphorin-6-oxide of the formula

wherein each of R^1, R^2 and R^3 are present once or more than once, wherein R^1 and R^2 represent hydrogen or chlorine and R^3 represents hydrogen, chlorine or alkyl or alkoxy each having from 1 to 6 carbon atoms.

5,008,427

AMMOXIDATION OF PARAFFINS

James F. Brazdil, Jr., Mayfield Village; Mark A. Toft, Lakewood, and Linda C. Glaeser, Lyndhurst, all of Ohio, assignors to The Standard Oil Company, Cleveland, Ohio

Filed Dec. 23, 1988, Ser. No. 289,095

Int. Cl.[5] **C07C** *253/24*

U.S. Cl. 558—319 **12 Claims**

1. A process for making an α,β-unsaturated mononitrile, selected from acrylonitrile and methacrylonitrile, by the catalytic reaction in the vapor phase of a paraffin selected from propane and isobutane with molecular oxygen and ammonia and optionally a gaseous diluent, by catalytic contact of the foregoing reactants in a reaction zone with a catalyst, the feed to said reaction zone containing a mole ratio of said paraffin to NH_3 in the range from 2.5 to 16 and a mole ratio of said paraffin to O_2 in the range from 1 to 10, said catalyst having the elements and the proportions indicated by the empirical formula:

$$VSb_mA_aD_dO_x$$

where

A is one or more Ti, Sn, Fe, Cr, Ga

D is one or more Li, Mg, Ca, Sr, Ba, Co, Ni, Zn, Ge, Nb, Zr, Mo, W, Cu, Te, Ta, Se, Bi, Ce, In, As, B, Mn and

m is 0.8–4

a is 0.01–2

d is 0–2

x is determined by the oxidation state of the cations present, which catalyst has been heated at a calcination temperature of at least 780° C.

5,008,428

INTEGRATED PROCESS FOR THE PRODUCTION OF AMINOACETONITRILES

Martin B. Sherwin, Potomac, and Jow-Lih Su, Silver Spring, both of Md., assignors to W. R. Grace & Co.-Conn., New York, N.Y.

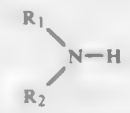
Filed Oct. 26, 1989, Ser. No. 427,438

The portion of the term of this patent subsequent to Jan. 23, 2007, has been disclaimed.

Int. Cl.[5] **C07C** *253/30*

U.S. Cl. 558—346 **20 Claims**

1. An improved process for the production of aminoacetonitriles prepared by



(a) contacting in a reactive absorber, under reactive conditions hydrogen cyanide, formaldehyde, and an additional nitrogen source,

(b) scrubbing the reaction products from (a) supra with a pH-controlled, aqueous scrubbing solution to form an aminoacetonitrile product, and

(c) recovering the product,

wherein the improvement comprises:

using as a source of hydrogen cyanide in step (a) the direct unpurified reactor product stream of a hydrogen cyanide production process comprising a gaseous mixture of hydrogen cyanide and ammonia, using as a source of formaldehyde in step (a) the direct unpurified reactor product stream of a formaldehyde production process comprising a gaseous mixture of formaldehyde and water using as an additional nitrogen source a composition represented by the formula

wherein R_1 and R_2 are each independently selected from alkyl, alkene, cycloalkyl groups, their amine substituted derivatives, and hydrogen.

5,008,429

PROCESS FOR INDUSTRIAL APPLICATION OF KNOEVENAGEL SYNTHESIS

Manfred Kaufhold, and Josef Metz, both of Marl, Fed. Rep. of Germany, assignors to Huels Aktiengesellschaft, Marl, Fed. Rep. of Germany

Filed Dec. 6, 1989, Ser. No. 446,601

Claims priority, application Fed. Rep. of Germany, Mar. 18, 1989, 3908998

Int. Cl.[5] **C07C** *253/30*

U.S. Cl. 558—374 **7 Claims**

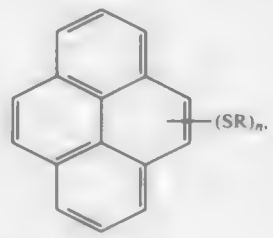
1. In a Knoevenagel synthesis involving reaction of cyanoacetic acid with a ketone followed by decarboxylation in one step with a Knoevenagel synthesis catalyst, the improvement comprising adding in portions 1–10 moles of acetic acid in solution with said cyanoacetic acid per mole of ketone, to the ketone and catalyst at about 100–160° C., wherein the addition of said portions produced a controlled even flow of CO_2 waste gas.

5,008,430

MERCAPTOPYRENES, PREPARATION THEREOF AND USE THEREOF FOR THE PREPARATION OF CHARGE TRANSFER COMPLEXES

Gerhard Heywang, Bergisch Gladbach, and Friedrich Jonas, Aachen, both of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Apr. 10, 1989, Ser. No. 335,902



Claims priority, application Fed. Rep. of Germany, Apr. 29, 1988, 3814534

Int. Cl.[5] **C07C** *321/28*

U.S. Cl. 558—396 **1 Claim**

1. The mercaptopyrene of the formula

(I)

wherein

n is 4 and

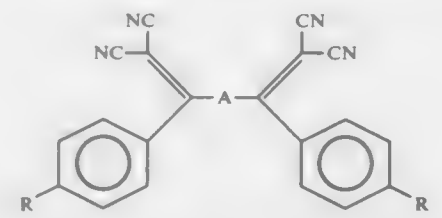
R is C_1–C_{22}-alkyl, benzyl or phenyl or C_1–C_{22}-alkyl, benzyl or phenyl substituted by C_1-C_4-alkyl, C_1–C_4-alkoxy or halogen.

5,008,431

BENZOPHENONE DERIVATIVE

Yutaka Akasaki; Katsumi Nukada, and Katsuhiro Sato, all of Kanagawa, Japan, assignors to Fuji Xerox Co., Ltd., Tokyo, Japan

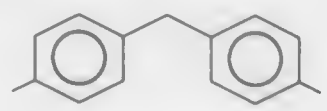
Filed Nov. 15, 1989, Ser. No. 436,620



Claims priority, application Japan, Nov. 16, 1988, 63-287617

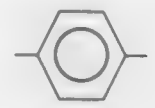
Int. Cl.[5] **C07C** *255/01*

U.S. Cl. 558—402 **2 Claims**

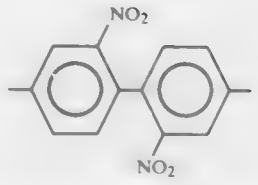


1. A benzophenone derivative represented by formula (I):

(I)



wherein A represents one of the following structural formulas (a), (b) or (c),



(a)

(b)

(c)

and R represents an alkyl group having 1 to 8 carbon atoms or a nitro group.

5,008,432

PRODUCTION OF MERCAPTO COMPOUNDS

John S. Roberts, Bartlesville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla.

Filed Jul. 11, 1985, Ser. No. 754,058

Int. Cl.[5] **C07C** *319/04, 323/03, 323/41, 323/60*

U.S. Cl. 558—436 **5 Claims**

1. A continuous process for the production of mercapto-substituted compounds which comprises passing a mixture of hydrogen sulfide and at least one olefinically unsaturated compound in which the double bond is conjugated with an activating group selected from the group consisting of carbonyl, carboxyl, carboxylate, carboxamide, nitrile, nitro and sulfoxide through a reaction zone comprising a bed of magnesium oxide catalyst which optionally contains silica or other suitable binding agent under reaction conditions which produce saturated sulfur compounds and separating excess hydrogen sulfide from the product mixture removed from said reaction zone.

5,008,433

2-HYDROXY-3-(4-METHOXYPHENYL)-3-(2-AMINOPHENYLTHIO)PROPIONIC ACID, 8'-PHENYLMENTHYL ESTER, ESPECIALLY FOR DILTIAZEM

James T. Palmer, Livermore, Calif., assignor to Marion Laboratories, Inc., Kansas City, Mo.

Division of Ser. No. 195,708, May 18, 1988. This application Apr. 6, 1990, Ser. No. 505,493

Int. Cl.[5] **C07C** *323/36*

U.S. Cl. 560—17 **2 Claims**

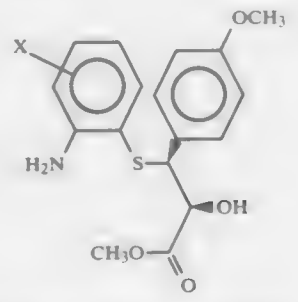
1. A (2°, 3°)-2-hydroxy-3-(4-methoxyphenyl)-3-(2-aminophenylthio)-propionic acid, (°)-8'-phenylmenthyl ester.

5,008,434

PROCESS FOR THE PREPARATION OF METHYL (+)-(2S,3S)-3-[(2-AMINOPHENYL)THIO]-2-HYDROXY-3-(4-METHOXYPHENYL)-PROPIONATES

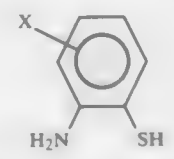
Guy Rossey, Voisins le Bretonneux; Antonio Ugolini, Le Pecq; Isaac Chekroun, Pinay; Abkar Vartanian, Meulan, and Alexander Wick, St Nom la Breteche, all of France, assignors to Synthelabo, Paris, France

Filed Apr. 18, 1989, Ser. No. 339,979



Claims priority, application France, Apr. 19, 1988, 88 05132

Int. Cl.[5] **C07C** *67/30, 323/09*



U.S. Cl. 560—17 **3 Claims**

1. A process for the preparation of a methyl (+)-(2S,3S)-3-

[(2-aminophenyl)thio]-2-hydroxy-3(4-methoxyphenyl)propionate of the formula (I):

in which X denotes hydrogen or chlorine, which process comprises reacting a 2-aminothiophenol of the formula (II):

in which X is as defined above, with methyl (−)-(2R,3S)2,3-epoxy-3-(4-methoxyphenyl)propionate, in a 1,2-dichloroethane solvent, at reflux temperature and under an inert atmosphere.

5,008,435

PREPARATION OF URETHANES

Kuo-Liang Loh; Puh Shieh, both of Hsinchu; Y. S. Chao, Kao-Hsiung, and Tsu-Kung Chuang, Hsinchu, all of China, assignors to Industrial Technology Research Institute, Taiwan

Filed Nov. 22, 1988, Ser. No. 275,261

Int. Cl.[5] C07C *261/00*

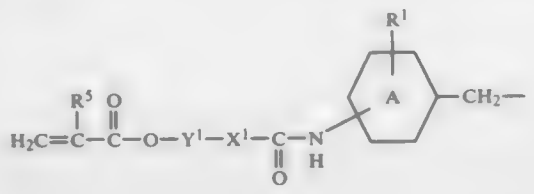
U.S. Cl. 560—24 **14 Claims**

1. A process for producing urethanes, which comprises reacting an organic hydroxyl group containing compound from the group consisting essentially of compounds having at least one aliphatic alcoholically bound hydroxyl group and having 1–20 carbon atoms, and compounds having at least one phenolically bound hydroxyl group and having 6–20 carbon atoms, and carbon monoxide, with an organic nitro group containing compound in the presence of a non-noble metal catalyst system consisting essentially of a copper catalyst.

5,008,436

UREA-CONTAINING (METH) ACRYLIC ACID DERIVATIVES OF TRIISOCYANATES

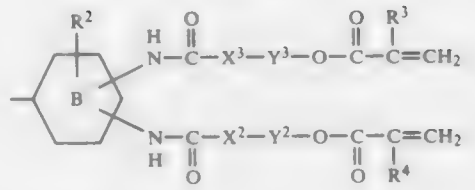
Michael Müller, Bergisch-Gladbach; Wolfgang Podszun, and Jens Winkel, both of Cologne, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Filed May 1, 1990, Ser. No. 517,261

Claims priority, application Fed. Rep. of Germany, May 27, 1989, 3917320

Int. Cl.[5] C07C *269/00*



U.S. Cl. 560—26 **8 Claims**

1. A (meth)acrylic acid derivative of a triisocyanate of the formula

(I)

-continued

wherein

R^1 and R^2 are identical or different and stand for hydrogen or a lower alkyl radical,

R^3, R^4 and R^5 are identical or different and denote hydrogen or methyl,

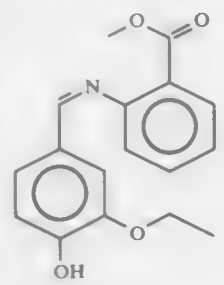
Y^1 to Y^3 are identical or different and denote divalent straight-chain or branched hydrocarbon radicals of 2 to 15 carbon atoms which may optionally include 1 to 3 oxygen bridges and which may be unsubstituted or substituted by 1 to 4 additional (meth)acryloyloxy radicals,

X^1 to X^3 are identical or different and denote $-NR^1-$ or -O-, at least one of the radicals X^1 to X^3 denoting $-NR^1-$, and the rings

A and B are identical or different and may be aromatic or saturated.

5,008,437

SCHIFF BASE REACTION PRODUCT OF ETHYL VANILLIN AND METHYL ANTHRANILATE AND ORGANOLEPTIC USES THEREOF



Braja D. Mookherjee, Holmdel; Robert W. Trenkle, Point Pleasant, both of N.J.; Nicholas Calderone, Laurel Hollow, N.Y., and Ronald S. Fenn, New Providence, N.J., assignors to International Flavors & Fragrances Inc., New York, N.Y.

Division of Ser. No. 134,978, Dec. 18, 1987, abandoned. This application Sep. 27, 1990, Ser. No. 588,737

Int. Cl.[5] C07C *229/00*

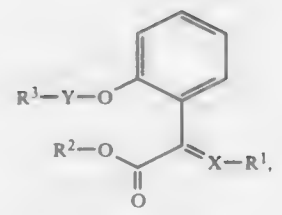
U.S. Cl. 560—35 **2 Claims**

2. A schiff base reaction product having the structure:

5,008,438

ORTHO-SUBSTITUTED PHENOL ETHERS AND FUNGICIDES WHICH CONTAIN THESE COMPOUNDS

Franz Schuetz, Ludwigshafen; Siegbert Brand, Weinheim; Bernd Wenderoth, Lampertheim; Hubert Sauter, Mannheim; Eberhard Ammermann, Ludwigshafen, and Cisela Lorenz, Neustadt, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany



Filed Mar. 13, 1989, Ser. No. 322,727

Claims priority, application Fed. Rep. of Germany, Mar. 31, 1988, 3811012

Int. Cl.[5] C07C *69/76*

U.S. Cl. 560—55 **7 Claims**

1. Ortho-substituted phenol ethers of the general formula I

I

where

R^1 is C_1–C_4-alkyl, C_1–C_4-alkoxy, C_1–C_4-alkylthio or amino which is unsubstituted or mono- or disubstituted by C_1–C_4-alkyl,

R^2 is C_1–C_4-alkyl,

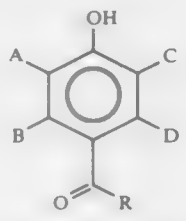
R^3 is aryloxy, arylthio or arylalkoxy, the aromatic ring being unsubstituted or substituted by one or more of the following radicals: halogen, C_1–C_6-alkyl, C_1–C_6-alkoxy, C_1–C_4-alkylthio, C_1–C_2-haloalkyl, aryl, aryl-C_1–C_2-alkoxy, C_1–C_4-alkylcarbonyl, mono- or di-C_1–C_4-alkyl-substituted amino; cyano, nitro,

X is CH or N, and

Y is saturated or unsaturated C_2–C_{12}-alkylene.

5,008,439

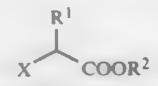
SYNTHESIS OF 2-(4-HYDROXYPHENOXY) ALKANOIC ACID ESTERS



Varadaraj Elango, and Kenneth G. Davenport, both of Corpus Christi, Tex., assignors to Hoechst Celanese Corporation, North Somerville, N.J.

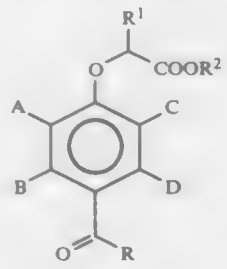
Filed Mar. 21, 1988, Ser. No. 170,711

Int. Cl.[5] C07C *69/76*



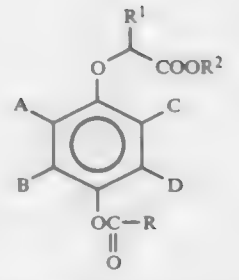
U.S. Cl. 560—61 **25 Claims**

1. A method for synthesizing 2-(4-hydroxyphenoxy)alkanoic acid esters which comprises reacting a hydroxyaromatic ketone derivative (II) of the formula

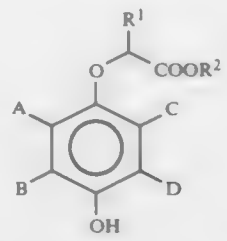


II

or a salt thereof; with a substituted ester of the formula



under basic conditions to thereby form a 2-(acylphenoxy)alkanoic acid ester (III) of the formula



III

and then oxidizing the thusly formed 2-(acylphenoxy)alkanoic acid ester with a peracid or peroxide to obtain a 2-(acyloxyphenoxy)alkanoic acid ester (IV) of the formula

IV

and then transesterifying said 2-(acyloxyphenoxy)alkanoic acid ester with R^3OH/H^+ to obtain a 2-(4-hydroxyphenoxy)alkanoic acid ester (I) of the formula

I

wherein R is C_1 to C_{18} alkyl or C_6 to C_{10} aryl; and

wherein R^1 is H, phenyl or C_1 to C_{18} alkyl; and

wherein R^2 and R^3 are independently C_1 to C_{18} alkyl or aryl; and

wherein A, B, C and D are independently H, X, CN, C_1 to C_{18} alkyl, or C_6 to C_{10} aryl; and X is F, Cl, Br, I or a sulfonic ester.

5,008,440

HERBICIDE COMPOSITION

József Bakos; Bálint Heil; Imre Tóth; Béla Édes, all of Veszprém; István Gebhardt, Budapest; Ferenc Bihari, Budapest; Anna Durkó née Pónácz, Budapest; Gyula Elfert, Dunaharaszti; Jeno Király, Budapest; Éva Konok née Horváth, Budapest; László Lukács, Budapest; Ágnes Mészáros née Szekrényesi, Budapest; Béla Radvány, Budapest, and Lajos Sárosi, Budapest, all of Hungary, assignors to Budapesti Vegyimuvek, Budapest, Hungary

Filed Dec. 21, 1989, Ser. No. 454,775

Claims priority, application Hungary, Dec. 27, 1988, 6609/88

PROCESS FOR THE PREPARATION OF NITRAMINE-CONTAINING HOMOPOLYMERS AND CO-POLYMERS

Roger W. Day, Meriden, and Rahim Hani, Cheshire, both of Conn., assignors to Olin Corporation, Cheshire, Conn.

Division of Ser. No. 270,977, Nov. 14, 1988, Pat. No. 4,916,206.
This application Sep. 25, 1989, Ser. No. 411,380
Int. Cl.[5] C07C *67/08*
U.S. Cl. 560—169 6 Claims

1. A process for producing a nitramine-containing polymer which comprises the steps of:

(a) reacting a nitramine-containing dicarboxylic acid monomer selected from the group consisting of 4,7-dinitraza-1,10-decanedioic acid (DNDA); 5-methyl-4,7-dinitraza-1,10-decanedioic acid (MDNDA); 4-nitraza-1,7-heptanedioic acid (NHDA); 4,8-dinitraza-1,11-undecanedioic acid (DNUDA), and combinations thereof, with a diol monomer selected from the group consisting of ethylene glycol, propylene glycol, 1,4-butane diol, 1,6-hexane diol, diethylene glycol and combinations thereof, in the presence of an acid catalyst by a melt polymerization reaction, the molar ratio of said diol monomer being either equimolar or a molar excess of said diol monomer relative to said nitramine-containing dicarboxylic acid monomer, said reaction being effected at a reaction temperature of between about 60° C. and about 150° C. and a reaction pressure which is either atmospheric or subatmospheric ranging between about 0.001 mm of Hg and about 600 mm. of Hg., to form said nitramine-containing polymer, and

(b) removing by-product water during the course of the reaction.

5,008,444

PROCESS FOR THE PRODUCTION OF SUBSTITUTED ACRYLOYLOXYHYDROXYPROPYLTRIALKYLAMMONIUM CHLORIDE

William G. Chiang, Fayetteville; Richard M. Jobbins, Marcellus, and Michael P. Populе, Syracuse, all of N.Y., assignors to Polypure, Inc., Solvay, N.Y.

Continuation-in-part of Ser. No. 278,297, Nov. 30, 1988, abandoned, and a continuation-in-part of Ser. No. 278,299, Nov. 30, 1988, abandoned, and a continuation-in-part of Ser. No. 278,300, Nov. 30, 1988, abandoned. This application Dec. 26, 1989, Ser. No. 456,340
Int. Cl.[5] C07C *69/52*
U.S. Cl. 560—222 29 Claims

1. A process for preparing a 3-(R)acryloyloxy-2-hydroxypropyltrialkylammonium halide monomer comprising:

reacting the halohydroxypropyl ester of an acid of the formula CH_2=C(R)COOH wherein R is selected from the group consisting of hydrogen and alkyl of 1 to 4 carbon atoms with from 0.05 to 2.0 moles of a trialkylamine per mole of halohydroxypropyl ester at from about 25° to about 70° C. for a time sufficient to form 3-(R) acryloyloxy-2-hydrocypropyltrialkylammonium halide and its isomer, 2-(R)acryloylocy-3-hydroxypropyltrialkylammonium halide, wherein said reaction occurs in from about 35 85% of a non-solvent for said 3-(R)acryloyloxy-2-hydroxypropyltri-alkylammonium halide and its isomer precipitating the halide monomer as the reaction proceeds.

5,008,445

PROCESS FOR THE PRODUCTION OF GLYCOL MONOESTERS

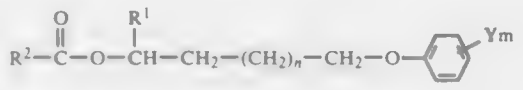
Nobuaki Shimizu, and Hiroaki Kezuka, both of Sodegaura, Japan, assignors to Idemitsu Kosan Company Limited, Tokyo, Japan

Continuation of Ser. No. 821,690, Jan. 23, 1986, abandoned, Continuation-in-part of Ser. No. 698,319, Feb. 5, 1985, abandoned. This application Jun. 5, 1987, Ser. No. 59,153
Claims priority, application Japan, Feb. 10, 1984, 59-24127; Dec. 12, 1984, 59-260790
Int. Cl.[5] C07C *67/055, 69/16, 69/28*
U.S. Cl. 560—243 26 Claims

1. A process for producing glycol monoesters using a catalyst which is regenerated, comprising

(a) reacting at least one carboxylic acid selected from the group consisting of acetic acid, propionic acid, butyric acid and isobutyric acid; at least one olefin selected from the group consisting of ethylene, propylene, butene-1, butene-2, cyclopentene and cyclohexene; and oxygen, in the presence of said catalyst containing (A) a palladium component, (B) an oxygen-containing nitrogen compound, and (C) a metal halide as major constituents, wherein the molar ratio of the oxygen-containing nitrogen compound (B) to the palladium component (A) is from 0.5 to less than 2.0 and the elemental ratio of the halogen atom in the metal halide (C) to the palladium atom in the palladium component (A) is at least 1, to produce glycol monoester; and

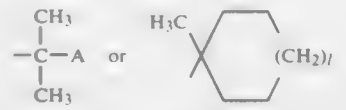
(b) regenerating said catalyst by reduction with hydrogen and reusing the catalyst for step (a) reaction to produce glycol monoester.



5,008,446

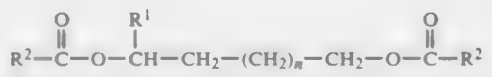
PREPARATION OF PHENOXY-SUBSTITUTED ESTERS AND INTERMEDIATES THEREFOR

Guenter Schulz, Ludwigshafen, and Hubert Sauter, Mannheim, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany



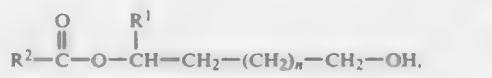
Division of Ser. No. 129,710, Dec. 7, 1987, Pat. No. 4,870,205.
This application Jun. 13, 1989, Ser. No. 365,559
Claims priority, application Fed. Rep. of Germany, Dec. 13, 1986, 3642632
Int. Cl.[5] C07C *67/02*
U.S. Cl. 560—254 6 Claims

1. A process for the preparation of a compound of the formula I

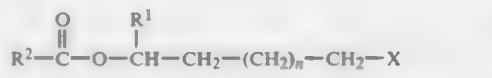


I

where R^1 is

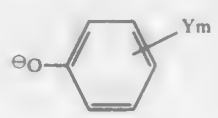


where A is C_1–C_4-alkyl, phenyl or C_7–C_{12}-aralkyl and l is 0 or 1, R^2 is C_1–C_4-alkyl, n is 0, 1, 2 or 3, m is 1, 2 or 3 and Y is hydrogen, fluorine, chlorine, bromine, C_1–C_3-alkyl, C_1–C_3-alkoxy, trifluoromethyl, phenyl or phenoxy, and, when m is greater than 1, the individual atoms or groups Y are identical or different, wherein, in a first stage, a diester of the formula II



II

is hydrolyzed with one equivalent of an aqueous alkali metal hydroxide to give the alcohol of the formula IIIa



IIIa

in a second stage this alcohol is converted with a halogenating agent or a sulfonyl chloride or bromide into a compound of the formula IIIb

IIIb

where X is substituted as a nucleophilically displaceable leaving group, and then, in a third stage, the compound IIIb is reacted with a phenolate of the formula IV

IV

where Y and m have the abovementioned meanings, in the presence of an aprotic solvent to give compound I.

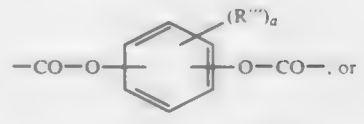
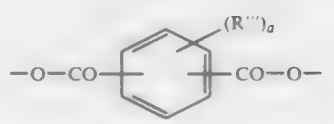
PROCESS FOR THE PREPARATION OF POLYURETHANES WITH LIQUID CRYSTAL PROPERTIES AND DIISOCYANATES SUITABLE FOR CARRYING OUT THE PROCESS



Werner Mormann, Kreuztal; Barbara Brahm, and Martin Brahm, both of Siegen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Fed. Rep. of Germany

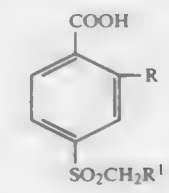


Division of Ser. No. 241,445, Sep. 7, 1988, Pat. No. 4,895,920.
This application Nov. 7, 1989, Ser. No. 433,636
Claims priority, application Fed. Rep. of Germany, Sep. 16, 1987, 3730985
Int. Cl.[5] C07C *249/00*
U.S. Cl. 560—355 1 Claim

1. An organic diisocyanate having the formula

wherein
R is an alkylene group of 2 to 11 carbon atoms;
X is CO—O or O—CO;
Z is N=N, CH=CH, CO—O,

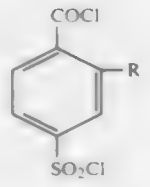
R′, R″, and R‴ are independently hydrogen, Cl, Br, NO_2, C_1–C_{20} alkyl, C_1–C_{20} alkoxy, C_1–C_{20} alkoxycarbonyl, or C_1–C_4 branched alkyl;
a is 1, 2, or 3; and
n is 0 or 1.



5,008,448

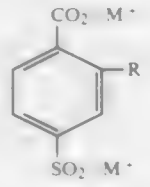
PREPARATION OF 2-(CHLORO, BROMO OR NITRO)-4-(ALKYL-SULFONYLK)BENZOIC ACIDS AND INTERMEDIATES

Richard W. Brown, Richmond, Calif., assignor to ICI Americas Inc., Wilmington, Del.



Division of Ser. No. 280,787, Dec. 7, 1988, abandoned. This application Jan. 25, 1990, Ser. No. 470,009
Int. Cl.[5] C07C *147/107*
U.S. Cl. 562—429 5 Claims

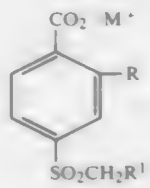
1. A process for preparing 2-(chloro, bromo or nitro)-4-(alkysulfonyl) benzoic acid compounds having the structural formula



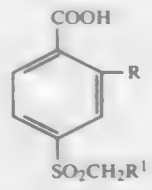
wherein R is chloro, bromo or nitro and R^1 is hydrogen or C_1–C_3 alkyl, comprising

(1) reacting a compound having the structural formula

wherein R is as defined with a reducing agent along with a base having a sodium, potassium or ammonium cation (M^{30}) in an aqueous medium to prepare a compound having the structural formula



wherein R is chloro, bromo or nitro and M is sodium, potassium or ammonium and



(2) reacting the prepared compound from step (1) with an α-halocarboxylic acid compound having the structural formula

wherein X is a chloro, bromo or iodo; R^1 is hydrogen or C_1–C_3 alkyl; and M is sodium, potassium or ammonium, to prepare a benzoic acid compound having the structural formula

wherein M, R and R^1 are as defined, and finally acidifying the compound to prepare the desired product having the structural formula

wherein R and R^1 are as defined.

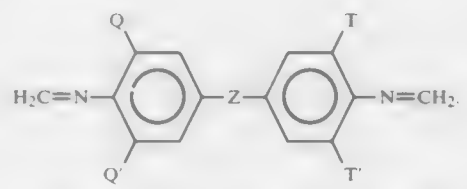
AROMATIC DIIMINE



Christopher J. Nalepa; J. Kenneth Presswood, and Gordon G. Knapp; all of Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Filed Apr. 14, 1989, Ser. No. 338,986
Int. Cl.[5] C07C *251/16*
U.S. Cl. 564—271 **8 Claims**

1. An aromatic diimine having one or two benzene rings and two ar-imino substituents corresponding to the formula

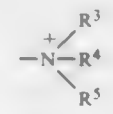
or

wherein R, R′, and R″ are independently selected from alkyl groups containing 1–6 carbons, Q, Q′, T, and T′ are independently selected from alkyl groups containing 1–6 carbons and Z is an alkylidene group containing 1–3 carbons.

5,008,454

PROPANEDIOL DERIVATIVES, THEIR PRODUCTION AND USE

Keizo Inoue, Tokyo; Hiroaki Nomura, Takatsuki, and Akihiro Tasaka, Suita, all of Japan, assignors to Takeda Chemical Industries, Ltd., Osaka, Japan



Continuation of Ser. No. 227,531, Aug. 3, 1988, abandoned. This application Mar. 12, 1990, Ser. No. 492,330
Claims priority, application Japan, Aug. 18, 1987, 62-204795
Int. Cl.[5] C07C *215/40*
U.S. Cl. 564—294 **8 Claims**

1. A compound of the formula:

$$R^1—OCH_2CH_2CH_2O—(CH_2)_n—R^2 \quad (I)$$

wherein R^1 stands for the alkyl group having 8 to 22 carbon atoms which is unsubstituted or substituted by C_{3-8} cycloalkyl, phenyl, halogen, cyano, ethynyl, oxo or C_{1-4} alkyl, C_{1-4} alkoxy, hydroxy, nitro or halogen;

R^2 stands for a quaternary ammonium group represented by the formula:

wherein R^3, R^4, and R^5 independently stand for C_{1-5} alkyl,

n denotes an integer of 3 to 10;

wherein said compound represented by the formula (I) is in the form of a pharmaceutically acceptable salt with an anion or an intramolecular salt with an anion in the molecule of said compound.

5,008,455

METHOD FOR THE PRODUCTION OF HYDROXYLAMINE DERIVATIVES

Masashi Nakajima, Takaoka; Nobuo Tomita, Tonami; Kenji Suzaki, Takaoka; Akira Kaneko, Takaoka, and Mikio Sawaki, Takaoka, all of Japan, assignors to Nippon Soda Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 897,208, Aug. 18, 1986, abandoned. This application Dec. 6, 1989, Ser. No. 445,155
Int. Cl.[5] C07C *239/20*
U.S. Cl. 564—300 **12 Claims**

1. A process for the production of hydroxylamine derivatives having the general chemical formula:

$$NH_2OR^1 \quad (I)$$

comprising:

(a) reacting an ester of carboxylic acid having the general chemical formula:

$$R^2COOR^3. \quad (II)$$

wherein R^2 is a lower alkyl, with an hydroxylamine having the formula:

$$HONH_2 \quad (III)$$

to form a salt of hydroxamic acid having the general chemical formula:

$$R^2CONHO\ 1/n\ M. \quad (IV)$$

(b) reacting the resulting salt of hydroxamic acid having the formula (IV) with a compound having the general formula:

$$(R^1O)_2SO_2 \text{ or } R^1X \quad (V)$$

to form an ester of hydroxamic acid having the general formula:

$$R^2CONHOR^1; \quad (VI)$$

(c) reacting the ester of hydroxamic acid (VI) with a mineral acid in an aqueous solution of an alcohol having the formula:

$$R^3OH \quad (VII)$$

to produce hydroxylamine derivatives having the general formula (I) and an ester of carboxylic acid having the general chemical formula (II); and

(d) introducing the ester of carboxylic acid having the general chemical formula (II) into the reaction of step (a), wherein said process is carried out in aqueous solution;

R^1 is selected from the group consisting of an alkyl group, a substituted alkyl group, an alkenyl group, a substituted alkenyl group, an alkynyl group, a substituted alkynyl group, an aryl group, a substituted aryl group, an aralkyl group, a substituted aralkyl group, and salts thereof;

R^2 and R^3 are selected from the group consisting of lower alkyl groups;

M is an alkali metal or an alkali earth metal;

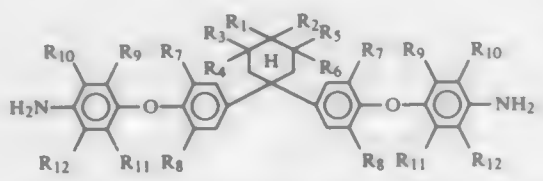
n is the valency of M;, and

X is a nucleophilic reacting group.

5,008,456

DIAMINO COMPOUNDS, DINITRO COMPOUNDS, DIOL COMPOUNDS AND A PROCESS FOR PREPARING THE DIAMINO COMPOUNDS

Shizuo Murata; Minoru Nakayama, both of Ichihara; Kenji Furukawa, Yokosuka, and Ryuji Kobayashi, Yokohama, all of Japan, assignors to Chisso Corporation, Osaka, Japan



Filed Nov. 8, 1989, Ser. No. 433,116

Claims priority, application Japan, Nov. 9, 1988, 63-282679

Int. Cl.[5] C07C *211/00*

U.S. Cl. 564—322 **2 Claims**

1. A diamino compound represented by the general formula

(I)

wherein R_1–R_6 are a hydrogen atom or an alkyl group having 1 to 22 carbon atoms, respectively, and R_7–R_{12} are a hydrogen atom, an alkyl group having 1 to 3 carbon atoms, F or Cl, respectively.

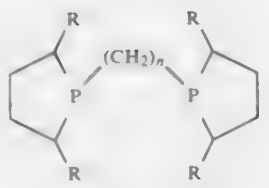
CHIRAL PHOSPHOLANE TRANSITION METAL CATALYSTS



Mark J. Burk, Hockessin, Del., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed May 17, 1990, Ser. No. 524,737

Int. Cl.[5] C07F *9/02, 9/00*

U.S. Cl. 568—12 **7 Claims**

1. A compound represented by the following formula I comprising:

I

wherein:

R is a lower alkyl, trifluoromethyl, phenyl, substituted phenyl, aralkyl or ring-substituted aralkyl; and

n is an integer having a value from 1 to 12.

5,008,458

PROCESS FOR PURIFYING CRUDE TETRABROMOBISPHENOL SULFONE BY EXTRACTION

Jeffrey E. Telschow, Tarrytown, N.Y., assignor to Akzo nv, Arnhem, Netherlands

Continuation-in-part of Ser. No. 299,495, Jan. 23, 1989. This application Dec. 19, 1989, Ser. No. 452,868

Int. Cl.[5] C07C *315/06*

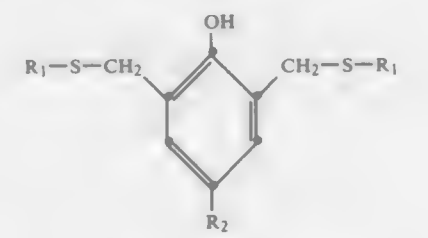
U.S. Cl. 568—28 **11 Claims**

1. A process for the purification of a crude tetrabromobisphenol S composition which comprises heating the composition in the presence of a quantity of substantially organic, moderately polar solvent insufficient to substantially dissolve the tetrabromobisphenol S, which solvent removes impurities from the crude composition, followed by removal of the tetrabromobisphenol S from the solvent.

5,008,459

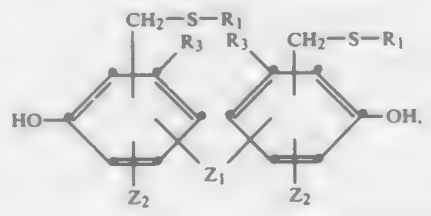
SUBSTITUTED PHENOLS AS STABILIZERS

Hans R. Meier; Samuel Evans, and Paul Dubs, all of Marly, Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.



Filed Dec. 22, 1987, Ser. No. 136,686

Claims priority, application Switzerland, Dec. 24, 1986, 5235/86



Int. Cl.[5] C07C *321/00, 323/00*

U.S. Cl. 568—46 **10 Claims**

1. A composition comprising an elastomer and at least one compound of the formulae I or/and II

(I)

(II)

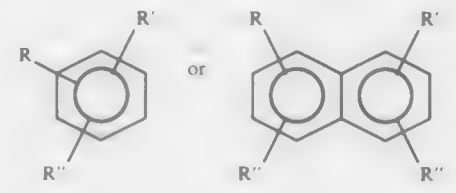
in which the radicals R_1 are identical or different and independently of one another are C_1–C_{20}-alkyl which is unsubstituted or substituted by 1 or 2 hydroxyl groups or/and interrupted by —O—, or are C_1–C_4-alkylene-$COOR_2'$, C_1–C_4-alkylene-CO—$NR_2''R_4$, C_5–C_{12}-cycloalkyl, phenyl, 1-naphthyl, 2-naphthyl, C_1–C_4-alkyl-phenyl or phenyl-C_1–C_4-alkyl, R_2, R_2' and R_2'' independently of one another are C_1–C_{20}-alkyl, allyl,

methallyl, propargyl, C_5–C_{12}-cycloalkyl, phenyl or benzyl, R_3 is hydrogen, C_1–C_{20}-alkyl, C_2–C_{18}-alkenyl or halogen, R_4 is hydrogen, C_1–C_{20}-alkyl or C_2–C_{18}-alkenyl, Z_1 is —S— or —$C(Z_3)(Z_4)$— and Z_2 is hydrogen, C_1–C_{20}-alkyl or —CH_2—S—R_1, Z_3 and Z_4 independently of one another being hydrogen or methyl, with the proviso that the phenols of the formula II are free of the —CH_2—S—R_1 functional group in the m-position relative to the OH group.

5,008,460

SYNTHETIC LUBRICANTS

William E. Garwood, Haddonfield; Quang N. Le, Cherry Hill; Joosup Shim, Wenonah, and Stephen S. Wong, Medford, all of N.J., assignors to Mobil Oil Corp., Fairfax, Va.



Filed May 30, 1989, Ser. No. 358,108

Int. Cl.[5] C07C *2/04*

U.S. Cl. 585—11 **20 Claims**

1. A method for manufacturing a lube base stock oil, which method comprises:

preparing a mixture consisting of (a) an alkenylaromatic hydrocarbon having the formula

(I) (II)

wherein R is the CH_2=CH— radical or the CH_2=$C(CH_3)$— radical and wherein R′ is hydrogen or the CH_2=CH— or the CH_2=$C(CH_3)$— radical and wherein R″ is individually selected from the group consisting of hydrogen and alkyl radicals having one to four carbon atoms; (b) from one to about 20 moles of an aliphatic olefin having at least about six to about forty carbon atoms per mole of alkenyl-aromatic hydrocarbon; and (c) about 0.5 to about 30 wt % of said mixture of alkenylaromatic hydrocarbon and aliphatic olefin of a ditertiaryalkyl peroxide;

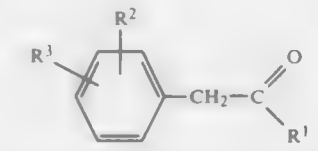
maintaining said mixture at a temperature of 100° to about 200° C. for a time effective to decompose said peroxide whereby reacting said alkenylaromatic hydrocarbon with said aliphatic alpha olefin; and,

recovering an alkylaromatic base stock oil boiling above about 600° F.

5,008,461

PREPARATION OF BENZYL KETONES

Fritz Naeumann, Mannheim, and Eckhard Hickmann, Dannstadt-Schauernheim, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

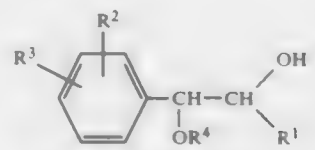


Filed Mar. 7, 1990, Ser. No. 489,690

Claims priority, application Fed. Rep. of Germany, Mar. 30, 1989, 3910220

Int. Cl.[5] C07C *45/52*

U.S. Cl. 568—322 **6 Claims**



1. A process for the preparation of a benzyl ketone of the formula

(I)

where R^1 is C_1–C_8-alkyl which is unsubstituted or substituted by cycloalkyl or aryl and R^2 and R^3 are each halogen, C_1–C_4-alkyl, hydroxyl, C_1–C_4-alkoxy or C_2–C_4-methylenedioxy, which comprises:

converting a glycol monoether of the formula

(II)

where R^1, R^2 and R^3 have the abovementioned meanings and R^4 is C_1–C_8-alkyl, into said benzyl ketone with elimination of the compound R^4—OH, in the presence of a catalyst selected from the group consisting of alumina, silica, phosphates and zeolites at from 50° to 500° C. and under from 0.01 to 50 bar.

5,008,462

METHOD FOR PREPARING MONOCHLOROACETALDEHYDE TRIMER

Makoto Ishizuka, Kawaguchi, and Takashi Wakasugi, Iwaki both of Japan, assignors to Kureha Chemical Industry Co., Ltd., Tokyo, Japan

Filed Nov. 8, 1989, Ser. No. 433,284

Claims priority, application Japan, Nov. 9, 1988, 63-282980

Int. Cl.[5] C07C *45/61, 45/63*

U.S. Cl. 568—466 **13 Claims**

1. A method of preparing a monochloroacetaldehyde trimer comprising:

(a) dissolving a raw material solution in an organic solvent, wherein said raw material solution contains at least 70% by weight monochloroacetaldehyde;

(b) cooling the solution to a temperature of 0° C. or less; and

(c) reacting the solution with concentrated sulfuric acid in an amount of 10 to 70% by weight with respect to the weight of the raw material solution.

5,008,463

PROCESS FOR THE PREPARATION OF FORMALDEHYDE

Horst-Philipp Beck, Dudweiler/Saar; Gerhard Emig, Erlangen; Günther Wiesgickl, Grosswallstadt; Karlheinz Burg, and Karl-Friedrich Mück, both of Wiesbaden, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt, Fed. Rep. of Germany

Filed Jun. 21, 1990, Ser. No. 541,629

Claims priority, application Fed. Rep. of Germany, Jun. 24, 1989, 3920811

Int. Cl.[5] C07C *45/00, 47/04*

PROCESS FOR THE ISOMERIZATION OF ALKENES HAVING A TERMINAL DOUBLE BOND TO GIVE ALKENES HAVING AN INTERNAL DOUBLE BOND

Bernhard Schleppinghoff; Hans-Dieter Köhler; Christian Gabel, and Hans-Volker Scheef, all of Dormagen, Fed. Rep. of Germany, assignors to EC Erdolchemie GmbH, Cologne, Fed. Rep. of Germany

Filed Apr. 12, 1989, Ser. No. 336,926

Claims priority, application Fed. Rep. of Germany, Apr. 16, 1988, 3812683

Int. Cl.[5] C07C *41/00, 43/00, 5/00*

U.S. Cl. 568—697 **20 Claims**

1. A process for the isomerization of alkenes having a terminal double bond to give alkenes having an internal double bond by treating alkenes having a terminal double bond or hydrocarbon feedstocks containing alkenes having a terminal double bond over catalysts containing hydrogenation-active metals in the presence of hydrogen, characterized in that the treatment is carried out in the liquid phase at a temperature from 0° to 120° C. on a macroporous or gel acid cation exchanger in the H^+ form which contains 0.001 to 10 g of one or more metals of the VIth and/or VIIth and/or VIIIth sub-group of the periodic system of the elements (Medeleev) in elementary form per liter of dry cation exchanger and which has a degree of crosslinking of 2 to 65% and a specific surface area of 5 to 750 m^2/g of dry exchange resin.

18. The process for carrying out at the same time

(a) the isomerization of alkenes having a terminal double bond to give alkenes having an internal double bond in accordance with claim 1,

(b) the selective hydrogenation of highly unsaturated accompanying compounds in hydrocarbon feed materials, and

(c) the catalysed etherification of isoalkanes in said feed materials,

characterized in that, in the process according to claim 1, said feed materials containing highly unsaturated accompanying compounds and containing said isoalkenes are used and, in addition, hydrogen is employed in a proportion of 100 to 200% of the proportion required by stoichiometry for the selective hydrogenation of the highly unsaturated accompanying compounds, and alkanols having 1 to 4 C atoms are employed in a proportion of 0.7 to 4 moles per mole of the isoalkenes.

PROCESS FOR DIRECT ETHERIFICATION OF A DEHYDROGENATED EFFLUENT

Bipin V. Vora, Darien, and Norman H. Scott, Arlington Heights, both of Ill., assignors to UOP, Des Plaines, Ill.

Filed Dec. 4, 1989, Ser. No. 445,503

Int. Cl.[5] C07L *41/06*

U.S. Cl. 568—697 **18 Claims**

1. A process for producing MTBE comprising:

(a) charging a feed stream comprising isobutane and at least a portion of a first recycle stream to a dehydrogenation zone, said recycle stream comprising isobutane and hydrogen, dehydrogenating said isobutane in said dehydrogenation zone, and recovering a first effluent stream comprising C_4 and lighter hydrocarbons, and hydrogen, said C_4 hydrocarbons of said first effluent stream including isobutene and isobutane;

(b) passing said first effluent to an etherification zone without separation at inlet conditions that will maintain at least a portion of said C_4 hydrocarbons in vapor phase;

(c) contacting isobutene from said first effluent stream with methanol in an etherification zone at etherification conditions and in the presence of an etherification catalyst;

(d) recovering a second effluent stream from said etherification zone having less than 5 mol. % isobutene and comprising MTBE, methanol and C_4 and lighter boiling hydrocarbons and discharging isobutane and hydrogen from said etherification zone;

(e) separating C_4 and lighter boiling hydrocarbons from said second effluent stream in a first separation zone and recovering an MTBE effluent stream essentially free of C_4 hydrocarbons, and a second recycle stream comprising C_4 hydrocarbons and methanol;

(f) combining at least a portion of said second recycle stream with said isobutane and hydrogen of said etherification zone to generate a third recycle stream; and

(g) charging said third recycle stream to a methanol removal zone and removing methanol from at least a portion of said third recycle stream to provide said first recycle stream.

STRIP CABLE

Asaharu Nakagawa, Yokkaichi, Japan, assignor to Kitagawa Industries Co., Ltd., Aichi, Japan

Filed Dec. 1, 1989, Ser. No. 444,695
Claims priority, application Japan, Dec. 16, 1988, 63-319163
Int. Cl.[5] H01B *7/34*
U.S. Cl. 174—36 **8 Claims**

1. A strip cable formed by a process comprising the steps of:

providing a plurality of signal conductors;

forming a coating of insulating material around the signal conductors;

developing carbon fibers through a vapor-phase process by using particles of a high-melting point metal or compounds thereof which have a diameter of 0.02–0.03 microns to reduce electrical resistivity of said carbon fibers; and

forming a conductive layer on the insulating material, wherein the conductive layer is comprised of said carbon fibers dispersed throughout a flexible non-conductive material.

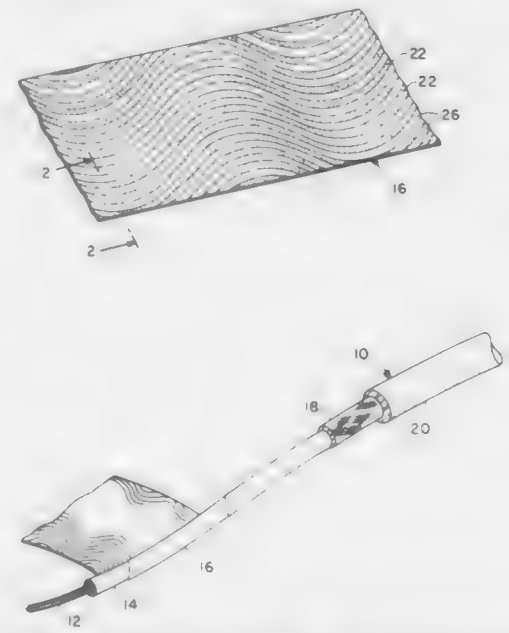
ELECTRICAL CABLES AND SERPENTINE PATTERN SHIELDING TAPE THEREFOR

Herman D. Weeks, Jr., Ramsey, and Robert Cella, Fairlawn, both of N.J., assignors to Facile Holdings, Inc., Paterson, N.J.

Filed Oct. 25, 1989, Ser. No. 426,194
Int. Cl.[5] H01B *7/34;* **B32B** *15/04*
U.S. Cl. 174—36 **20 Claims**

1. A metal shielding tape for an electrical cable, said tape having a top and a bottom surface and having an adhesive coating on the top surface thereof in a pattern of parallel serpentine strips extending longitudinally thereon.



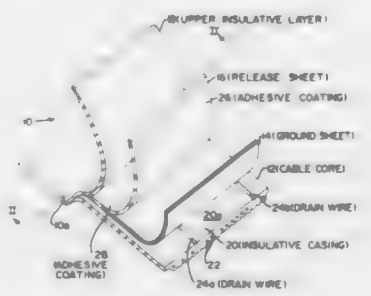
10. An electronic cable comprising:

an elongated conducting member;

an insulator surrounding the conducting member;

and a metal shielding tape having a top and a bottom side and surrounding the insulator, said metal shielding tape

having an adhesive coating on the top side thereof in a pattern of parallel serpentine strips extending longitudi-



nally thereon, whereby said cable is effectively protected against electrical interference and moisture penetration.

5,008,490

STRIPPABLE ELECTRICALLY SHIELDED CABLE

Richard F. Strauss, Morrisville, Pa.; Richard A. Fiacco, Bayville, N.J.; Hosrow T. Bordbar, Stanton, Calif.; Caesar C. Chen, Fountain Valley, Calif., and David Quiroz, Santa Ana, Calif., assignors to Thomas & Betts Corporation, Bridgewater, N.J.

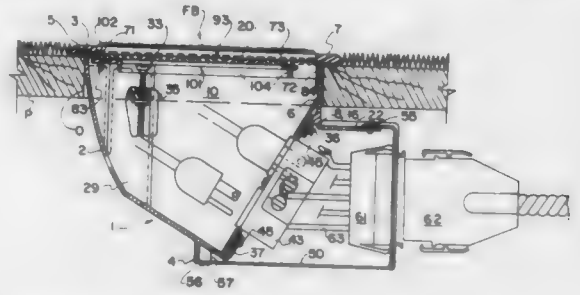
Filed Jan. 19, 1990, Ser. No. 467,698
Int. Cl.[5] H01B *7/08*
U.S. Cl. 174—36 **9 Claims**

1. A strippable, shielded electrical cable comprising:

a plurality of elongate, spaced electrical conductors; a casing of electrically insulative material enclosing said conductors, at least one of said conductors having an exposed portion free of said casing material;

an electrically conductive shield of permeable material overlying said casing and in electrical contact with said exposed conductor portion;

a layer of electrical insulation overlying said conductive shield; and



a sheet of electrical insulation disposed between said conductive shield and said layer, a first adhesive on one surface of said sheet facing said shield, said first adhesive being removably adhered to said shield, said first adhesive and said casing being removably adhered to each other through said permeable material, a second adhesive on an opposing surface of said sheet facing said layer, said second adhesive being removably adhered to said layer.

5,008,491

FLOOR BOX FOR ACCESS FLOORS

Timothy S. Bowman, Parkersburg, W. Va., assignor to Butler Manufacturing Company, Kansas City, Mo.

Continuation-in-part of Ser. No. 95,437, Aug. 27, 1987, abandoned. This application Mar. 13, 1989, Ser. No. 322,104
Int. Cl.[5] H02G *3/18*
U.S. Cl. 174—48 **28 Claims**

1. In an access floor box:

a back wall having a top edge and a bottom edge;

a front wall having a top edge and a bottom edge

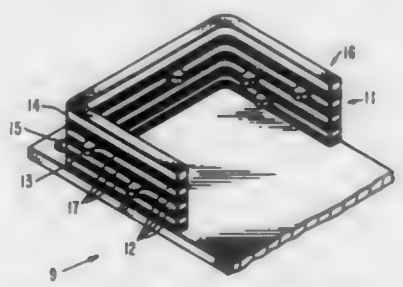
the front wall arcuately extending from its top edge in a direction toward its bottom edge;

a pair of side walls each having an upper section having a top edge and a lower section, the upper sections being connected to said front and back walls and each lower section extending outwardly from the bottom edge of the back wall;

flange means adjacent the top edges of the front, back, and side walls and respectively extending outwardly of the walls;

a back foot connected to the bottom edge of the back wall and extending outwardly therefrom and connected to the respective top edges of the lower sections of the side walls which extend outwardly from the back wall;

said front, back, and side walls forming a generally rectangular-shaped chamber with the respective top edges forming a rectangular-shaped opening to the chamber; and



barrier means extending parallel said side walls and connected to said back foot and to the bottom edge of said front wall, the barrier means forming a plurality of channels for the passage of cable.

5,008,492

HIGH CURRENT FEEDTHROUGH PACKAGE

Raymond L. Brown, Fountain Valley, and Clifford L. Shock, Jr., Santa Ana, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Oct. 20, 1989, Ser. No. 424,414
Int. Cl.[5] H01L *23/02*
U.S. Cl. 174—52.4 **20 Claims**

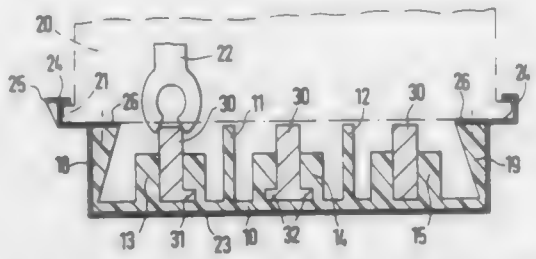
1. A package having high current feedthroughs comprising:

a base comprising a low thermal coefficient of expansion material; and

a plurality of alternating thermally conductive and electrically conductive rings stacked on the base to define an enclosure, the electrically conductive rings having a plurality of internal and external tabs defining high-current feedthroughs, the thermally conductive rings providing electrical isolation between the feedthroughs.

5,008,493

HOLDER WITH BUSBARS FOR A BUSBAR SYSTEM



Hans Wagener, Rittershäuser Str. 14, 6344 Dietzhölztal-Rittershausen, Fed. Rep. of Germany

Filed Apr. 4, 1989, Ser. No. 333,296

Claims priority, application Fed. Rep. of Germany, Apr. 6, 1988, 3811456

Int. Cl.[5] H02G *5/04;* **H02B** *1/04, 1/20;* **H01R** *25/14*

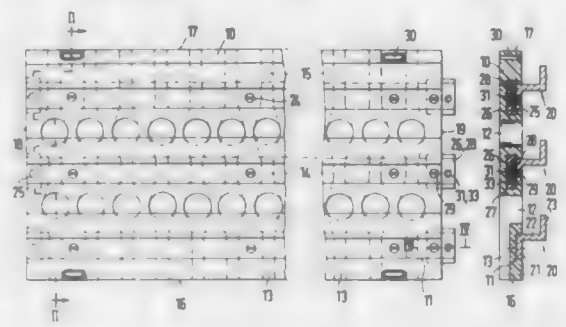
U.S. Cl. 174—68.2 **3 Claims**

1. A holder having currentcarrying busbars for a busbar system for connecting electrical equipment, said holder comprising a rectangularly-shaped insulating support having an upper side and parallel, equally spaced sockets in the upper side, current-carrying busbar sections fixed in said sockets, the longitudinal sides of the insulating support being aligned along the longitudinal direction of the busbar sections, the current-carrying busbar sections each having a connection portion extending perpendicularly from the top of the insulating support for plug contact with electrical equipment, the longitudinally-extending sides of the insulating support having end bridges which extend from the top of the insulating support perpendicularly and terminate in end faces which lie in the same plane as the ends of said connection portions of the current-carrying busbar sections, said insulating support further having separating partitions between the busbar sections, and the insulating support being set into a channel-shaped receptacle made of elastic material, the side walls of which enclose the end bridges at the outside, the receptacle having front faces which overlie the end faces of the end bridges and slot-shaped latching receptacles on the side walls which open toward each other for mechanical attachment of electrical equipment.

5,008,494

BUSBAR SYSTEM WITH HOLDERS AND BUSBAR SECTIONS

Hans Wagener, Rittershäuser Str. 14, 6344 Dietzhölztal-Rittershausen, Fed. Rep. of Germany



Filed Apr. 3, 1989, Ser. No. 332,708

Claims priority, application Fed. Rep. of Germany, Apr. 6, 1988, 3811457

Int. Cl.[5] H02G *5/00*

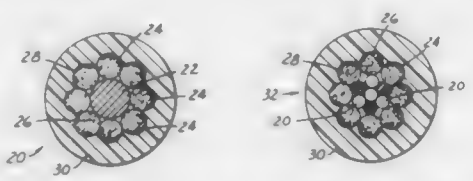
U.S. Cl. 174—68.2 **13 Claims**

1. A busbar system with holders, the tops of said holders having a number of receptacles, busbar sections spaced at intervals and running parallel and fixed in position in said receptacles, said holders being rectangular carrier plates having narrow sides and longitudinal sides, said longitudinal sides being aligned in parallel with the busbar sections, the busbar sections abutting the narrow sides of the carrier plates, the narrow sides of the carrier plates at the facing end sections of the receptacles accommodating one-half of connecting elements aligned in the longitudinal direction of the busbar sections, said connecting elements being connected so as to conduct electrically and so that the holders are joined together in a row with the ends of the busbar sections abutting, wherein

the connecting elements are each composed of an insulating support and a contact plate, and there are threaded holes in the insulating support and aligned through-holes in the contact plate.

5,008,495

ELECTRIC CABLE WITH BURN RESISTANT CHARACTERISTICS AND METHOD OF MANUFACTURE



Donald Mudgett, Coopersville, Mich., assignor to Lestox, Inc., Birmingham, Mich.

Continuation-in-part of Ser. No. 330,008, Mar. 29, 1989, Pat. No. 4,906,308, and a continuation-in-part of Ser. No. 329,927, Mar. 29, 1989, Pat. No. 4,910,361, and a continuation-in-part of Ser. No. 365,748, Jun. 13, 1989, Pat. No. 4,966,638. This application Feb. 12, 1990, Ser. No. 478,600

The portion of the term of this patent subsequent to Mar. 6, 2007, has been disclaimed.

Int. Cl.[5] H01B *7/34*

U.S. Cl. 174—121 R **9 Claims**

1. A method of insulating an energy transmission member comprising the steps of:

creating a insulated transmission member by;

wrapping a glass fiber yarn around an energy transmission member;

impregnating the yarn with a metered amount of a first mixture; and

preventing the first mixture from reaching the inner periphery of the yarn and contacting the energy transmission member.

6. An insulated transmission member comprising:

at least one energy transmission member;

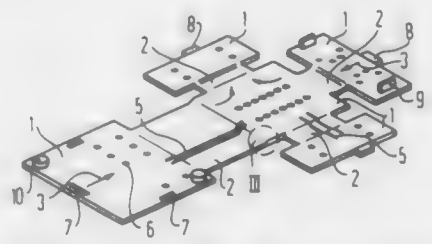
glass fiber yarn wrapped around said energy transmission member, said glass fiber yarn having inner periphery that contacts said transmission member;

said glass fiber yarn being impregnated by a first silicone mixture, said first silicone mixture being impregnated into the outer periphery of said glass fiber yarn, said inner periphery of said glass fiber yarn being unimpregnated such that said first silicone mixture does not contact said transmission member; and

a second silicone mixture coating disposed around the outer periphery of said glass fiber yarn.

5,008,496

THREE-DIMENSIONAL PRINTED CIRCUIT BOARD



Hans-Fr. Schmidt, Eurasburg; Siegfried Rauchmaul, Munich, and Juergen Bednarz, Penzberg, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Filed Jul. 24, 1989, Ser. No. 383,648

Claims priority, application Fed. Rep. of Germany, Sep. 15, 1988, 3831432

Int. Cl.[5] H05K *1/00*

U.S. Cl. 174—254 **20 Claims**

1. A three-dimensional printed circuit board, comprising:

two rigid plate sections capable of lying in different planes;

a flexible connecting section between adjacent plate sections; and

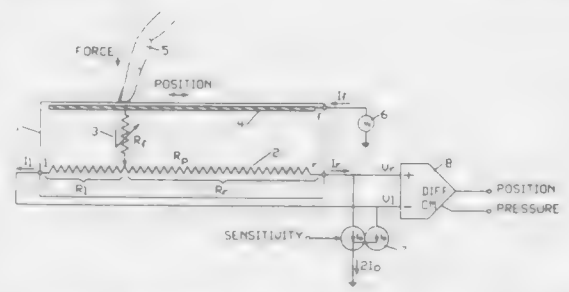
said plate sections and said connecting section being manufactured as a one-piece injection molded part of a thermoplastic molding material, said connecting section being formed as a weak area of a lesser thickness than said plate sections.

15. A method for forming printed circuit boards, comprising the steps of:

injection molding a part of a thermoplastic material to form rigid board sections connected by joining sections in said part, the joining sections being of a thickness substantially less than a thickness of the rigid board sections; and

bending the injection molded part at the joining sections to form a three-dimensional circuit board.

5,008,497



TOUCH CONTROLLER

David J. Asher, P.O. Box 8748, Albany, N.Y. 12208

Filed Mar. 22, 1990, Ser. No. 497,691

Int. Cl.[5] G08C *21/00*

U.S. Cl. 178—18 **11 Claims**

1. A touch controller comprising:

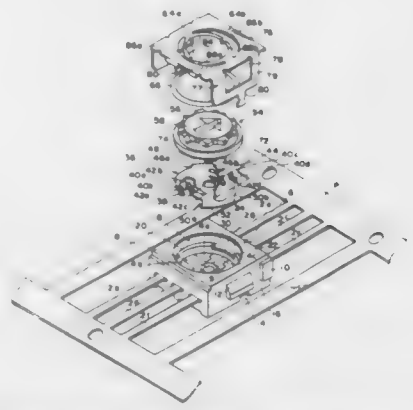
(a) a touch sensor comprising a position resistor having a definite length wherein the impedance of the position resistor changes in response to touch from a disjunct member;

(b) a current regulator electrically connected to the touch sensor for generating a pressure signal by maintaining a prescribed current through the touch sensor whereby the voltage produced by the current regulator changes as a function of the pressure applied to the touch sensor by the disjunct member; and

(c) a differential amplifier electrically connected to the position resistor for generating a position signal by amplifying the differential voltage across the length of the position resistor whereby the differential voltage across the length of the position resistor changes as a function of the position of the disjunct member on the touch sensor.

5,008,498

ROTARY SWITCH



Atsuo Yamazaki, c/o Iruma Center, Copal Electronics Co. Ltd. No. 110-1, Shimoshinden, Araku, Iruma City, Saitama Prefecture, Japan

Division of Ser. No. 376,599, Jul. 7, 1989. This application Jan. 5, 1990, Ser. No. 461,549

Claims priority, application Japan, Aug. 11, 1989, 1-106294[U]; Aug. 11, 1989, 1-200966; Aug. 23, 1989, 1-110242[U]

Int. Cl.[5] H01H *19/60, 21/80*

U.S. Cl. 200—11 R **1 Claim**

1. A rotary switch, comprising:

a housing having an upwardly open chamber opening out of the top of said housing;

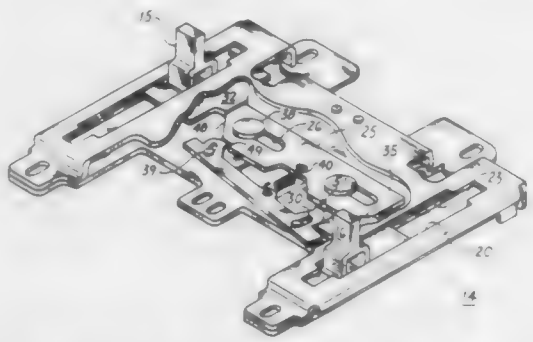
terminal lead fixed contacts in said housing exposed in the bottom of said chamber and spaced from each other in an asymmetrical pattern;

a planar plate-shaped contact member fixedly positioned in said chamber and having a plurality of output contact fingers corresponding to the respective terminal lead fixed contacts and movable transversely of the plane of said contact member and each output contact finger having a contact projection thereon and a contact point thereon and said contact fingers being exposed to corresponding terminal lead fixed contacts in the bottom of said chamber with the contact points normally spaced from said terminal lead fixed contacts;

a rotor rotatably mounted in said chamber and having cam patterns on the under side thereof toward said contact member for engagement with the contact projections on corresponding ones of said contact fingers for causing said contact points to contact said terminal lead contacts in the bottom of said chamber seriatim as said rotor is rotated, and further having click cams around the top thereof;

said housing having a pair of opposite side walls and a center projection projecting laterally of said housing from each side wall, and having a corner projection projecting laterally from each said side wall and spaced from the respective center projections toward one side of said housing for defining a clearance therebetween, said housing further having grooves in the bottom thereof opening out of the bottom edge of said opposite side walls; and

a case having a top wall with a central aperture therein through which the upper portion of said rotor extends, and having depending walls depending from opposite side edges of said top wall along said opposite side walls of said housing, said depending walls each having a side aperture in the center thereof for fitting in snapping engagement



over a corresponding center projection and having a frame portion depending along one side of said side aperture having a width for fitting into said clearance and having a further frame portion extending along the other side of said side aperture having a width greater than said clearance, and depending lugs extending from the bottoms of said depending walls and bent into said grooves for fixedly. holding said case on said housing, and said casing further having click projections depending from said top wall for engagement with said click cams on said rotor for producing an audible click when said rotor is rotated, whereby said case can be fitted onto said housing oriented in only one direction toward said one side of said housing.

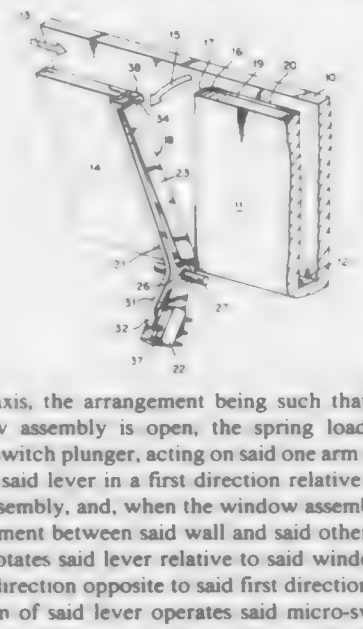
5,008,499

BI-STABLE INTERLOCK ARRANGEMENT FOR MOLDED CASE CIRCUIT BREAKERS

Edgar Yee, Vernon, and Richard E. Bernier, Southington, both of Conn., assignors to General Electric Company, New York, N.Y.

Filed Aug. 20, 1990, Ser. No. 569,897
Int. Cl.[5] H01H *9/26*
U.S. Cl. 200—50 C **10 Claims**

1. An interlock device for electric circuit breakers and switches comprising in combination:
- a planar metal base having first elongated slots arranged on opposite sides thereof;
- a planar metal cover on said base having second elongated slots arranged on opposite sides thereof over said first slots;
- first and second interlock handles arranged for travel within said first and second slots;
- first and second cams attached to said interlock handles, said first and second cams including first and second angulated sides;
- an interlock cam on said base extending between said first and second cams, said interlock cam including angulated ends interacting with said angulated sides to allow only one of said first and second cams and attached interlock handle to move in one direction at any one time; and
- means on said base interacting with said interlock cam to prevent said one of said cams and attached interlock handle from moving in said one direction until the other of said cams has already moved a predetermined distance in an opposite direction.



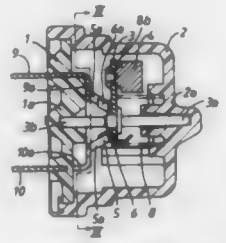
5,008,500

DOCUMENT FEEDER WINDOW CLOSED DETECTION ASSEMBLY

T. A. Hamilton, Fife, Scotland, assignor to Unisys Corporation, Blue Bell, Pa.

Filed May 18, 1990, Ser. No. 525,454
Claims priority, application United Kingdom, May 31, 1989, 8912426
Int. Cl.[5] H01H *3/16*
U.S. Cl. 200—61.7 **7 Claims**

1. A system for detecting the open or closed state of a window assembly in an equipment wall, said window assembly, mounted for rotation about a hinged axis defined by a hinge pin, comprising:
- a micro-switch mounted on an extension of the window assembly;
- a lever freely mounted for rotation on the window assembly hinge axis, one arm of said lever including a portion adapted to engage a plunger of said micro-switch and another arm of said lever including a portion adapted to engage said equipment wall at a point remote from said



hinge axis, the arrangement being such that, when said window assembly is open, the spring loading on said micro-switch plunger, acting on said one arm of said lever, rotates said lever in a first direction relative to said window assembly, and, when the window assembly is closed, engagement between said wall and said other arm of said lever rotates said lever relative to said window assembly in the direction opposite to said first direction so that said one arm of said lever operates said micro-switch by depressing said plunger against said spring loading.

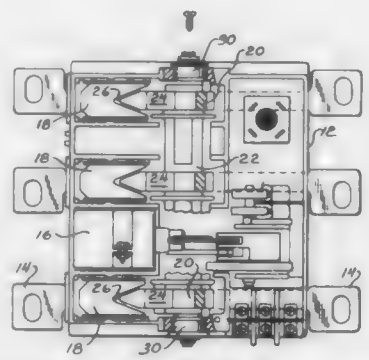
5,008,501

COLLISION DETECTING DEVICE FOR MOTOR VEHICLES

Norio Kumita; Takaaki Yamamoto, both of Okazaki; Seiichi Narita, Kariya, and Takaaki Ori, Nagoya, all of Japan, assignors to Nippondenso Co., Ltd., Kariya, Japan

Filed Sep. 15, 1989, Ser. No. 408,031
Claims priority, application Japan, Sep. 15, 1988, 63-231651; Aug. 8, 1989, 1-205097
Int. Cl.[5] H01H *35/14*
U.S. Cl. 200—61.45 R **9 Claims**

1. A collision detecting device for a motor vehicle comprising:
- a cylindrical case having an open end and a bottom;
- a base plate rotatably coupled within the open end of said case and secured in place to provide a sealed chamber;
- a support shaft housed within said sealed chamber and being rotatably carried at one end thereof on the bottom of said case and at the other end thereof on said base plate;
- a rotary member provided on said support shaft for rotation therewith and having the center of gravity positioned eccentrically from its rotational axis;
- a pair of contact elements provided on said rotary member



for rotation therewith and being symmetrically arranged with respect to the rotational axis of said rotary member;
- a pair of electric terminals fixed to said base plate, said electric terminals each having an internal contact portion slidably engageable with each of said contact elements and an external terminal pin for connection to an electric control circuit; and
- resilient means housed within said sealed chamber to apply a counteracting rotational force to said rotary member depending on an angle of rotation through which said rotary member has rotated.

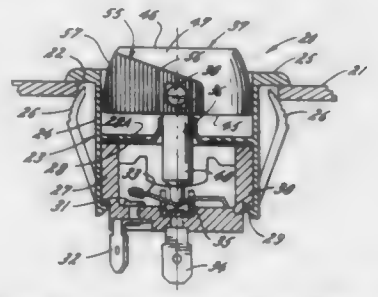
5,008,502

POWER SWITCHING CONTACTOR

Nawaz I. Kassam, 7586 Northway Dr., Hanover Park, Ill. 60103

Filed Feb. 3, 1989, Ser. No. 307,829
Int. Cl.[5] H01H *1/32, 9/04*
U.S. Cl. 200—248 **3 Claims**

3. A power switching contactor for electrical loads comprising:
- (a) a housing for switching contacts;
- (b) a rotatable contactor shaft having a plurality of contact arms selectively engageable with a plurality of contact pads;
- (c) a means for mounting said shaft for rotation in said housing including:
  - (i) a pair of bearings each receiving one end of said shaft, and a pair of slots formed in said housing and dimensioned to receive said pair of bearings, and
  - (ii) a pair of removable filler blocks dimensioned to be received in said slots and being releasably engageable with said bearings for sealing said housing to prevent entry of foreign matter,
- (d) a plurality of alignment pillows positioned on said shaft adjacent the location where the contact arms are secured to said shaft, said alignment pillows being contoured so as to act as a fulcrum, whereby each contact arm can rock side-to-side about a corresponding pillow when its distal end engages the corresponding contact pad thereby to ensure proper electrical contact for efficient flow of electric current.



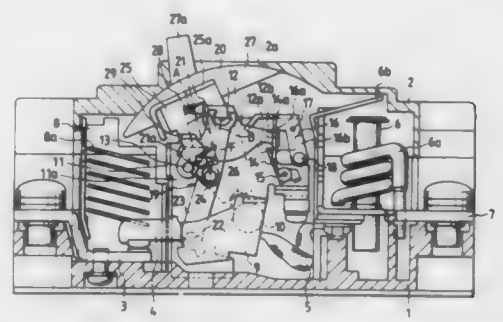
5,008,503

SWITCH WITH COLORED INDICATOR CAP

John A. Stuhlmacher, Crown Point, Ind., assignor to McGill Manufacturing Company, Inc., Valparaiso, Ind.

Filed Oct. 27, 1989, Ser. No. 427,737
Int. Cl.[5] H01H *9/18, 23/14*
U.S. Cl. 200—308 **11 Claims**

1. A switch actuator comprising an enlarged manually engageable head having a first surface, having an oppositely facing second surface and having a peripheral side surface extending between said first and second surfaces around the margins thereof, oppositely extending trunnions projecting transversely from said side surface, and an indicator cap made of resilient material and having trunnion receiving holes for positive snap action attachment to said trunnions for retaining said cap on said head, and said indicator cap and said side wall



being of different colors whereby the cap visually highlights a portion of the actuator.

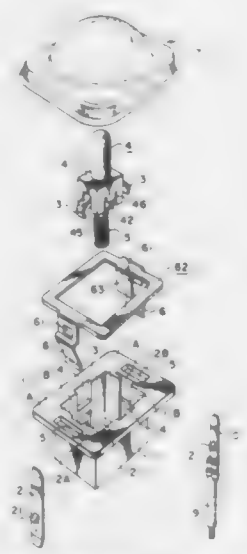
5,008,504

SWITCHING MECHANISM IN CIRCUIT BREAKER

Seishiro Ozaki; Nobuo Asahi, and Tsuneo Ebisawa, all of Kanagawa, Japan, assignors to Fuji Electric Co., Ltd., Kanagawa, Japan

Filed Dec. 29, 1989, Ser. No. 459,363
Claims priority, application Japan, Jan. 6, 1989, 64-966
Int. Cl.[5] H01H *5/06*
U.S. Cl. 200—401 **7 Claims**

1. A switching mechanism in a circuit breaker, comprising:
- a casing;
- means movably coupled to the casing for movably holding a movable contact, said movable contact engaging a stationary contact at times when the circuit breaker is in a normal state and disengaging the stationary contact at times when the circuit breaker is a tripped state;
- a latch coupled to the casing, said latch being located from moving at times when the circuit breaker is in the normal state;
- a toggle link having upper and lower link portions being movably coupled to one another, said upper link portion having a striking part, said upper link portion being coupled to said latch, said lower link portion being coupled to said holding means,
- said toggle link and said latch being relatively pivoted for a snap action, said toggle link being subjected to an elastic force applied in a stable direction within a dead zone by a switching spring at times when the circuit breaker is in the normal state, and being subjected to a rapid variation from the stable direction resulting in the direction of the elastic force leaving the dead zone at times when the circuit breaker is in the tripped state; and
- a stopper fixedly formed on the casing adjacent said upper link portion of said toggle link, said striking part of said upper link portion and said stopper being spaced a distance from one another at times when the circuit breaker is in the normal state, and being relatively positioned so that said striking part strikes said stopper intermediate in the tripping action to shorten a radius about which a



portion of the toggle link pivots, thereby to accelerate the tripping action.

5,008,505

SELF-RESETTING PUSH SWITCH

Tsunesuke Takano, and Kouichi Shinzawa, both of Tokyo, Japan, assignors to Daiichi Denso Buhin Co., Ltd., Tokyo, Japan

Filed Mar. 16, 1990, Ser. No. 494,467
Claims priority, application Japan, Mar. 22, 1989, 1-32225[U]
Int. Cl.[5] H01H *13/52*
U.S. Cl. 200—531 **8 Claims**

1. A self-resetting push switch comprising:

an electrically insulating housing having a bottom surface establishing a closed end of said housing, and an open end opposite said closed end, and first and second pairs of opposing inner wall surfaces extending from said bottom surface;

a pair of first grooves formed on respective ones of said first pair of opposing inner wall surfaces;

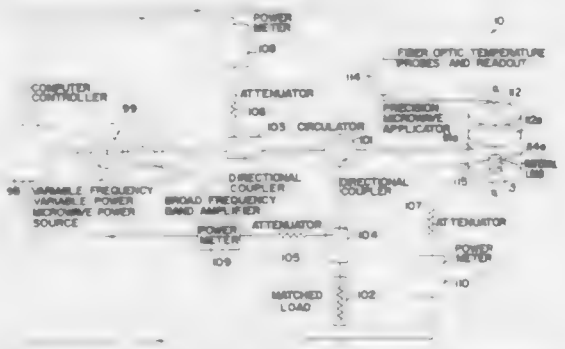
a second groove formed on at least one of said second pair of said opposing inner wall surfaces, said second groove having a projection formed therein;

a first stationary contact piece inserted in one of said first grooves;

an operation rod having an integral sliding sleeve defining a lower surface, and first and second movable contact pieces projecting outwardly from said sliding sleeve, said first movable contact piece being capable of coming into sliding contact with said first stationary contact piece, said sliding sleeve having at least one engagement piece engageable with said projection within said second groove;

a spring interposed between the bottom surface of said housing and the lower surface of said sliding sleeve, and spring urging said operation rod in a direction which causes a part of said operation rod to project outwardly from said housing; and

a frame having a pair of conductive and resilient fixing piece, and a second stationary contact piece capable of coming into sliding contact with said second movable contact piece, wherein



said frame is coupled to an upper portion of said housing such that said pair of conductive and resilient fixing pieces are disposed on opposing side portions of said housing.

5,008,506

RADIOFREQUENCY WAVE TREATMENT OF A MATERIAL USING A SELECTED SEQUENCE OF MODES

Jes Asmussen, Okemos, and Ronald E. Fritz, Haslett, both of Mich., assignors to Board of Trustees operating Michigan State University, East Lansing, Mich.

Filed Oct. 30, 1989, Ser. No. 429,063
Int. Cl.[5] H05B *6/74*
U.S. Cl. 219—10.55 M **28 Claims**

1. A method of heating of an initially liquid or solid material with a complex dielectric constant which changes as a function of radiofrequency heating over a heating time which comprises:

(a) providing a radiofrequency wave generating apparatus including a metallic radiofrequency wave applicator which is excited in one or more of its pre-selected material loaded modes of resonance as a single mode or controlled multimode in the applicator around an axis of the applicator so that there is pre-selected heating of the material in the applicator, antenna means connected to and extending inside the applicator for coupling the radiofrequency wave to the applicator; and

(b) continuously heating the liquid or solid material with an initial complex dielectric constant positioned in the applicator in a precisely oriented position with the radiofrequency wave and maintaining an initial mode of the radiofrequency wave with the material in the applicator as the dielectric constant of the material changes for a period of time during the heating and then shifting to at least one second mode in the applicator during the heating after the first mode is extinguished and maintaining the second mode as the complex dielectric constant of the material changes during the heating, wherein the modes in the applicator are maintained using measured incident and reflected power such that the reflected power from the applicator is continuously tuned to approximately zero in the applicator and the incident power is tuned to a desired level in the applicator.

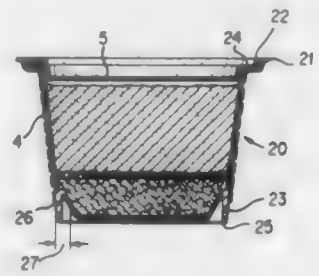
MICROWAVE FOOD PRODUCTS AND METHOD OF THEIR MANUFACTURE

Peter S. Pesheck, Brooklyn Center; William A. Atwell; Madonna M. Krawiecki, both of Andover, and George R. Anderson, Minneapolis, both of Minn., assignors to The Pillsbury Company, Minneapolis, Minn.



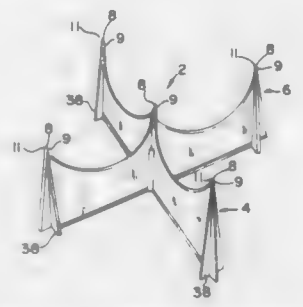
Continuation-in-part of Ser. No. 903,007, Sep. 2, 1986, Pat. No. 4,926,020. This application Aug. 13, 1987, Ser. No. 85,125
Int. Cl.[5] H05B *6/80*
U.S. Cl. 219—10.55 E **58 Claims**

1. A food product for controlled heating in a microwave oven, said food product comprising:

(a) at least one layer of edible component having thickness and dielectric properties;

(b) at least one layer of material proximate said at least one layer of edible component having thickness and dielectric properties; and

(c) the thickness of at least one of said layers and the position of said at least one layer of edible component relative to



said at least one layer of material being selected for the purpose that said at least one layer of edible component will heat to within a preselected temperature range during exposure to microwave radiation.

5,008,508

COOKING APPARATUS FOR SUSPENDING A FOOD PRODUCT

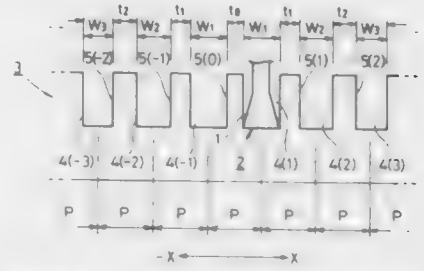
Robert B. Skerker, Buffalo, N.Y., and William Prindle, Santa Barbara, Calif., assignors to Robinson Knife Manufacturing Co., Inc., Sprinville, N.Y.

Filed Mar. 13, 1990, Ser. No. 493,138
Int. Cl.[5] H05B *6/80*
U.S. Cl. 219—10.55 E **11 Claims**

1. An apparatus for suspending a food product while cooking comprising

(a) a least two reversible engageable support members;

(b) a plurality of spaced apart penetration means on each of said support members wherein each of the plurality of penetration means comprises an upwardly extending projection adapted to penetrate and suspend the food product; and



(c) means for ventilating the food product comprising a plurality of legs extending from each of the penetration means downwardly and outwardly in spaced apart relationship thereby forming a channel for the escape of moisture and gases from the food product.

PRODUCTION METHOD OF HONEYCOMB DIE-FORMING ELECTRICAL DISCHARGE MACHINING ELECTRODES AND PRODUCTION METHOD OF HONEYCOMB DIES

Isao Hattori, Nagoya, and Shoji Futamura, Kawasaki, both of Japan, assignors to NGK Insulators, Ltd., Nagoya City and Institute of Technology Precision Electrical discharge Works, Kawasaki, both of, Japan

Filed Mar. 15, 1990, Ser. No. 493,666
Claims priority, application Japan, Mar. 20, 1989, 1-68806
Int. Cl.[5] B23H *9/00, 1/04;* **B29C** *47/12;* **B24B** *53/06*
U.S. Cl. 219—69.15 **6 Claims**

1. A method for the production of an electrical discharge machining electrode for forming a honeycomb die, said electrode being provided with a plurality of electrode groove portions formed by cutting parallel grooves in an electrode material and with a plurality of projecting electrode portions corresponding to forming grooves of the honeycomb die and formed between their corresponding electrode groove portions, comprising the steps of:

cutting said parallel grooves by means of a grinding wheel formed in a reverse tapered shape in which the grinding width is gradually widened toward its peripheral direction; and

progressively dressing said grinding wheel during the cutting of said parallel grooves.

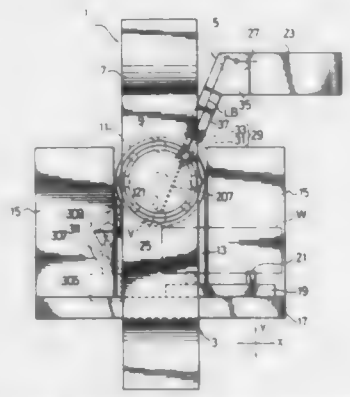
6. A method for the production of a honeycomb die provided with forming grooves, which have configurations corresponding to the profile of a honeycomb structure to be formed and are to be formed by electrical discharge machining using a honeycomb die-forming electrical discharge machining electrode provided with a plurality of projecting electrode portions corresponding to the forming grooves, which comprises;

using, as the honeycomb die-forming electrical discharge machining electrode, a honeycomb die-forming electrical discharge machining electrode provided with a plurality of electrode groove portions, which have been formed by cutting a plurality of grooves in an electrode material while moving a grinding wheel formed into a reverse tapered shape, in which the grinding width is gradually widened toward its peripheral direction, relative to the electrode material so as to cut a groove in the electrode material, and subsequent to the cutting of the groove, relatively moving the grinding wheel and the electrode material by desired pitches in a direction perpendicular to the grinding direction, and dressing the grinding surface of the grinding wheel at plural pitch distances relative to the movement of the grinding wheel and the electrode material toward the directions of both ends from the center portion for the purpose of narrowing the grinding width, and at the same time provided with a plurality of projecting electrode portions formed between their corresponding electrode groove portions, owing to the formation of the plural electrode groove portions, in such a manner that the thicknesses of the plural projecting electrode portions become greater stepwise toward both ends from the center of the electrode;

cutting, as a first machining step, forming grooves being in rows in one direction relative to a material to be formed by electrical discharge machining making use of the hon-

eycomb die-forming electrical discharge machining electrode; and

after completion of the first machining step, cutting, as a second machining step, forming grooves in a direction crossing perpendicularly to said one direction by electrical discharge machining making use of the honeycomb die-forming electrical discharge machining electrode in a condition that the honeycomb die-forming electrical discharge machining electrode and the material to be formed have been relatively rotated 90°;



thereby cutting forming grooves, whose dimensions in width become greater stepwise toward both ends from the center, in the honeycomb die.

LASER PUNCH PRESS, AND BEAM DETECTION DEVICE FOR ADJUSTING THE LASER BEAM PATH

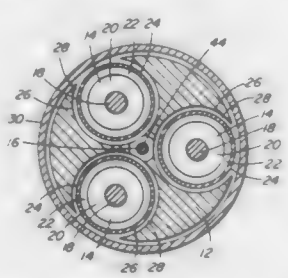
Ryoji Koseki, Fullerton, Calif., assignor to Amada Company, Limited, Kanagawa, Japan

Filed Dec. 29, 1989, Ser. No. 459,298
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.7 14 Claims

1. A punch press having a V-axis and a laser cutting device, which comprises:

a laser cutting head mounted on the punch press;

a laser generator provided in a position spaced from the punch press; and



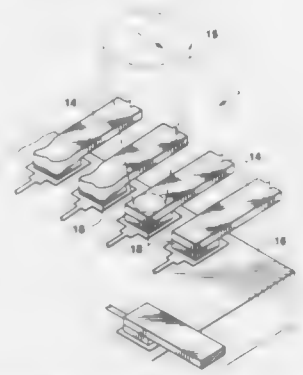
means for laser beam path adjustment of a laser beam from the laser generator to the laser cutting head, wherein the means for beam path adjustment comprises a plurality of reflective surfaces which suitably bend the laser beam and are positioned on the laser generator side spaced from the laser cutting head.

5,008,511

PLASMA TORCH WITH AXIAL REACTANT FEED

Douglas A. Ross, Richmond, Canada, assignor to The University of British Columbia, Canada

Filed Jun. 26, 1990, Ser. No. 543,403
Int. Cl.[5] B23K *9/00*
U.S. Cl. 219—121.48 20 Claims



1. A plasma torch comprising a plurality of arc forming chambers arranged symmetrically about an axis, a first arc forming electrode in each said arc forming chamber, a common electrode cooperating with each of said first electrodes in said chambers to form an arc in each of said chambers a plasma passage through said common electrode opening into each of said chambers, each of said plasma passages leading from its respective of said chamber and converging toward each other in a region of convergence into a single plasma nozzle passage extending along said axis and a reactant feed passage opening axially into an end of said nozzle passage in said region of convergence thereby to inject reactant substantially axially into said plasma nozzle passage and in the direction of travel of a plasma jet formed in said plasma nozzle passage by plasma passing from chambers through said plasma passages into said plasma nozzle passage.

5,008,512

METHOD OF LASER BONDING ELECTRICAL MEMBERS

Phillip J. Spletter, Cedar Park, and Colin A. MacKay, Austin, both of Tex., assignors to Microelectronics and Computer Technology Corporation, Austin, Tex.

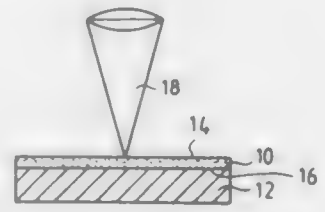
Filed Sep. 8, 1989, Ser. No. 405,377
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.64 16 Claims

1. A method of bonding a first highly reflective metallic electrical member to a second highly reflective metallic electrical member by a laser comprising,

coating the first electrical member with a material that is well absorbent to the laser energy at the wavelength of the laser, has a lower melting point than either of the electrical members, and has a low solubility in a solid alloy of the electrical members,

aligning the first and second electrical members with the coating therebetween,

holding the first and second electrical members in contact with the coating to form an interface, and



bonding the first and second members at the interface by applying a laser beam, wherein the laser characteristics are selected so that as an alloy of the electrical members solidifies a solidification front will drive the molten coating and molten compounds containing the coating away from the bond interface towards the exterior periphery of the bond, wherein substantially all of the solidified bond interface consists of an alloy of the first and second members, and wherein substantially all of the bond interface strength results from an alloy of the first and second members.

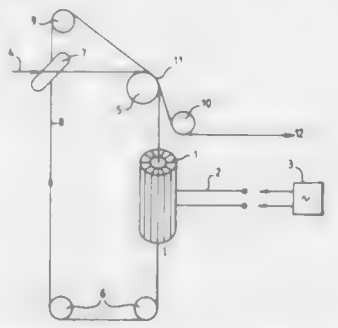
SHAPING OF BONDED ABRASIVE PRODUCTS

Mohammad Najafi-Sani, 4 Heerlen Road, Ormonde, Johannesburg, Transvaal, South Africa, and Philip A. Bex, 4 Hillcrest Road, Camberley, Surrey, United Kingdom

Filed Nov. 9, 1989, Ser. No. 435,199
Claims priority, application United Kingdom, Nov. 10, 1988, 8826305
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.69 7 Claims



1. A method of removing a layer of material from the surface of a bonded abrasive compact including the steps of directing a laser beam at the surface of a bonded abrasive compact, while causing the laser beam to traverse the surface to damage it to a desired depth, wherein the laser beam is first caused to traverse the surface of the bonded abrasive compact in one or more passes creating substantial damage to the surface, followed by a final pass which creates lesser damage, and removing damaged material remaining on the surface.

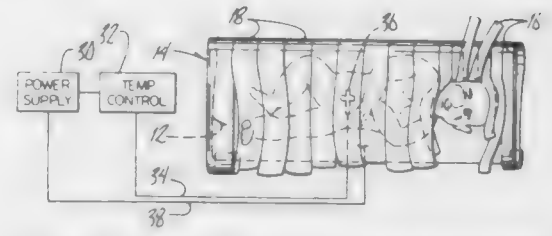
METHOD AND APPARATUS FOR HEATING A METALLIC ELONGATED PRODUCT

John Kyriakis, High Wycombe, Great Britain, assignor to Beta Instrument Company Limited, Buckinghamshire, England

Filed Dec. 29, 1989, Ser. No. 459,239
Int. Cl.[5] C21D *9/62*; H05B *1/00*
U.S. Cl. 219—155 13 Claims

1. Apparatus heating a length of a metallic elongated product, comprising:

a plurality of insulating pulleys for movably guiding a portion of the product over a path including a closed loop, one of said pulleys having a double groove, and another of said pulleys being located adjacent the double-grooved pulley to receive said product from one groove thereof and to return it to the other groove thereof; and



a transformer, a secondary winding whereof comprises said product disposed over said closed loop.

5,008,515

BODY TEMPERATURE RESPONSIVE TRANSPORT WARMING BLANKET

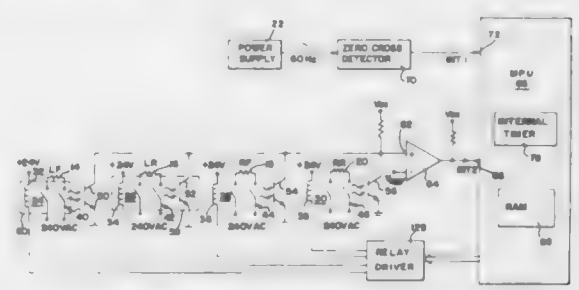
William C. McCormack, 3703 Woodland St., Ames, Iowa 50010

Filed May 10, 1990, Ser. No. 521,410
Int. Cl.[5] H05B *3/34*
U.S. Cl. 219—212 6 Claims

1. A body temperature responsive transport warming blanket comprising,

a blanket having a first section integrally connected to a second section, said second section including a plurality of strips independently operable and adapted to provide access to selected areas of the body wrapped in said blanket,

electrical heating elements extending substantially throughout said first and second sections including said plurality of strips, and



an electrical control circuit including said heating elements, a power supply and a skin contact temperature sensor adapted to be attached to said body, and a temperature control means adapted to be adjusted to a predetermined desired body temperature which is substantially continuously maintained throughout operation and use of the blanket by said heating element being operative only as required and indicated by said temperature sensor to maintain said predetermined desired body temperature within a narrow range.

5,008,516

RELAY CONTROL METHOD AND APPARATUS FOR A DOMESTIC APPLIANCE

Ronald W. Holling, Lincoln Township, Berrien County, Mich., assignor to Whirlpool Corporation, Benton Harbor, Mich.

Filed Aug. 4, 1988, Ser. No. 228,339
Int. Cl.[5] H05B *1/02*
U.S. Cl. 219—519 47 Claims

1. A relay control for an apparatus having a load adapted to be powered by a time varying power supply signal having a zero crossover or minimum magnitude point comprising:

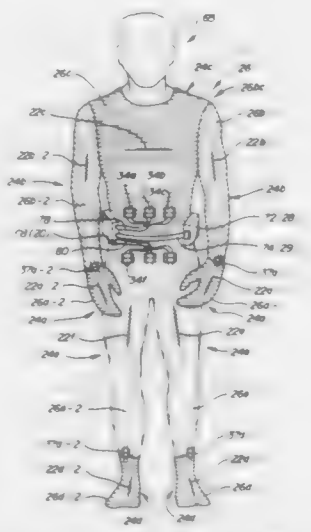
relay means for coupling said power supply signal to said load, said relay means having a contact assembly with open and closed positions;

control means for generating a relay control signal to change the state of said contact assembly between said open and closed positions;

means for sensing the actual change of the state of the contact assembly;

means responsive to said control means and said sensing

means for determining the time delay between the generation of said relay control signal and the actual changing of the contact assembly's state;



said control means being responsive to said power supply signal and said time delay determining means to cause the state of the contact assembly to change when said power supply signal is approximately at said zero crossover or minimum magnitude point.

5,008,517

ELECTRICALLY HEATED FORM-FITTING FABRIC ASSEMBLY

Kevin L. Brekkestran, Fargo, and Barry D. Batcheller, West Fargo, both of N. Dak., assignors to Environwear, Inc., Fargo, N. Dak.

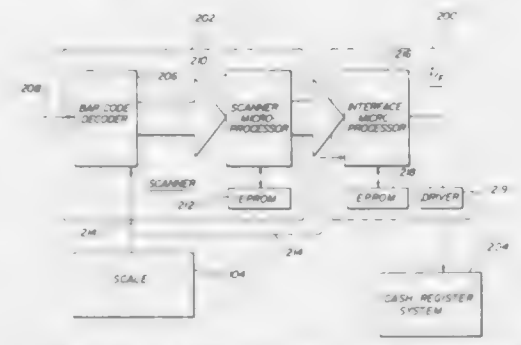
Filed Sep. 8, 1989, Ser. No. 404,827
Int. Cl.[5] H05B *3/34*
U.S. Cl. 219—211 **24 Claims**

1. An electrically heated form-fitting fabric assembly for use in an electrically heated, cold-weather garment, comprising:

lightweight, stretchable, form-fitting fabric means for covering at least a portion of the body of a wearer of the garment, the fabric means being made at least primarily of a lightweight fabric having (1) a weight in the range of about 2 to 20 ounces per square yard, (2) a break elongation of at least 100 percent, (3) a tensile recovery of at least 50 percent from about a 50 percent elongation, and (4) a tensile strength of at least about 0.2 grams per denier;

flexible conductor means arranged in a serpentine fashion relative to the fabric means, for generating heat in response to an electrical current passed therethrough, thereby providing warmth to the wearer of the garment, including at least one multiple-strand conductor having an insulation jacket;

means for securing the said conductor means to the fabric means, the means for securing including stretchable stitching for securing the conductor and its insulating jacket to the fabric, the stitching further being of a pattern operable to draw portions of the fabric on opposing sides of the conductor upwardly into contact with the insulating jacket so as to partially but not completely circumscribe the conductor and its insulating jacket, said stitching circumscribing that part of the conductor which is not circumscribed by the fabric; and



connector means for removably connecting the conductor means with a power source to thereby provide power to the conductor means, thereby enabling the conductor means to generate heat to heat the garment.

5,008,518

DATA GATHERING SYSTEM INTERFACE

Andrew P. Taussig, Eugene, and Blake L. Isaacs, Springfield, both of Oreg., assignors to Spectra-Physics, Inc., San Jose, Calif.

Filed Mar. 24, 1989, Ser. No. 328,177
Int. Cl.[5] G06K *7/14;* **G07G** *1/12*
U.S. Cl. 235—383 **10 Claims**

1. A data gathering system for use in a checkout counter to determine information relating to products to be purchased and to provide such information to a cash register system, comprising:

optical scanning means supported on a subplatter for reading coded labels on products presented to said data gathering system, said optical scanning means including a bar code decoder circuit for decoding scan signals to provide coded label data, a scanner microprocessor for correlating and supplying coded label data, and scanner memory means for storing control software for use by said scanner microprocessor,

scale means supported within said checkout counter for determining weights of said products, said scale means including said subplatter located below the upper surface of said checkout counter, said scale means capable of supplying weight data to said bar code decoder circuit of said optical scanning means, and

a common interface circuit, responsive to both said scale means and said optical scanning means, for providing weight data and coded label data to said cash register system, wherein said scanner microprocessor of said optical scanning means is capable of supplying said coded label data to said common interface circuit, and said scale means is capable of supplying said weight data to said common interface circuit via said scanner microprocessor without alteration

---

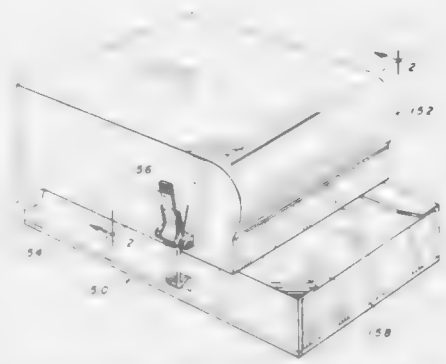
FOOLPROOF COUPON REDEMPTION SYSTEM



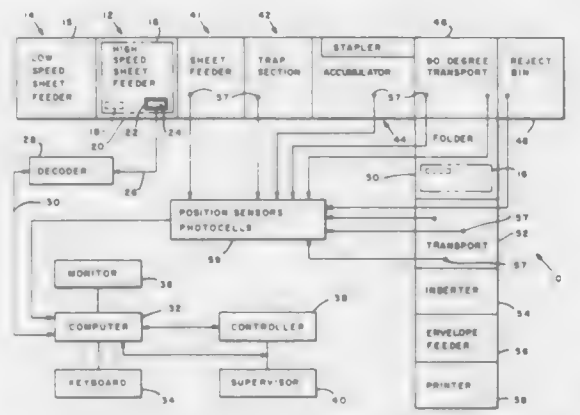
William R. Cunningham, P.O. Box 500, Anna, Ill. 62906; Carmelo S. Amareno, 3775 Bay Rd., Menlo Park, Calif. 94026, and Helmut Kayan, 222 Scenice Dr., Redwood City, Calif. 94062

Filed Nov. 16, 1988, Ser. No. 272,176
Int. Cl.[5] G06K *15/00*
U.S. Cl. 235—383 **37 Claims**

1. A coupon-redemption system for redeeming and validating coupons at a check-out counter of a supermarket, and the like, comprising, in combination:

an electronic cash register for totaling purchased goods of a consumer;

an automatic coupon-reading device for automatically transporting a coupon and reading bar code on a coupon; and



means coupling said coupon-reading device to said cash register for transferring data therebetween.

5,008,520

METHOD AND APPARATUS FOR READING A BAR CODE ON A MOVING SHEET

John Georgiou, 250 Glover Ave. #43, Norwalk, Conn. 06850; Thomas F. Gueth, 43 Whippoorwill Rd., Bethel, Conn. 06801, and James S. Ramsey, 75 Nicholdale Rd., Shelton, Conn. 06484

Filed Nov. 10, 1988, Ser. No. 269,390
Int. Cl.[5] G06F *7/10*
U.S. Cl. 235—462 **16 Claims**

1. An apparatus for reading a bar code symbol on a full sheet, the combination comprising:

feeding means for feeding a sheet at a speed of at least 120 inches/sec,

a fixed beam scanner positioned to scan the bar code symbol on a sheet as a sheet is fed from said support means,

decoding means in communication with said scanner for decoding the bar code scanned by said scanner, and

a computer in communication with said decoder means.

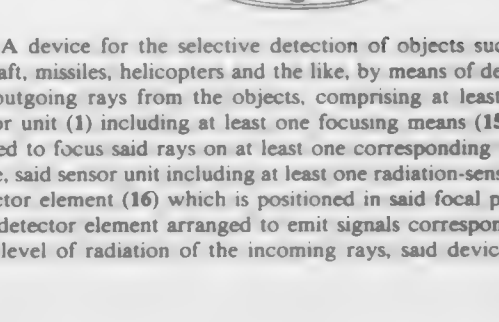
5,008,521

REPRODUCING APPARATUS FOR AN OPTICAL RECORDING MEDIUM

Hiroshi Ohki; Shoei Kobayashi, and Takuya Wada, all of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan

Filed Mar. 29, 1989, Ser. No. 330,299
Claims priority, application Japan, Apr. 6, 1988, 63-86776
Int. Cl.[5] G06K *7/10;* **G07B** *7/12*
U.S. Cl. 235—454 **11 Claims**

1. A reproducing apparatus comprising:



an optical recording medium from which an information signal can be optically read and onto which an information signal is discretely recorded as a plurality of recording units each comprising a plurality of track trains;

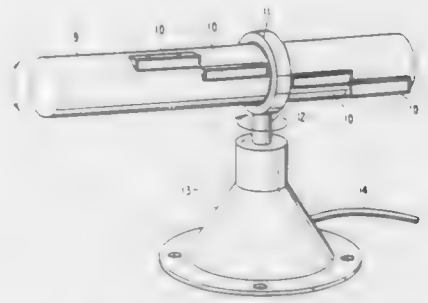
a light source;

an optical system for causing a light beam from said light source to irradiate a whole area of one of said plurality of recording units and for guiding a light beam reflected from said recording medium;

detecting means comprising a plurality of detecting elements arranged two-dimensionally for detecting said reflected beam as guided by said optical system;

extracting means for extracting a detection output of one track train of said recording unit irradiated by said light

source on the basis of an output signal of the detecting means and including a comparing means for successively comparing the detection outputs from said detecting means and a line memory means for storing an output of said comparing means; and



memory means for storing digitally converted detection output from said detecting means and including a first address generating circuit to generate an address in a direction parallel with said track trains and a second address generating circuit to generate an address in a direction perpendicular to the said track trains, and in which an address signal from said first address generating circuit is also supplied to said line memory means.

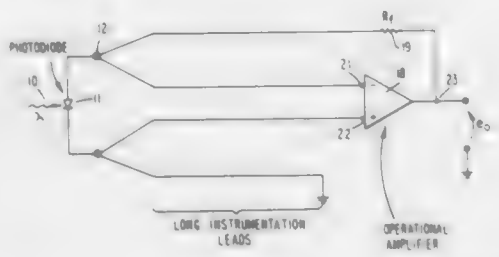
5,008,522

DEVICE FOR THE SELECTIVE DETECTION OF OBJECTS

Jan-Erik Lundin, Västra Frölunda, Sweden, assignor to Saab Missiles Aktiebolag, Sweden

Filed Feb. 28, 1989, Ser. No. 378,514
Claims priority, application Sweden, May 29, 1987, 8702247
Int. Cl.[5] G01J *1/20*
U.S. Cl. 250—203.6 **14 Claims**

1. A device for the selective detection of objects such as aircraft, missiles, helicopters and the like, by means of detecting outgoing rays from the objects, comprising at least one sensor unit (1) including at least one focusing means (15) arranged to focus said rays on at least one corresponding focal plane, said sensor unit including at least one radiation-sensitive detector element (16) which is positioned in said focal plane, said detector element arranged to emit signals corresponding to a level of radiation of the incoming rays, said device ar-



ranged to variably scan an angular field in azimuth and/or elevation, said device further comprising an evaluation unit means (2), arranged to receive said signals, for selecting objects which seem to be of similar size with respect to the angle measured from the position of the device, such objects being large objects at a long distance such as aircraft, and small objects at a short distance, such as birds, by suppressing signals whose amplitude as a function of the scanned azimuth or elevation angle shows a relatively large size compared with signals that show at relatively small size.

5,008,523

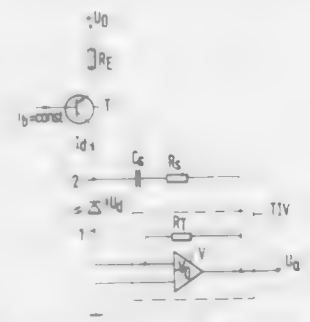
CURRENT MEASURING CIRCUIT WITH MEANS FOR NULLIFYING THE EFFECTS OF CURRENT SOURCE AND LEAD RESISTANCE

Rex M. Davis, West Chester, and Mark E. Greiner, Mason, both of Ohio, assignors to Cincinnati Electronics Corporation, Cincinnati, Ohio

Filed Sep. 26, 1989, Ser. No. 412,715
Int. Cl.[5] H01J *40/14*
U.S. Cl. 250—214 A **10 Claims**

1. A photodetector circuit comprising a photodiode having: (a) first and second terminals, (b) a current generator for deriving a current having an amplitude directly proportional to photons incident thereon, and (c) a resistance affecting the amount of current supplied by a current generator to the first and second terminals, a DC operational amplifier having, an inverting input terminal, a non-inverting input terminal and an output terminal, the amplifier developing a voltage between the output terminal and a reference potential level; a feedback resistor; first, second, third and fourth electric lead wires having appreciable resistance that is substantially the same for each lead wire; the first lead wire and the feedback resistor being connected in series between the first terminal and the amplifier output terminal, the second lead wire being connected between the first terminal and the inverting input terminal, the third lead wire being connected between the second terminal and the non-inverting input terminal, the fourth lead wire being connected between the second terminal and a terminal at the reference potential level, the lead wires being connected to: the first and second terminals, the feedback resistor, the amplifier input terminals and the terminal at the reference potential level so that the voltage between the amplifier output terminal and the reference potential level is directly proportional to the photon rate of the optical energy incident on the photodiode substantially independently of variations in the value of the photodiode resistance.

5,008,524



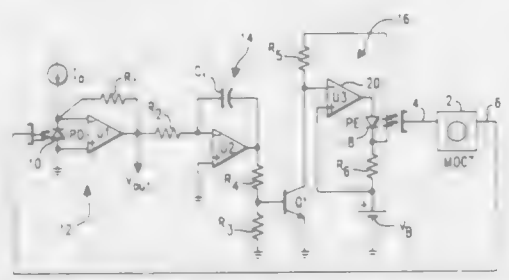
OPTICAL RECEIVER WITH EXTENDED DYNAMIC RANGE

Jörg Reutter, and Frank Krause, both of Stuttgart, Fed. Rep. of Germany, assignors to Alcatel N.V., Amsterdam, Netherlands

Filed Sep. 18, 1989, Ser. No. 408,626
Claims priority, application Fed. Rep. of Germany, Sep. 28, 1988, 3832857
Int. Cl.[5] H04B *9/00*
U.S. Cl. 250—214 A **20 Claims**

1. Optical receiver comprising a photodiode and a transimpedance amplifier, with the photodiode contained in a direct-current circuit between a supply-voltage source and the input of the transimpedance amplifier, and further comprising an element limiting the direct current in the direct-current circuit and an alternating-current circuit fed from the photodiode, which acts as an AC voltage source, and containing an impedance which converts the alternating voltage of the photodiode into an alternating current flowing into the transimpedance amplifier,

characterized in that the alternating current circuit couples the terminal (2) of the photodiode (PD) which is not connected to the input of the transimpedance amplifier (TIV) to the output (U_a) of the transimpedance amplifier.

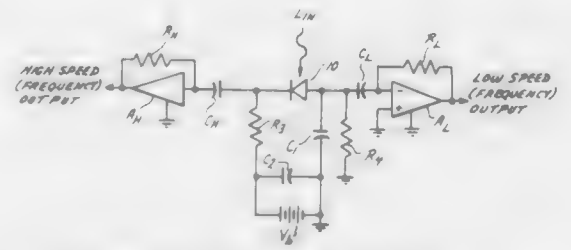


5,008,525

CURRENT MONITORING CIRCUIT ERROR COMPENSATION

Carlo F. Petronio, Ross Township, Allegheny County, Pa., assignor to ABB Power T & D Company, Inc., Blue Bell, Pa.

Filed Aug. 3, 1989, Ser. No. 389,145
Int. Cl.[5] H01J *40/14*
U.S. Cl. 250—214 C **9 Claims**



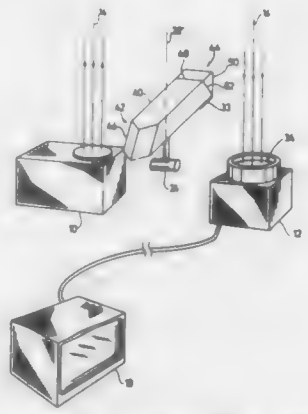
9. In a measuring device including a magneto-optic current transformer defining an optical path having an input and an output and having an optical transmission characteristic such that the relation between optical energy supplied to the input and optical energy arriving at the output is a function of an electrical parameter being monitored, an electrically driven photoemitter disposed for supplying optical energy to the optical path input, photodetector circuit means optically coupled to the optical path output for producing an electrical signal representative of the optical power arriving at the output, and a control circuit connected between the photodetector circuit means and the photoemitter for controlling the light energy supplied by the photoemitter, the transformer and the control circuit together forming a high pass filter having a corner frequency, the control circuit comprising a circuit unit whose temperature influences the corner frequency value the improvement wherein said control circuit further comprises: an amplifier and first compensation means connected to form a negative feedback path of said amplifier for supplying a negative feedback signal which is linearly proportional to the optical power emitted by said photoemitter for causing the corner frequency value to be independent of the relation between the optical power at the input to the path and the optical power at the output of the path; and second compensation means operatively connected for causing the corner frequency value to be independent of the temperature of said circuit unit.

5,008,526

PHOTODETECTOR OUTPUT COUPLING WITH LOW AND HIGH FREQUENCY OUTPUTS

Samuel I. Green, University City, Mo., assignor to McDonnell Douglas Corporation, St. Louis, Mo.

Filed Oct. 2, 1989, Ser. No. 416,003
Int. Cl.[5] H01J *40/14*
U.S. Cl. 250—214 R **15 Claims**



1. A photodetector output circuit, comprising:
(a) a photodetector means for detecting light impinging thereon having a first electrode and a second electrode;
(b) a first connection means for detecting high frequency components of the impinging light connected to the first electrode of the photodetector means providing a high frequency output;
(c) a second connection means for detecting low frequency components of the impinging light connected to the second electrode of the photodetector means providing a low frequency output; and
(d) electrical circuit means for analyzing the high and low frequency outputs of the photodetector means connected to the outputs of the first and second connection means.

5,008,527

OPTICAL SYSTEM EMPLOYING A TRANSMITTING SOLID CORNER CUBE

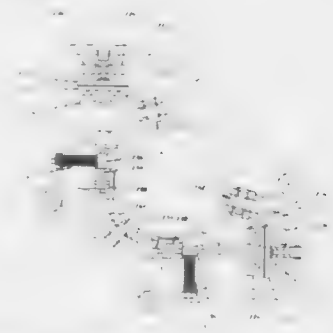
Shalom Wilk, Jerusalem, Israel, assignor to Israel Aircraft Industries Ltd., Ben Gurion International Airport, Israel

Filed Oct. 19, 1989, Ser. No. 423,118
Claims priority, application Israel, Oct. 31, 1988, 88243
Int. Cl.[5] H01J *3/14*
U.S. Cl. 250—216 **18 Claims**

1. Optical apparatus for transferring at least a portion of radiation emitted from a radiation source having a first line of sight to a radiation sensor having a second line of sight comprising:

a corner cube having first and second reflective ends arranged to intersect at predetermined orientations with said first and second lines of sight, respectively, and each having a predetermined orientation relative thereto;

prismatic means mounted onto at least one of said first and second reflective ends so as to define a common interface therewith; and



an optical coating provided at said interface defined by said at least one of said first and second reflective ends and said prismatic means for permitting passage of a first portion of radiation while deflecting a second portion of radiation.

5,008,528

INVERTIBLE TRACKBALL

Douglas Duchon, Chanhassen, Minn., assignor to Logitech S.A., Apples, Switzerland

Filed Jul. 14, 1989, Ser. No. 380,092
Int. Cl.[5] G01V *9/04*
U.S. Cl. 250—221 **7 Claims**

1. A trackball comprising

a lower housing member,

a ball suitable for rotational manipulation by the fingers and generally accessible through the upper surface of the trackball,

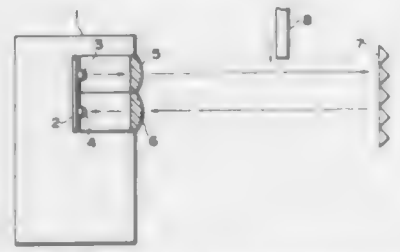
a skeleton member having ball receiving means therein for receiving the ball,

a plurality of optomechanical encoders having the mechanical components thereof mounted on the skeleton member and urged into mechanical engagement with the ball, the mechanical components supporting the ball,

an upper housing member having ball retaining means and capable of being fixedly mounted to the lower housing member and thereby fixedly locating at least the skeleton member therebetween.

5,008,529

PHOTOELECTRIC SWITCHING APPARATUS OF REFLECTION TYPE PROJECTING RED AND INFRARED LIGHT



Arata Nakamura, Kyoto, Japan, assignor to Omron Tateisi Electronics Co., Kyoto, Japan

Continuation of Ser. No. 310,685, Feb. 15, 1989, abandoned.
This application Jul. 6, 1990, Ser. No. 551,046
Claims priority, application Japan, Feb. 15, 1988, 63-18535
Int. Cl.[5] G01V *9/04*; G01J *3/50*
U.S. Cl. 250—221 **12 Claims**

11. A method of detecting an object comprising the steps of:
projecting from a single light projecting diode a red light and an infrared light along a same optical axis;
reflecting the red light and absorbing the infrared light with a reflex reflector located at a position distant from the single light projecting means;
in a photo sensitive means individually detecting the red light reflected from the reflex detector along with red light reflected from an object to be detected and infrared light reflected from the object to be detected and outputting a pair of light detection signals corresponding to the red light and the infrared light;

adding the light detection signals in an adding means to produce an added output and comparing a level of the added output to a first threshold to produce a first comparison output;

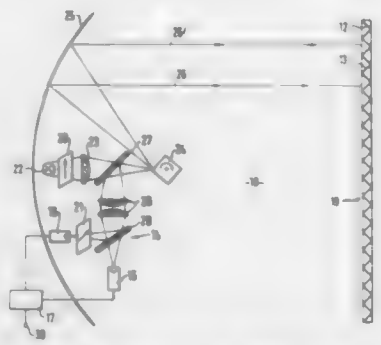
subtracting the light detection signals in a subtraction means to produce a difference output and comparing a level of

the difference output to a second threshold to produce a second comparison output; and

logically combining the first and second comparison outputs in a logic circuit having predetermined logic and outputting an object detection signal in accordance with the predetermined logic.

5,008,530

AUTOCOLLIMATION LIGHT CURTAIN



Hans-Klaus Ball, Freiburg/Brsg., Fed. Rep. of Germany, assignor to Erwin Sick GmbH Optik-Elektronik, Waldkirch, Fed. Rep. of Germany

Filed Dec. 7, 1987, Ser. No. 129,280

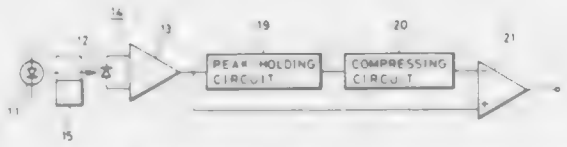
Claims priority, application Fed. Rep. of Germany, Dec. 9, 1986, 3641926

Int. Cl.[5] G01V *9/04*; G08B *13/18*

U.S. Cl. 250—221 **6 Claims**

1. Autocollimation light curtain comprising a light source; a light beam generating optical system; a light deflecting device such as a mirror wheel which receives the light beam, a reflector at the end of a monitoring region which is periodically scanned by the light beam and is subdivided in the scanning direction into a plurality of fields of two types which alternate with each other; and also a light receiving system which receives a received light beam reflected out of the beam path in front of the light deflecting device and which has a photoreceiver for receiving the light reflected back from the reflector when the monitored region is free of obstacles, characterised in that the two alternating types of fields (12, 13) of the reflector (19) have characteristics which influence the spectral range and/or the state of polarisation of the incident light; in that the light receiving arrangement (14) includes a second photoreceiver (16) which is so filtered that it receives only light reflected from the one type (12) of field but not light from the other type (13) of field, whereas the first photoreceiver responds to all light reflected back from the reflector (19); and in that both photoreceivers (15, 16) are connected to a logic circuit (17) which only signals that the monitored region is free of obstacles when the second photoreceiver (16) transmits an alternating signal and the first photoreceiver (15) transmits a dc signal.

5,008,531



PULSED LIGHT IDENTIFYING SYSTEM

Shoichi Ono, Suwa, and Atsuhito Kobayashi, Okaya, both of Japan, assignors to Chinon Kabushiki Kaisha, Suwa, Japan

Filed Aug. 15, 1989, Ser. No. 394,067

Int. Cl.[5] G01V *9/04*; H01J *40/14*

U.S. Cl. 250—222.1 **5 Claims**

1. Apparatus for identifying the presence or absence of an object, comprising:

a light emitting part responsive to a pulsed electrical signal for emitting a pulsed light at a pulse interval;

a light receiving part responsive to said pulsed light for producing a light reception signal having a pulsed characteristic at a pulse rate;

a comparator receiving said light reception signal at a first input thereof;

a peak detection circuit including means for storing a peak value of said light reception signal;

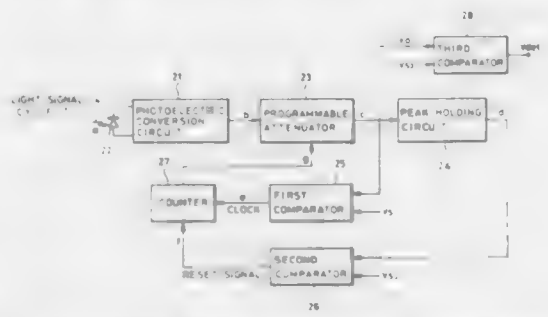
said peak detection circuit having a time constant that is large compared to said pulse interval;

a compressing circuit;

said compressing circuit including means for producing a threshold signal equal to said peak value divided by a predetermined value; and

said threshold signal being connected to a second input of said comparator, whereby an output of said comparator is a pulse signal in synchronism with said pulsed light when there is no object intercepting said light, and which is constant when an object intercepts said light, whereby the presence or absence of said object is detectable.

5,008,532



LIGHT RECEPTION SIGNAL CIRCUIT FOR PHOTOELECTRIC SWITCH

Shoichi Ono, Suwa, and Atsuhito Kobayashi, Okaya, both of Japan, assignors to Chinon Kabushiki Kaisha, Suwa, Japan

Filed Aug. 15, 1989, Ser. No. 394,213

Int. Cl.[5] G01V *9/04*; H03G *3/10*

U.S. Cl. 250—222.1 **14 Claims**

1. A photoelectric switch of a type adapted for use with a pulsating light beam having an emission period, comprising:

means for detecting said pulsating light beam to produce a light detection signal;

means for attenuating said light detection signal to produce an output signal;

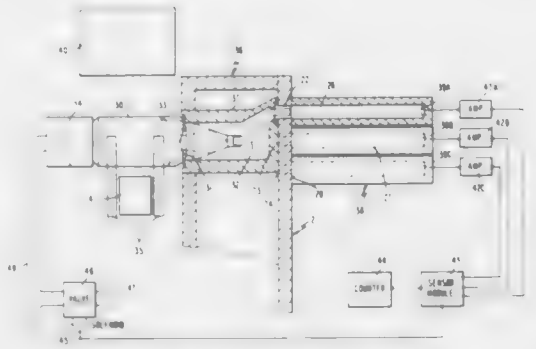
means for producing a pulsating clock signal synchronized with pulsations of said pulsating light beam only when said output signal exceeds a predetermined upper threshold;

control means, responsive to said pulsating clock signal, for producing a digital control signal;

said means for attenuating being responsive to said digital control signal to add a predetermined amount of attenuation each time said pulsating clock signal is produced; and

means for removing a predetermined amount of attenuation from said light detection signal when said output signal falls below a predetermined lower threshold, whereby said output signal is maintained in a range between said upper threshold and said lower threshold.

5,008,533



HIGH SPEED FIBER OPTIC CONTAINER INSPECTION APPARATUS AND METHOD

Harry W. Lee, Jr., Bon Air, Va., assignor to Reynolds Metals Company, Richmond, Va.

Filed Jan. 29, 1990, Ser. No. 471,586

Int. Cl.[5] G01N *9/04*

U.S. Cl. 250—223 B **18 Claims**

1. A light testing apparatus for testing a plurality of container like objects moving in series order along a prescribed path, said path including a portion irradiated by a light source, said apparatus comprising:

a plurality of light conducting means for conducting light, one of said plurality associated respectively with each said object for movement therewith in position to be shielded by said object from said light source; and

sensing means responsive to light conducted by said light conducting means, whereby a defect in said object, permitting light transmission from said light source through said defect to said light conducting means, can be determined, wherein

said sensing means comprises a light sensing unit, said unit comprising a light sensor disposed within a stationary housing, said housing having an end panel thereof provided with an aperture, said aperture having a slot configuration, said aperture positioned to face said light conducting means.

5,008,534

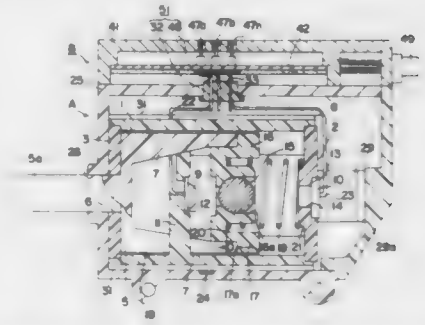
CONTACTLESS SWITCH HAVING TRANSLATING FOCUSING/DEFOCUSING LENS

Tatsushi Yonezawa, Takatsuki, and Satosi Nozoe, Kyoto, both of Japan, assignors to Omron Tateisi Electronics Co., Kyoto, Japan

Filed Aug. 30, 1989, Ser. No. 400,654

Int. Cl.[5] G01D *5/34*

U.S. Cl. 250—229 **14 Claims**



1. A contactless switch, comprising:

a casing defining an axial bore;

a light emitting element disposed in said bore to produce a light beam directed in an axial direction of said axial bore;

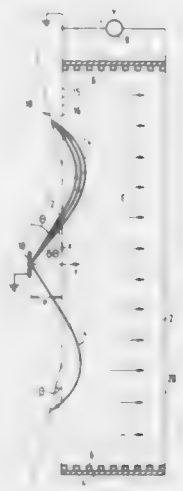
a light receiving element disposed in said bore opposite to said light emitting element defining a certain axial space therebetween;

a lens carrier carrying a lens element and interposed between said light emitting element and said light receiving element in an axially slidable manner; and

a plunger member having one end projecting axially out of one of axial ends of said casing and another end engaging with said lens carrier.

5,008,535

ENERGY ANALYZER AND SPECTROMETER FOR LOW-ENERGY ELECTRONS



Gerardus G. P. Van Gorkom, Eindhoven, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 29, 1989, Ser. No. 400,182

Claims priority, application Netherlands, Sep. 2, 1988, 8802170

Int. Cl.[5] H01J *40/00*

U.S. Cl. 250—305 **28 Claims**

1. An energy analyzer for low-energy electrons comprising

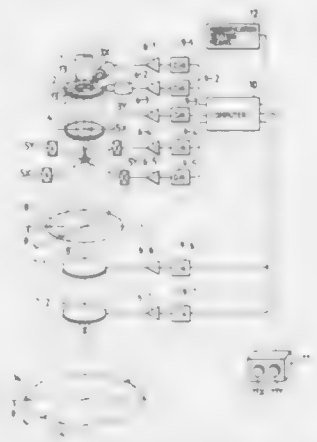
(a) an electrically insulating tubular section having rotational symmetry disposed about an analyzer space, a homogeneous and uniform electrical field being generated in said analyzer space, said analyzer space including an entrance aperture and an exit aperture, said exit aperture being an annular slot,

(b) a helical electrical resistance layer disposed at an inner side of said tubular section, said helical electrical resistance layer being coaxial with said tubular section,

(c) an electrical conductor disposed at ends of said tubular section, and

(d) detector means for detecting electrons emanating from said exit aperture, said detector means including an annular, flat channel plate arranged opposite to said exit aper-

ture, said annular, flat channel plate being concentric with said exit aperture,



wherein said energy analyzer comprises an anode, said anode including a number of anode rings electrically insulated from one another, said number of anode rings being electrically interconnected in a two-by-two fashion.

5,008,536

ELECTRON MICROSCOPE HAVING ELECTRICAL AND MECHANICAL POSITION CONTROLS FOR SPECIMEN AND POSITIONING METHOD

Shigeto Isakozawa, and Takahito Hashimoto, both of Katsuta, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 5, 1989, Ser. No. 446,283
Claims priority, application Japan, Dec. 5, 1988, 63-307278
Int. Cl.[5] H01J *37/26*
U.S. Cl. 250—307 **11 Claims**

9. A specimen and image position controlling method, for use in an electron microscope, comprising the steps of:

setting a magnification of the electron microscope;

setting a moving distance and a moving direction of a stage on which said specimen is placed;

comparing the setting of magnification with a predetermined magnification value;

shifting only an image of said specimen when the setting of magnification is larger than the predetermined value; and

shifting only the specimen in a certain direction and for a certain distance when the setting of magnification is not larger than the predetermined value.

5,008,537

COMPOSITE APPARATUS WITH SECONDARY ION MASS SPECTROMETRY INSTRUMENT AND SCANNING ELECTRON MICROSCOPE

Hiroshi Toita, Katsuta; Hifumi Tamura, Hachioji; Issei Tobita, Ibaraki, and Hiroshi Iwamoto, Katsuta, all of Japan, assignors to Hitachi, Ltd., Tokyo and Hitachi Instrument Engineering Co., Ltd., Ibaraki, both of, Japan

Filed Sep. 20, 1989, Ser. No. 409,761
Claims priority, application Japan, Sep. 22, 1988, 63-236351
Int. Cl.[5] H01J *37/26*
U.S. Cl. 250—309 **16 Claims**

1. A composite apparatus with secondary ion mass spectrometry instrument and scanning electron microscope comprising:

at least one kind of liquid metal ion source;

an ion source other than said liquid metal ion source;

a primary ion separating device for mass-separating an ion beam emitted from said ion source other than said liquid metal ion source;

deflecting means for bringing the ion beam from said ion source other than said liquid metal ion source into alignment with a primary beam axis which is an optical axis of an irradiating system;

moving means for moving a position of said liquid metal ion source so that an ion beam emitted from said liquid metal ion source is aligned with said primary beam axis;

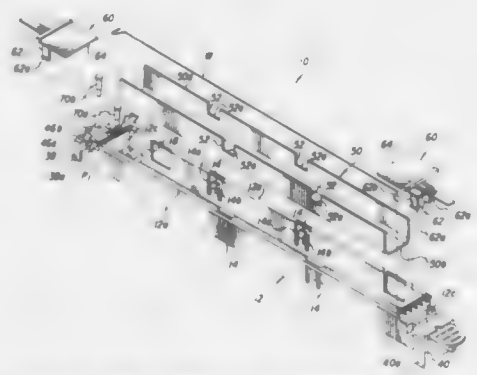
an electron gun for emitting an electron beam;

moving means for moving a position of said electron gun so that the electron beam emitted from said electron gun is aligned with said primary beam axis;

focusing means for focusing the ion beam or the electron beam to irradiate a specimen with the focused beam;

detecting means for detecting secondary electrons and secondary ions emitted from said specimen;

analyzing means for analyzing said specimen on the basis of a signal from said detecting means; and



said liquid metal ion source or said electron gun being disposed between said primary ion separating device and said specimen.

5,008,538

CORONA CHARGER APPARATUS OF SIMPLIFIED CONSTRUCTION

Michael L. DeCecca, Fairport; Michael S. Kowalczyk, Rochester; Thomas W. Gray, Rochester, and Paul W. Partridge, Rochester, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Aug. 3, 1989, Ser. No. 389,192
Int. Cl.[5] H01T *19/04*
U.S. Cl. 250—324 **9 Claims**

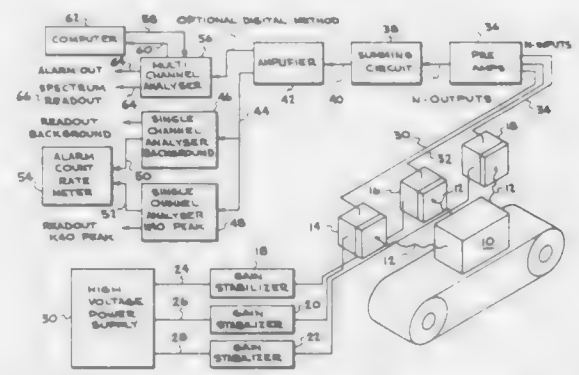
1. A corona charger apparatus comprising:

a conductive corona wire;

a generally U-shaped conductive shield;

a pair of non-conductive end caps; and

a generally U-shaped non-conductive housing, said housing



being formed with a plurality of respective integral features which include a plurality of clips respectively having a surface engaging an edge surface of said shield, and at least one cantilever beam spring urging said shield in a direction where said clip surfaces are in held in positive engagement with said edge surfaces of said shield to retain and accurately space said shield within the housing, and further integral features which locate and properly tension said corona wire, support electrical terminals, retain and locate said end caps, and enable the assembled apparatus to be accurately located by an unskilled operator.

5,008,539

PROCESS AND APPARATUS FOR DETECTING PRESENCE OF PLANT SUBSTANCES

John A. Kirby, Las Vegas, Nev., assignor to The United States of America as represented by the United States Department of Energy, Washington, D.C.

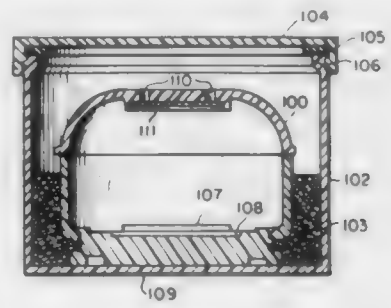
Filed Aug. 1, 1990, Ser. No. 561,633
Int. Cl.[5] G01N *33/00;* **G01T** *1/20*
U.S. Cl. 250—336.1 **17 Claims**

1. A process for detecting the presence of plant substances in a particular environment which comprises the steps of:

(a) measuring the background K40 gamma ray radiation level in a particular environment with a 1.46 MeV gamma ray counter system;

(b) measuring the amount of K40 gamma ray radiation emanating from a package being passed through said environment with said counter; and

(c) signaling the presence of plant substances by generating an alarm signal when the total K40 gamma ray radiation reaches a predetermined level over and above the background level.



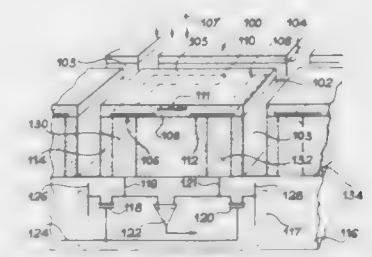
5,008,540

ELECTRET GAMMA/X-RAY LOW LEVEL DOSIMETER

John C. Dempsey, Frederick, Md., assignor to Rad Elec Inc., Frederick, Md.

Continuation-in-part of Ser. No. 936,240, Dec. 1, 1986, Pat. No. 4,853,536. This application Jul. 31, 1989, Ser. No. 387,497
Int. Cl.[5] G01T *1/14*
U.S. Cl. 250—336.1 **37 Claims**

1. An apparatus for monitoring gamma or X-ray radiation comprising a chamber having an inner surface which is electrically conductive, an electret positioned within the chamber for holding an electrostatic charge which collects ions formed in the chamber by bombardment of gamma or X-ray radiation, and a removable means connected with the chamber for



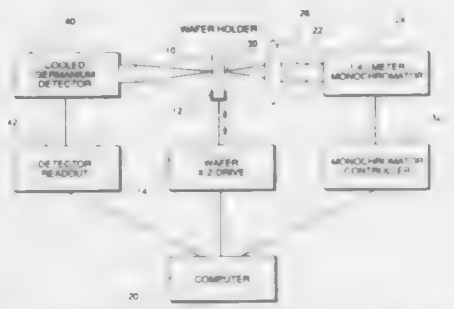
mounting the electret, said chamber enclosed in a radioactive gas tight container.

5,008,541

MONOLITHIC DETECTION OR INFRARED IMAGING STRUCTURE AND ITS PRODUCTION PROCESS

Luc Audaire, Grenoble; Jean C. Peuzin, Herbeys, and Bernard Schaub, Lans-En-Vercors, all of France, assignors to Commissariat Energie Atomique, Paris, France

Filed Nov. 17, 1989, Ser. No. 438,768
Claims priority, application France, Nov. 29, 1988, 88 15581
Int. Cl.[5] H04N *5/33;* **G01J** *5/10*
U.S. Cl. 250—338.3 **12 Claims**



1. A monolithic detection or infrared imaging structure comprising at least one electrically and thermally insulating polymer layer (**114, 216, 218, 220**), infrared sensors (**102, 102*a*, 102*b*, 102*c*, 102*d*)**, which are insulated from one another and have a pyroelectric polymer film (**104**), whose face (**109**) in contact with the insulating layer (**114**) is equipped with two comb-shaped electrodes (**106, 108**), whose teeth (**110, 112**) are imbricated, the pyroelectric polymer film (**104**) being polarized (**111**) in a plane parallel to said face of the film in directions parallel (x) and perpendicular (y) to the teeth of the combs, an integrated circuit (**116**) having a face (**134**) in contact with the insulating layer (**114**) equipped with reading circuits (**117, 117*a*, 117*b*, 117*c*, 117*d*)** and electrical contact zones (**130, 132, 222, 224, 226**) completely traversing the insulating layer and connecting the electrodes (**106, 108**) of each sensor to a reading circuit (**117, 117*a*, 117*b*, 117*c*, 117*d*)**.

5,008,542

METHOD AND SYSTEM FOR AUTOMATED MEASUREMENT OF WHOLE-WAFER ETCH PIT DENSITY IN GAAS

David C. Look, Dayton; James S. Sewell, Kettering; Millard G. Mier, Yellow Springs; John R. Sizelove, Kettering; Dennis C. Walters, Fairborn, all of Ohio, and Scott C. Dudley, Air Force Academy, Colo., assignors to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Dec. 20, 1989, Ser. No. 456,924
Int. Cl.[5] G01N *21/88, 21/35*
U.S. Cl. 250—341 **11 Claims**

4. A method for producing a map of etch pit density in a GaAs wafer surface, comprising the steps of:

a. determining etch pit density (ρ_D) at at least two points on said GaAs wafer surface;

b. focusing a light source of predetermined wavelength at a plurality of points on said GaAs wafer surface;

c. detecting the fractional transmission (T) of said light source through said GaAs wafer surface at said plurality of points;

d. selecting two locations on said GaAs surface where one of said at least two points in step a is in common with one of said plurality of points in step c; one of the locations being in an area of said GaAs wafer surface having relatively high transmission and other in an area having relatively low transmission;

e. determining the average area (a) of etch pits on said GaAs wafer surface;

f. calibrating a reference transmission point (T_O) from the fractional transmission and the etch pit density at one of said two locations in step d where the transmission is high,

g. calibrating a reference transmission point (T_E) from the fractional transmission and etch pit density at the other of said two locations in step d where the transmission is low; and

h. generating a map of etch pit density (ρ_D) at each of said plurality of points according to the equation

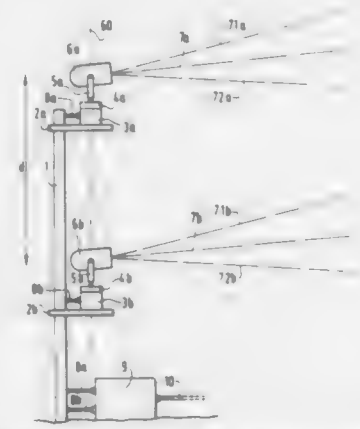
$$\rho_D = -\frac{1}{a}\ln\frac{T^4 - T_E^4}{T_O^4 - T_E^4}$$

5,008,543

SYSTEM FOR DETERMINING THE POSITION OF AT LEAST ONE TARGET BY TRIANGULATION

Michel P. Bertrand, Fontenay-Sous-Bois; Michel B. Bucher, Paris, and André R. Delclaux, Champigny sur Marne, all of France, assignors to Sat(Societe Anonyme De Telecommunications, France

Filed Jan. 17, 1990, Ser. No. 466,501
Claims priority, application France, Jan. 18, 1989, 89 00531
Int. Cl.[5] G01C *3/08, 3/20*
U.S. Cl. 250—342 **10 Claims**



1. A system for determining the position of at least one target emitting radiation, comprising:

two passive sighting devices, sensitive to said radiation, disposed at a distance from each other and movable in rotation about a substantially vertical common axis,

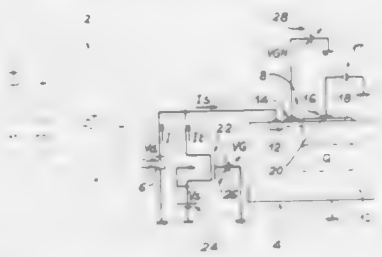
means for measuring the intensity of the radiation received by one of the sighting devices along a sighting line scanning a substantially vertical sighting plane, common to the two sighting devices,

means for extracting, in response to the intensities measured, the values of the elevation angles of said target relatively to the two sighting devices, and

means for computing, in response to the values of the elevation angles, the distance of said target by triangulation in

said substantially vertical common sighting plane, wherein

each of the two sighting devices comprises its own means for measuring the intensity of the radiation received, its own drive means for driving it in rotation about said common axis and its own means for measuring its bearing angle, and



means are provided for controlling said means driving it in rotation about said common axis, in response to the values of the bearing angles measured, and arranged so that said bearing angles are equal.

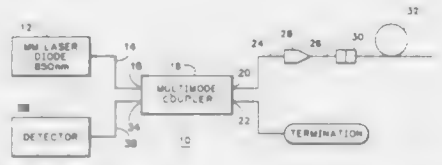
5,008,544

SYSTEM FOR THE DETECTION OF INFORMATION IN THE FORM OF ELECTROMAGNETIC RADIATION AND READING THE DETECTED INFORMATION

Pierre Nicolas, Saint Egreve, and Philippe Pantigny, Grenoble, both of France, assignors to Commissariat a l'Energie Atomique, Paris, France

Filed Jul. 19, 1989, Ser. No. 382,427
Claims priority, application France, Aug. 1, 1988, 88 10375
Int. Cl.[5] H01L *31/09*; G01J *5/06*
U.S. Cl. 250—349 **10 Claims**

1. System for the detection of information in the form of electromagnetic radiation and reading the detected information, said system comprising information photodetection means, which have N photodetectors, each photodetector being able to supply a current having an information carrier component and a component not carrying information, N being an integer at least equal to 1, and means for reading the information detected in this way and using for this purpose the



current supplied by each photodetector and N other regulatable means respectively associated with the N photodetectors, each other regulatable means being able to remove a current of regulatable intensity from the current supplied by the associated photodetector prior to the use of the latter current by the reading means so as to remove the component not carrying information from the current supplied by the respective photodetector.

5,008,545

HIGH RESOLUTION OPTICAL FAULT LOCATOR

Duwayne R. Anderson; Robert W. McMahon, both of Redmond, and Barry L. Rosenow, Bend, all of Oreg., assignors to Tektronix, Inc., Beaverton, Oreg.

Filed Oct. 23, 1989, Ser. No. 425,770
Int. Cl.[5] G01N *21/45*
U.S. Cl. 250—358.1 **5 Claims**

1. An optical fault locator for examining a single mode optical fiber under test wherein optical pulses are input into the single mode optical fiber under test and a return optical signal is received from the single mode optical fiber under test, the optical fault locator comprising:

a high power, short wavelength optical power source for generating the optical pulses;

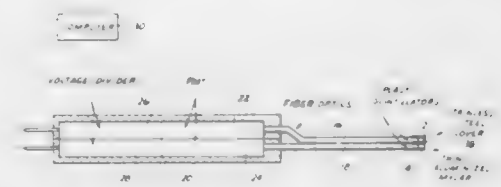
an optical detector compatible with the high power, short wavelength optical power source for receiving the return optical signal from the single mode optical fiber under test;

a multimode optical coupler having input ports and output ports with each input port having associated multiple output ports, the optical pulses from the optical power source being received at a first input port and coupled to an output multimode optical fiber connected to one of the output ports associated with the first input port and the return optical signal being received at a second input port and coupled to the optical detector connected to one of the output ports associated with the second input port, the multimode optical coupler equally dividing the optical power of each propagating mode from the optical source and the return optical signal between the associated output ports of the input ports; and

a single mode optical fiber spliced to the output multimode optical fiber, the single mode fiber having a connector for coupling the single mode optical fiber under test to the optical fault locator.

5,008,546

INTRAOPERATIVE BETA PROBE AND METHOD OF USING THE SAME



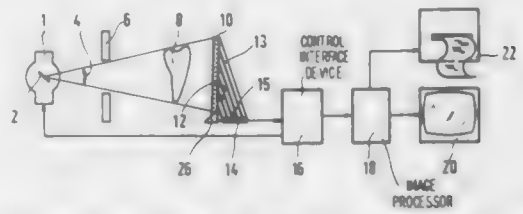
John C. Mazziotta, Beverly Hills, Calif.; Farhad Daghighian, New York, N.Y., and Edward J. Hoffman, Van Nuys, Calif., assignors to The Regents of the University of California, Oakland, Calif.

Filed Jun. 18, 1990, Ser. No. 539,794
Int. Cl.[5] G01T *1/161, 1/20, 1/203*
U.S. Cl. 250—366 **20 Claims**

1. A probe system for preferentially detecting beta radiation over background gamma radiation from a source of beta and gamma radiation comprising:

a first means for detecting beta and gamma radiation at an arbitrarily selected location; and

a second means for selectively detecting only one type of radiation of said beta and gamma radiation, said second and first means coupled together,



whereby beta radiation from near sources is reliably detected and differentiated from gamma radiation emitted from far sources.

5,008,547

DENTAL X-RAY IMAGE DETECTION SYSTEM

Roberto Molteni, and Giulio Zanmarchi, both of Monza, Italy, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Nov. 30, 1989, Ser. No. 444,930
Claims priority, application European Pat. Off., Dec. 8, 1988, 88202809.5
Int. Cl.[5] A61B *6/14*
U.S. Cl. 250—368 **18 Claims**

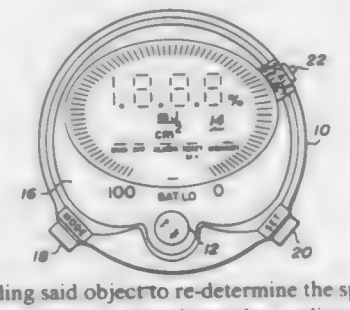
1. A dental X-ray detection system for detecting at least one tooth at a time, said system including an optically sensitive sensor optically coupled to a luminescent screen, an optical fibre device for coupling said screen to said sensor comprising in combination with said screen and sensor:

at least one optical fibre having an optical axis, said at least one fibre having first and second end surfaces, one end having a first surface oblique with respect to said optical axis, said first surface defining a first area of a given magnitude, one of said end surfaces comprising means for receiving an X-ray image transmitted thereto by said luminescent screen, said second end surface defining a second area of a second magnitude different than the first area magnitude, the other of said surfaces comprising means for transmitting said received image to said sensor, said device further comprising a cascade of two optically coupled fibre optics devices each comprising means for reducing a dimension of the received X-ray image independently of each other.

5,008,548

PERSONAL UV RADIOMETER

Nahum Gat, 1227 9th St., Manhattan Beach, Calif. 90266



Filed Aug. 1, 1989, Ser. No. 388,115
Int. Cl.[5] G01J *5/32*
U.S. Cl. 250—372 **36 Claims**

1. In the method of preventing overexposure of an object located in a three dimensional field of ambient ultraviolet radiation of the range of 250 to and including 400 nanometers in wavelength in which such radiation travels toward the object from a plurality of directions, said method including the steps of monitoring ultraviolet radiation dosage by means of a ultraviolet radiation dosimeter and removing or covering said object upon attainment of predetermined exposure to prevent significant additional radiation from reaching said object, the improvement in which the step of monitoring radiation dosage includes the steps of:

moving an ultraviolet radiation sensor about the space surrounding said object to determine the specific direction from which ultraviolet radiation of 250 through 400 nanometers in wavelength traveling toward said object is of a maximum intensity level;

retaining said radiation sensor oriented in said specific direction for a desired interval to monitor ultraviolet radiation dosage received by said object while said object remains exposed to said radiation field;

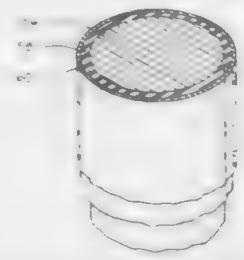
moving said ultraviolet radiation sensor about the space

surrounding said object to re-determine the specific direction from which said ultraviolet radiation traveling toward said object is of a maximum intensity level after the lapse of said desired interval;

retaining said radiation sensor oriented in said specific direction as redetermined to continue to monitor ultraviolet radiation dosage received thereafter by said object while said object remains exposed to said radiation field; and

withdrawing said object from said ultraviolet radiation field in the event the dosage exceeds a predetermined threshold.

5,008,549



HIGH PERFORMANCE, VACUUM COMPATIBLE ELECTROMAGNETIC LENS COIL

Albert V. Crewe, Palos Park, Ill., assignor to Orchid One Corporation, Palos Hills, Ill.

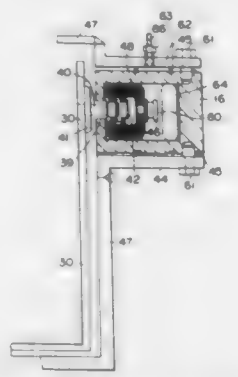
Filed Apr. 10, 1990, Ser. No. 507,170

Int. Cl.[5] H01F *7/22*

U.S. Cl. 250—396 ML **30 Claims**

1. A high performance, vacuum compatible electromagnetic electron lens coil for electron beam systems having reduced gaseous emissions and improved heat dissipation capability, comprising a wound coil of electrically conductive wire sheathed in a selected thermoplastic resin insulator, said wire insulator being coated with a hermetic layer of low vapor pressure metal, the low vapor pressure and hermetic sealing properties of the layer providing ultra high vacuum compatibility of the coil, while the high thermal conduction property of the layer provides high heat dissipation capability and therefore permits high current densities in the coil, whereby said coil can provide low cost, highly efficient, high electromagnetic performance in an unsealed state in a high vacuum environment.

5,008,550



CONVEYOR SYSTEM FOR IRRADIATED FOOD PRODUCTS

Lawrence G. Barrett, Lynchburg, Va., assignor to Applied Food Processors, Inc., Lynchburg, Va.

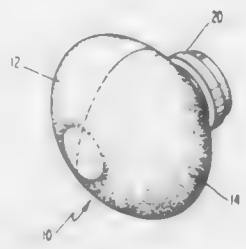
Division of Ser. No. 184,878, Apr. 22, 1988, Pat. No. 4,908,221, which is a division of Ser. No. 819,254, Jan. 16, 1986, Pat. No. 4,760,264. This application Nov. 27, 1989, Ser. No. 441,642

Int. Cl.[5] A23L *3/26*

U.S. Cl. 250—453.1 **7 Claims**

1. A conveyor system for conveying food products through an irradiator, said conveyor system comprising a plurality of baskets with walls, each of said baskets having at least one shaft extending outwardly from one of said walls in a generally horizontal fashion, said system further comprising a first roller chain connected to said shafts, said roller chain being attached to a plurality of spaced chain guides with slots for moveably receiving said chain, said chain and said guides being independently removably positioned within a first generally rectangular casing.

5,008,551



PHOSPHORESCENT LUMINOUS DOOR KNOBS COVER

Timothy T. Randolph, 1415 Alameda Dr. S., Lakeland, Fla. 33805

Filed May 16, 1989, Ser. No. 352,805

Int. Cl.[5] F21K *2/00*

U.S. Cl. 250—462.1 **4 Claims**

1. A luminescent door knob cover comprising:

a first rigid cover member having a first part that conforms to a first half of a door knob and having an integral second part that conforms to a first half of a door knob neck;

a second rigid cover member having a first part that conforms to a second half of said door knob and having an integral second part that conforms to a first half of said door knob neck;

said first and second parts of said respective first and second cover members being formed entirely of a hardened carrier means having phosphorescent powder admixed therein;

said carrier means having a predetermined thickness;

an annular band disposed in circumscribing relation to said integral second parts of said first and second cover members when said first and second cover members are disposed in overlying relation to said door knob and in confronting relation to one another;

said first and second cover members exhibiting bilateral symmetry with respect to one another;

a parting line being formed where said first and second cover means meet when disposed in confronting relation to one another;

a hinge means hingedly connecting together said first and second cover members;

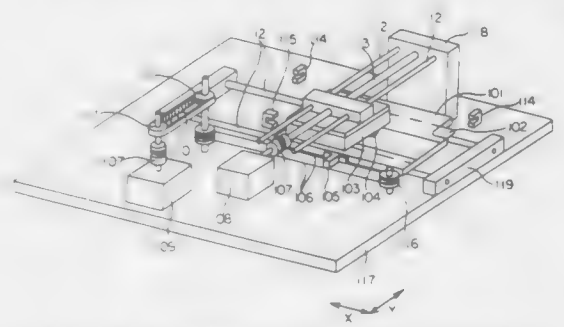
said hinge means being formed at a preselected location in axial alignment with said parting line; and

said hinge means being formed by a substantially reduced thickness of said carrier means.

5,008,552

DATA RECORDING AND REPRODUCING APPARATUS FOR AN OPTICAL CARD

Wataru Kuramochi, Kawagoe; Yoshiaki Tsuruoka, Funabashi; Norikazu Saitou, Fuchu; Akira Shibuya, Ageo, and Shuichi Yamashita, Shinjuku, all of Japan, assignors to Dai Nippon Insatsu Kabushiki Kaisha, Japan



PCT No. PCT/JP88/00142, § 371 Date Oct. 7, 1988, § 102(e) Date Oct. 7, 1988, PCT Pub. No. WO88/06335, PCT Pub. Date Aug. 25, 1988

PCT Filed Feb. 12, 1988, Ser. No. 274,994

Claims priority, application Japan, Feb. 12, 1987, 62-18978; Feb. 12, 1987, 62-30583; Feb. 12, 1987, 62-30586; Mar. 31, 1987, 62-78040; Jun. 11, 1987, 62-146086; Jun. 11, 1987, 62-146087

Int. Cl.[5] G06K *13/06, 13/24*

U.S. Cl. 235—483 **6 Claims**

1. A data recording apparatus for use in an optical card on which a plurality of tracks are arranged in parallel, said apparatus comprising:

card supporting means for supporting a lower surface of said optical card;

card pressing means for pressing down on an upper surface of said optical card;

positioning means formed on said supporting means to contact or be spaced away from a first side surface of said optical card;

pushing means for pushing a second side surface, which is opposite to said first side surface, of said optical card so as to make said first side surface contact said positioning means;

card drive means for reciprocating said card supporting means in a first direction;

an optical head for selectively providing access to respective tracks on said optical card to irradiate a light beam at a position above said optical card to conduct recording of data; and

head drive means for reciprocating said optical head in a second direction perpendicular to said first direction.

5,008,553

ELECTRON BEAM LITHOGRAPHY METHOD AND APPARATUS

Takayuki Abe, Kawasaki, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Apr. 24, 1989, Ser. No. 341,977

Claims priority, application Japan, Apr. 22, 1988, 63-99505; Nov. 10, 1988, 63-284771

Int. Cl.[5] H01J *37/304*

U.S. Cl. 250—492.2 **19 Claims**

1. A method of writing a pattern involving various shapes on a sample with charged beams, by finding optimum charged beam emission quantities for respective positions (xj, yj) in each of the shapes and writing the shapes with charged beams of the optimum emission quantities, for each of the positions (xj, yj), the method comprising the steps of:

(a) extracting shapes Ti which exist at least partly within a distance "r" from the position for which the optimum charged beam emission quantity is to be found in question;

(b) finding emission correction quantities Qij related to the shapes Ti according to distances from the position in question to about the centers of the shapes Ti and the sizes of the shapes Ti to compensate backward scattering effects on the position in question caused by the shapes Ti;

(c) finding a total emission correction quantity Rj for the position in question by summing up the emission correction quantities Qij related to the shapes Ti; and

(d) determining an optimum emission quantity for the position in question by using the total emission correction quantity Rj and a predetermined emission quantity S.

MULTI-PLATE OPTICAL SIGNAL PROCESSING APPARATUS WITH INTER-PLATE OPTICAL COMMUNICATION

Toshifumi Asakawa, Yamato, and Haruo Nakayama, Kawanishi, both of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

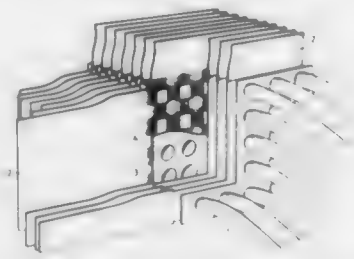
Filed Jun. 29, 1989, Ser. No. 373,932

Claims priority, application Japan, Jul. 4, 1988, 63-166168

Int. Cl.[5] G02B *27/00*

U.S. Cl. 250—551 **10 Claims**

1. An optical signal processing apparatus comprising:



a plurality of plates disposed in parallel, spaced from each other;

light LSIs mounted on each of said plates;

lead wires electrically interconnecting said light LSIs to transfer signals among said light LSIs in directions along said plates; and

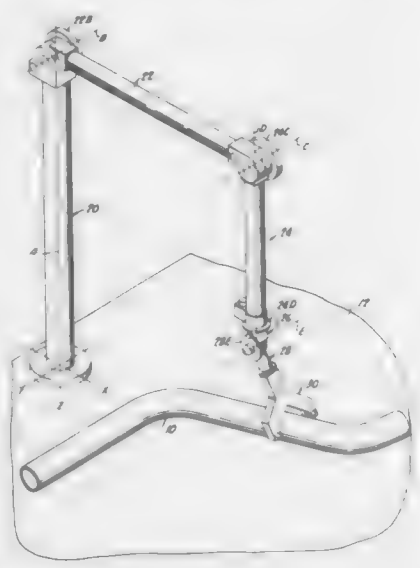
optical means extending in directions transverse to said

plates and utilizing light emitted and received by said light LSIs to transfer signals among light LSIs mounted on

different ones of said plates, in directions transverse to said plates.

5,008,555

OPTICAL PROBE WITH OVERLAPPING DETECTION FIELDS



David J. Mundy, San Diego, Calif., assignor to Eaton Leonard Technologies, Inc., Carlsbad, Calif.

Continuation-in-part of Ser. No. 179,496, Apr. 8, 1988, Pat. No. 4,849,643, which is a continuation-in-part of Ser. No. 98,510, Sep. 18, 1987, abandoned. This application May 2, 1989, Ser. No. 346,123

The portion of the term of this patent subsequent to Jul. 18, 2006, has been disclaimed.

Int. Cl.[5] G01N *21/86*

U.S. Cl. 250—560 **37 Claims**

1. An optical probe comprising:

a working head,

first and second mutually spaced light sensors mounted to said working head,

first and second point light sources mutually spaced from each other and from said sensors mounted to said working head, said light sources configured and arranged to project first and second light beams toward said first and second sensors, respectively, though a sensitive region adjacent said sensors,

both said sensors having at least portions thereof occluded by presence in said sensitive region of an occluding object of which position is to be measured, and

means responsive to said sensors for generating a set of signals that collectively define position of an occluding object relative to said working head in a reference system fixedly related to the working head.

MEASURING A GAP BETWEEN A TUBE AND A FLOAT

Steven H. Mersch, Germantown, Ohio, assignor to Becton, Dickinson and Company, Franklin Lakes, N.J.

Filed Jul. 24, 1989, Ser. No. 383,786

Int. Cl.[5] G01N *21/86;* **G01B** *11/00*

U.S. Cl. 250—560 **17 Claims**

1. An apparatus to determine the radial dimension of a gap including a material between a transparent or translucent tube and a cylindrical float located substantially concentrically within the tube comprising:

a monochromatic light source which provides an elliptically polarized light beam along an optical axis at the wavelength for which the materials of the tube and the gap are transparent or translucent and the index of refraction of the material of the tube is greater than the index of refraction of the material in the gap;

a light beam focusing means positioned in alignment with the optical axis to receive the polarized light beam for converting the light beam to a line of light in a plane;

means for translating and rotating an assembly of the tube and the cylindrical float through the plane with the line of light normal to a longitudinal axis of the assembly, the means for translating and rotating translates the assembly along the longitudinal axis while rotating the assembly about the longitudinal axis to produce an illumination with the line of light from at least a part of the assembly in the plane;

a light filtering means positioned along the optical axis beyond the assembly and arranged to, block light from the illumination reflected by the assembly and block light from the illumination refracted by the tube, the gap between the tube and the float and transmit light from the illumination refracted by the tube and the gap between tube and float;

light detection means positioned along the optical axis beyond the light filtering means to receive light transmitted by the light filtering means, the light detection means capable of generating signals responsive to the light received; and

signal processing means associated with said light detection means for processing signals therefrom.

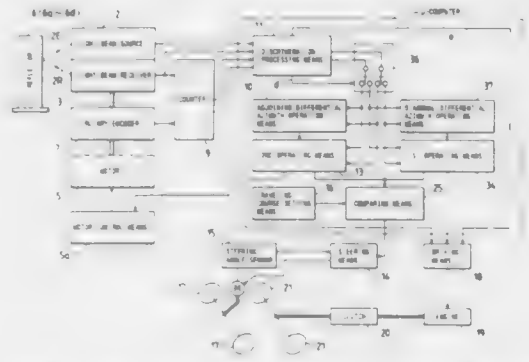
5,008,557

POSITION DETECTOR FOR MOVING VEHICLE

Akio Noji; Kenji Kamimura, and Sadachika Tsuzuki, all of Saitama, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 23, 1990, Ser. No. 484,041

Claims priority, application Japan, Mar. 1, 1989, 1-46408



Int. Cl.[5] G01N *21/86;* **G01V** *9/04*

U.S. Cl. 250—561 **11 Claims**

1. A position-detecting system for a moving vehicle wherein the position of the moving vehicle is detected by scanning the light beam emitted from a light beam emitting means mounted on the moving vehicle in the circumferential direction centering around the moving body, and receiving the light beam reflected from light-reflecting means disposed at at least three positions by means of a light-receiving means mounted on the moving vehicle, comprising;

a light beam scanning means provided on the moving vehicle for scanning the light beam in the circumferential direction centering around the moving vehicle,

an azimuth detecting means for detecting the azimuthes of the respective light-reflecting means on the basis of the light-receiving intervals of the light-receiving means, differential azimuth operation means for operating the differential azimuthes between the reference points

viewed from the moving vehicle on the basis of the azimuthes,

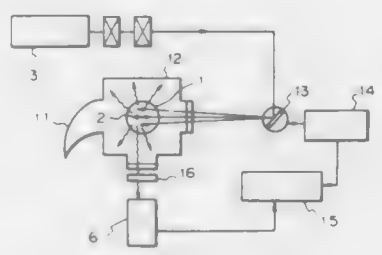
a means for detecting the distance between the source of the reflected light received at the light-receiving means and the moving vehicle,

a means for calculating the position of the moving vehicle on the basis of the positional information and azimuthes of the reference points, and

a means for reducing the rotational speed of the light beam scanning means in response to the operation of the distance detecting means.

5,008,558

SYSTEM FOR DETECTING MINUTE PARTICLES ON OR ABOVE A SUBSTRATE



Masao Koshinaka; Minoru Akiyama; Hitoshi Tanaka, and Toshimasa Tomoda, all of Hyogo, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 29, 1989, Ser. No. 373,801

Claims priority, application Japan, Oct. 12, 1988, 63-257780

Int. Cl.[5] G01N *21/88*

U.S. Cl. 250—563 **7 Claims**

1. A fine-particle detecting apparatus for detecting fine particles disposed on the surface of a substrate for a semiconductor device and fine particles suspended in the space above the surface of said substrate by the use of scattering of a laser beam caused by these fine particles, comprising:

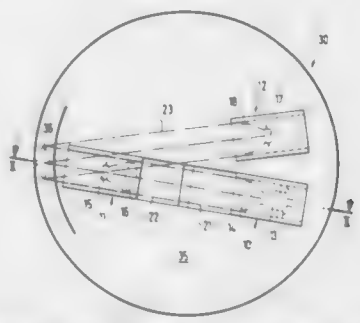
a laser beam scanning mechanism for irradiating a measuring space with a laser beam, said mechanism including means for relatively minutely modulating the angular position of the laser beam at a predetermined frequency;

a photodetector which receives light scattered by any of said fine particles and converts the received light into an electrical signal; and

a signal processor which extracts from the electrical signal output by said photodetector a signal component whose frequency is an integral multiple of said predetermined frequency for said minute scanning with the laser beam and which has a constant phase difference over time with respect to said predetermined frequency.

5,008,559

METHOD FOR OPERATING AN OPTICAL SMOKE DETECTOR AND OPTICAL SMOKE DETECTOR FOR THE METHOD



Hartwig Beyersdorf, Travemunder Allee 6a, 2400 Lubek, Fed. Rep. of Germany

Filed Sep. 6, 1989, Ser. No. 403,282

Claims priority, application Fed. Rep. of Germany, Sep. 17, 1988, 3831654

Int. Cl.[5] G01N *15/06*

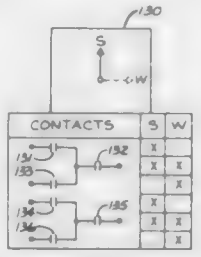
U.S. Cl. 250—575 **14 Claims**

1. An optical smoke detector, comprising a highly light-absorbing detector chamber (**36**), a light source (**10**) generating a light beam and a first and second light-sensitive receiver (**11, 12**) each co-operating with said detector chamber and having a limited field of view, wherein the field of view of said first light-sensitive receiver (**11**) intersects the radiation path of the light source (**10**) and the field of view of said second light-sensitive receiver (**12**) is exclusively directed onto a surface area of the detector chamber radiated by said light source, the detector further comprising an alarm circuit (**48**) generating an alarm signal when the output signal of the first light-sensitive receiver (**11**) reaches a predetermined value and a control circuit (**41**) connected to at least said second receiver generates a control signal when the output signal of said second light-sensitive receiver (**12**) reaches a predetermined value, and processing means processing the output signals of the first and the second receivers to provide an input signal for said alarm circuit and said control circuit, respectively, the processing means having two different modes, with one mode only the output signal of said first receiver and with the other mode only the output signal of said second receiver being processed.

5,008,560

LOAD TOTALIZING BLOCKED THROWOVER CONTROL

Roger Kieren, Grosse Pointe Woods; David A. Jamison, Livonia, and John J. Thomas, Rochester, all of Mich., assignors to The Detroit Edison Company, Detroit, Mich.



Filed Feb. 23, 1989, Ser. No. 314,049

Int. Cl.[5] H02J *3/04, 3/38*

U.S. Cl. 307—19 **10 Claims**

1. In an electric utility sub-station having two power systems each comprising a transformer which transmits electrical energy to customers over services lines, throwover means operative, when a failure occurs in either system, to switch the lines of the failed system to the transformer of the other system so that said transformer of said other system then carries the load of both systems, means responsive to a failure in one of said

systems to activate said throwover means, load sensing means for sensing the total demand load on both said transformers, and blocking means responsive to the sensing by said load

sensing means of total demand load in excess of a predetermined maximum allowable value for blocking the operation of said throwover means.

5,008,561

DEVICE DEPOWERING APPARATUS

David R. Madeley, Staffordshire, and Mark S. Binet, Gloucestershire, both of Great Britain, assignors to Lucas Industries, Birmingham, England

Filed Mar. 13, 1990, Ser. No. 492,773

Claims priority, application United Kingdom, Mar. 16, 1989, 8906066; Jun. 9, 1989, 8913289

Int. Cl.[5] **H02J** *1/00;* **G05B** *9/03*

U.S. Cl. 307—80 **14 Claims**

1. A device depowering apparatus for driving first and second loads, said apparatus comprising:

first and second channels for respectively driving the first and second loads, each of said first and second channels comprising

a device power supply line;

switch means, operatively connected with said device power supply line, for depowering one of the first and second loads corresponding thereto; and

control means for closing said switch means and supplying an other channel deselect signal in response to a channel select signal and for opening said switch means in response to an other channel deselect signal from said control means of an other of said first and second channels.

14. A method for depowering one of first and second channels respectively driving first and second loads via a power supply, said method comprising the steps of:

(a) receiving, at the first channel, input control data and a channel selection signal;

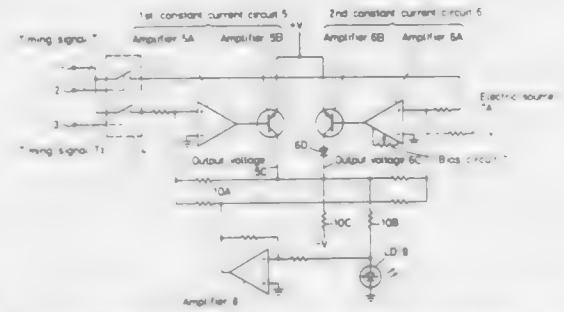
(b) generating, at the second channel, a channel deselect signal based on the input control data and the channel selection signal;

(c) generating, at the first channel, a de-energize signal based on the input control data; and

(d) depowering the first channel driving the first load based on one of the de-energize signal generated in step (c) and the channel deselect generated in step (b).

5,008,562

APPARATUS FOR GENERATING PULSE-LIKE CONSTANT CURRENT HAVING VARIABLE PULSE WIDTH



Takuya Hosoda; Mitsuhiro Morishita, and Takashi Tamura, all of Tokyo, Japan, assignors to Ando Electric Co., Ltd., Tokyo, Japan

Filed Aug. 1, 1989, Ser. No. 388,200

Claims priority, application Japan, Aug. 31, 1988, 63-218191

Int. Cl.[5] **H03K** *5/04, 5/05*

U.S. Cl. 307—265 **4 Claims**

1. An Apparatus for generating a pulse-like constant current with a variable pulse width, comprising:

a first constant current circuit constituted by a high-speed amplifier;

a second constant current circuit constituted by a low-speed amplifier and connected in parallel with said first constant current circuit;

each of said first and second constant current circuits providing an output current and an output voltage;

a bias circuit for setting the output voltage of said second constant current circuit higher than the output voltage of said first constant current circuit;

first switching means for turning on and off said first constant current circuit in response to a first timing signal;

second switching means for turning on and off said second constant circuit in response to a second timing signal;

first and second timing signal generating means for generating said first timing signal and said second timing signal, respectively, in such a manner that said first timing signal and said second timing signal are simultaneously turned on while said second timing signal is turned off after said first timing signal is turned off;

said first and second timing signal generator means including means for changing the on/off durations of the first and second timing signals so as to change the widths of the output current pulses.

5,008,563

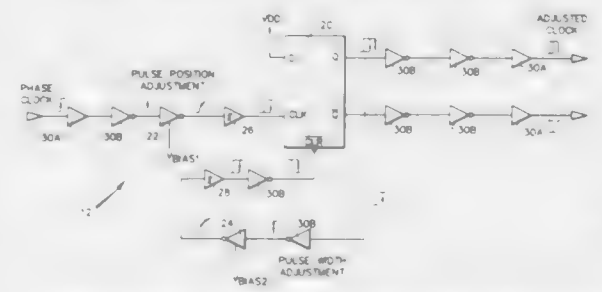
ADJUSTABLE CLOCK GENERATOR CIRCUIT

Timothy J. Kenney, Pittsford, and Lionel J. D'Luna, Rochester, both of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Sep. 5, 1989, Ser. No. 402,585

Int. Cl.[5] **H03K** *3/284, 5/13, 3/017*

U.S. Cl. 307—269 **4 Claims**



1. An adjustable clock generator circuit comprising:

flip-flop means having a clock input, a clear input, and complementary outputs comprising:

first adjustable rise time inverter means having a first input for receiving a phasing input signal, a second input for receiving a first bias voltage for controlling the rise time of its output signal, and an output for providing a first output signal;

first trigger means having an input connected to the output of said first adjustable rise time inverter and an output connected to the clock input of said flip-flop means and responsive to said first output signal for providing a pulse transition when said first output signal reaches a trigger voltage;

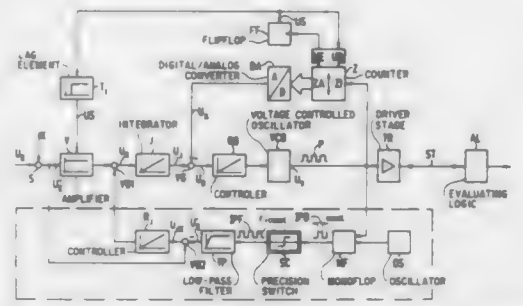
second adjustable rise time inverter means having a first input connected to one output of said flip-flop means and a second input connected to a second bias voltage and an

output for providing a second output signal having a rise time controlled by the second bias voltage;

second trigger means having an input connected to the output of said second adjustable rise time inverter means and an output connected to the clear input of said flip-flop means for providing a signal transition when said second output signal reaches a trigger voltage, thereby causing signals to appear on the complementary outputs of said flip-flop means with said signals having a pulse position controlled by the level of said first bias voltage and a width controlled by the level of said second bias voltage.

5,008,564

METHOD AND DEVICE FOR CONVERTING VOLTAGE TO FREQUENCY



Hagen Hartwig, Erlangen, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Munich and Berlin, Fed. Rep. of Germany

Filed Mar. 16, 1990, Ser. No. 494,600

Claims priority, application Fed. Rep. of Germany, Mar. 17, 1989, 3908848

Int. Cl.[5] **H03L** *7/00;* **H03M** *1/60*

U.S. Cl. 307—271 **6 Claims**

1. A method of converting voltage to frequency comprising:

(a) increasing an input voltage having an arbitrary value with respect to time, into the positive range by adding a constant voltage;

(b) integrating the raised input voltage;

(c) comparing said integrated raised input voltage with a reference voltage which varies in constant voltage steps;

(d) acting upon a voltage controlled oscillator which generates a sequence of pulses which are proportional to the output voltage of a controlling element, with the voltage differential between the integrated voltage and the reference voltage via the controlling element;

(e) increasing the reference voltage by one constant voltage step with each pulse so that the voltage differential approaches zero;

(f) repeating steps (a) to (e) until reaching a specified upper limiting value;

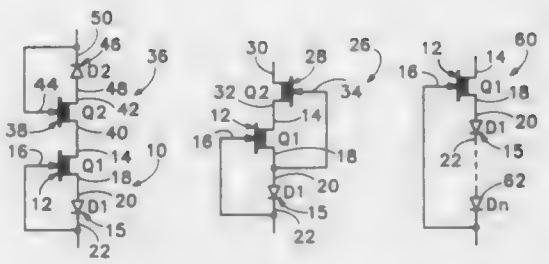
(g) upon reaching said limiting value, reversing the integration of the raised input voltage and lowering the reference voltage by one constant voltage step;

(h) repeating steps a) to e) until reaching a specified lower limiting value;

(i) and upon reaching said limiting value, reversing the integration of the raised input voltage, increasing the reference voltage by one constant voltage step;

counting the pulses generated by the voltage controlled oscillator within a predetermined time interval.

5,008,565



HIGH-IMPEDANCE FET CIRCUIT

Stewart S. Taylor, Beaverton, Oreg., assignor to TriQuint Semiconductor, Inc., Beaverton, Oreg.

Filed Jan. 23, 1990, Ser. No. 468,507

Int. Cl.[5] **H03K** *3/01, 3/353;* **G06G** *7/10*

U.S. Cl. 307—296.7 **31 Claims**

1. A high impedance integrated circuit element comprising:

an n-channel FET having a gate, a first side and a second side;

a diode having an anode and a cathode, said anode being electrically connected to said first side and said cathode being electrically connected to said gate, said diode biasing said FET to reduce FET conduction when said second side is at a positive potential relative to said diode cathode; and

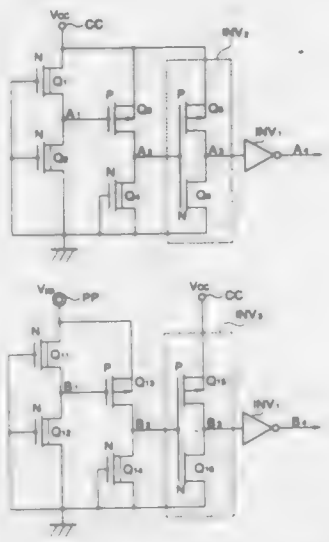
a second FET having a gate, a first side and a second side and wherein the gate of said second FET is electrically connected to said anode and the first side of said second FET is electrically connected to the second side of said first FET.

5,008,566

POWER SUPPLY VOLTAGE DROP DETECTION CIRCUIT FOR USE IN EEPROM MEMORY

Kiyokazu Hashimoto, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Nov. 30, 1989, Ser. No. 444,505



Claims priority, application Japan, Nov. 30, 1988, 63-303610

Int. Cl.[5] **H03K** *5/153, 3/01*

U.S. Cl. 307—296.8 **4 Claims**

1. A power supply voltage drop detection circuit comprising a first N-channel field-effect-transistor of a depletion type

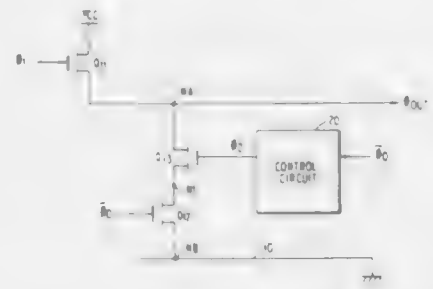
having a drain connected to a power supply voltage line and a gate connected to ground, said first N-channel field-effect-transistor having a threshold whose absolute value has a positive temperature characteristic, a second N-channel field-effect-transistor having a drain connected to a source of the first N-channel field-effect-transistor and a source connected to the ground, a gate of the second N-channel field-effect-transistor being connected to receive a controlled gate voltage which ceaselessly maintains the second N-channel field-effect-transistor in a conducting condition, a P-channel field-effect-transistor of an enhancement type having a source connected to the power supply voltage line and a gate connected to a connection node between the first and second N-channel field-effect-transistors, said P-channel field-effect-transistor having

a threshold whose absolute value has a negative temperature characteristic, a third N-channel field-effect-transistor having a drain connected to a drain of the P-channel field-effect-transistor and a source connected to the ground, a gate of the third N-channel field-effect-transistor being connected to receive a controlled gate voltage whose ceaselessly maintains the third N-channel field-effect-transistor in a conducting condition, and an inverter having an input connected to a connection node between the P-channel field-effect-transistor and a third N-channel field-effect-transistor and having an output generating a signal which is a function of the sum of the absolute value of the threshold of the first N-channel field-effect-transistor and the absolute value of the threshold of the P-channel field-effect-transistor and indicative of a power supply voltage drop.

5,008,567

SIGNAL GENERATING CIRCUIT FREE FROM MALFUNCTION BASED ON NOISE

Kazuo Shibata, and Toshio Komuro, both of Tokyo, Japan, assignors to NEC Corporation, Tokyo, Japan



Filed Apr. 24, 1989, Ser. No. 342,066

Claims priority, application Japan, Apr. 25, 1988, 63-101809

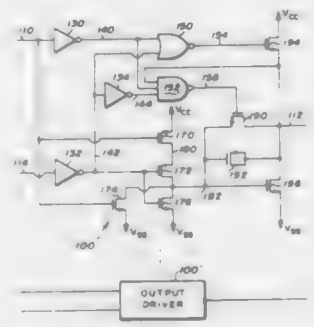
Int. Cl.[5] H03K *17/16, 19/003, 19/017*

U.S. Cl. 307—443 **4 Claims**

1. A signal generating circuit comprising a first field effect transistor having a source-drain path connected between a first node and an output node, second and third field effect transistors having their source-drain paths connected in series between said output node and a second node, means for supplying said first node with a power voltage, means for supplying said second node with a reference voltage, means for supplying a gate of said first transistor with a first signal which assumes an active level to render said first transistor conductive in a first period and an inactive level to render said first transistor non-conductive in subsequent second and third periods following said first period, means for supplying a gate of said third transistor with a second signal which assumes an active level to render said third transistor conductive in said third period and an inactive level in said first and second periods, and means for supplying a gate of said second transistor with a third signal, different from said second signal, which assumes an active level to render said second transistor

non-conductive in said second period, wherein said output node is supplied with the power voltage through said first transistor in said first period and the power voltage at said output node is maintained in a dynamic manner throughout said second period and then discharged to the reference voltage through said second and third transistors in said third period.

5,008,568



CMOS OUTPUT DRIVER

Wingyu Leung, Cupertino, and Chuen-Der Lien, Mountain View, both of Calif., assignors to Integrated Device Technology, Inc., Santa Clara, Calif.

Continuation of Ser. No. 300,915, Jan. 24, 1989, abandoned. This application Aug. 8, 1990, Ser. No. 565,169

Int. Cl.[5] H03K *19/003*

U.S. Cl. 307—451 **6 Claims**

1. An output driver (**100**) comprising in combination:

an input line (**110**) for connection to receive an input signal;

an output line (**112**);

pull-down means including a transistor (**196**) having a gate, drain means connected to said output line, and source means connected to receive a power supply potential;

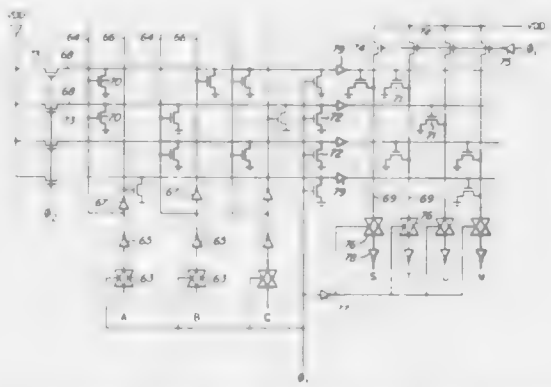
capacitor means (**192**) connected between said pull-down means transistor drain means and said pull-down means transistor gate;

first means (**170, 172, 174, and 176**) including at least an input connected to said input line and an output connected to said pull-down means transistor gate, said first means being responsive to at least the state of said input signal and operative to develop a signal of inverted state on said pull-down means transistor gate, said first means presenting a finite resistance to said pull-down means transistor gate;

feedback means including a transistor (**190**) having a gate, source means connected to said pull-down means transistor gate, and drain means connected to said output line; and

second means (**130, 134, 150, and 152**) including an input connected to said input line and an output connected to said feedback means transistor gate, said second means being responsive to at least the state of said input signal and operative to develop a signal of similar state on said feedback means transistor gate.

5,008,569



HIGH-SPEED DYNAMIC CMOS CIRCUIT AND PRECHARGE GENERATOR

Marc P. Roy, Nepean, Canada, assignor to Northern Telecom Limited, Montreal, Canada

Filed Sep. 11, 1989, Ser. No. 406,294

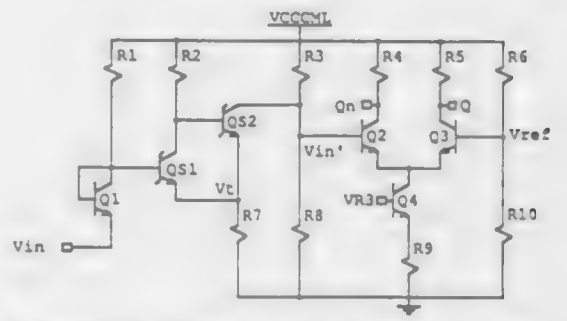
Int. Cl.[5] H03K *19/177*

U.S. Cl. 307—465 **8 Claims**

1. A two-plane logic array circuit adapted to be operated from a single clock pulse train and having an input plane and an output plane, the input plane being defined by an array of rows and input columns, the output plane being defined by an array of the rows and at least one output column, a series of first transistors being selectively positioned in the input plane at the intersection of the rows with the input columns such that a charge on one of the input columns results in the discharge of any charge on those rows sharing first transistors with that column, a series of second transistors being selectively positioned in the output plane at the intersection of the rows with the at least one output column such that a charge on one of the rows results in the discharge of any charge on any output column that shares second transistors with that row, the circuit further comprising first, second, third, fourth and fifth gate means, the first gate means controlling the transmission of each of a first set of input signals to a respective one of the input columns, the second gate means controlling the discharge of charge from the rows, the third gate means and the state of the input columns controlling the charging of each of the rows with a respective one of a second set of input signals, the fourth gate means controlling a pre-charging of the at least one output column, and the fifth gate means controlling the transmission of the state of the at least one output column to the output of the logic array circuit, the first, second and fourth gate means opening and closing simultaneously, the fifth gate means closing as the first gate means opens and opening as the first gate means closes, the logic array circuit further comprising a subcircuit for deriving a third gate means pulse train from the single clock pulse train for controlling the opening and closing of the third gate means;

whereby during a first time period the first, second and fourth gate means are opened and then closed, and the fifth gate means is closed then opened, each of the first set of input signals being thereby transmitted to a respective one of the input columns, any charge on the first rows being discharged, and the at least one output column being pre-charged, the third gate means remaining closed during the first time period, and whereby during a second time period the third gate means is opened and then closed, the first, second and fourth gate means remaining closed and the fifth gate means remaining open during the second time period, the state of each row being thereby determined by the state of the respective second input signal and the state of the input columns, the state of the at least one output column then being determined by the resultant state of the rows, and the resultant state of the at least one output column then being transferred to the output of the logic array circuit, and whereby the aggregate length of the first and second time periods is equal to the period of the single clock pulse train.

5,008,570



SCHMITT-TRIGGERED TTL TO CML INPUT BUFFER APPARATUS

John D. Coddington, Plymouth, Minn., assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Mar. 30, 1990, Ser. No. 502,397

Int. Cl.[5] H03K *17/16, 3/354*

U.S. Cl. 307—475 **6 Claims**

1. An input buffer apparatus comprising in combination:

a CML gate having a first and second input, said first input receiving a voltage reference signal, said CML gate providing a first and second output signal, which are respectively complementary, and,

a hysteresis means operatively connected to said first input of said CML gate, said hysteresis means receiving a logic signal at its input, when said logic signal is low, said hysteresis means applies a trigger signal to said second input of said CML gate which is lower than said voltage reference signal and thus causes said first output signal to become a logical zero, when said logic signal is high, said hysteresis means applies a trigger signal to said second input of said CML gate which is higher than said voltage reference signal and thus causes said first signal to become a logical one, said hysteresis means comprises a Schmitt trigger.

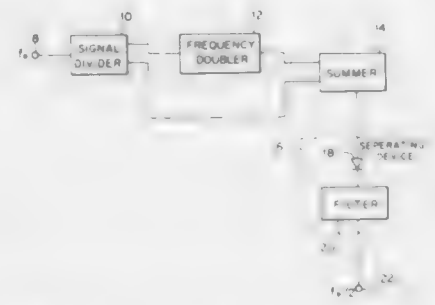
5,008,571

METHOD AND APPARATUS FOR DIVIDING HIGH FREQUENCY ANALOG SIGNALS

Ronald M. Rudish, Commack, N.Y., assignor to AIL Systems, Inc., Deer Part, N.Y.

Filed Jun. 29, 1989, Ser. No. 373,894

Int. Cl.[5] G06G *7/00;* **H03B** *19/00*



U.S. Cl. 307—529 **6 Claims**

1. A frequency divider, which comprises:

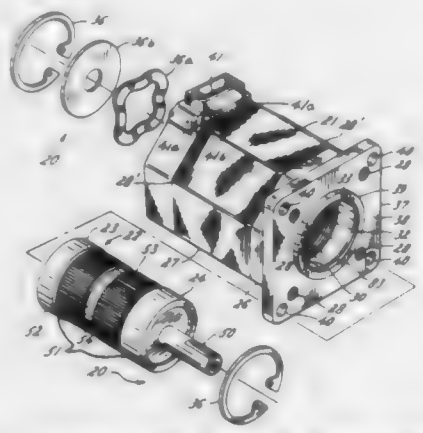
means responsive to a time varying input signal for dividing the input signal into at least first and second signals, the signal dividing means including outputs from which the first and second signals are provided;

means responsive to the first signal for doubling the frequency of the first signal, the frequency doubling means providing a third signal as an output signal having a frequency which is substantially twice the frequency of the first signal;

means responsive to the second and third signals for summing the second and third signals, the summing means providing a fourth signal as an output signal which corresponds to the sum of the second and third signals, the fourth signal having a low frequency component which is substantially equal to one-half the frequency of the input signal, and a high frequency component; and

means for separating the low frequency component of the fourth signal from the high frequency component, the separating means providing an output signal corresponding to the low frequency component of the fourth signal, which low frequency component is substantially equal to one-half the frequency of the input signal.

5,008,572



ENCAPSULATED MOTOR WITH PRECISION BEARING REGISTRATION

James W. Marshall, Towson, Md.; David Gotchy, Roscoe; Bradley L. Uffelman, Rockford, both of Ill.; Wendell B. Leimbach, Baltimore, and Albert A. Wilhelmi, Baldwin, both of Md., assignors to Pacific Scientific Company, Rockford, Ill.

Division of Ser. No. 323,507, Mar. 13, 1989, Pat. No. 4,922,604. This application Mar. 30, 1990, Ser. No. 491,814

Int. Cl.[5] **H02K** *5/15;* **F16C** *35/00*

U.S. Cl. 310—45 **10 Claims**

1. An encapsulated stator electrical motor comprising, in combination:

a rotor assembly having a plurality of rotor laminations fixed in a stack on a rotor shaft, rotor bearings on the rotor shaft at either end of the rotor lamination stack, the outer diameter of the bearings being slightly greater than the outer diameter of the rotor lamination stack;

a unitary potted stator assembly including a stator lamination stack with exterior exposed and stator end caps on either end of the stator lamination stack;

a continuous bore formed in the stator assembly through a first one of the end caps, through the stator lamination stack and through a second one of the stator end caps, the bore forming an internal cylindrical area for receipt of the rotor lamination stack and bearing surfaces in the end caps, the bore comprising a smoothly machined surface free of discontinuities capable of trapping machining debris formed during machining of the bore, the smoothly machined surface of the bore exposing portions of the end caps, the stator lamination stack and interposed potting material; and

the rotor assembly being carried within the bore formed in the stator assembly with the rotor bearings engaging the bearing surfaces in the end caps leaving an air gap between the rotor lamination stack and the stator lamination stack.

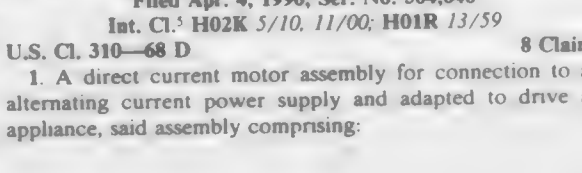
MAGNETIC DISK ENCLOSURE WITH DETACHABLE STATOR



Osamu Beppu, Odawara; Toshihiro Moribe, Chigasaki; Youjiro Tezuka, Hiratuka, and Akira Chuma, Ashigarakami, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Feb. 21, 1990, Ser. No. 482,807

Claims priority, application Japan, Feb. 22, 1989, 1-40231

Int. Cl.[5] **H02K** *29/00, 21/22;* **G11B** *33/00*

U.S. Cl. 310—67 R **15 Claims**

1. A magnetic disk unit including at least one magnetic disk, comprising:

a hub;

means for supporting said hub in rotation, said magnetic disk being fixed to said hub;

a magnetic head for reading/writing information from and to said magnetic disk;

an actuator for positioning said magnetic head in predetermined positions on said magnetic disk;

enclosure means having an interior portion for storing said magnetic disk, said magnetic head and said actuator;

said means for supporting said hub in rotation including a shaft extending through said hub having bearings at its opposite ends for supporting said shaft in rotation with respect to said enclosure means;

a motor for rotating said hub including said motor having a rotor concentrically mounted to said shaft having a rotor housing in the shape of a cup with an opening facing away from the interior portion of said enclosure;

said rotor housing having a magnet fixed to the rotor housing and facing inwardly thereof;

a stator mounted concentrically inwardly of said rotor, and facing said rotor magnet;

one end of said shaft extending outside of said enclosure means and said rotor housing being fixed to said one end so that said rotor is positioned outside of said enclosure means; and

a supporting member for supporting said stator and being fixed to said enclosure means adjacent said rotor such that said one end of said shaft and said supporting member are not in contact with one another.

5,008,574

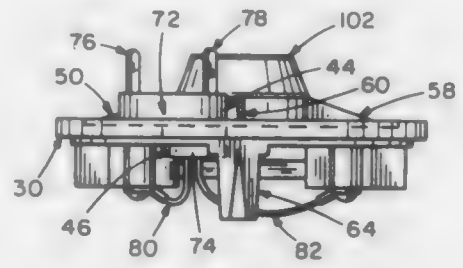
DIRECT CURRENT MOTOR ASSEMBLY WITH RECTIFIER MODULE

Roy S. Kitahata, Fullerton, Calif., assignor to The Chamberlain Group, Elmhurst, Ill.

Filed Apr. 4, 1990, Ser. No. 504,640

Int. Cl.[5] **H02K** *5/10, 11/00;* **H01R** *13/59*

U.S. Cl. 310—68 D **8 Claims**



1. A direct current motor assembly for connection to an alternating current power supply and adapted to drive an appliance, said assembly comprising:

a tubular housing;

an armature having windings and disposed inside said housing;

a first end closure closing one end of said housing; and

a second end closure closing the other end of said housing, said first end closure comprising an end plate having an aperture, said first end closure further comprising a rectifier assembly including a body portion with a first end and a second end, a pair of input terminals extending from said

body portion first end, and a pair of output terminals extending from said body portion second end, said body portion being retained in said aperture with said input terminals being disposed in their entirety outside of said housing and said output terminals positioned in their entirety inside said housing whereby direct current may be provided to said armature without any discrete electrical conductors extending through said end closure or said housing.

LIFTING STRUCTURE FOR DYNAMIC ELECTRIC MACHINE

Noriyuki Ishimoto, Aichi, and Hirofumi Iida, Obu, both of Japan, assignors to Sumitomo Heavy Industries, Ltd., Tokyo, Japan

Filed Apr. 30, 1990, Ser. No. 516,994

Int. Cl.[5] **H02K** *5/26*

U.S. Cl. 310—89 **1 Claim**

1. A lifting structure for lifting a dynamic electric machine having a substantially cylindrical stator frame provided on an outer peripheral surface thereof with a plurality of heat radiating ribs extending in a longitudinal direction of said machine, said lifting structure comprising:

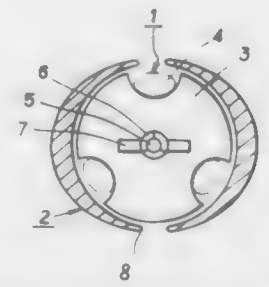
grooves formed in opposing walls of two adjacent heat radiating ribs so as to extend in the longitudinal direction of said machine;

outer and inner ridges radially provided on each said opposing wall to define therebetween each said groove; and

a lifting member provided at a lower portion with a sliding engaging portion having an expanded portion which is slidably received in said grooves.

5,008,576

MAGNETIZING TYPE INDUCTION MOTOR



Jong-Seob Lee, InChon, Rep. of Korea, assignor to Jong-Sub Lee and Woo-Jin Kim, both of Seoul, Rep. of Korea

Filed Mar. 15, 1989, Ser. No. 324,217

Claims priority, application Rep. of Korea, Mar. 16, 1988, 2769/1988

Int. Cl.[5] **H02K** *17/12, 1/12*

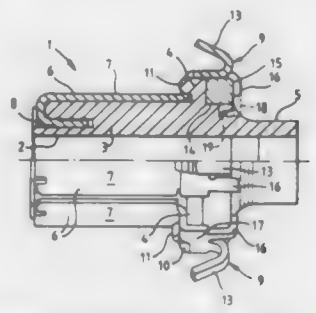
U.S. Cl. 310—166 **11 Claims**

1. A magnetizing type induction motor having a coil-wound rotor and a commutator installed on a shaft comprising:

at least two stator pieces positioned about an exterior surface of the rotor, each said stator piece having a crescent-shaped cross section and being formed of a non-magnetized ferromagnetic material, the thickness of a center portion of each said stator piece being larger than the thickness of opposite longitudinal edges of said stator piece.

5,008,577

ASSEMBLED COMMUTATOR WITH HEAT-RESISTING RING



Patrick S. Wang, Repulse Bay, Hong Kong, assignor to Johnson Electric S.A., La Chaux de Fonds, Switzerland

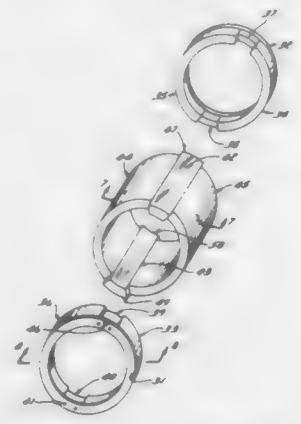
Filed Oct. 10, 1989, Ser. No. 418,021

Claims priority, application United Kingdom, Oct. 13, 1988, 8823991; Oct. 13, 1988, 8823992

Int. Cl.[5] **H02K** *13/04;* **H01R** *39/16, 39/32*

U.S. Cl. 310—233 **4 Claims**

1. An assembled commutator comprising a cylindrical thermoplastic base having a first end and a second end, recesses formed in the first end, the base being formed with an integral outwardly projecting peripheral collar surrounding the base adjacent the second end, the base further having a supporting part extending between the first end and the collar, and the collar being formed with an annular shelf facing the second end of the base; an annular ring of high temperature non-softening material positioned on the shelf, the collar and the ring having adjacent peripheral surfaces; and a plurality of elongate commutator segments mounted on and around the base against the supporting part, each segment having a first finger at one end of the segment which fits into a respective one of the recesses and a tang and a second finger at an opposite end of the segment, the tang fitting over the peripheral surfaces of the collar and the ring, and the second finger extending over and



against a rear surface of the ring which faces the second end of the base to hold the ring in position and prevent axial movement of the segment along the base towards the second end.

5,008,578

PERMANENT MAGNET MOTOR HAVING DIVERTING MAGNETS

Sang H. L. Pace, 3802 Green Shadow, Pasadena, Tex. 77503

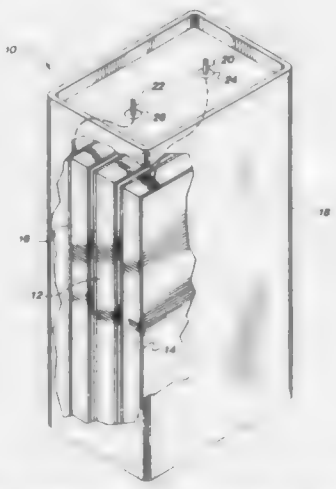
Filed Apr. 26, 1989, Ser. No. 343,923
Int. Cl.[5] H02K *1/12, 1/17, 21/26*
U.S. Cl. 310—256 **3 Claims**

1. In a dc electric motor having a rotor and a stator, and at least a pair of oppositely disposed main magnets associated with one of the rotor and stator, the improvement comprising:

an end diverting magnet positioned at each end of each main magnet, said end diverting magnets having a magnetic field perpendicular to the magnetic field of the main magnets, the magnet orientation of said end diverting magnets being positioned to increase the flux density of the main magnets with low magnetic leakage, wherein the main magnets and said end diverting magnets are arcuate segments of approximately 120°.

5,008,579

LIGHT EMITTING POLYMER ELECTRICAL ENERGY SOURCE



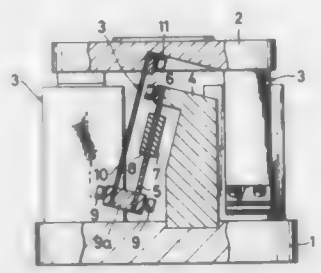
Jerry J. Conley, and Gary B. Mortensen, both of Waseca, Minn., assignors to E. F. Johnson Co., Waseca, Minn.

Filed Mar. 3, 1989, Ser. No. 318,743
Int. Cl.[5] G21H *1/12*
U.S. Cl. 310—303 **43 Claims**

1. An electrical energy source, comprising:

a light emitting polymer material having at least one light emitting surface emitting light energy in a specified frequency bandwidth, the light emitting polymer material comprising an organic polymer incorporating a radioisotope emitting beta particles to which an organic phosphor is bonded, wherein the radioisotope consists of a radioisotope selected from the group ^{3}H, ^{10}Be, ^{14}C, ^{32}Si and ^{32}P; and

a photovoltaic cell having a light collecting surface and a pair of electrical contacts, the light collecting surface of the photovoltaic cell being substantially intimately optically coupled to the light emitting surface of the light emitting polymer, such that an open-circuit voltage is generated between the pair of electrical contacts as a



result of the photovoltaic cell's absorption of light energy emitted from the light emitting polymer.

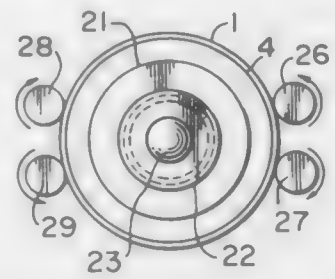
PIEZOELECTRIC VIBRATION GENERATOR AND VIBRATORY PARTS FEEDER INCORPORATING THE SAME

Takeshi Masuda, Kurobe; Susumu Yagi, Toyama; Sakiichi Okabe, Ishikawa; Yoichi Kamishima, and Kazuo Kawagoe, both of Toyama, all of Japan, assignors to Yoshida Kogyo K. K., Tokyo, Japan

Filed Feb. 3, 1989, Ser. No. 305,919
Claims priority, application Japan, Feb. 3, 1988, 63-23299; Oct. 4, 1988, 63-250284
Int. Cl.[5] H01L *41/08*
U.S. Cl. 310—321 **52 Claims**

1. A piezoelectric vibration generator comprising:

(a) at least two resilient plate members joined together at their one ends, which are free-standing and disposed in a U-shaped configuration substantially folded about the joint therebetween, their opposite ends being directly upwardly and separately secured to supports; and



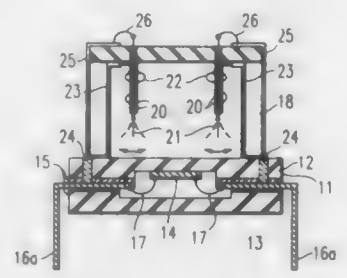
(b) a pair of piezoelectric elements attached respectively to front and back surfaces of one of said resilient plate members.

5,008,581

PIEZOELECTRIC REVOLVING RESONATOR AND SINGLE-PHASE ULTRASONIC MOTOR

Akio Kumada, Kokubunji; Takahiko Iochi, Koganei, and Minoru Okada, Kunitachi, all of Japan, assignors to Hitachi Maxell, Ltd., Osaka and Demix Technology Inc., Tokyo, both of, Japan

Filed Apr. 10, 1989, Ser. No. 335,374
Claims priority, application Japan, Apr. 12, 1988, 63-88160
Int. Cl.[5] H01L *41/08*
U.S. Cl. 310—323 **6 Claims**



1. A piezoelectric revolving resonator comprising a piezoelectric ceramic element in the form of a disk, a cylinder or a pipe having only two areas of opposite polarization, said two areas being formed by dividing said disk, cylinder or pipe by its diameter, said piezoelectric ceramic element including a single electrode on each of opposite main surfaces thereof to form equipotential surfaces on said opposite main surfaces, such that a resonant condition, in which a center of mass of said piezoelectric element is revolved due to piezoelectric deformations thereof, can be excited by a single-phase alternating current voltage applied across said two single electrodes on said opposite main surfaces of said piezoelectric ceramic element.

5,008,582

ELECTRONIC DEVICE HAVING A COOLING ELEMENT

Chiaki Tanuma, Tokyo; Kazuhiro Itsumi, Kawasaki; Nobuo Iwase, Kamakura; Tomio Ono; Yuu Kondo, both of Yokohama, and Kazutaka Saito, Kawasaki, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation of Ser. No. 150,294, Jan. 29, 1988, abandoned. This application Apr. 26, 1990, Ser. No. 515,668
Int. Cl.[5] H01L *41/08*
U.S. Cl. 310—332 **4 Claims**

1. An electronic device, comprising:

an insulating base member;

a semiconductor integrated circuit chip having electrodes thereon and being mounted on said base member;

an insulating cap member being provided on said base member and sealing said chip therebetween;

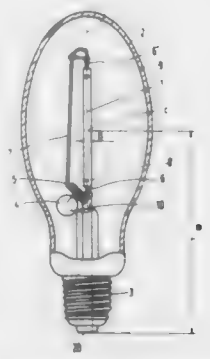
a lead frame member having plural leads and extending outside of said base and cap members;

wire connection members connected between said electrodes of said chip and said lead of said frame;

a supporting member provided directly on said base member,

piezoelectric cooling means provided on said supporting member for cooling said chip, including bimorph vibrator means and plural electric terminals connected to said bimorph vibrator means;

plural through holes being provided through said base member; and



plural electric connecting members connecting said electric terminals of said cooling means to said leads of said lead frame through said through holes provided through said base member.

5,008,583

HIGH-PRESSURE DISCHARGE LAMP

Samuel A. Carleton, Bath, N.Y., assignor to U.S. Philips Corporation, New York, N.Y.

Filed Jul. 12, 1989, Ser. No. 378,879
Claims priority, application Netherlands, Jul. 12, 1988, 8801756; Aug. 17, 1988, 8802034
Int. Cl.[5] H01J *1/02*
U.S. Cl. 313—25 **5 Claims**

3. A high pressure sodium discharge lamp, comprising:

a clear outer envelope defining a lamp axis and having a reentrant stem sealing said envelope in a gas-tight manner;

an elongate discharge vessel disposed within said outer envelope in which a discharge is maintained during lamp operation, said discharge vessel having a longitudinal axis aligned with said lamp axis, an outside diameter D, a first end proximate said stem and a second end remote from said stem;

first and second rigid current conductors extending from said stem into said envelope for supporting and energizing said discharge vessel, said first current conductor being connected to said first end of said discharge vessel and said second current conductor extending the length of said discharge vessel and being connected to said second end of said discharge vessel;

a starting circuit comprising a glow starter for initiating a discharge within said discharge vessel, said glow starter being mounted adjacent said stem and spaced a distance of at least D/2 from said longitudinal axis of said discharge vessel; and

shielding means for shielding a substantial portion of said glow starter from heat radiation.

5,008,584

SPARK PLUG HAVING A BUILT-IN RESISTOR FOR SUPPRESSING NOISE SIGNALS

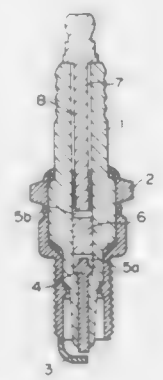
Morihiro Atsumi, Okazaki, and Kiyoaki Tanaka, Obu, both of Japan, assignors to Nippondenso Co., Ltd., Kariya, Japan

Filed Jul. 6, 1989, Ser. No. 375,978
Claims priority, application Japan, Jul. 6, 1988, 63-168533
Int. Cl.[5] H01T *13/05*
U.S. Cl. 313—136 **23 Claims**

2. A spark plug comprising an insulator having a bore therein along an axis direction, a terminal electrode inserted from one opening of the bore of the insulator and fixed in the bore, a center electrode inserted from another opening of the

bore of the insulator and fixed in the bore, a resister placed between the terminal electrode and the center electrode in the bore of the insulator, and conducting glass seals placed between one end of the resister and the terminal electrode and between another end of the resistor and the center electrode,

said resistor being a sintered body made from a mixture of glass powders, electrical insulating ceramic powders and a carbon black powder in an amount of 0.1 to 2.5% by weight based on 100% by weight of a total of the glass powders and the ceramic powders,



said glass powders comprising coarse glass particles of 177 μm to 840 μm in particle size and fine glass particles of 74 μm or less in particle size,

said ceramic powders comprising coarse ceramic particles of molten alumina of 177 μm to 840 μm in particle size and fine ceramic particles of 10 μm or less in particle size,

the amount of the glass powders in % by weight being in the range between the formulae (1) and (2):

$$65.7 - 7.5x + 0.5x^2 \quad (1)$$

$$82.2 - 6.1x + 0.4x^2 \quad (2)$$

wherein x is the density in g/cm³ of fine ceramic particles having a particle size of 10 μm or less,

the proportion of the coarse glass particles in the glass powders in weight ratio being in the range between the formulae (3) and (4):

$$0.53 + 0.03x - 0.0006x^2 \quad (3)$$

$$0.72 + 0.06x - 0.0030x^2 \quad (4)$$

wherein x is as defined above,

the proportion of the coarse ceramic particles of molten alumina in the ceramic powders in weight ratio being in the range between the formulae (5) and (6):

$$0.93 - 0.20x + 0.016x^2 \quad (5)$$

$$1.06 - 0.10x + 0.006x^2 \quad (6)$$

wherein x is as defined above.

5,008,585

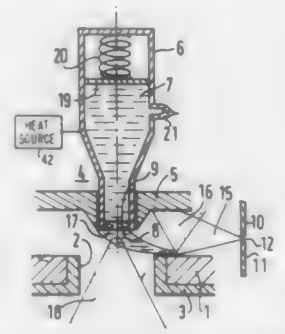
VACUUM ARC SOURCES OF IONS

Henri Bernardet, Saint Michel sur Orge, and Jean-Claude Pauwels, Brunoy, both of France, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Jul. 21, 1988, Ser. No. 223,465

Claims priority, application France, Jul. 22, 1987, 87 10391

Int. Cl.[5] **H01J** *27/00, 27/26*



U.S. Cl. 313—231.31 **14 Claims**

1. Vacuum arc ion comprising

a cathode and an anode having a surface,

means for providing a layer of liquid metal over said anode surface, said means including a reservoir of said liquid metal,

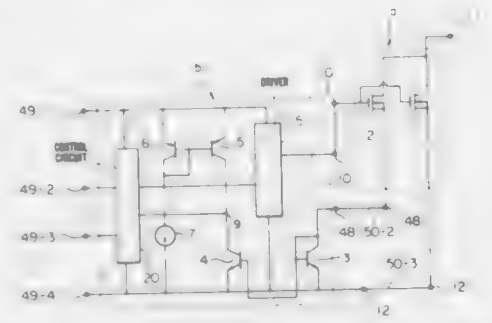
a connection member disposed between said reservoir and said anode surface, and being permeable to said liquid metal, said connection member being a material having numerous pores to pass by capillary action said liquid metal from said reservoir to said anode surface;

trigger electrode means for forming a first plasma from said cathode to said anode surface, said anode surface being heated by said first plasma to form an emitted vapor of said liquid metal, and

means for ionizing said emitted vapor to form a second plasma of arc ions from said anode surface and extending past said cathode.

5,008,586

SOLID STATE CURRENT SENSING CIRCUIT AND PROTECTION CIRCUIT



Hideki Miyazaki; Akihiko Kanouda; Kenichi Onda, and Yasuo Matsuda, all of Hitachi, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jan. 27, 1989, Ser. No. 302,340

Claims priority, application Japan, Jan. 29, 1988, 63-16971

Int. Cl.[5] **G05F** *1/56, 3/26*

U.S. Cl. 323—315 **7 Claims**

1. A current sensing circuit for a semiconductor circuit having a first semiconductor element forming a series circuit including a first external power source and an external load, wherein said first semiconductor element includes means to control a flow and cut-off of a load current through said external load, and a second semiconductor element having a smaller size than the first semiconductor element and allowing a second current to flow which is smaller than the load current and which varies depending on the load current, said current sensing circuit comprising:

means for taking out a current which is connected to the second semiconductor element to take out the second current, said means including a first current mirror circuit having at least two transistors;

means including a second current mirror circuit having at least two transistors;

means for setting a reference current to allow a predetermined reference current to flow in said second current mirror circuit;

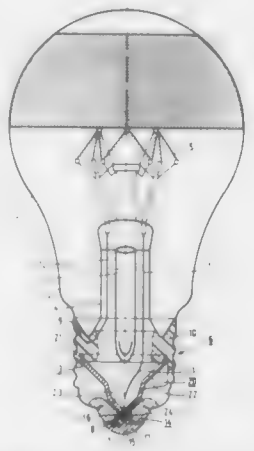
current comparison means including a series circuit of one of said transistors of the first current mirror circuit and one of said transistors of the second mirror circuit, and an output terminal provided therebetween from which a state signal showing a result of the comparison between the second current and the reference current is outputted;

means for connecting said current comparison means to a second external power source having a lower voltage than said first external power source; and

current sensing means for sensing a value of the load current flowing in said first semiconductor based on the output of said current comparison means.

5,008,587

ELECTRIC LAMP WITH IMPROVED LAMP CAP ASSEMBLY



Livio Borgis, Torino, Italy, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 14, 1990, Ser. No. 567,413

Claims priority, application Netherlands, Aug. 28, 1989, 8902170

Int. Cl.[5] **H01J** *5/50;* **H01K** *1/46*

U.S. Cl. 313—318 **11 Claims**

1. An electric lamp comprising

a translucent lamp vessel (1) with an end portion (2) which comprises a sealed exhaust tube (3) and a stemtube (4),

a light source (5) inside the lamp vessel,

a lamp cap (6) having an axis (7) and contact members (8, 9), which cap is fastened to the end portion of the lamp vessel by means of an adhesive compound (10),

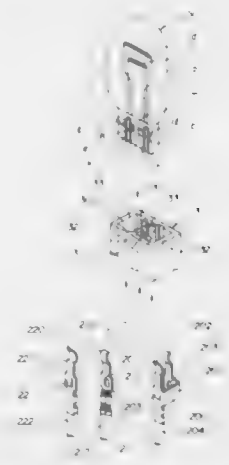
current supply conductors (11, 12) which extend from the light source to respective contact members (8, 9) at the lamp cap and are connected thereto,

the lamp cap (6) having a metal shell portion (13) and a base portion (14) of insulating material which carries at least one base contact member (8) provided with an opening (15) which issues into a channel (16) through the base portion, through which channel a current supply conductor (11) can pass to the exterior,

in the lamp cap, a hollow body (20) of synthetic material which extends from a first open end (21) near the lamp vessel (1) to the base portion (14) of the lamp cap (6) and insulates the current supply conductor (11) from the shell portion (13) of the lamp cap, characterized in that the body (20) of synthetic material has outward projections (22) which are distributed over its circumference and bear with clamping fit on the shell portion (13) of the lamp cap (6).

5,008,588

WEDGE-TYPE LAMP BULB ASSEMBLY



Toshiro Nakahara, Hiratsuka, Japan, assignor to Ichikoh Industries, Ltd., Tokyo, Japan

Filed Jun. 22, 1989, Ser. No. 369,233

Claims priority, application Japan, Jun. 22, 1988, 63-81675

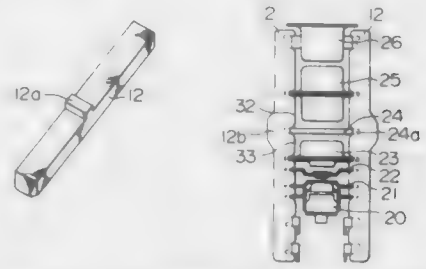
Int. Cl.[5] **H01K** *1/46;* **H01R** *17/00*

U.S. Cl. 313—318 **3 Claims**

1. A wedge-type lamp bulb assembly having a wedge-type lamp bulb consisting of a bulb containing a filament and a wedge-shaped base extending from the bulb, a plurality of lead wires connected to the filament being led out of a part of the wedge-shaped base and folded along the surfaces of the wedge-shaped base, and a socket which removably holds the wedge-shaped base, wherein there is mounted inside said socket a plurality of terminals which are in resilient contact with said lead wires, respectively, and there is formed on either the inner wall of said socket or the surfaces of said base and in positions opposite to each other along the inserting/removing direction of said base at least a pair of protruding members which engages either the surfaces of said base or the inner wall of said socket.

5,008,589

ELECTRON GUN AND METHOD FOR MANUFACTURING THE SAME



Hiroshi Takanobu, Mobara, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Dec. 18, 1989, Ser. No. 451,805

Claims priority, application Japan, Dec. 26, 1988, 63-325832

Int. Cl.[5] **H01J** *29/48*

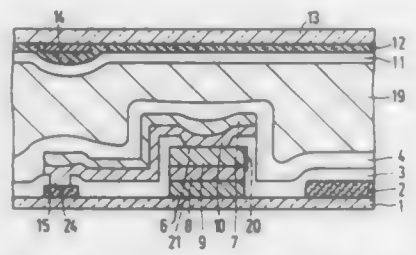
U.S. Cl. 313—456 **8 Claims**

1. A method for manufacturing an electron gun retaining a cathode and a plurality of electrodes with bead glasses, wherein each of said bead glasses are provided with a convex portion at a portion on its electrode side where at least one bead support for an electrode is buried, said bead glasses disposed on bead bases of a beading apparatus are heated and

softened, and bead supports for the cathode and the plurality of electrodes are buried and secured in the bead glasses.

5,008,590

DISPLAY ARRANGEMENT HAVING PIN DIODE SWITCHING ELEMENTS



Frederikus R. J. Huisman; Gerrit Oversluizen, and Jan W. D. Martens, all of Eindhoven, Netherlands, assignors to U.S. Philips Corp., New York, N.Y.

Filed Sep. 25, 1989, Ser. No. 412,024

Claims priority, application Netherlands, Sep. 30, 1988, 8802409

Int. Cl.[5] H01L *29/06, 29/44*

U.S. Cl. 313—500 **8 Claims**

1. A display arrangement comprising an electro-optical display medium between two supporting plates, a system of picture elements arranged in rows and columns, each picture element comprising two picture electrodes provided on the surface of the supporting plates facing each other, a system of row and column electrodes for driving the picture elements, the row electrodes being provided on one supporting plate and the column electrodes being provided on the other supporting plate, and a system of switching elements, a switching element being included between at least one row electrode and one column electrode in series with each picture element, which switching element comprises at least one PIN diode having a mesa-shaped semiconductor body, which comprises in a sectional view transverse to a supporting plate in order of succession at least a first semi-conductor region of a first conductivity type having a comparatively high doping concentration, a second semiconductor region of one of the first and a second conductivity type having a comparatively low doping concentration, and a third semiconductor region of the second conductivity type having a comparatively high doping concentration, the first and third semiconductor regions being provided with a connection conductor, characterized in that a region within which the second semiconductor region and the third semiconductor region adjoin each other is located, viewed in projection, inset within the edge of the second semiconductor region.

HALOGEN INCANDESCENT LAMP AND METHOD OF MANUFACTURING A HALOGEN INCANDESCENT LAMP

Henrikus J. H. Pragt, Eindhoven, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Oct. 23, 1989, Ser. No. 425,894

Claims priority, application Netherlands, Nov. 15, 1988, 8802803

Int. Cl.[5] H01J *9/26;* **H01K** *3/20, 1/38*

U.S. Cl. 313—623 **5 Claims**

1. An incandescent lamp comprising a sealed, tubular, tiples envelope containing a halogen containing gas and having a central longitudinal axis along which is disposed a filament and first and second current supply conductors connected to respective first and second ends of the filament, characterized in that:

a. the first current supply conductor includes an intermediate widened portion having a width which is smaller than a first internal diameter of an adjacent first portion of the envelope which exists before sealing of the envelope, but is larger than a second internal diameter of the envelope for stopping entry of the widened portion into the envelope and facilitating axial positioning of the filament before sealing of the envelope, and having a thickness which is substantially smaller than said second internal diameter;

b. the second current supply conductor includes an intermediate widened portion having a width which is smaller than both the second internal diameter and the internal diameter of an adjacent second portion of the envelope which exists before sealing of the envelope; and

c. the envelope is sealed around the widened portions of the first and second current supply conductors, with distal ends of said conductors projecting from respective ends of said envelope.

3. A method of manufacturing a halogen incandescent lamp comprising a tipless glass lamp vessel sealed in a vacuum-tight manner and having an axis, this lamp vessel having on each side a first and a second seal, respectively, in which

a filament having an axis is connected to a first and a second current supply conductor having a first and a second foil-shaped part, respectively, and an external part connected thereto, which foil-shaped parts each have a width dimension transverse to the axis of the filament,

the filament is axially introduced into a glass tube having an axis through an open first end thereof, means being provided for holding the filament positioned in the axial direction of the tube,

the glass tube is heated at the area of the first foil-shaped part and a first seal is formed in the tube, in which the first foil-shaped part is accommodated;

the tube is filled with a halogen-containing gas,

the tube is sealed in a vacuum-tight manner by heating the tube at the area of the second foil-shaped part and forming a second seal in the tube in the axial direction at a certain distance from the seal, the second foil-shaped part being accommodated in this second seal, characterized in that the width dimension of the second foil-shaped part is larger than the width dimension of the first foil-shaped part and the glass tube has a constriction which allows the first current supply conductor and the filament to pass and stops the second foil-shaped part.

COAXIAL LIQUID COOLING OF HIGH POWER MICROWAVE EXCITED PLASMA UV LAMPS

LaVerne A. Schlie, and Robert D. Rathge, both of Albuquerque, N. Mex., assignors to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Filed Jul. 13, 1990, Ser. No. 553,929

Int. Cl.[5] H01J *7/46*

U.S. Cl. 315—39 **5 Claims**

1. In a high power microwave excited plasma system comprising:

(a) a source of microwave energy;

(b) a plasma tube operatively coupled to said source of microwave energy for generation of a plasma within said plasma tube in response to energy input thereinto from said source of microwave energy;

(c) a gaseous medium within said plasma tube for supporting a plasma therein;

(d) reflector means for focusing radiation emitted from said plasma tube; and

(e) means for cooling said plasma tube;

an improvement wherein said means for cooling said plasma tube comprises,

(f) a jacket surrounding said plasma tube and defining a passageway around said plasma tube within said jacket;

(g) a source of liquid dimethyl polysiloxane; and

(h) means for circulating said liquid dimethyl polysiloxane through said passageway in heat exchange relationship with said plasma tube for cooling said plasma tube.

Int. Cl.[5] H05B *37/00, 39/04, 41/36;* H02M *7/5387*

U.S. Cl. 315—205 15 Claims

1. For combination with a low-pressure discharge lamp (LL),

an operating circuit for high-frequency operation of the lamp, said operating circuit comprising

a power network rectifier (GL) for providing d-c output electrical energy;

a self-excited half-bridge oscillating circuit comprising

an emitter current supply terminal (M; A2) for each of said transistors;

a toroidal core transformer (TR1, TR2, TR3),

said transistors being connected to the toroidal core transformer to form an inductively coupled oscillatory circuit and, in operation, causing said toroidal core transformer to operate in saturated condition;

base resistors (R2, R3) connected to the respective bases of the transistors and to the respective emitter current supply terminal (M, A2) of the respective transistor (T1, T2);

a trigger circuit (DC) for starting of the oscillating circuit; and

an emitter circuit connected to the respective emitters of the transistors (T1, T2) and to the respective current supply terminal of the respective transistor to provide current feedback therefor,

a circuit means generating enhanced ignition voltages for the lamp and to ensure reliable starting and subsequent stable continuous operation,

said circuit means consisting of a diode means (D6, D7) in the emitter circuits of each of said switching transistors,

said diode means being poled in current passing direction with respect to current flow through the emitter and connected between the emitter and the respective emitter current supply terminal of said at least one transistor to thereby enhance, during starting conditions of the lamp, resonance current flow through the oscillatory circuit including said toroidal core transformer operated in saturation level condition.

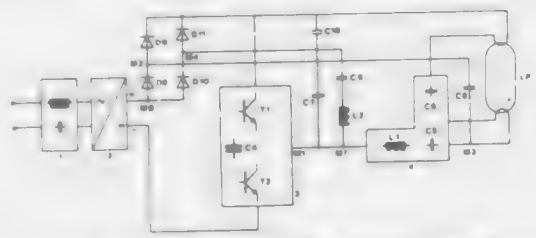
POWER NETWORK SUPPLIED HIGH-FREQUENCY LOW-PRESSURE DISCHARGE LAMP OPERATING CIRCUIT



Anton Zuchtriegel, Taufkirchen, Fed. Rep. of Germany, assignor to Patent Treuhand Gesellschaft für elektrische Gluhlampen mbH, Munich, Fed. Rep. of Germany

Filed Nov. 22, 1989, Ser. No. 440,776

Claims priority, application Fed. Rep. of Germany, Dec. 7, 1988, 3841227

Int. Cl.[5] H05B *37/02*

U.S. Cl. 315—209 R 11 Claims

1. Power network supplied high-frequency low pressure discharge lamp (LP) operating circuit having

a power rectifier (2) having output terminals (M8, M5),

a high-frequency oscillator circuit (3) including a push-pull transistor frequency generator having two alternately conducting transistors (T1, T2) connected to define a common junction (M1) between the transistors, a feedback circuit (RK1, RK2, RK3) coupled to the transistors, and a smoothing capacitor (C4) coupled across both transistors;

a series resonance circuit (4) having a series inductance (L1) and a series capacitor (C6) coupled to the lamp, to provide starting energy thereto;

a first circuit means connecting a first electrode (E1) of the lamp (LP) through the series inductance (L1) with said common junction (M1) between said transistors;

a second circuit means connecting the second electrode (E2) of the lamp with one of said output terminals (M8) of the power rectifier; and

an active harmonic filter including

two parallel series connected circuits, each of which series circuits is formed by a pair of serially connected diodes (D8, D9; D10, D11) coupled to the power rectifier and polarized in forward direction with respect to the output voltage from the power rectifier,

and comprising, in accordance with the invention, the combination of

a first capacitor (C7) connected to a first common diode junction (M2) between the diodes (D8, D9) of the first pair and to said common junction (M1) between said transistors;

a second capacitor (C8) connected also to the first common diode junction (M2) and to a junction (M3) between said inductance (L1) and the first electrode (E1) of the lamp (LP); and

a pumping inductance (L2) connected to a second common diode junction (M4) between the diodes (D10, D11) of the second diode pair, and further connected to said common junction (M1) between said transistors (T1, T2).

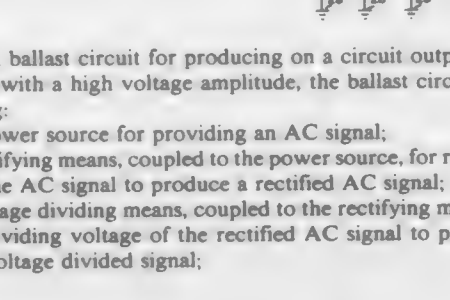
FLUORESCENT LIGHTING CONTROL CIRCUIT

James C. Cook, II, Marshall, Mich., assignor to Progressive Dynamics, Inc., Marshall, Mich.

Filed Jan. 5, 1990, Ser. No. 461,221

Int. Cl.[5] H05B *41/36*



U.S. Cl. 315—225 8 Claims

1. A control circuit for a gas discharge lamp, said lamp having a gas filled chamber and at least one pair of discharge electrodes in said gas filled chamber, said control circuit comprising:

a transformer including a primary winding and a secondary winding,

a gated switch means having a gating terminal and selective conducting means responsive to a signal being applied to said gating terminal for applying a supply voltage to said primary winding;

control signal generating means for selectively applying a signal to said gating terminal when said control circuit is in a first state and for not applying a signal to said gating terminal when said control circuit is in a second state;

said secondary winding being adapted to attempting to establish a current between said discharge electrodes upon the occurrence of both a current not being conducted between said discharge electrodes and said control circuit being in said second state; and

protection means for applying a signal to said gating terminal upon the occurrence of both said control circuit being in said second state and failure of said secondary winding to establish a current between said discharge electrodes;

said secondary winding includes means for producing a high voltage in order to attempt to establish a current between said discharge electrodes and wherein said protection means includes means responsive to said high voltage exceeding a predetermined level.

POWER FACTOR CORRECTION CIRCUIT

Richard C. Counts, Dallas, Tex., assignor to USI Lighting, Inc., San Leandro, Calif.

Filed Feb. 14, 1990, Ser. No. 479,650

Int. Cl.[5] H05B *37/02*

U.S. Cl. 315—247 9 Claims

1. A ballast circuit for producing on a circuit output a DC signal with a high voltage amplitude, the ballast circuit comprising:

a power source for providing an AC signal;

rectifying means, coupled to the power source, for rectifying the AC signal to produce a rectified AC signal;

voltage dividing means, coupled to the rectifying means, for dividing voltage of the rectified AC signal to produce a voltage divided signal;

capacitance means, coupled to the circuit output, for storing a charge;

inductance means, coupled to the rectifying means, for providing a current to charge the capacitance means;

diode means, coupled between the capacitance means and the inductance means, for allowing current to flow from the inductance means to the capacitance means to charge the capacitance means, and for not allowing current to flow from the capacitance means to the inductance means;

current gate means for draining current from the inductance means when the current gate means is turned on; and,

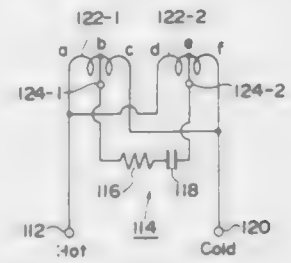
control circuitry, coupled to the current gate means and to the voltage dividing means, for turning the current gate means on and off, the control circuitry including

ramp generator means for generating a pulse modulation reference signal with a varying voltage amplitude, and

first comparator means, coupled to the ramp generator and to the voltage divider, for comparing the pulse modulation reference signal with the voltage divided signal to produce a first modulated signal.

5,008,600

DEFLECTION YOKE DEVICE



Akira Hashimoto, and Shunji Arai, both of Yokohama, Japan, assignors to Murata Mfg. Co., Ltd., Kyoto, Japan

Filed Aug. 13, 1990, Ser. No. 566,095

Claims priority, application Japan, Aug. 30, 1989, 1-101451[U]

Int. Cl.[5] H01J *29/56*

U.S. Cl. 315—370 10 Claims

1. A deflection yoke device including a first horizontal deflection coil wound into a saddle-type configuration and a second horizontal deflection coil wound into the saddle-type configuration and connected in parallel with said first horizontal deflection coil with one end of said second horizontal deflection coil connected thereto via a high voltage-side terminal and the other end of said second horizontal deflection coil connected thereto via a low voltage-side terminal, said deflection yoke device comprising:

a first intermediate terminal provided on said first horizontal deflection coil;

a second intermediate terminal provided on said second horizontal deflection coil; and

a damping circuit connected between said first intermediate terminal and said second intermediate terminal and adapted to eliminate electrical oscillations generated by said first and second horizontal deflection coils.

5,008,601

MULTIFUNCTION SWITCHING CONTROL SYSTEM

Takashi Nakamura; Haruhiko Tanaka; Touru Hyodo, and Yasuhiro Osanai, all of Tokyo, Japan, assignors to Janome Sewing Machine Company Limited, Tokyo, Japan

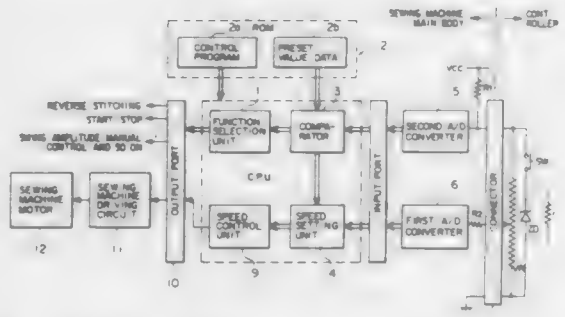
Filed Apr. 2, 1990, Ser. No. 503,324

Claims priority, application Japan, Mar. 31, 1989, 1-78056

Int. Cl.[5] H02P *7/00;* D05B *69/26*

U.S. Cl. 318—268 5 Claims

1. In a multifunction switching control system for a sewing machine, comprising:



a sewing speed controller for controlling a sewing speed of a computerized sewing machine by setting a voltage value of a variable resistor incorporated in said sewing speed controller;

said variable resistor having a ground terminal, a variable terminal and a fixed terminal;

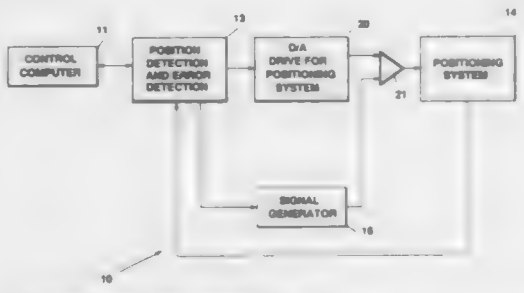
an invariable resistor;

a first A/D converter for converting the set voltage value of the variable resistor, at the variable terminal, from an analog signal to a digital signal; and

a second A/D converter for converting a voltage value, at the fixed terminal of the variable resistor, from an analog signal to a digital signal;

the improvement comprising:

(a) a switch circuit operated to connect one terminal of the variable resistor to the fixed terminal of said variable resistor; and



(b) a comparator having a reference value stored therein for detecting a connection of said switch circuit by comparing the converted digital signal of said second A/D converter with said stored reference value, said comparator causing said sewing speed controller to operate functional parts of said sewing machine other than said sewing speed control if said switch circuit is connected.

5,008,602

SIGNAL GENERATOR FOR USE IN INDUSTRIAL POSITIONING SYSTEMS

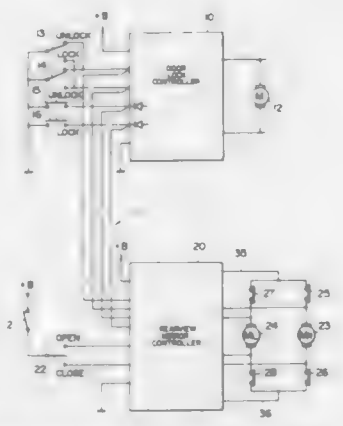
Eugene H. Stevens, Newbury Park, Calif., and Mark W. Utlaut, Scappoose, Oreg., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed May 19, 1989, Ser. No. 354,652
Int. Cl.[5] G05B *13/00*
U.S. Cl. 318—561 **9 Claims**

1. A signal generator comprising:

integrating means for integrating an input signal to provide an output signal;

limiting means, connected between the input and output of said integrating means for limiting the output thereof; and



nulling means coupled to the output of said integrating means for nulling the output signal of said integrating means when the input to said integrating means drops below a first predetermined threshold.

5,008,603

ELECTRICALLY FOLDABLE REARVIEW MIRRORS INTERLOCKED WITH DOOR LOCKS

Kiyoshi Nakayama, Shizuoka, Japan, and Darbesio Luigi, Orbassano, Italy, assignors to Murakami Kaimeido Co., Ltd., Sizuoka, Japan and Fiat Auto SpA, Turin, Italy

Filed Mar. 14, 1990, Ser. No. 493,323
Claims priority, application Japan, Dec. 20, 1989, 1-328527
Int. Cl.[5] G05B *19/42*
U.S. Cl. 318—568.1 **4 Claims**

1. A system for controlling a position of foldable rearview mirrors on a motor vehicle comprising:

at least one rearview mirror foldably mounted on the vehicle for movement between a folded position when not in use and an extended position for use;

a door lock controller operatively connected to door locks of the vehicle for locking and unlocking doors of the vehicle;

at least one outer door lock switch and at least one inner door lock switch operatively connected to said door lock controller for operating said door locks between locking and unlocking positions;

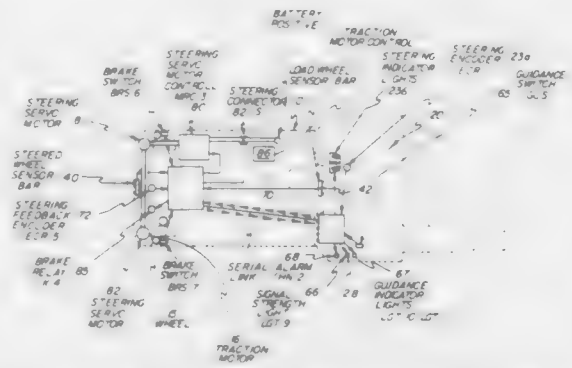
reversible electric motor means operatively connected to said at least one rearview mirror for operating said at least one rearview mirror between said folded and extended positions when actuated;

a rearview mirror controller having an input side and an output side, said output side being operatively connected to said reversible electric motor means for actuating said motor means and said door lock controller and said at least one outer door lock switch and at least one inner door lock switch being operatively connected to said input side;

ignition switch means and operation switch means inside the vehicle connected in series between an electric power source and said input side of said rearview mirror controller, said ignition switch means and operation switch means having open and closed positions, said operation switch means comprising a manual-two circuit reversible motor operation switch;

a driving circuit in said rearview mirror controller operatively connected to said electric motor means for reversing the rotation of said electric motor means in response to said open and closed positions of said operation switch so that when said ignition switch means is in the closed position and said operation switch means is in said open position said driving circuit operates said electric motor means to move said at least one rearview mirror into said folded position and when said operation switch means is in said closed position said driving circuit operates said electric motor means into said extended position;

limit switch means mounted on said at least one rearview mirror for detecting said folded and extended positions of said at least one rearview mirror; and



a micro computer operatively connected to said driving circuit for controlling said driving circuit by processing inputs from said switches.

5,008,604

DYNAMIC CLIPPER FOR USE IN A VEHICLE GUIDANCE SYSTEM

Ned E. Dammeyer, New Bremen, and Nick D. Thobe, Celina, both of Ohio, assignors to Crown Equipment Corporation, New Bremen, Ohio

Filed Dec. 5, 1989, Ser. No. 446,502
Int. Cl.[5] G05D *1/00*
U.S. Cl. 318—587 **11 Claims**

1. In a guided vehicle control system including at least one sensing coil for providing an output representative of the presence and location of a buried wire, circuit means responsive to the output of said sensing coil, and means responsive to the circuit means for controlling the direction of the vehicle,

the improvement characterized by the circuit means including noise limiting means for limiting the effect of noise and other spurious signals detected by the sensing coil, said noise limiting means including

voltage limiting means responsive to the output of the sensing coil for limiting the magnitude of the sensing coil voltage to a value determined by a reference voltage,

rectifier means for rectifying the output of said voltage limiting means, and

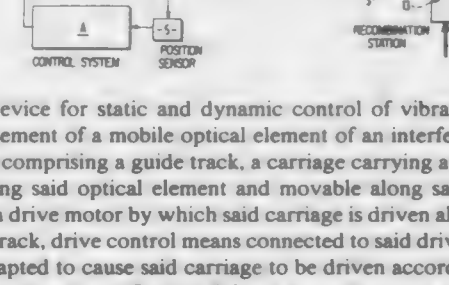
means for integrating the output of said rectifier means to generate said reference voltage, whereby the output of said rectifier means will be closely related to the strength of the signal induced into the sensing coil from the buried wire.

5,008,605

ELECTRIC DRIVING DEVICE CAPABLE OF ELIMINATING BACKLASH

Tsunemasa Ohara, Tokyo, and Tomoo Shibanai, Utsunomiya, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 11, 1988, Ser. No. 141,730
Claims priority, application Japan, Jan. 12, 1987, 62-4594
Int. Cl.[5] G05B *11/01*
U.S. Cl. 318—630 **16 Claims**



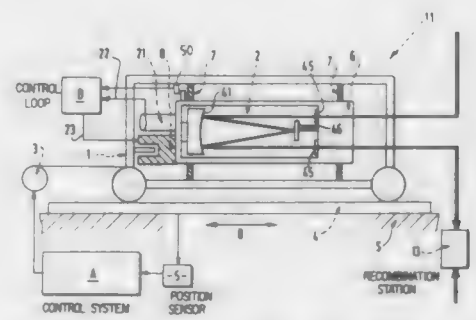
1. An electric driving device capable of eliminating backlash, comprising:

(a) electric drive means for generating a driving force;

(b) actuator means to be activated by the driving force of said electric drive means;

(c) gear means for transmitting the driving force of said electric drive means to said actuator means; and

(d) control means for supplying electric power to said electric drive means to eliminate backlash generated in said gear means, the electric power being supplied at a first power level during an initial period when said electric drive means is started and being supplied at a second power level lower than said first power level subsequent to said initial period, wherein both the first level and the second level are lower than the driving power level supplied to said electric drive means for actuating said actuator means.

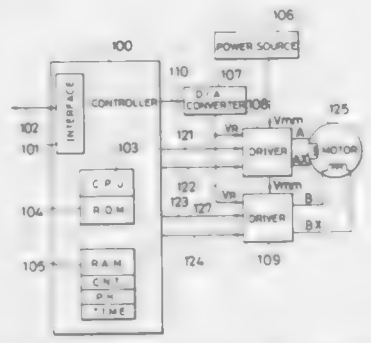


5,008,606

DEVICE FOR CONTROLLING VIBRATION-FREE MOVEMENT OF AN OPTICAL ELEMENT IN A STELLAR INTEFEROMETER AND STELLAR INTERFEROMETER COMPRISING SAME

Bertrand Koehler, Cannes; Emmanuel Manil, Le Cannet Rocheville, and Jacques Chapellier, Le Cannet, all of France, assignors to Aerospatiale Societe Nationale Industrielle, Paris, France

Filed Apr. 17, 1990, Ser. No. 509,821
Claims priority, application France, Apr. 17, 1989, 89 05060
Int. Cl.[5] B64C *17/06*
U.S. Cl. 318—649 **15 Claims**



1. Device for static and dynamic control of vibration-free displacement of a mobile optical element of an interferometry device comprising a guide track, a carriage carrying a payload including said optical element and movable along said guide track, a drive motor by which said carriage is driven along said guide track, drive control means connected to said drive motor and adapted to cause said carriage to be driven according to a predetermined law, flexible linkage means between said payload and said carriage enabling relative movement between said payload and said carriage parallel to the direction of displacement of said optical element, a stabilization control loop independent of said drive control means, an accelerometer carried by said payload, responsive to acceleration of said payload parallel to said direction of displacement of said optical element and connected to said stabilization control loop, an actuator operative between said payload and said carriage under the control of said stabilization control loop, a filter means in said stabilization control loop for filtering signals from said accelerometer, a control loop in said drive control means and a position sensor connected to said control loop and adapted to sense the position of said carriage on said guide track.

5,008,607

DRIVING SYSTEM FOR STEPPING MOTOR

Takeshi Ono, Yokohama; Masahiro Sakamoto, Tokyo, and Tadashi Takano, Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 29, 1989, Ser. No. 372,822
Claims priority, application Japan, Jul. 1, 1988, 63-162608
Int. Cl.[5] H02P *8/00*
U.S. Cl. 318—696 **5 Claims**

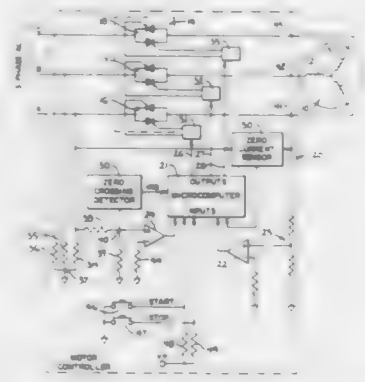
1. A driving system for a stepping motor wherein a stepping motor is rotatively driven by a predetermined number of steps for each driving trigger, comprising:

a stepping motor having a plurality of energization coils through each of which an energization current flows to drive said stepping motor;

a plurality of drivers for applying said energization current to the respective energization coils of said stepping motor;

a counting means for counting a time between two successive driving triggers; and

an energization controlling means controlling said energization current of said stepping motor in response to said time counted by said counting means.



5,008,608

CONTROLLER FOR STARTING AND STOPPING ELECTRIC MOTORS

Peter J. Unsworth, Lewes, England; John C. Merrison, and Timothy M. Rowan, Wauwatosa, both of Wis., assignors to Allen-Bradley Company, Inc., Milwaukee, Wis.

Filed Dec. 26, 1989, Ser. No. 456,910
Int. Cl.[5] H02P *5/40*
U.S. Cl. 318—729 **22 Claims**

14. A method for controlling the torque of an electric motor that is coupled by a switch means to a source of alternating voltage and current, the switch means being of a type which is conductive from when a trigger pulse is applied until the magnitude of alternating current therethrough goes to zero, said method comprising repeatedly executing the steps of:

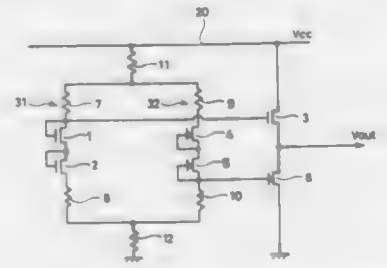
(a) measuring a phase difference θ between the alternating voltage and current from the source;

(b) defining a reference value θ_{REF};

(c) calculating a control value θ according to the equation $\theta=\phi+K\gamma$, where K is a positive number and where γ corresponds to the length of a previous interval during which the switch means was non-conductive;

(d) producing an error signal representing the difference between the control value θ and the reference value θ_{RREF};

(e) altering the value of γ in response to the error signal; and



(f) applying a trigger pulse to the switch means at the end of an interval substantially equal to the altered value of γ from when the alternating current from the source has a zero magnitude.

5,008,609

VOLTAGE GENERATING CIRCUIT FOR SEMICONDUCTOR DEVICE

Takahiko Fukiage, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed May 22, 1990, Ser. No. 526,740
Claims priority, application Japan, Jun. 6, 1989, 1-144776
Int. Cl.[5] G05F *3/20*
U.S. Cl. 323—313 **3 Claims**

1. A voltage generating circuit for a semiconductor memory device, comprising:

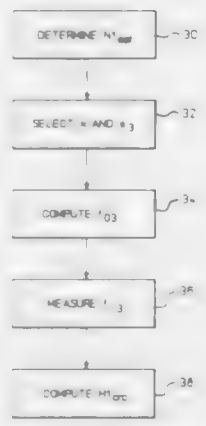
a first serial connection circuit including first resistance means, one or more first conductive-type field effect transistors, and second resistance means which are connected in series to each other, and

a second serial connection circuit including third resistance means, one or more second conductive-type field effect transistors, and fourth resistance means which are connected in series to each other, said first and second serial connection circuits being connected in parallel, each of said first and second conductive-type field effect transistors having its gate connected to its first conductive electrode,

fifth resistance means interposed between a first reference potential source and said first and third resistance means,

sixth resistance means interposed between a second reference potential source and said second and fourth resistance means,

a first output terminal connected to a first conductive electrode of any of said first conductive-type field effect transistors, and



a second output terminal connected to a second conductive electrode of any of said second conductive-type field effect transistors.

5,008,610

METHOD FOR HARMONIC NUMBER DETERMINATION IN A MICROWAVE FREQUENCY COUNTER

Nancy W. Nelson, San Jose; Lee D. Cosart, III, Palo Alto; Luiz Peregrino, Cupertino, and Eric M. Ingman, Los Altos Hills, all of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Jul. 31, 1989, Ser. No. 388,208
Int. Cl.[5] G01R *25/02*
U.S. Cl. 324—84 **15 Claims**

1. In a harmonic heterodyne converter wherein the frequency of an input signal is determined from a local oscillator frequency, an intermediate frequency obtained by mixing the local oscillator frequency with the input signal, and a harmonic number, a method for determining a generalized harmonic number H, comprising the steps of:

computing an estimated generalized harmonic number $H1_{est}$ from closely-spaced first and second local oscillator frequencies f_{01} and f_{02} and first and second intermediate frequencies f_{i1} and f_{i2} obtained by successively mixing said first and second local oscillator frequencies with the input signal;

selecting a third local oscillator frequency f_{03} such that the corresponding generalized harmonic number H3 differs from the estimated harmonic number by a predetermined integer, k;

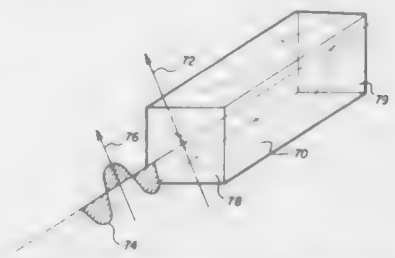
measuring a third intermediate frequency f_{i3} obtained by mixing the third local oscillator frequency with the input signal; and

computing a corrected generalized harmonic number $H1_{crc}$ from the first and third local oscillator frequencies and the first and third intermediate frequencies.

5,008,611

METHOD OF ELIMINATING THE EFFECTS OF BIREFRINGENCE FROM THE DETECTION OF ELECTRIC CURRENT USING FARADAY ROTATION

Edward A. Ulmer, Jr., Clearwater, Fla., assignor to Square D Company, Palatine, Ill.



Filed Mar. 14, 1989, Ser. No. 323,599
Int. Cl.[5] G01R *15/00, 31/00*
U.S. Cl. 324—96 **29 Claims**

1. A method for minimizing the effect of stress birefringence within the optical apparatus of an optical current transducer providing an optical current signal proportional to a time-varying target current of electricity to be measured, said optical current transducer including at least one optical medium having a Faraday effect, said optical medium receiving a light beam of polarized light and transmitting the received light to produce an optical current signal, comprising the steps of:

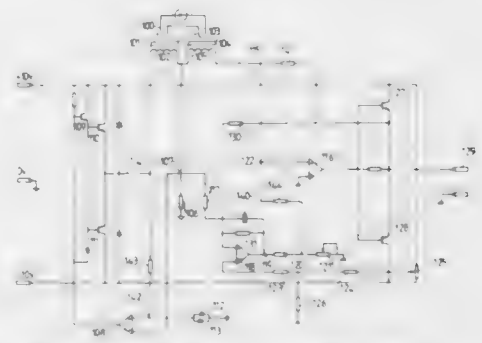
geometrically selecting a geometric configuration of said optical medium to be placed within a magnetic field produced by said target current;

orientatedly selecting said optical medium to have an entrance surface, and an exit surface, said optical medium having fast and slow known characteristic directions in which if polarized light is oriented in the absence of a magnetic field the polarized light is transmitted without a change in polarization angle, a known Verdet constant, a known permeability, a known approximate birefringence comprising the difference between a fast index of refraction and a slow index of refractions, each index associated with an associated said characteristic direction and a known path length with respect to said received and transmitted light from said entrance surface to said exit surface from which said optical current signal exits;

mathematically determining the existence and identity of at

least one non-birefringent angle of polarization with respect to said characteristic direction of said optical medium at which a polarized beam of light may be received by and transmitted through said optical medium along said path length and produce said optical current signal with a time-varying component, said optical current signal having a current polarization angle proportional to and produced by the target current and proportional to the path, length, the root-mean-square average value of said time-varying component being proportional to the root-mean-square average value of said target current;

aligning said received light with said non-birefringent angle; and



measuring said current polarization angle.

5,008,612

CURRENT SENSOR

Donald V. Otto, Auckland, New Zealand, assignor to Unisearch Systems Limited, Pakuranga, New Zealand

Filed Aug. 24, 1989, Ser. No. 399,837
Claims priority, application New Zealand, Aug. 24, 1988, 225931
Int. Cl.[5] G01R *33/00*
U.S. Cl. 324—117 R **8 Claims**

1. Apparatus for sensing currents comprising:

sensing means including first and second transformers each having a primary winding connected in series and defining a loop for carrying a current to be sensed and each having a secondary winding which is electrically isolated from the primary winding and a magnetic core for magnetically coupling the primary winding with the secondary winding;

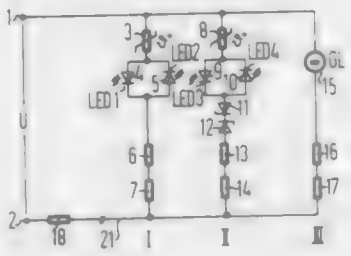
means for feeding the secondary winding of said first transformer with a cyclic magnetization current to cyclically drive the magnetic core of said first transformer into saturation;

separating means for separating said cyclic magnetization current from a first sensed current component induced from said primary winding into the secondary winding of said first transformer;

processing means for processing said first sensed current component together with a second sensed current component induced from said primary winding into the secondary winding of said second transformer to provide an output signal substantially proportional to the current to be sensed.

5,008,613

VOLTAGE TESTER FOR GRADUATED OPTICAL DISPLAY OF A VOLTAGE AND METHOD FOR ITS MANUFACTURE



Heinrich-Wolfgang Steinel, Bad Woersihofen; Ulrich Armonier, Rheda-Wiedenbrueck, and D-F Schulze-Froehlich, Herzebrock-Clarholz, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Aug. 23, 1989, Ser. No. 397,530

Claims priority, application European Pat. Off., Aug. 26, 1988, 88113986.9

Int. Cl.[5] **G01R** *19/14, 31/00*

U.S. Cl. 324—133 **8 Claims**

1. A voltage tester for graduated optical display of voltages, comprising:

test tips to which a voltage is applied;

circuit arrangement of electrical components connected to said test tips, said circuit arrangement including:

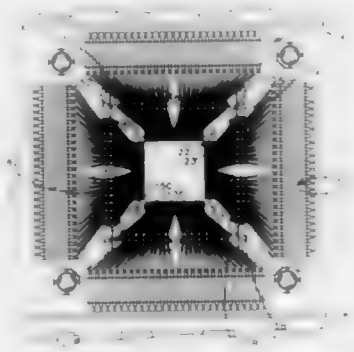
a first series circuit connected across said test tips comprising a first PTC-resistor and a first pair of light emitting diodes connected antiparallel to one another and a first drop resistor, said first series circuit being balanced so that at least one of said two light emitting diodes lights up when a voltage exceeding a first value is applied to said test tips;

a second series circuit comprising a second PTC-resistor and a second pair of light emitting diodes connected antiparallel to one another and two Zener diodes connected in series polarized oppositely of one another and a second drop resistor, said second series circuit being connected parallel to said first series circuit across said test tips, said second series circuit being balanced so that at least one of said second pair of light emitting diodes lights up when a voltage exceeding a second value is applied to said test tips;

a third series circuit comprising a glow lamp and a third drop resistor, said third series circuit being connected parallel to said first series circuit and to said second series circuit across said test tips, said third series circuit being balanced so that said glow lamp lights up when a voltage exceeding a third value is applied to said test tips; and

a current-limiting resistor connected in series with said first, second and third series circuits.

5,008,614



TAB FRAME AND PROCESS OF TESTING SAME

Robert W. Shreeve, and Melissa D. Boyd, both of Corvallis, Oreg., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Oct. 11, 1988, Ser. No. 255,230

Int. Cl.[4] **G01R** *31/28,* **H03F** *1/52;* **H01L** *23/50*

U.S. Cl. 324—158 F **8 Claims**

1. A tape automated bonding (TAB) process for testing TAB frames and dies, integrated chips or other similar components mounted thereon, comprising the steps of:

A. using a TAB frame having:

a. a relatively thin film of dielectric material;

b. a plurality of substantially adjacent inner lead bonds pads disposed on said film, in close proximity to the die, said inner lead pads surrounding the die in a desired predetermined pattern;

c. a plurality of substantially adjacent outer lead pads on the film, for providing input/output ports to the die, said outer lead pads being generally disposed in a predetermined pattern, at the outer periphery of the frame, to permit easy accessibility for soldering to a printed circuit board when the frame is excised from the dielectric film;

d. a plurality of substantially adjacent test probe pads disposed in a predetermined pattern on the film, intermediate said inner lead pads and the outer lead pads, for providing test points for the frame and the die thereon, said test probe pads being supported by the dielectric film for maintaining a substantially fixed spacing between two adjacent test probe pads; and

e. conducting means for electrically interconnecting said inner lead pads, said outer lead pads and said test probe pads, in a predetermined pattern, wherein portions of said conductive means interconnecting said inner lead pads and said test probe pads are generally supported by, and disposed onto the dielectric film, in order to minimize the bending and twisting of the frame and of the pattern of said test probe pads;

B. excising the die from the frame in the form of a coupon, said coupon including the die and all of said test probe pads, and wherein the excision outline of said coupon is selected intermediate said test probe pads and said outer lead pads so as to exclude said outer lead pads from being included in said coupon;

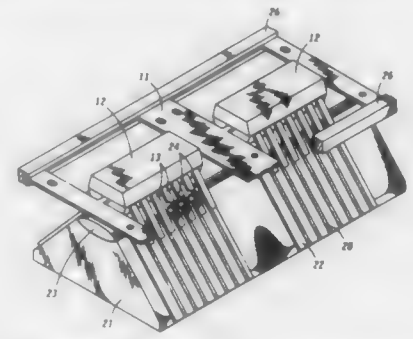
C. aligning the die; and

D. testing said coupon and the die.

5,008,615

MEANS AND METHOD FOR TESTING INTEGRATED CIRCUITS ATTACHED TO A LEADFRAME

Hugh W. Littlebury, Chandler, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.



Filed Nov. 3, 1989, Ser. No. 431,346

Int. Cl.[5] **G01R** *1/06, 31/02*

U.S. Cl. 324—158 F **9 Claims**

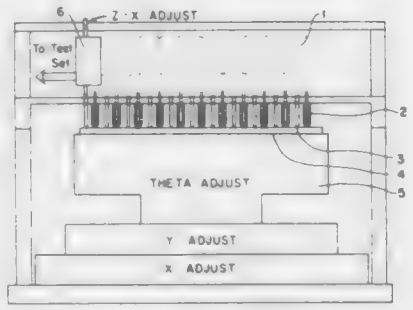
4. A test fixture for testing a plurality of packaged integrated circuits which are attached to a leadframe, wherein each of the integrated circuits has a plurality of leads which are isolated from the leadframe, the test fixture comprising:

a membrane test head having a plurality of contacts thereon positioned underneath the plurality of leads;

a tester coupled to the test head;

a drive means for moving the test head towards and away from the plurality of leads, wherein the membrane test head couples to a plurality of packaged ICs at one time.

5,008,616



FLUIDICS HEAD FOR TESTING CHEMICAL AND IONIC SENSORS

Imants R. Lauks, Morrisville, Pa.; Henry J. Wieck, Plainsboro, and Gregory M. Bandru, Ewing, both of N.J., assignors to I-Stat Corporation, Princeton, N.J.

Filed Nov. 9, 1989, Ser. No. 434,660

Int. Cl.[5] **G01R** *31/02;* **G01N** *27/00;* **H01L** *29/66*

U.S. Cl. 324—158 F **8 Claims**

1. A fluidics head or a multiplicity of heads in an array thereof for automatically testing chemical and ionic sensing electronic circuit devices comprising:

a fluid confining cell having at least one open orifice to contain a known test fluid,

means for filling said test fluid into said open orifice and discharging said test fluid from said open orifice when said orifice is in leakproof engagement with said sensing electronic circuit device to be tested, and

means for providing electrical contacts to said sensing electronic circuit device so as to test said sensing electronic circuit device with said test fluid, wherein said open orifice has an internal shape such that fluid contamination in said fluid confining cell is minimized during discharge of said test fluid.

FUNCTIONAL TESTING OF ULTRA LARGE AREA, ULTRA LARGE SCALE INTEGRATED CIRCUITS

Wolodymyr Czubatyj, Warren, and Ronald Himmler, Sterling Heights, both of Mich., assignors to Energy Conversion Devices, Inc., Troy, Mich.

Filed Jun. 20, 1989, Ser. No. 369,784

Int. Cl.[5] **G01R** *31/00, 31/02*

U.S. Cl. 324—158 R **5 Claims**

1. A method of testing a large area active matrix liquid crystal display; said method including the steps of:

(a) providing a matrix array which includes a plurality of rows and columns of address lines; each pair of adjacent row address lines and column address lines defining a picture element; each picture element including switching means for discretely electrically interrogating said element; said switching means including a plurality of thin film layers of silicon alloy material;

(b) providing a chargeable dry powder;

(c) providing the matrix array of picture elements, including the layers of silicon alloy material of the switching means, in proximity to the chargeable powder;

(d) electrically activating the switching means of the matrix array; and

(e) applying an electrical potential between the switching means and the powder, said potential causing particles of the chargeable powder to adhere to the activated picture elements of the matrix array.

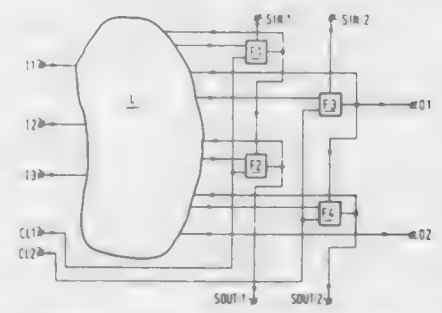
SCAN TEST APPARATUS FOR ASYNCHRONOUS CIRCUITRY



Max Van Der Star, Hilversum, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

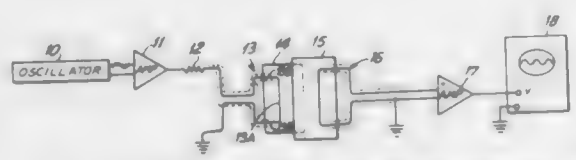
Filed Jan. 23, 1990, Ser. No. 468,534

Claims priority, application Netherlands, Jan. 23, 1989, 8900151

Int. Cl.[5] **G01R** *31/00, 31/02*

U.S. Cl. 324—158 R **12 Claims**

1. In a digital signal processing circuit jointly controlled by first and second mutually asynchronous clock signals, the improvement for enabling scan testing of said circuit, compris-



ing: first and second scan chains of cascaded bistable elements connected to data inputs and outputs of said circuit which first and second scan chains are respectively independently controlled by said first and second clock signals; first and second test data inputs respectively connected to said first and second scan chains; and first and second result data outputs respectively connected to said first and second scan chains.

5,008,619

MULTILEVEL CIRCUIT BOARD PRECISION POSITIONING

Raymond J. Keogh, Huntington; Ronald Morino, Shelter Island Heights, both of N.Y., and R. Page Burr, Matinicus, Me., assignors to AMP-AKZO Corporation, Melville, N.Y.

Filed Nov. 18, 1988, Ser. No. 272,929
Int. Cl.[5] G01B *7/14;* **H05K** *3/02, 3/10*
U.S. Cl. 324—207.16 **15 Claims**

1. An apparatus for determining the relative position of at least a first object with respect to a second object, the first object being a layer of a circuit board and the second object being a surface associated with a machine for making circuit boards or a second layer of a circuit board, the apparatus comprising:

a first geometric pattern of conductive material disposed on the first object;

a second geometric pattern of conductive material which is disposed on the second object in juxtaposition with the first, such that the perpendicular projection of said second geometric pattern on the first object is centered on about said first geometric pattern;

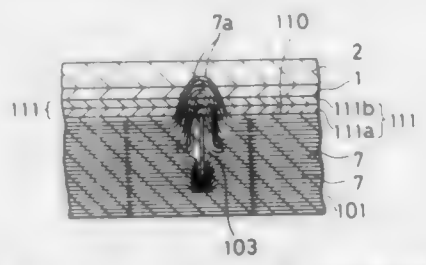
means for applying a predetermine value of alternating current to said first pattern to establish an electromagnetic field surrounding said first pattern;

means for detecting the magnitude of the voltage induced in said second pattern by the field established by said first pattern;

whereby the position of the first object relative to the second object is indicated by the magnitued of the detected voltage resulting from the said predetermined value of alternating current.

5,008,620

LEAKAGE FLUX FLAW DETECTION METHOD AND APPARATUS UTILIZING A LAYERED DETECTOR



Katusnobu Nonaka, Tsuchiura, and Kazuyoshi Sekine, Yokohama, both of Japan, assignors to Agency of Industrial Science & Technology and Ministry of International Trade & Industry, both of Tokyo, Japan

Filed Mar. 6, 1990, Ser. No. 489,235
Claims priority, application Japan, Mar. 10, 1989, 1-58478
Int. Cl.[5] G01N *27/82;* **G01R** *33/12*
U.S. Cl. 324—213 **13 Claims**

5. A leakage flux flaw detection apparatus comprising:

a magnetic recording material one surface of which is in contact with a test surface of a test material;

an auxiliary recording member with a ferromagnetic layer and a non-magnetic layer arranged one on the other so

that the non-magnetic layer is in contact with the magnetic recording layer;

and a magnetizer for magnetizing the test material.

5,008,621

MULTIPARAMETER MAGNETIC INSPECTION SYSTEM WITH MAGNETIC FIELD CONTROL AND PLURAL MAGNETIC TRANSDUCERS

David C. Jiles, Ames, Iowa, assignor to Iowa State University Research Foundation, Inc., Ames, Iowa

Filed Apr. 14, 1989, Ser. No. 338,966
Int. Cl.[5] G01R *33/12;* **G01N** *27/72*
U.S. Cl. 324—227 **21 Claims**

1. A multiparameter magnetic inspection system for deriving and displaying a plurality of related magnetic parameters of specimens, some of the parameters being measured in that they are obtained from transducer signals and others being derived from one or more of the measured parameters, the system comprising in combination:

housing means for holding a specimen to be inspected;

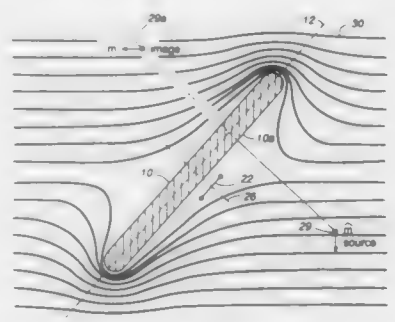
magnetic field means connectable to the housing means for applying magnetic fields of various properties and characteristics to the specimen;

a plurality of inspection transducers of different types mountable on or adjacent to the specimen in the housing means for inspecting the specimens and producing transducer signals related to and representing measures of different magnetic specimen parameters as a result of magnetic fields applied thereto;

measuring circuitry means for each inspection transducer to receive and convert the transducer signals into a plurality of measurement signals; the measurement signals being independent in that they result from transducer signals which are produced by the plurality of different inspection transducers but related in that they are produced

from the same specimen subjected to the same magnetic fields;

communication cable means for connecting the inspection transducers with the analytical circuit means; and



control means for instructing application of and changes in magnetic fields to the specimen; receiving the measurement signals resulting from the application of and changes in the magnetic field; and contemporaneously and rapidly from said measurement signals compiling the measured parameters, deriving the derived parameters from the measured parameters, and displaying the related measured and derived parameters for the inspected specimen.

5,008,622

SUPERCONDUCTIVE IMAGING SURFACE MAGNETOMETER

William C. Overton, Jr., Los Alamos; David B. van Hulsteyn, Santa Fe, and Edward R. Flynn, Los Alamos, all of N. Mex., assignors to United States Department of Energy, Washington, D.C.

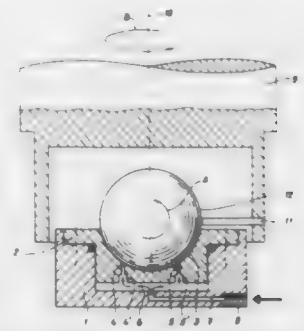
Filed Dec. 21, 1989, Ser. No. 454,607
Int. Cl.[5] G01R *33/02, 33/035*
U.S. Cl. 324—248 **44 Claims**

1. Apparatus for detecting nearby magnetic sources by performing imaging SQUID magnetometry and gradiometry comprising:

one or more first superconducting coil means connected in series opposition to one or more second superconducting coil means for sensing nearby magnetic signals and electrically cancelling distant magnetic noise;

superconducting plate means interposed between and in close proximity to said one or more first and second superconducting coil means for imaging said nearby magnetic signals and deflecting said distant magnetic noise away from said first and second superconducting coil means;

wherein said one or more first and second superconducting coil means are connected to a SQUID.



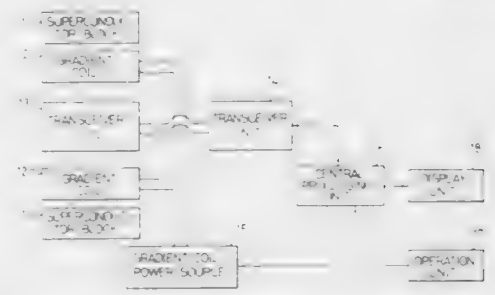
5,008,623

METHOD AND APPARATUS FOR TESTING BALLS WITH THE USE OF EDDY CURRENTS

Hendrik Dolfsma, Tull en 't Waal, and Hendrik van Engelenburg, Driebergen, both of Netherlands, assignors to SKF Industrial Trading and Development Company BV, DT Nieuwegein, Netherlands

Filed Mar. 19, 1990, Ser. No. 495,349
Claims priority, application Netherlands, Apr. 5, 1989, 8900848
Int. Cl.[5] G01R *33/00;* **G01N** *27/72*
U.S. Cl. 324—262 **6 Claims**

1. In a method employing eddy currents for checking damage on the surface of a round, e.g., ball-shaped, metal object, wherein the object is supported and made to rotate around at least one axis while an electronic contact-free scanner or sensor is aimed at the surface of the object, the improvement comprising placing the round object on a fixed support, and blowing a gaseous medium against the object to flow between the support and the object in a direction to form a gas layer



that supports the object, said step of blowing comprising blowing the gas to impart a rotational movement to the object.

5,008,624

NUCLEAR MAGNETIC RESONANCE IMAGING APPARATUS FOR ARBITRARY PATIENT POSTURE

Tadatoki Yoshida, Tochigi, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jun. 30, 1989, Ser. No. 373,583
Claims priority, application Japan, Jul. 6, 1988, 63-166856
Int. Cl.[5] G01R *33/20*
U.S. Cl. 324—318 **18 Claims**

1. A nuclear magnetic resonance imaging apparatus, comprising;

a main magnet having two physically disconnected poles arranged in parallel for generating a static magnetic field in an open space between the two physically disconnected poles each of the two physically disconnected poles being made of a superconductor block capable of producing a magnetic field independently; and

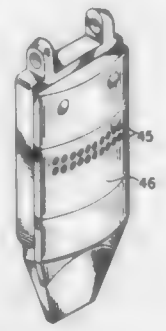
carrier means for carrying an object to be examined into the static magnetic field, capable of supporting the object at arbitrary angles with respect to a floor.

5,008,625

METHOD AND APPARATUS FOR LOGGING AND DISPLAYING A TWO DIMENSIONAL IMAGE OF SPONTANEOUS POTENTIAL

Min-Yi Chen, West Redding, Conn., assignor to Schlumberger Technology Corporation, New York, N.Y.

Filed Nov. 1, 1989, Ser. No. 430,214
Int. Cl.[5] G01V *3/26, 3/34*
U.S. Cl. 324—351 **16 Claims**



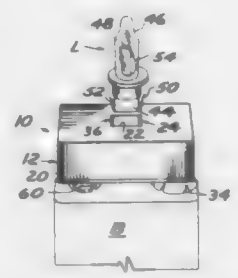
1. A system for producing indications of the spontaneous potentials existing along a longitudinally extending segment of an exposed wall of an earth formation, comprising:

an electrically insulating electrode support, an array of mutually-insulated SP electrodes supported thereon and recessed below a surface of said support, and means for moving said support along a predetermined logging direction with said surface in contact with said wall;

said array comprising a plurality of said electrodes differ-

ently positioned along a direction transverse to said direction of logging motion of said array;

potential measuring means as connected to each of said electrodes for producing respective SP signals indicative of the values of the spontaneous potentials at said electrodes; and



visual-image forming means supplied with said SP signals for forming a visually-observable twodimensional image corresponding to the pattern of SP values in the segment of said wall traverse by said array during said logging operation and extending substantially continuously transversely of said wall.

5,008,626

DIRECT CURRENT MINIATURE LAMP TESTER

William P. Boyd, Sr., 4624 N. William Ct., Stillwater, Okla. 74075

Filed May 17, 1990, Ser. No. 524,533
Int. Cl.[5] G01R *31/00*
U.S. Cl. 324—414 **2 Claims**

1. A direct current tester for a bayonet-type miniature electric lamp having an incandescent filament and a shunt circuit, comprising:

a dielectric rectangular translucent body having a top surface and having a bottom surface overlying a dielectric thin, when compared with the thickness of said body, planar base,

said body having a central upwardly open rectangular socket dimensioned for nesting in electrical circuit contacting relation the bayonet end portion of a miniature electric lamp;

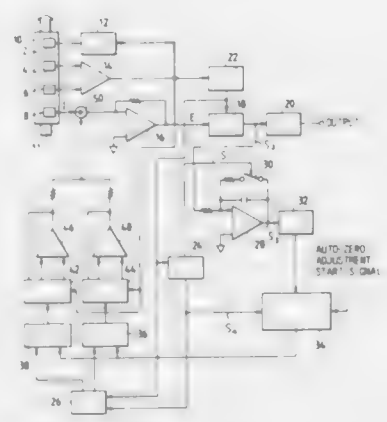
a pair of upstanding strap metal L-shaped body socket terminals, each terminal of said pair of body socket terminals having a foot portion and a leg portion and having their respective foot portions flatly interposed between said base and said body and secured in spaced-apart relation to said base and having their respective leg portions coextensive with and flatly disposed, in confronting relation, on opposing surfaces of the walls defining the body socket;

a first pair of snap-tab type battery terminals,

one terminal of said first pair of battery terminals depending from said base and connected with the foot portion of one body socket terminal of said pair of body socket terminals,

the other battery terminal of said first pair of battery terminals depending from and connected with said base in longitudinally spaced relation with respect to the position of the foot portion of the other said body socket terminal on said base;

a dry cell direct current battery having a second pair of battery terminals cooperatively received in electrical conducting relation by said first pair of battery terminals; and,



circuit means supported by the body and electrically connected with the said other battery terminal of said first pair of battery terminals and having an auxiliary miniature electric lamp having an incandescent filament circuit interposed between the other said foot portion of said other body socket terminal of said pair of body socket terminals and said other terminal of said first pair of battery terminals for indicating a closed circuit through the incandescent filament of a miniature lamp under test, by the battery potential exciting said auxiliary incandescent filament and the incandescent filament of a miniature lamp under test or a closed circuit through only the shunt circuit of a miniature lamp under test by the illuminating glow of said body from the battery potential excited incandescent filament of the auxiliary lamp.

5,008,627

CONDUCTIVITY DETECTOR

Koji Tsutsuta, and Kiwao Seki, both of Katsuta, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Oct. 12, 1989, Ser. No. 420,479
Claims priority, application Japan, Oct. 19, 1988, 63-261511
Int. Cl.[5] G01N *27/02*
U.S. Cl. 324—444 **3 Claims**

1. An apparatus comprising:

a cell for flowing an electrolyte;

a pair of first electrodes disposed in said cell and separated by a predetermined distance;

means for supplying said pair of first electrodes with a variable A.C. voltage signal;

a pair of second electrodes disposed between said pair of first electrodes in said cell and separated by a predetermined distance for detecting the voltage across said second electrodes;

means for controlling the output voltage of said variable A.C. voltage signal supplying means so as to maintain the voltage across said second electrodes at a predetermined value;

means for generating a variable A.C. reference signal with reverse phase to the A.C. voltage signal;

means for adding an output A.C. current flowing between said pair of first electrodes to the A.C. reference signal;

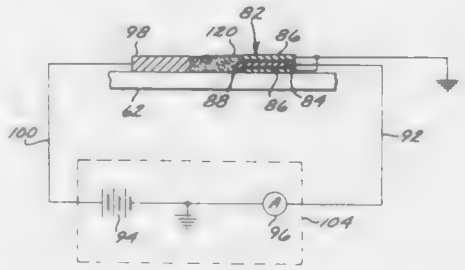
means for determining whether the output of said adding means reduces to zero or not; and

means for correcting the A.C. reference signal so as to reduce the output signal of said adding means to zero;

wherein said zero determining means includes;

a synchronous rectifying circuit for rectifying the output signal of said adding means;

an interval integral circuit for performing the interval integral of the output of said synchronous rectifying circuit, and



a comparator for determining whether the output of said interval integral circuit is zero or not, the interval integral circuit operating in synchronism with the output signal of said synchronous rectifying circuit and when the output of said interval integral circuit reduces to zero, said zero determining means determining the completion of the zero adjustment operation.

5,008,628

MEASUREMENT OF ELECTRICAL RESISTIVITY OF PARTICULATE ENTRAINED IN A GAS STREAM

Henry V. Krigmont, Seal Beach, and Everett L. Coe, Jr., Downey, both of Calif., assignors to Wahlco, Inc., Santa Ana, Calif.

Filed Jun. 5, 1989, Ser. No. 361,273
Int. Cl.[5] G01R *27/02*
U.S. Cl. 324—693 **16 Claims**

1. Particulate resistivity measurement apparatus, comprising:

a substrate having a first side and a second side;

two adjacently positioned electrodes supported on the first side of the substrate, including

a measurement electrode, and

a reference electrode;

means for applying a vacuum to the second side of the substrate to controllably draw gas through the substrate so that particulate matter carried by the gas is deposited on the first side of the substrate;

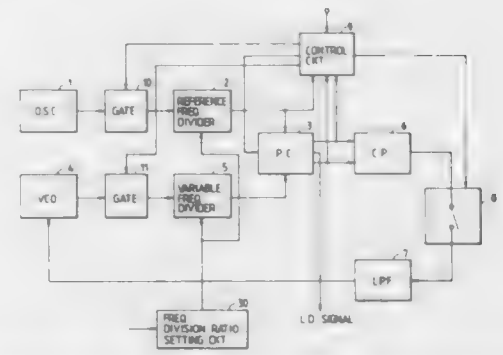
a measurement power supply that applies a measurement voltage between the reference electrode and the measurement electrode; and

a current measurement meter that measures the current flowing between the reference electrode and the measurement electrode due to the applied measurement voltage.

5,008,629

FREQUENCY SYNTHESIZER

Motoi Ohba, Yokohama; Hiroyuki Yabuki, Kawasaki, and Mitsuo Makimoto, Yokohama, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan



Filed Jun. 20, 1989, Ser. No. 369,408
Claims priority, application Japan, Jun. 20, 1988, 63-151619; Jul. 22, 1988, 63-184330
Int. Cl.[5] H03L *7/00*; H03B *19/00*
U.S. Cl. 328—14 **2 Claims**

1. A frequency synthesizer for use in a multichannel radio apparatus, said frequency synthesizer having a first oscillator for outputting a signal having a reference frequency, a first frequency divider for dividing the frequency of the signal outputted from said first oscillator, a second oscillator for outputting a signal having a desired frequency, a second frequency divider for dividing the frequency of the signal outputted by said second oscillator by a variable number, a phase comparator for comparing the phase of the signal outputted from said first frequency divider with that of the signal outputted from said second frequency divider, a charge pump for converting an output signal of said phase comparator and outputting the converted signal as an integrator drive signal and an integrator for integrating the output signal of said charge pump and controlling said second oscillator, the improvement comprising:

a first gate circuit provided between said first oscillator and said first frequency divider;

a second gate circuit provided between said second oscillator and said second frequency divider;

a third gate circuit between said charge pump and said integrator;

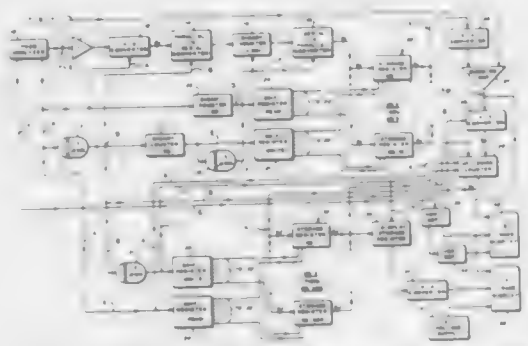
a control circuit responsive to an output signal from said first or second frequency divider, a frequency synthesizer controlling signal, and output signals from said phase comparator for producing first and second gate control signals respectively applied to said first and second gate circuits; and

a frequency division ratio setting circuit having a shift register, an N-bit data latch responsive to parallel outputs from said shift register, and means for controlling said data latch by logical product of a first signal inputted from a strobe input terminal and a second signal outputted from another data latch which holds a first or last one bit of said parallel outputs of said shift register thereby controlling frequency division ratio of said first and second frequency dividers by outputs of said N-bit data latch.

5,008,630

STATIONARY PROBABILITY INTEGRATOR SYSTEM

Paul F. Reimel, Quakertown, Pa., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.



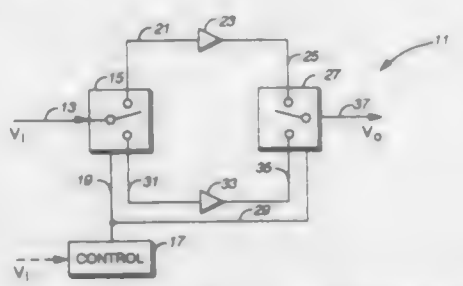
Filed Mar. 26, 1969, Ser. No. 811,695
Int. Cl.[5] H03K *5/00*; G01R *23/16*
U.S. Cl. 328—165 **7 Claims**

1. A system for suppressing noise in a spectrum analysis within a predetermined frequency range of a complex waveform sample, the analysis being an analog signal of predetermined duration composed of a plurality of discrete magnitudes in equal increments of time indicative of the energy levels of a corresponding plurality of frequency elements of predetermined bandwidths and of progressively increasing frequency, comprising, in combination:

timing means providing pulses at time intervals synchronous with equal multiples of said time increments;

averaging means receiving one of said analog signals and said timing means pulses and providing a signal of said predetermined duration composed of a plurality of discrete magnitudes in said time intervals indicative of the average energy levels of a corresponding plurality of

ensembles of the frequency elements of progressively increasing frequency; and



combining means concomittantly receiving the averaging means signal for said one analog signal and the next-consecutive analog signal and providing a signal indicative of the difference in energy levels.

5,008,631

PULSE ANALYZER WITH GAIN COMPRESSION

Dieter Scherer, Palo Alto, and William E. Strasser, Montara, both of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Aug. 16, 1989, Ser. No. 394,407
Int. Cl.[5] H03F *3/68*
U.S. Cl. 330—51 **5 Claims**

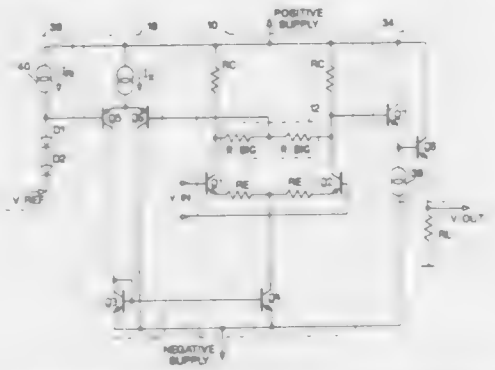
1. A method for reducing the dynamic range of an incoming electrical signal, the method comprising the steps of:

determining the magnitude of the incoming signal;

providing a control signal that has a first value if the incoming signal magnitude exceeds a predetermined value, and that has a second value if the incoming signal magnitude does not exceed a predetermined value;

providing a control override signal, having an active state and an inactive state, that, in its active state, overrides the control signal and sets the control signal value equal to the first value; and

passing the incoming electrical signal through an amplifier circuit that receives the control signal and control override signal, to multiply the incoming signal by a first amplification coefficient A_1 and to issue this amplified signal as an output signal if the control signal value received has the first value, and to multiply the incoming signal by a second amplification coefficient A_2 and to issue this amplified signal as an output signal if the control signal value received has the second value, where the magnitudes of the amplification coefficients satisfy $O < A_1 < A_2$,



whereby the dynamic range of the collection of the first and second output signals is less than the dynamic range of the incoming signal.

5,008,632

TEMPERATURE COMPENSATED FEEDBACK CIRCUIT FOR SETTING AND STABILIZING AMPLIFIER DC BIAS POINTS

Philip H. Sutterlin, Durham, N.C., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 31, 1989, Ser. No. 429,665
Int. Cl.[5] H03F *3/45*
U.S. Cl. 330—256 **1 Claim**

1. An improved amplifier comprising:

a differential amplifier stage having differential input devices (Q_1, Q_2) with a pair of differential input terminals for receiving an input signal, a pair of output terminals, interconnected collector terminals, and interconnected emitter terminals;

a buffer stage, coupled to the pair of output terminals;

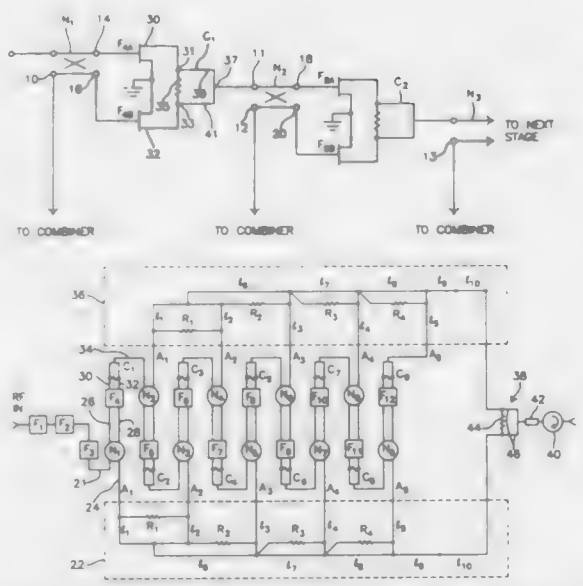
a first circuit means connected in the interconnected collector terminals, said first circuit means averaging signals in said interconnected collector terminals and generating a single-ended signal representative of a DC component in said signals;

a second circuit means for generating a reference signal (Vref);

a third circuit means to compensate for temperature and process variations caused by said buffer stage, coupled to the second circuit means;

an error amplifier coupled to the third circuit means for comparing Vref with the single-ended signal to generate a bias current signal which directly flows through (Q1, Q2) to set the DC operating point of said differential amplifier stage.

5,008,633



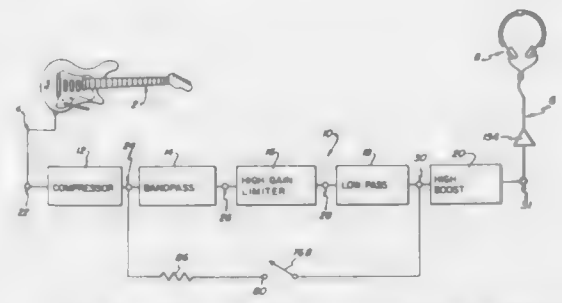
CROSS-FED FET POWER-CHIP

Harvey K. Y. Hom, Santa Monica, Calif., assignor to ITT Corporation, New York, N.Y.

Filed Mar. 29, 1990, Ser. No. 502,077
Int. Cl.[5] H03F *3/193, 3/68*
U.S. Cl. 330—277 **5 Claims**

1. A cross-fed FET power-chip amplifier in which a first stage consists of two FET devices, each having a gate, a source and a drain; a wide band four port directional coupler having an input terminal, an output terminal and two driver inputs; means for connecting an input signal to said input terminal, said directional coupler being designed to produce the majority of its output at said output terminal and a lesser output in each of said two driver inputs which have a 90° phase relationship; means connecting each of said driver inputs to a gate of one of said FET devices; a broadband 90°. coupler having two inputs and an output with a resistor across its inputs; means connecting the sources of said FET devices to common and the drains of said FET devices each to one input of the broadband 90° coupler to accommodate the 90° offset at the gates; at least one subsequent stage configured the same as said first stage; means coupling the output of the broadband coupler to the input terminal of the directional coupler of the subsequent

stage; at least one combiner; and means for coupling the output terminals of the directional couplers of each stage and the



broadband coupler of the final stage to said at least one combiner to derive an output signal.

5,008,634

SYSTEM FOR CONTROLLING THE DYNAMIC RANGE OF ELECTRIC MUSICAL INSTRUMENTS

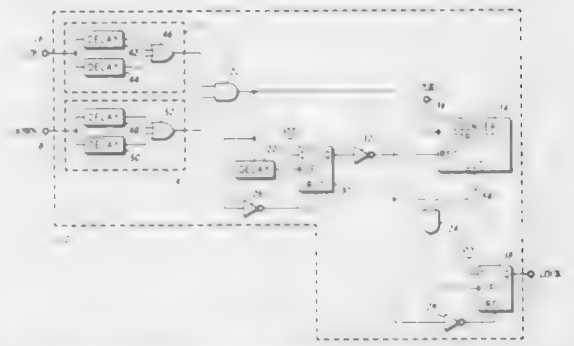
David E. Christian, Danbury, Conn., assignor to C. B. Labs, Inc., Bridgeport, Conn.

Continuation-in-part of Ser. No. 274,443, Nov. 18, 1988, Pat. No. 4,899,115. This application Oct. 4, 1989, Ser. No. 417,789
Int. Cl.[5] H03F *3/191*
U.S. Cl. 330—306 **17 Claims**

1. A circuit for controlling electrical signals from at least one transducer associated with an electrified musical instrument, said circuit having input and output terminals and comprising:

(a) bandpass filter circuit means operatively coupled to said transducer for receiving signals therefrom and passing therethrough a relatively narrow bandwidth of said signals;

(b) limiting circuit means operatively connected to said bandpass filter circuit means for limiting the signals received from said filter circuit means, said limiting circuit means including at least a pair of oppositely connected semiconductor diode paths for operating substantially in the linear region of said diode forward characteristics; and



(c) low pass filter circuit means operatively coupled to said limiting circuit means to further condition signal.

5,008,635

PHASE-LOCK-LOOP LOCK INDICATOR CIRCUIT

Carl C. Hanke, Mesa; Carlos D. Obregon, Tempe, and Ahmad H. Atriss, Chandler, all of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

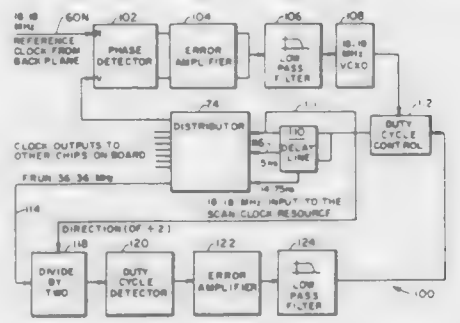
Filed Jun. 25, 1990, Ser. No. 542,542
Int. Cl.[5] H03L *7/06*
U.S. Cl. 331—1 A **13 Claims**

1. A circuit for indicating when a phase-lock-loop circuit is in lock comprising:

gate circuit means being coupled to the phase-lock-loop circuit for providing an output logic signal responsive to the phase lock loop circuit being in lock;

a counter circuit responsive to said output logic signal of said gate circuit means for providing an output logic signal when said counter circuit has reached a predetermined count;

circuit means for enabling said circuit when said output logic signal of said circuit means is in a first logic state and disabling said counter circuit when said output logic signal of said gate circuit means is in a second logic state; and



a latch circuit responsive to said output logic signal of said counter circuit for providing a lock signal at an output terminal of the latch circuit.

5,008,636

APPARATUS FOR LOW SKEW SYSTEM CLOCK DISTRIBUTION AND GENERATION OF 2X FREQUENCY CLOCKS

Scott Markinson, Goffstown, N.H.; Michael Schuster, Norwood, and Thomas Hogan, Worcester, both of Mass., assignors to Apollo Computer, Inc., Chelmsford, Mass.

Filed Oct. 28, 1988, Ser. No. 263,714
Int. Cl.[5] H03L *7/06, 7/07*
U.S. Cl. 331—2 **9 Claims**

1. Apparatus for generation of a plurality of synchronized clock signals on a computer system circuit board from a reference clock signal comprising:

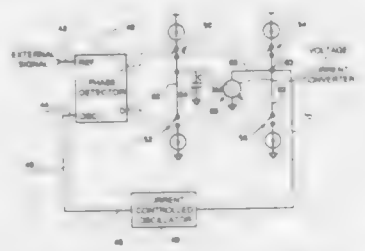
means for receiving a reference clock signal;

means for providing a clock signal whose frequency may be varied in response to a control signal;

means, receiving said clock signal, for providing a plurality of clock output signals having a selected phase relationship therebetween and having a delay from said reference clock signal;

phase-locked loop means receiving said reference clock signal and a selected one of said plurality of clock output signals, for providing a control signal to said clock signal providing means, for varying the frequency of said plurality of clock output signals, to maintain a phase relationship between said plurality of clock output signals and said reference clock signal and to compensate for said delay;

frequency multiplier means, receiving said clock signal, for providing an output signal at a frequency being a multiple of said clock signal, and comprising plural clock pulses each having a specified duty cycle relative to said clock signal, and



duty cycle control means for controlling the duty cycle of each of said plural clock pulses.

5,008,637

FULLY INTEGRATED CHARGE PUMP PHASE LOCKED LOOP

Daniel L. Ray, Fair Oaks, Calif., assignor to Level One Communications, Inc., Folsom, Calif.

Filed Nov. 15, 1989, Ser. No. 437,724
Int. Cl.[5] H03L *7/093*
U.S. Cl. 331—8 **10 Claims**

1. In a phase locked loop circuit including a phase detector having a first input lead for receiving a reference signal and a second input lead connected to the output lead of an oscillator, apparatus for varying the output signal on the output lead of the oscillator comprising:

normally non-conducting first and second switch means providing conductance therethrough in response to a lag signal from the phase detector;

normally non-conducting third and fourth switch means providing conductance therethrough in response to a lead signal from the phase detector;

a first conductor connecting the first and third switch means;

a second conductor connecting the second and fourth switch means;

a first current source means connected to the first switch means, such that closing of the first switch means provides connection between the first current source means and first conductor;

a first current sink means connected to the third switch means, such that closing of the third switch means provides connection between the first current sink means and the first conductor;

second current source means connected to the second switch means, such that closing of the second switch means provides connection between the second current source means and the second conductor;

second current sink means connected to the fourth switch means such that closing of the fourth switch means provides connection between the second current sink means and the second conductor;

a capacitor having a terminal connected to the first conductor;

a voltage to current converter operatively connected with the capacitor, the second conductor and the input lead of the oscillator so that upon the first switch means providing conductance in response to a lag signal, current flows into the capacitor from the first current source means and charge is built on the capacitor to increase the voltage thereacross to in turn vary the signal to the oscillator to in turn vary the output signal of the oscillator, with the oscillator output signal further being varied by the second switch means conducting current via the second current source means in response to a lag signal, and upon the third switch means conducting in response to a lead signal, charge flows from the capacitor via the first current sink means to decrease the voltage thereacross to in turn vary the signal to the oscillator to in turn vary the output signal of the oscillator, with the oscillator output signal further being varied by the fourth switch means providing conductance through the second current sink means in response to a lead signal.

5,008,638

INSTALLATION STRUCTURE OF A MICROWAVE OSCILLATION CIRCUIT UNIT

Makio Nakamura, Osaka, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jun. 7, 1989, Ser. No. 362,506
Claims priority, application Japan, Jun. 8, 1988, 63-76160[U]
Int. Cl.[4] H03B *1/00*
U.S. Cl. 331—68 **1 Claim**

1. In an installation structure for installing a microwave oscillation circuit unit on one surface of a chassis base having a circuit substrate on its other surface, said unit having at least two screws, a power supply terminal and an output terminal on its one surface confronting the chassis base when installed on the chassis base, the improvement comprising

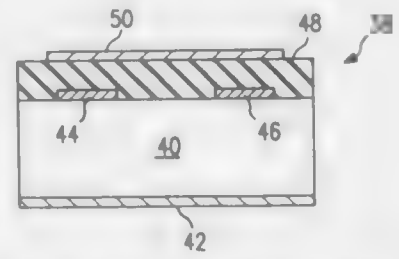
a first nut to be threaded on one of the screws which is positioned adjacent to the power supply terminal and the output terminal so that torque caused by tightening said first nut to said one of the screws acts upon the chassis base and said first nut is clear from the circuit substrate, and

a second nut to be threaded on the other of the screws which is positioned apart from the power supply terminal and the output terminal so that torque caused by tightening said second nut to said the other of the screws acts upon both the chassis base and the circuit substrate.

5,008,639

COUPLER CIRCUIT

Anthony M. Pavio, 1813 Edgewater Dr., Plano, Tex. 75075



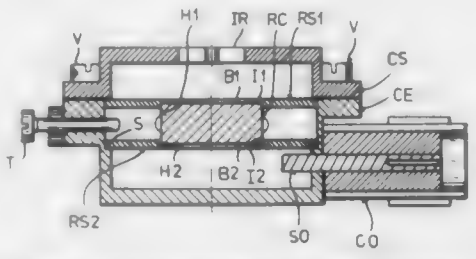
Filed Sep. 27, 1989, Ser. No. 413,558
Int. Cl.[5] H01P *5/18*
U.S. Cl. 333—116 **28 Claims**

1. A coupler circuit, comprising:

a first conductor adjacent and substantially parallel to a substrate;

a second conductor adjacent and substantially parallel to said substrate and coplanar with said first conductor; and

a conductive layer substantially parallel with said first and second conductors such that a current is induced in said second conductor responsive to a current generated in said first conductor and coupling of said second conductor to said first conductor by said conductive layer; and a dielectric layer between said conductive layer and said first and second conductors, wherein said dielectric layer is



selected from the group consisting of nitride, polyamide and silicon-glass.

5,008,640

DIELECTRIC-LOADED CAVITY RESONATOR

Luciano Accaliño, Rosta, and Giorgio Bertin, Ltrouble, both of Italy, assignors to CSELT - Centro studi e Laboratori Telecomunicazioni S.P.A., Turin, Italy

Filed Jul. 17, 1989, Ser. No. 380,978
Claims priority, application Italy, Jul. 21, 1988, 67M7 A/88
Int. Cl.[5] H01P *7/06, 7/10*
U.S. Cl. 333—219.1 **3 Claims**

1. A dielectric-loaded cavity resonator, comprising:

a generally closed metallic housing defining a cylindrical cavity and formed with two spaced-apart steps on opposite sides of an increased-diameter portion of said cavity spaced from opposite ends of said housing; and

a dielectric assembly received in said housing and comprising:

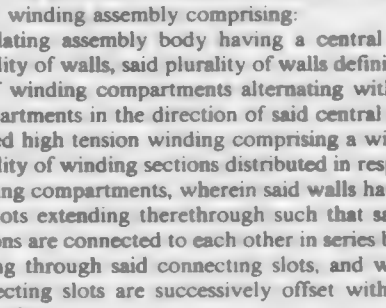
a pair of dielectric plates each seated in one of said steps and formed with a centering indentation opening toward the other of said plates, and

a dielectric cylinder received between said plates and having opposite bases each received in a respective one of said indentations, whereby said assembly formed by said plates and said cylinder is held in a fixed position in said cavity and is spaced from said ends by said steps.

5,008,641

POLARIZED ARMATURE CONTACT RELAY

Helmut Schedele, Diessen, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany



Filed May 31, 1990, Ser. No. 531,839
Claims priority, application Fed. Rep. of Germany, May 31, 1989, 8906678[U]
Int. Cl.[5] H01H *51/22*
U.S. Cl. 335—80 **6 Claims**

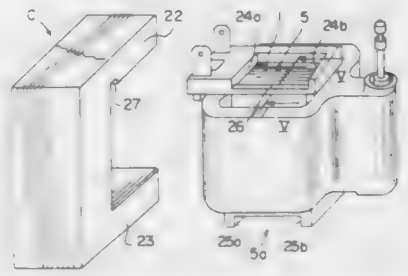
1. A polarized armature contact relay, comprising:

a hollow coil body having first and second end flanges; a winding about said coil body;

first and second tongue armatures extending within said hollow coil body in opposite directions and parallel to one another, said tongue armatures each having a terminal end mounted in a corresponding one of said first and second end flanges and a free end;

first and second pairs of pole pieces mounted on corresponding ones of said first and second end flanges adjacent said terminal ends of corresponding ones of said first and second tongue armatures, said pole pieces each having a front face and said pole pieces being mounted next to one another in pairs with said front faces facing each other to enclose said free ends of corresponding ones of said second and first tongue armatures;

first and second flat four-pole permanent magnets mounted on corresponding pairs of said first and second pairs of pole pieces, said permanent magnets having two opposite polarization directions parallel to the axis of said coil member, said permanent magnets each being mounted with oppositely magnetized poles coupled to respective ones of said pole pieces in each of said first and second pair of pole pieces; and



first and second flux plates coupled between outside poles of corresponding ones of said first and second magnets and said free ends of said second and first tongue armatures.

5,008,643

IGNITION COIL HAVING A DIVIDED HIGH TENSION WINDING, IN PARTICULAR FOR INTERNAL COMBUSTION ENGINES

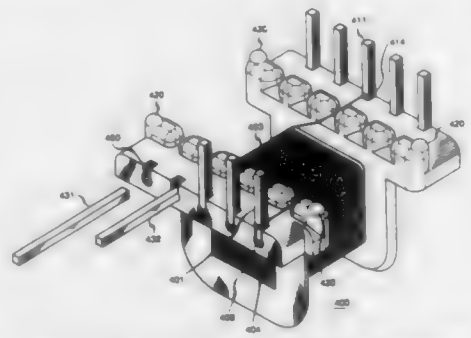
Pierre Heritier-Best, Orbeil, France, assignor to Valeo Electronique, Issy-les-Moulineaux, France

Filed Dec. 21, 1989, Ser. No. 454,150
Claims priority, application France, Dec. 23, 1988, 88 17053
Int. Cl.[5] H01F *15/02, 27/30*
U.S. Cl. 336—96 **2 Claims**

1. An ignition coil having primary and secondary winding assemblies for automotive internal combustion engines, said secondary winding assembly comprising:

an insulating assembly body having a central axis and a plurality of walls, said plurality of walls defining a plurality of winding compartments alternating with insulating compartments in the direction of said central axis;

a divided high tension winding comprising a wire having a plurality of winding sections distributed in respective said winding compartments, wherein said walls have connecting slots extending therethrough such that said winding sections are connected to each other in series by said wire passing through said connecting slots, and wherein said connecting slots are successively offset with respect to each other;



said secondary winding assembly having an adhesive varnish able to polymerize on itself after exposure to ultraviolet radiation impregnated therein, said adhesive varnish comprising a composition of epoxide resin and acrylic ester, and said secondary sub-assembly further being encapsulated with an insulating envelope of thermoplastic material.

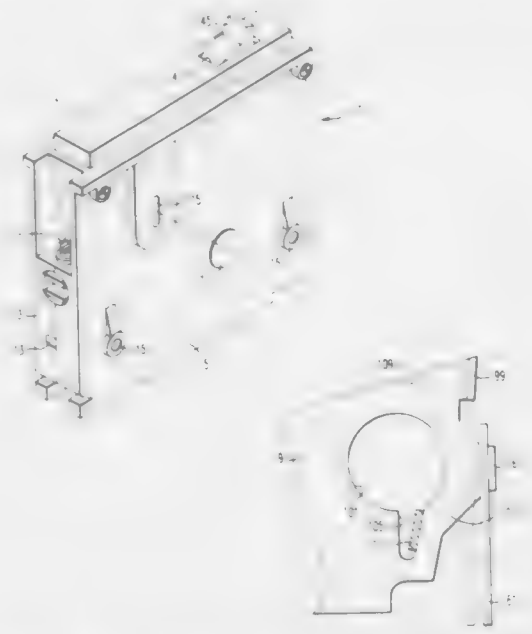
5,008,644

TERMINAL ASSEMBLY FOR LINEAR MAGNETIC COMPONENT BOBBIN

Robert C. Cooper, Newton, N.H., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Aug. 31, 1989, Ser. No. 401,275
Int. Cl.[5] H01F *15/10, 27/30*
U.S. Cl. 336—192 **4 Claims**

1. An assembly for a magnetic component comprising:
a bobbin structure including:
mounting supports having a plurality of supporting standoffs for resting on a planar surface on which the bobbin structure is to be mounted
a winding wound about a portion of the bobbin structure with a winding axis parallel to the planar surface and having at least one wire termination lead connected to the winding,
at least a terminal integral to the bobbin being included in the mounting support of the bobbin structure having an L shape and included in a passageway in the mounting support of the bobbin structure and having a longitudinal axis parallel to the planar surface with a first leg of the L shaped terminal substantially parallel to the planar surface and a second leg of the L shaped terminal substantially perpendicular to the planar surface and the termination end of the winding wound about the second leg of the terminal,
the wire termination being passed between two adjacent standoffs to a wound portion of the winding on the bobbin structure, and
the standoffs having a sufficient dimension perpendicular to the planar surface to prevent contact between the termination end of the winding wound on the second leg and the planar surface.



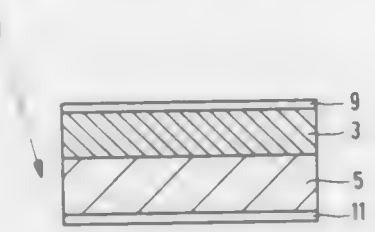
5,008,645

CIRCUIT BREAKER WITH TAMPER INDICATING CALIBRATION MEANS

Stephen A. Mrenna, Brighton Township, Beaver County, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jul. 30, 1990, Ser. No. 559,861
Int. Cl.[5] H01H *71/06, 75/10, 77/04*
U.S. Cl. 337—70 **10 Claims**

1. A circuit breaker comprising an electrically insulating housing including a base defining a cavity and a cover for enclosing said cavity, a circuit breaker assembly within the cavity in said housing and comprising electrical contacts movable between open and closed positions, an operating mechanism including a cradle latchable in a latched position and operative when unlatched to automatically move said electrical contacts to said open position, a trip mechanism including an elongated bimetal which latches said cradle in the latched position and which flexes to unlatch said cradle in response to predetermined persistent current overload conditions, and a calibration opening in said housing through which a tool is insertable to adjust the bimetal to calibrate said predetermined



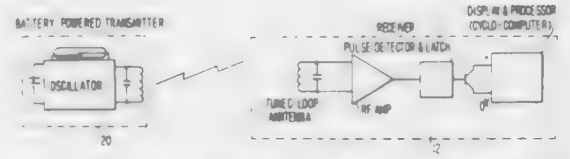
persistent current overload conditions at which said bimetal unlatches said cradle to move said electrical contacts to the open position after said circuit breaker assembly has been installed in said cavity and the cavity has been enclosed with said cover secured to said base, and tamper indicating seal means sealing said calibration opening in said housing from subsequent access.

5,008,646

NON-LINEAR VOLTAGE-DEPENDENT RESISTOR

Detlev Hennings, Aachen; Bernd F. W. Hoffmann, Rheinstetten, and Markus Nutto, Endingen, all of Fed. Rep. of Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Jun. 26, 1989, Ser. No. 371,866
Claims priority, application Fed. Rep. of Germany, Jul. 13, 1988, 3823698
Int. Cl.[5] H01C *7/10*
U.S. Cl. 338—20 **19 Claims**



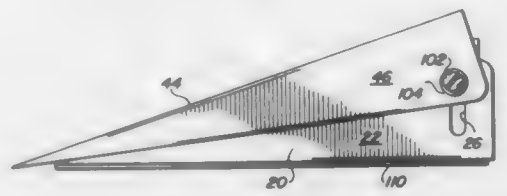
1. A non-linear voltage-dependent resistor comprising a ceramic sintered body of at least one laminated structure of a layer (3) of resistance material consisting essentially of zinc oxide doped with at least one alkaline earth metal, at least one rare earth metal and at least one metal of the iron group consisting of aluminum, gallium and indium provided on a carrier layer (5) consisting essentially of zinc oxide and having a higher electric conductivity than the layer (3) of resistance material

5,008,647

WIRELESS BICYCLE WHEEL MONITOR SYSTEM

Chris Brunt, Topanga, and Don C. Carner, Jr., Oxnard, both of Calif., assignors to Orleander S.A., Lugano-Cassarate, Switzerland

Continuation-in-part of Ser. No. 306,621, Feb. 6, 1989, abandoned. This application Oct. 25, 1989, Ser. No. 430,093
Int. Cl.[5] B62J *3/00;* **G01P** *3/66*
U.S. Cl. 340—432 **20 Claims**



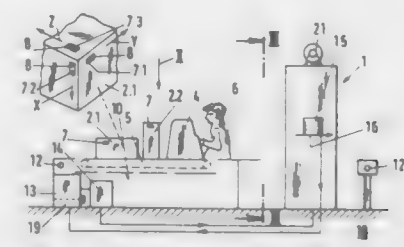
13. In a low-power wireless data display system for monitoring rotation of an object relative to a frame, said system having a transmitter unit including sensor means for monitoring rotation of the object and generating a corresponding signal, and a transmitter antenna for transmitting the signal, and a receiver unit remote from the transmitter unit including a receiver antenna for receiving the transmitted signal, processing means for processing the received signal into monitoring data, and display means for displaying the monitoring data,
the improvement wherein said transmitter and receiver units are mounted to the frame, and said transmitter and receiver antennas have a longitudinal axis of symmetry for signal propagation in a longitudinal direction, and means for orienting the axes of symmetry of said antennas in alignment with each other, said orienting means including at least one of said transmitter and receiver units having a mounting portion which is mounted to a part of the frame and provided with a pivotable part carrying the antenna for said unit for allowing it to be pivoted to a position in which its longitudinal axis is aimed in alignment with the longitudinal axis of the antenna of the other unit, whereby efficient transmission and reception of the signal is obtained and interference with or from an adjacent, similar system is avoided.

5,008,648

ELECTRONIC DOOR WEDGE ALARM

Timothy D. Conemac, 9533 Gierson Ave., Chatsworth, Calif. 91311

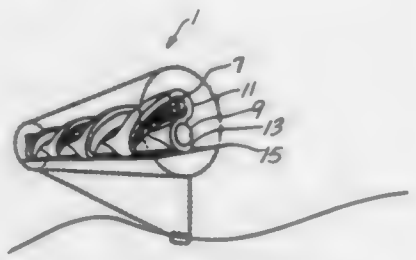
Filed Sep. 14, 1989, Ser. No. 407,502
Int. Cl.[5] G08B *13/08*
U.S. Cl. 340—546 **27 Claims**



1. An alarm device for use with a hinged, inwardly-opening door, comprising:
a bottom chassis member comprising a first rectangular segment, said bottom chassis member having a front end including a first side of said first rectangular segment and a back end including a second side of said first rectangular segment, said second side of said first rectangular segment being opposite said first side of said first rectangular segment;
a top chassis member comprising a second rectangular segment, said top chassis member having a front end including a first side of said second rectangular segment and a back end including a second side of said second rectangular segment being opposite said first side of said second rectangular segment;
means for mounting said top chassis member on said bottom chassis member to form a wedge-shaped assembly with the thin edge of said wedge-shaped assembly defined by said first sides of said first and second rectangular segments and the thick edge of said wedge-shaped assembly being defined by said second sides of said first and second rectangular segments, said second sides of said rectangular segments being relatively moveable toward and away from each other;
means for biasing said second sides of said first and second rectangular segments away from each other;
switch means for triggering said alarm device when said second ends of said first and second rectangular segments move toward each other;
an audio transducer; and
an alarm circuit electrically connected to said switch means and to said audio transducer, said alarm circuit causing said audio transducer to emit an alarm signal whenever said switch means operates to trigger said alarm device.

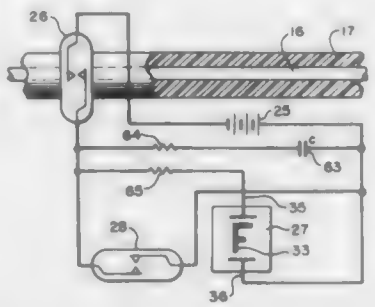
5,008,649

MAGNETIC SECURITY SYSTEM AGAINST THEFT AND BURGLARY AND METALLIC SENSOR ELEMENT SUITABLE THEREFOR



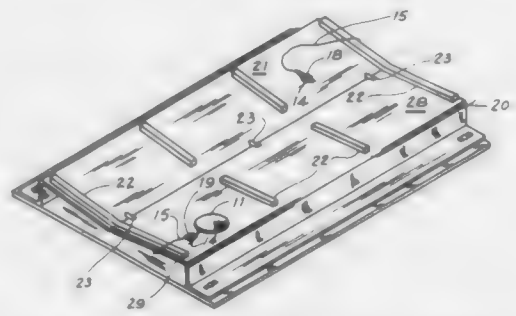
Erhard Klein, Butjadingen, Fed. Rep. of Germany, assignor to Karl Harms Handels-GmbH & Co. KG, Jever, Fed. Rep. of Germany

Continuation of Ser. No. 229,951, Aug. 9, 1988, abandoned, which is a continuation-in-part of Ser. No. 172,888, Mar. 25, 1988, abandoned. This application Feb. 9, 1989, Ser. No. 308,227
Claims priority, application Fed. Rep. of Germany, Dec. 10, 1987, 3741780
Int. Cl.[5] G08B *13/14;* **G01R** *33/00*
U.S. Cl. 340—572 **43 Claims**



1. An apparatus for securing an object located in a room having at least one room outlet against theft, comprising:
at least one field coil surrounding each room outlet which generates a magnetic field, each of said at least one field coil having a horizontal axis, and a height and breadth which are suitable for a person to walk through the field coil in the direction of the horizontal axis;
at least one magnetically-activated sensor metal element fixed to the object which, when brought into an active state by a special treatment, generates a first signal when the sensor metal element is brought within a distance of one of said at least one field coil so as to exceed a field strength limit value
means for detecting the first signal from the sensor metal element;
an alarm which is triggered when said detecting means detects the first signal; and
said first signal being distinguishable by the detecting means from signals generated by other metallic objects when under magnetic excitation.

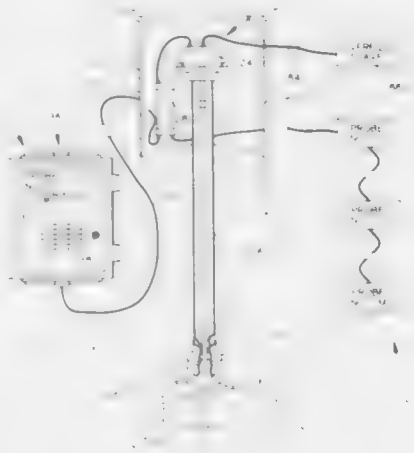
5,008,650
LEAK DAMAGE PREVENTION SYSTEM
Dane A. Holberg, 402 Fallingstar, Irvine, Calif. 92714
Filed Sep. 21, 1989, Ser. No. 410,641
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—604 3 Claims



1. A liquid detection system comprising:
means for detecting the presence of a liquid on a normally dry surface area, the detecting means including a helically wound elongated sensor comprising at least two conductors each being partially surrounded by a body of electrically insulating material, so that an elongated exposed portion having a continuous extent along the length of the sensor is formed on each conductor and the exposed portions are exposed to the environment continuously in alternating fashion while remaining electrically isolated from each other by protruding ridges of insulation along the length of the sensor, whereby the presence of liquid on the surface area to which the conductors are exposed can bridge the exposed portions of a pair of conductors independent of orientation of the sensor; and
electrical circuit means operatively connected to the sensor for detecting electrical resistance changes in the sensor in response to the liquid bridging the exposed portions of the conductors of the sensor.

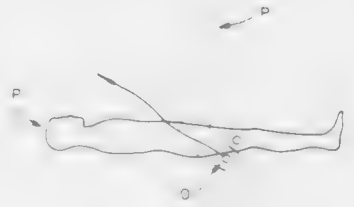
5,008,651
BATTERY-POWERED FAULT INDICATOR
Edmund O. Schweitzer, Jr., 2433 Center St., Northbrook, Ill. 60062
Continuation of Ser. No. 433,674, Nov. 8, 1989, abandoned. This application Jul. 9, 1990, Ser. No. 551,043
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—664 30 Claims

1. A fault indicator operable from a battery for indicating the occurrence of a fault current in a monitored electrical conductor, comprising:
a housing;
status indicating means within said housing comprising a high impedance display device having at least a pair of display electrodes disposed in operative association with a layer of voltage-responsive light controlling material, the display device providing on the exterior of said housing a first display condition in the absence of an actuating signal applied to said display electrodes, and a second display condition in the presence of an actuating signal applied to said display electrodes;
charge storage means;
switch means rendered conductive upon the occurrence of a fault current in the monitored conductor for momentarily connecting the battery to said charge storage means to develop a charge therein following the fault current; and
circuit means for connecting said charge storage means to said display electrodes whereby said high impedance display device is caused to display said second condition following the fault current.



5,008,652
WATER LEAK DETECTION APPARATUS FOR USE IN SUSPENDED CEILINGS
Leonard T. Woloszyk, Greenfield, Wis., assignor to Electro-Consultants, Inc., Greenfield, Wis.
Filed May 30, 1990, Ser. No. 530,385
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—605 4 Claims

1. A device, on the top side of a suspended ceiling panel for detecting leakage of liquid on to and through a ceiling comprising:
at least one liquid concentrating tray having surfaces sloping to form a narrow trough;
electric conductor means for conducting electricity, sensor terminal; means in said troughs to be contacted by said liquid, warning means for warning of a leak in said ceiling, and current supply means in a circuit to actuate said warning means when said liquid contacts said sensor terminal means;
said sensor terminal means being connected in parallel by said electric conductor means to said current supply means and said warning means in said electric circuit.



5,008,653
FLUID DETECTOR WITH OVERFILL PROBE
Roy E. Kidd, Clayton; Raymond J. Andrejasich, Carmel; Hilary Michel, Plainfield, and Laurence S. Slocum, Indianapolis, all of Ind., assignors to Emhart Industries, Inc., Towson, Md.
Filed Dec. 22, 1989, Ser. No. 455,577
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—620 8 Claims

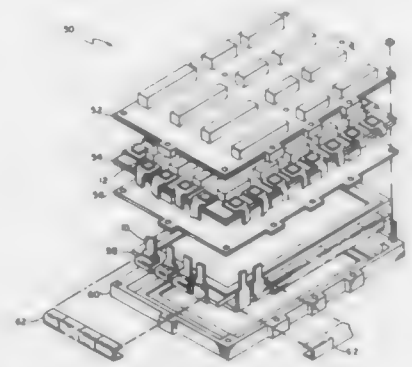
1. An apparatus for detecting the presence of fluids comprising:
a plurality of probes for detecting the fluid state of their environment, said probes including an overfill probe for detecting the approach of the overfill condition in a tank of liquid;
monitor means for checking the status of said probes, said monitor means including: timing means for clocking a predetermined time period; and overfill checking means responsive to said timing means for checking said overfill probe at lest once during each predetermined time period, said predetermined time period being shorter than the time to check all of said probes; and

means for electrically connecting said monitor means and said probes.

5,008,654
PATIENT AMBULATION MOTION DETECTOR
James J. Callaway, 1577 Moran Rd., Franklin, Tenn. 37064
Filed Nov. 7, 1989, Ser. No. 432,867
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—686 4 Claims

1. A patient's ambulation motion detector comprising:
motion sensor means for sensing movement of a patient's body from a supine posture to a posture indicative of impending ambulation and for providing an electrical signal in accordance with said sensed movement;
attachment means for attaching the motion sensor means to a lateral and substantially vertical surface of a supine patient's body, and
detachment sensor means for sensing detachment of the detector from the patient's body and for providing an electrical signal in accordance with said sensed detachment;
wherein the detachment sensor means comprises:
a planar circuit board provided with respective first and second conductor lands thereon and having an aperture provided centrally therethrough;
a conductive spring contact member having a base end conductively mounted to said first conductor land on said circuit board, a medial bridge portion extending from the base end and spaced above and at a higher level relative the circuit board than the base end, and a free contact end opposite the base end and overlying said second conductor land on said circuit board and being elastically urged into conductive contact therewith; and
a plunger having a shaft portion passing through the aperture in the circuit board, one end of said shaft portion abutting an underside of the medial bridge portion of the conductive spring contact member, said plunger being movable against said conductive spring member for urging the free contact end of said conductive spring contact member out of electrical contact with said second conductor land on said circuit board.

5,008,655
VISUAL ALARM DEVICE INTERCONNECTABLE TO EXISTING MONITORING CIRCUITRY
Robert A. Schlesinger, 1618 Vinewood La., NE., Cedar Rapids, Iowa 52402; Kimuel L. Hill, Rte. 2 - Box 200, Clinton, Tenn. 37716; Hamid S. Ali, 4946 Kebbe Dr., Sterling Heights, Mich. 48077, and Mark E. Watson, 2209 Kline Ave., Nashville, Tenn. 37211
Filed Nov. 20, 1989, Ser. No. 438,083
Int. Cl.[5] G08B *21/00*
U.S. Cl. 340—691 6 Claims

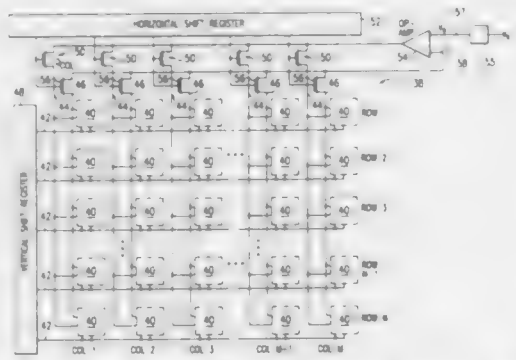


1. A visual alarm device readily interconnectable within a monitored circuit, said monitored circuit including
a motor operated device;
a motor control center for controlling said motor operated device; and
visual indicating devices for indicating the position of said motor operated device said visual alarm device comprising:
a condition-detecting circuit connected to said monitored circuit to detect a change of condition in said monitored circuit;
an oscillator responsive to said condition-detecting circuit, said oscillator providing a regular cyclic signal upon receiving a signal from said condition-detecting circuit; and
a controller disposed in series with said visual indicating devices within said monitored circuit and responsive to said oscillator, said controller allowing current to cyclically flow between pole terminals of said visual indicating devices upon receiving said regular cyclic signal from said oscillator;
said visual alarm device thereby giving a distinct visual indication upon a change of condition in said monitored circuit using existing wiring between said motor control and said visual indicating devices.

5,008,656
FLEXIBLE CABLE ASSEMBLY

Frank J. Cheriff, Holliston; Joseph J. Kirk; Arnold M. Pulver, both of Sudbury, and Walter N. Cox, Westboro, all of Mass., assignors to Raytheon Company, Lexington, Mass.

Continuation of Ser. No. 325,062, Mar. 14, 1989, abandoned, which is a continuation of Ser. No. 173,002, Mar. 30, 1988, abandoned, which is a continuation of Ser. No. 97,381, Sep. 16, 1987, abandoned, which is a continuation of Ser. No. 684,415, Dec. 20, 1984, abandoned. This application Feb. 20, 1990, Ser. No. 483,345
Int. Cl.[5] G09G *3/00*
U.S. Cl. 340—718 6 Claims



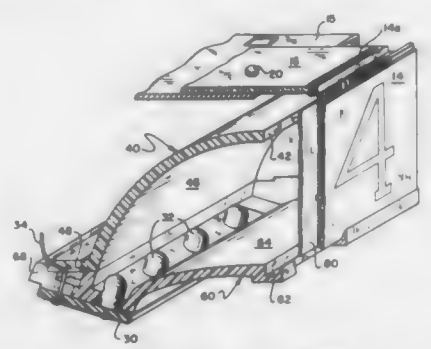
1. A display assembly comprising:
display element means for displaying a plurality of characters;
a plurality of chip carrier means having driver circuit means for selecting one or more of said plurality of characters;
a plurality of flexible cables having formed therein a plurality of insulated strip conductors, said flexible cables being readily connected and disconnected within said display assembly;
prearranged solder pad means disposed on a portion of a first side of each one of said flexible cables for attaching one of said plurality of chip carrier means, a portion of said solder pad means being coupled to a portion of said strip conductors;
means, disposed on a portion of a second side of each one of said flexible cables under said chip carrier means and attached to said flexible cables, having a coefficient of expansion approximately matched to a coefficient of expansion of said chip carrier means, for restraining said flexible cables during temperature variations to accommodate said chip carrier means expansion, said disposed means providing support to each one of said flexible cables, further restraining said flexible cables to prevent fatiguing at said solder pad means of said chip carrier means and removing heat from said chip carrier means; and
means on a first end and second end of each one of said flexible cables and coupled to portions of said strip conductors for attaching said first end within said display assembly and said second end to said display element, said attaching means facilitating disconnection of each one of said flexible cables for repair.

5,008,657
SELF ADJUSTING MATRIX DISPLAY

Charles M Hanson, Richardson, Tex., and Virginia N. MacDonald, Lansdale, Pa., assignors to Varo, Inc., Garland, Tex.

Filed Jan. 31, 1989, Ser. No. 304,166
Int. Cl.[5] G09G *3/20*
U.S. Cl. 340—766 18 Claims

15. A method of displaying a visual representation of a video signal on a plurality of individually addressable picture elements, comprising the steps of:
applying a voltage dependent upon the video signal to a selected picture element;
sensing the voltage at said selected picture element; and

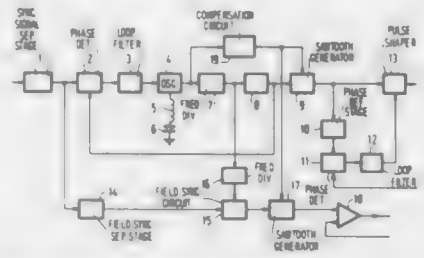


adjusting the voltage at said selected picture element towards a desired voltage having a predetermined relationship to the video signal.

5,008,658
DOMED LIGHT HOUSING FOR BACK-LIT LCD DISPLAY

Thomas Russay, Park Ridge, and Carl W. Stacy, Elmwood Park, both of Ill., assignors to Zenith Electronics Corporation, Glenview, Ill.

Filed Dec. 9, 1986, Ser. No. 939,668
Int. Cl.[5] G09G *3/36*
U.S. Cl. 340—784 15 Claims

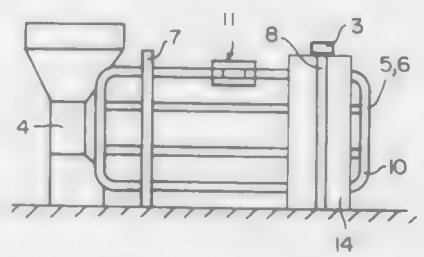


1. A video display arrangement comprising:
a generally planar LCD display having an aft surface, a forward viewed surface, and a plurality of peripheral edges;
at least one LED; and
a hollow housing having an empty aperture extending therethrough and including an open forward section whereon is positioned said LCD display, an aft section for receiving said at least one LED, and a curvilinear intermediate section coupling said forward section to said aft section, wherein said at least one LED is positioned aft of and beyond a peripheral edge of said LDC display in an off-set manner and in non-alignment therewith such that light emitted by said at least one LED is transmitted through said empty aperture and is reflected by the curvilinear intermediate section of said housing onto the aft surface of said LCD display in providing backlighting therefor, wherein said housing includes first and second facing lateral panels and facing concave and convex panels coupled at respective adjacent ends to said first and second facing lateral panels so as to define said empty aperture.

5,008,659
PICTURE DISPLAY DEVICE INCLUDING A WAVEFORM GENERATOR/AND A COMPENSATION CIRCUIT, AND INTEGRATED CIRCUIT INCORPORATING THE SAME

Paulus J. M. Hovens, Eindhoven, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Jan. 24, 1989, Ser. No. 301,574
Claims priority, application Netherlands, Feb. 8, 1988, 8800286
Int. Cl.[5] G09G *3/00*
U.S. Cl. 340—812 8 Claims

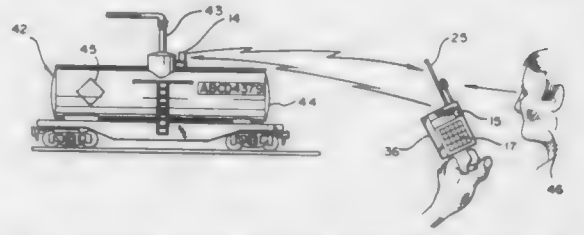


1. A picture display device including a first generator circuit for generating a first periodical waveform for addressing picture elements on a picture display screen, said circuit comprising a first time-determining network including a first capacitor, characterized in that the picture display device is provided with a compensation circuit for compensating for inaccuracies in the values of components in said first generator circuit, said compensation circuit including a second generator circuit for generating a second periodical waveform and a source for applying a compensation current to the first capacitor in dependence upon the second periodical waveform, the second generator circuit comprising a second time-determining network with a second capacitor, and the first and second capacitors being integrated in one semiconductor body.

5,008,660
ELECTROMAGNETIC DETECTION SYSTEM

Hendrik J. de Jong, Groenlo, Netherlands, assignor to N.V. Nederlandsche Apparatenfabriek Nedap, De Groenlo, Netherlands

Filed Mar. 3, 1989, Ser. No. 318,303
Claims priority, application Netherlands, Mar. 4, 1988, 8800546
Int. Cl.[5] H04B *5/00;* A01K *5/00*
U.S. Cl. 340—825.54 4 Claims



1. An electromagnetic detection system comprising a transmitter-receiver apparatus and at least one antenna element, said transmitter-receiver apparatus being coupled to said at least one antenna element to form an electromagnetic interrogation field in an interrogation zone, structural confining means for defining the range and area of said interrogation zone and for physically confining mobile entities to be interrogated in said interrogation zone, and a plurality of responders attached to each of said mobile entities and capable of generating a detectable signal under the influence of said interrogation field, said at least one antenna element being formed as an integral part of said structural confining means, said structural confining means comprising an automatic feeding station for animals comprising a food dispenser, two side railings, and two bows for reinforcing said side railings and extending over said railings and said interrogation zone, said at least one antenna element being integrally formed with at least one of said bows.

5,008,661
ELECTRONIC REMOTE CHEMICAL IDENTIFICATION SYSTEM

Phani K. Raj, 2 Kitson Park Dr., Lexington, Mass. 02173

Continuation-in-part of Ser. No. 780,938, Sep. 27, 1985, abandoned. This application Jan. 4, 1989, Ser. No. 293,505
Int. Cl.[5] H04Q *7/00, 3/00*
U.S. Cl. 340—825.54 11 Claims

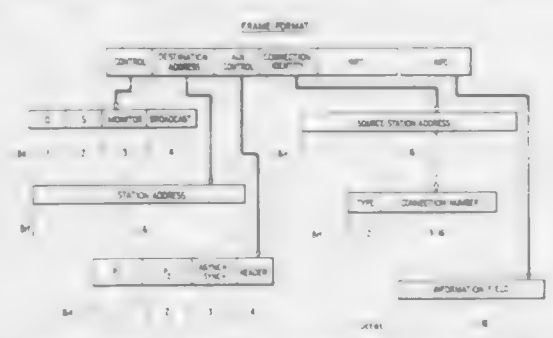
1. An electronic remote chemical identification system consisting of a transponder unit for mounting on a container; memory and processor units associated with said transponder unit; said memory unit having both permanent and programmable sections, said permanent section containing a unique transponder identification number; and encoder unit for programming and reprogramming said programmable memory section in said transponder with information relating to the chemical being transported and other data; and an interrogator unit for interrogating said transponder unit to cause said processor units in said transponder to compare the information content of said interrogation with both said data in said permanent memory section and said chemical specific data in said programmable memory section of said transponder and to compile and encode a proper response to said interrogation only if said proper response is appropriate, and to transmit said response compiled from said data in said memories, said interrogator unit being capable of simultaneous communication with a plurality of transponders.

5,008,662
REMOTE SUPERVISORY AND CONTROLLING MACHINE

Toshiaki Tokizane; Yoshiharu Ito; Osamu Yamada; Toshiyuki Masuda, and Mitsunobu Kuroda, all of Osaka, Japan, assignors to Matsushita Electric Works, Ltd., Osaka, Japan

Continuation of Ser. No. 379,407, Jul. 13, 1989, abandoned, which is a division of Ser. No. 218,176, Jul. 13, 1988, abandoned. This application Aug. 21, 1990, Ser. No. 569,726
Claims priority, application Japan, Oct. 27, 1987, 62-271061; Nov. 26, 1987, 62-298738
Int. Cl.[5] G05B *23/02*
U.S. Cl. 340—825.06 5 Claims

1. A remote supervisory and controlling system comprising:
a central control unit;
a plurality of terminal units, said plurality of terminal units being connected to said central control unit through a two-wire signal line and said central control unit sends out a transmission signal including an address data signal for calling each of said terminal units, a control data signal for controlling a load associated with each of said terminal units, and a return wait signal for setting a period of returning a monitor data signal from each of said terminal units to perform time-divisional multiplex transmission of monitor data and control data between said central control unit and each of said terminal units, in which said



system further comprises a wireless relay terminal unit for returning data received through an optical wireless receiver from an optical wireless transmitter to said central control unit through time-divisional multiplex transmission, said wireless relay terminal unit being coupled to said central control unit through said two-wire signal line and said transmitters each having an address setting section for setting the address to which said data is to be transmitted, and wherein said receiver is coupled to said wireless relay terminal unit via an exclusive link, said wireless relay terminal unit responding to said signal received from said receiver only when a systematic operation is to be performed, and wherein said system further comprises an individual receiver having a load associated therewith, said individual receiver responding to said signal from said transmitter when an individual operation is to be performed.

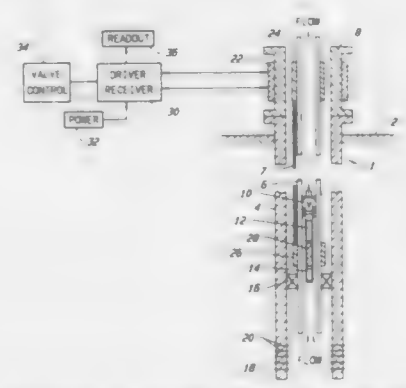
COMMUNICATIONS SYSTEMS

John L. Adams, Leiston, England, assignor to British Telecommunications public company limited, London, England

Continuation-in-part of Ser. No. 753,993, Jul. 11, 1985, abandoned. This application Jul. 22, 1987, Ser. No. 76,276
Claims priority, application United Kingdom, Jul. 24, 1986, 8618118
Int. Cl.[5] H04Q *1/00*; H04J *3/02*
U.S. Cl. 340—825.5 **16 Claims**



1. A method of controlling a communications network comprising a plurality of stations which can communicate via a closed communication loop; said method including:
- providing information in digital form for transmission from one station to another in message blocks which circulate around the loop, each message block being provided as a first group of control bits and a second group of data bits,
- controlling each of said plurality of stations having data to transmit to assume an active state in which it inserts digitally encoded information into empty message blocks for transmission to a destination station via the loop,
- causing any of said stations in an active state, if it has inserted information into d message blocks, where d is an integer greater than zero and is variable, to enter a state in which it cannot gain access to empty blocks for the transmission of information until it is reset,
- controlling any receiving station after receiving data from a message block to set the control bits of said message block to indicate a further allocation request;
- controlling the receiving station setting the control bits of said block to further modify said control bits upon the station recognizing that said block has traveled unmodified once around the loop, said control bits being modified to indicate a reset;
- said resets being issued to each of said stations so that no station is in a preferential position with regard to the rate of reception of resets.

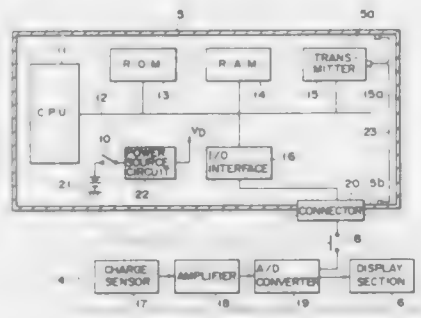
APPARATUS FOR INDUCTIVELY COUPLING SIGNALS BETWEEN A DOWNHOLE SENSOR AND THE SURFACE

Henry S. More, Los Altos; Edward C. Fraser, Cupertino, and Lawrence R. Bulduc, Cottonwood, all of Calif., assignors to Quantum Solutions, Inc., Santa Clara, Calif.

Filed Jan. 23, 1990, Ser. No. 468,591
Int. Cl.[5] G01V *1/00*
U.S. Cl. 340—854 **33 Claims**



1. An apparatus for transmitting signals between surface equipment and downhole equipment, including:
- a set of inductive coupling coils, including a first downhole coil and a second downhole coil separated by a pressure barrier from the first downhole coil, for inductively coupling an AC drive signal from the surface equipment to the downhole equipment; wherein the downhole equipment includes:
- a sensor, for generating a data signal having a frequency indicative of a measured quantity;
- a rectifier for receiving the AC drive signal from the first downhole coil and generating a rectified signal from the received AC signal; and
- a modulator connected between the first downhole coil and the sensor, for receiving the data signal and impressing on the first downhole coil a modulation indicative of the data signal frequency.

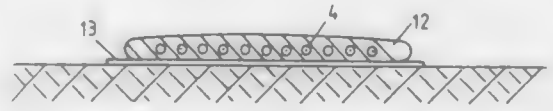
MEASURING DEVICE HAVING TRANSMITTER

Yoshio Wakatsuki; Toshiharu Okuyama; Hajime Takeuchi; Misao Shimizu, and Giichiro Shimizu, all of Tokyo, Japan, assignors to Man Design Co. Ltd., Tokyo, Japan

PCT No. PCT/JP88/00377, § 371 Date Dec. 14, 1988, § 102(e) Date Dec. 14, 1988, PCT Pub. No. WO88/08184, PCT Pub. Date Oct. 20, 1988
Continuation of Ser. No. 290,414, Dec. 14, 1988, abandoned. This PCT application Apr. 15, 1988, Ser. No. 569,534
Claims priority, application Japan, Apr. 16, 1987, 62-56703
Int. Cl.[5] G08C *19/00*
U.S. Cl. 340—870.26 **2 Claims**



1. A measuring device having a transmitter, comprising:
a measuring device section, including a measurement data display section, for converting measurement data into a digital value and displaying the digital value;
- a data processing unit for arranging the measurement data output from said measuring device section in a data frame having a predetermined format and outputting the measurement data as a transmission data string; and
- a FSK transmitter for FSK modulating and transmitting the transmission data string, which is output from said data processing unit, by radio transmission, the improvement comprising:
- a casing arranged on said measuring device section back to back with said measurement data display section of said measuring device section, housing said data processing unit and said FSK transmitter; and
- a conductor portion adapted to be grasped by an operator, said portion provided on at least a predetermined area of an outer rear wall of said casing, for connecting the body of the operator to said FSK transmitter whereby the body serves as a transmitting antenna.

TRAFFIC MEASUREMENT EQUIPMENT

Franz J. Gebert; Johannes P. Theron; Ralf D. H. Gebert, and Rudiger H. Gebert, all of P.O. Box 14183, Lyttleton, Transvaal, South Africa

Continuation-in-part of Ser. No. 176,257, Mar. 31, 1988, abandoned. This application Oct. 12, 1989, Ser. No. 420,762
Claims priority, application South Africa, Apr. 2, 1987, 87/2386
Int. Cl.[5] G08G *1/02*
U.S. Cl. 340—936 **19 Claims**

1. In a traffic data acquisition method comprising laying an electrically conductive cable with at least two conductors separated by a material which has electrical properties selected from one or more of piezo-electric, tribo-electric, magneto-=and/or electro=strictive effects, connecting the conductors to an electronic processor comprising an amplifier, digitiser and micro-processor, detecting signals induced in the cable by passage of vehicle wheel(s) over the cable, and processing the signals, the improvements in that the processing of the signals comprises computing a total integrated spectral power of the signals, establishing an empirical relationship between speed and weight of other vehicle wheel(s) passing over the cable and the total spectral power for the cable, inputting the computed total spectral power and one of the speed or weight of the vehicle wheel(s) thereof into the empirical relationship and deriving the other one of the weight or speed of the latter vehicle wheel(s) from the empirical relationship.

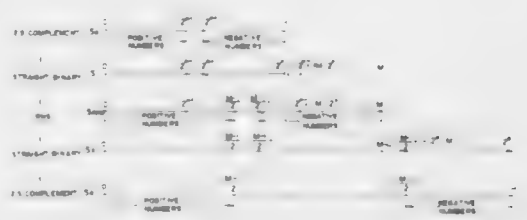
SAFETY SYSTEM FOR BOATS IN DRY STORAGE

Larry R. Palmer, Rt. 2, P.O. Box 397-X1, Harriman, Tenn. 37748; Joseph M. Collins, Rt. 4, Box 561, Lenoir City, Tenn. 37771, and Gary M. Holloway, Rte. 2, Box 423A, Vonore, Tenn. 37885

Filed Mar. 26, 1990, Ser. No. 498,971
Int. Cl.[5] G08B *23/00*
U.S. Cl. 340—984 **11 Claims**

1. A safety system for use with boats stored within an enclosed building, which comprises:
- a transmitting unit for attachment to said boats, said transmitting unit interposed between a battery system and an electrical distribution system of said boats, said transmitting unit including a disconnect switch means for selectively interrupting connection between said battery system and said electrical distribution system and further including at least one signal transmitting unit to generate an output signal when said battery system is connected to said electrical distribution system by said disconnect switch means; and
- a receiving unit associated with said enclosed building, said receiving unit having at least one detector unit for receiving said output signal of said signal transmitting unit, said receiving unit further having a power supply means for said detector unit and an alarm means connected to said detector unit for generating an alarm signal whenever said detector unit detects said output signal from said signal transmitting unit.



5,008,668

METHOD AND APPARATUS FOR ENCODING AND DECODING DATA IN RESIDUE NUMBER SYSTEM

Jun Takayama, Tokyo; Takeshi Ninomiya, Kanagawa; Tadao Fujita, Kanagawa, and Yoshiaki Inaba, Kanagawa, all of Japan, assignors to Sony Corporation, Tokyo, Japan

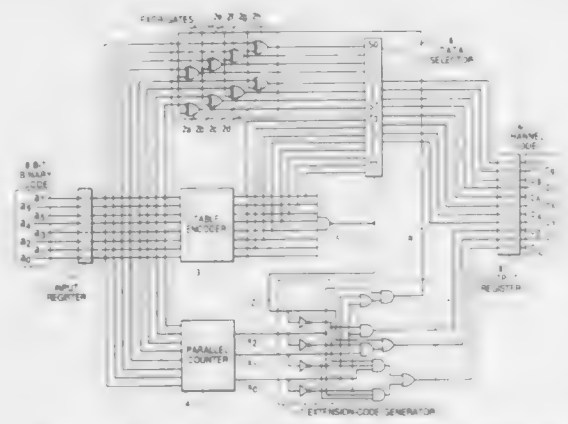
Filed Oct. 12, 1988, Ser. No. 256,732
Claims priority, application Japan, Oct. 12, 1987, 62-257025; Oct. 15, 1987, 62-260991
Int. Cl.[5] H03M *7/18*
U.S. Cl. 341—83 **5 Claims**

1. An encoder circuit for converting input data composed of binary codes into RNS data, comprising:
dividing means using fixed bits of a predetermined length for dividing said input data having the value S into upper bit data S_U and lower bit data having the value S_L in the relation

$$S = S_U \times 2^q + S_L$$

in which 2^q is a weighted value;
- a first ROM table circuit for weighing each of said upper and lower bit data and converting said upper and lower bit data into residue data for respective fixed RNS moduli, said residue data having a value R_i represented by the equation $R_i = (R_{Ui} + R_{Li}) \text{ MOD } m_i$, wherein R_{Ui} is an upper bit residue data value R_{Li} is a lower bit residue data value of a modulus m_i;
- a second ROM table circuit for converting an addition value of said residue data for each of said moduli into residue data of respective moduli and said addition value has a

residue data value D_i composed of the added values of lower bit residue data D_L and upper bit residue data D_U; and



means for outputting said residue data obtained from said second ROM table circuit as said residue data composing said RNS data.

5,008,669

ENCODING/DECODING SYSTEM FOR OPTICAL RECORDING/READING

Hiromichi Ishibashi, Toyonaka, and Shinichi Tanaka, Kyoto, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Jul. 19, 1989, Ser. No. 383,153
Claims priority, application Japan, Jul. 22, 1988, 63-184308
Int. Cl.[5] H03M *7/20*
U.S. Cl. 341—102 **8 Claims**

1. An encoding system for converting an M-bit binary code composed of M bits each being a "1" or a "0" to an N-bit channel code composed of N bits each being a "1" or a "0", the number of "1"s in said N-bit channel code being a fixed number, i, said system comprising:

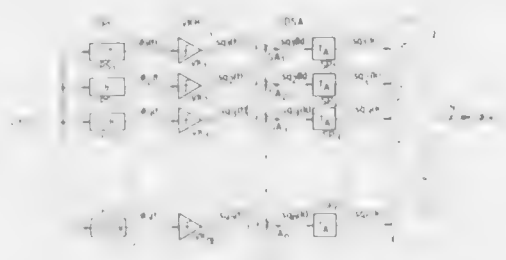
a count means for counting the number of "1"s, k, in an input M-bit binary code;

a logic gate means responsive to a count value, k, by said count means for passing said input M-bit binary code as is when k is equal to or smaller than i and inverting a logic state of said input M-bit binary code when k is larger than (M−i), said M-bit binary code passed as is or the logic inverted M-bit binary code being outputted as a first M-bit temporary code from said logic gate means;

an encoding means for encoding said input M-bit binary code into a specific M-bit binary code when said input M-bit binary code is one of a plurality of predetermined codes, said specific M-bit binary code being outputted as a second M-bit temporary code from said encoding means;

a selection means for selectively outputting said second M-bit temporary code when said input M-bit binary code is one of said plurality of predetermined codes and for otherwise outputting said first M-bit temporary code to obtain a selected M-bit temporary code;

an extension code producing means for producing an (N−M)-bit extension code according to said input M-bit binary code such that the total number of "1"s in said selected M-bit temporary code and said (N−M) bit extension code becomes equal to i; and



a means for combining said selected M-bit temporary code and said (N−M)-bit extension code to obtain said N-bit channel code.

5,008,670

PHASE/DIGITAL CONVERSION METHOD AND ARRANGEMENTS FOR IMPLEMENTING THE METHOD

Manfred Zimmer, Ulm, Fed. Rep. of Germany, assignor to Licentia Patent Verwaltungs-GmbH, Frankfurt, Fed. Rep. of Germany

Filed Mar. 31, 1989, Ser. No. 331,372
Claims priority, application Fed. Rep. of Germany, Mar. 31, 1988, 3811018; Sep. 29, 1988, 3833005
Int. Cl.[5] H03M *1/48*
U.S. Cl. 341—113 **15 Claims**

1. In a method of converting an analog signal to a digital phase form in which an input signal $s(t)=x(t)+jy(t)$ present in the form of orthogonal signal components x(t) and y(t) is converted with the use of a combination network and a plurality of comparators into a digital phase signal at outputs of the comparators, the improvement comprising the steps of:

for digital phase resolution to 2^N identical phase increments $\Theta=2\pi\cdot2^{-N}$, forming from the signal components X(t) and y(t) signal phases

$$\phi i(t)=[di\cdot x(t)]ai\cdot xi(t)+bi\cdot y(t) \text{ (where } i=1, 2, 2^N-1)$$

which are shifted in phase by identical phase angles, wherein ai and bi are weighting coefficients with the relation

$$bi/ai=\tan \Theta i$$

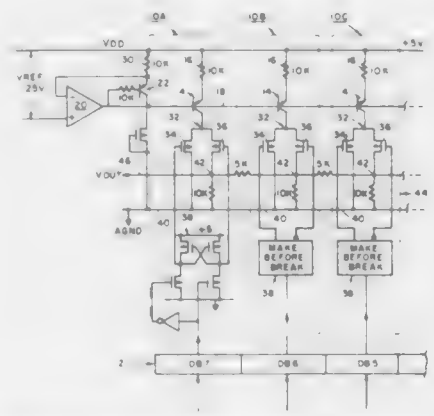
where $\Theta i=(i-1)\Theta$; and

evaluating the signs of the signal phases with the comparators to obtain digital phase signals sqi(t), wherein sqi(t) $=sqn\phi i(t)$, for $i=1, 2, \ldots 2^N-1$.

5,008,671

HIGH-SPEED DIGITAL-TO-ANALOG CONVERTER WITH BIMOS CELL STRUCTURE

Michael G. Tuthill, Limerick, Ireland, assignor to Analog Devices, Incorporated, Norwood, Mass.



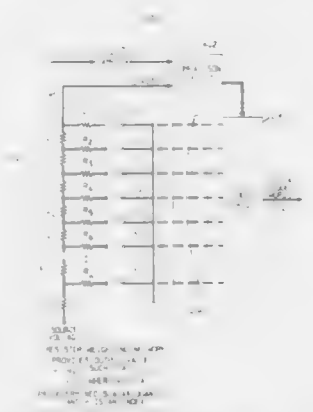
Filed Jun. 27, 1988, Ser. No. 211,707
Int. Cl.[5] H03M *1/78*
U.S. Cl. 341—136 **9 Claims**

1. A digital-to-analog converter (DAC) with means to receive a binary input code and including a plurality of identical high-speed DAC cells each developing a continuous current output for selective connection to a corresponding input node of an R/2R ladder network to produce on the ladder output line a composite analog signal corresponding to the input code; each of said identical DAC cells comprising:

(A) a bipolar transistor connected to first circuit means arranged so that said bipolar transistor serves as a current source;

(B) MOS switch means with an input terminal connected to the output of said bipolar transistor to receive said continuous output current, said MOS switch means having a channel polarity which is the same as the polarity of the collector/emitter of said bipolar transistor, said switch means further having first and second output terminals alternatively connectable to said switch means input terminal to carry said continuous output current, said first and second output terminals being connected respectively to (1) a common reference line and (2) a corresponding input node of said R/2R ladder; and

(C) second circuit means responsive to said input code for



controlling the conditioning of the corresponding MOS switch means to activate a selected one of said output terminals to carry said continuous current of the corresponding bipolar current source either to said common reference line or to the corresponding ladder input node.

5,008,672

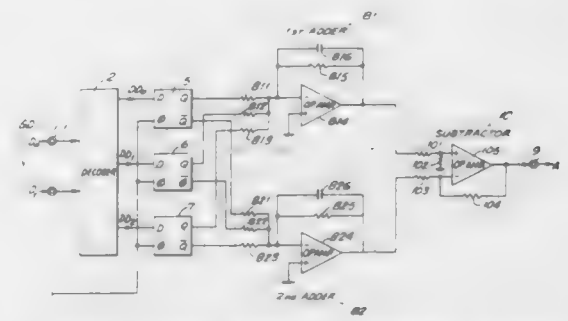
SIGNAL CONVERSION APPARATUS WHICH REDUCES QUANTIZATION ERRORS FOR TELECOMMUNICATIONS APPLICATIONS

Harold G. Leedy, Westminster, Colo., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Dec. 29, 1988, Ser. No. 291,728
Int. Cl.[5] H03M *1/06, 1/34, 1/00, 1/80*
U.S. Cl. 341—138 **17 Claims**

1. Signal conversion apparatus comprising

means for receiving input signals, each input signal having a value falling within one of a plurality of input signal ranges; and



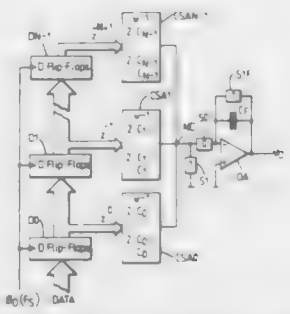
means for associating the range corresponding to each received input signal value with an output signal whose value is different for each of said plurality of ranges, all of the output signal values corresponding to said plurality of input signal ranges forming an ordered set, any one output signal value that follows a first output signal value in said set being equal to the immediately preceding output signal value multiplied by a predetermined factor, said factor having one value for at least three consecutive output signal values in said set.

5,008,673

DIGITAL TO ANALOG CONVERTER ENHANCING CONVERSION PRECISION

Eiichi Ishii, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Filed Feb. 22, 1989, Ser. No. 314,148
Claims priority, application Japan, Feb. 26, 1988, 63-44995
Int. Cl.[5] H03M *1/66*
U.S. Cl. 341—144 **7 Claims**



1. A digital-to-analog converter comprising a plurality of flip-flops, each of said flip-flops temporarily storing corresponding bit data of digital data to be converted and producing true and complementary outputs relative to the stored data, first means coupled to all of said flip-flops for adding the true outputs produced by all of said flip-flops to output a first signal, second means coupled to all of said flip-flops for adding the complementary outputs produced by all of said flip-flops to produce a second signal, and third means coupled to said first and second means for producing an output signal relative to a difference between said first and second signals.

5,008,674

DIGITAL-TO-ANALOG CONVERTER USING SWITCHED CAPACITOR AND TRANSVERSE FILTER

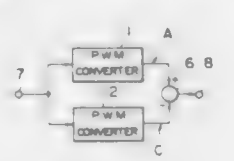
Jose D. A. E. Da Franca; Joao P. C. C. Vital, and Carlos M. D. A. D. A. Leme, all of Lisbon, Portugal, assignors to British Telecommunications, London, England

Filed Jun. 8, 1989, Ser. No. 362,981
Claims priority, application United Kingdom, Jun. 3, 1988, 8813162
Int. Cl.[5] H03M *1/82*
U.S. Cl. 341—150 **8 Claims**

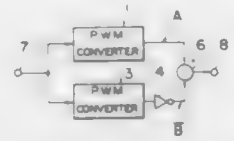
1. An apparatus for producing a filtered analogue output signal from a digital signal, said digital signal being in the form of a sequence of digital signal samples each having a plurality of bits comprising:

(a) digital delay means receiving a first sequence of digital signal samples and producing further sequences of digital signal samples, each said further sequence being a replica of said first sequence delayed with respect thereto by a respective delay period, thereby making available a plurality of earlier samples simultaneously with each sample of said first sequence;

(b) conversion and weighting means comprising a plurality of switched capacitor arrangements, each for receiving a respective one of said sequences of digital signal samples; wherein each said switched capacitor arrangement has a plurality of capacitors with values weighted according to the significances of respective bits of said samples and switching means for supplying, in dependence on the states of bits of each received sample, charges to said capacitors, thereby forming a total charge dependent on the value represented by said sample, said total charges each being weighted by a respective one of a set of coefficients corresponding to a desired filter response; and



(c) common summing means for forming an analogue output sequence representing the sum of the charges from the individual switched capacitor arrangements.



5,008,675

DIGITAL TO ANALOG CONVERTER USING PULSE WIDTH MODULATOR FOR INDEPENDENTLY SETTING EDGE POSITION

Kazuya Toyomaki, Zama, Japan, assignor to Victor Company of Japan, Ltd., Yokohama, Japan

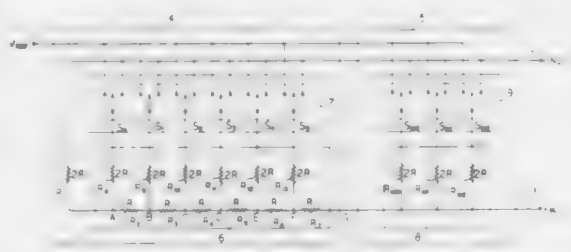
Filed Sep. 29, 1989, Ser. No. 414,278
Claims priority, application Japan, Sep. 29, 1988, 63-245697
Int. Cl.[5] H03M *1/82*
U.S. Cl. 341—152 **2 Claims**

1. A PWM type D/A converter wherein digital input signals supplied to the converter at each predetermined input sample period are designated as odd and even numbered input signals alternately in the order of input, the reference timing point for outputting an odd numbered input signal is designated as an odd numbered reference timing point, and the reference timing point for outputting an even number is designated as an even numbered reference timing point, said PWM type D/A converter comprising:

a first PWM converter receiving said digital input signal for outputting an output signal (A) wherein the timing point when said output signal (A) rises from the low level to the high level is set at the earlier the timing, the larger the value of the odd numbered input signal relative to the odd numbered reference timing point, and the timing point when said output signal (A) falls from the high level to the low level is set at the later the timing, the larger the value of the even numbered input signal relative to the even numbered reference timing point, and wherein the pulse width from the rising point to the falling point of said output signal (A) is determined by the values of the odd numbered input signal and the next even numbered input signal;

a second PWM converter receiving said digital input signal for outputting an output signal (B) wherein the timing point when said output signal (B) falls from the high level to the low level is set at the later the timing, the larger the value of the odd numbered input signal relative to the odd numbered reference timing point, and the timing when said output signal (B) rises from the low level to the high level is set at the earlier the timing, the larger the value of the even numbered input signal relative to the even numbered reference timing point, and wherein the pulse width from the rising point to the falling point of said output signal (B) is determined by the values of the even numbered input signal and the next odd numbered input signal; and

an analog adder for adding together said output signal (A) from said first PWM converter and said output signal (B) from said second PWM converter to output a sum signal (A + B);



wherein an analog signal corresponding to said digital input signal is outputted from said analog adder.

5,008,676

DIGITAL/ANALOG CONVERTER

Kenji Kanoh, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 12, 1990, Ser. No. 551,994
Claims priority, application Japan, Feb. 15, 1990, 2-34677
Int. Cl.[5] H03M *1/78*
U.S. Cl. 341—154 **4 Claims**

1. A digital/analog converter which converts a digital signal of a binary number consisting of N_L low-order bits and N_U high-order bits into an analog signal, comprising:

a first input terminal to which first reference potential is applied;

a second input terminal to which second reference potential is applied;

an output terminal;

a first digital/analog converting circuit driven in accordance with a digital data of said low-order bits; and

a second digital/analog converting circuit driven in accordance with a digital data of said high-order bits;

said first digital/analog converting circuit including:

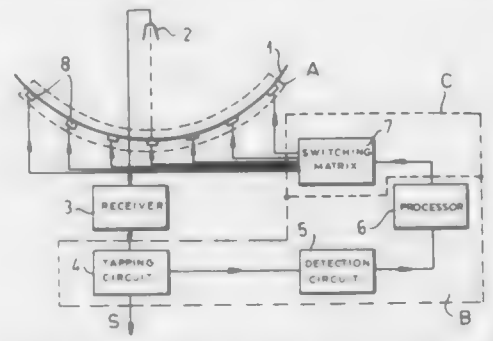
a first resistor of resistance value 2R having its one end connected to said second input terminal;

R-2R circuitry which includes N_L second resistors of resistance value R connected in series and N_L third resistors of resistance value 2R having their respective one ends connected to one ends of said second resistors; a junction of the one end of said second resistor and the one end of said third resistor disposed on one side being connected to the other end of said first resistor, and the other end of said second resistor disposed on the other side being connected to said output terminal; and

a first switch group which consists of N_L first changeover switches having their respective first and second changeover contact points and common contact points; in each of said first changeover switches, said first changeover contact point being connected to said first input terminal, said second changeover contact point being connected to said second input terminal and said common contact point being connected to the other end of said corresponding third resistor, and each of said first changeover switches changing its connection between said first and second changeover contact points in accordance with a state of each bit of said low-order bits;

said second digital/analog converting circuit including:

2R circuitry which consists of (2^N-1) fourth resistors of resistance value 2R having their respective one ends commonly connected and having said one ends connected to said output terminal; and



a second switch group which consists of (2^N-1) second changeover switches having their respective first and second changeover contact points and common contact points; in each of said second changeover switches, said first changeover contact point being connected to said first input terminal, said second changeover contact point being connected to said second input terminal and said common contact point being connected to the other end of said corresponding fourth resistor, and the number of said second changeover switches changing their respective connections to said first changeover contact points being determined in accordance with a state of said high-order bits.

5,008,677

ANTI-JAMMING DEVICE FOR A RADAR PROVIDED WITH A REFLECTOR ANTENNA

Roland Trigon; Serge Drabowitch, and Joseph Roger, all of Paris, France, assignors to Thomson-CSF, Paris, France

Filed Jul. 7, 1977, Ser. No. 816,280
Claims priority, application France, Jul. 13, 1976, 76 21400
Int. Cl.[5] G01S *7/36, 7/40*
U.S. Cl. 342—17 **12 Claims**

1. In a radar system subject to jamming, provided with an antenna including a primary radiator and a reflector juxtaposed therewith for directing incoming wave energy to said radiator, the latter having an output connection to a signal receiver,

the combination therewith of an anti-jamming device comprising:

phase-modifying means closely juxtaposed with said reflector for shifting the phases of signal waves reflected toward said radiator, said phase-modifying means being settable to a plurality of operational states introducing different phase shifts;

detector means connected to said receiver for generating test signals representative of incoming wave energy intercepted by the reflector; and

processing means for emitting switching commands to said phase-modifying means successively setting same in each of said operational states, said processing means being connected to said detector means for comparing the test signals generated in each of said operational states and for preserving a switching command found to result in a minimum of intercepted wave energy.

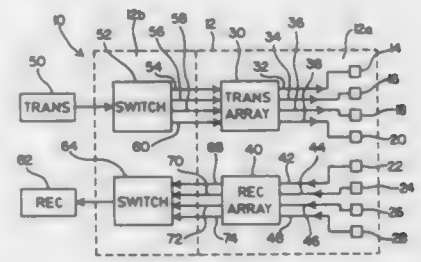
ELECTRONICALLY SCANNING VEHICLE RADAR SENSOR

Martin I. Herman, Torrance, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed Mar. 2, 1990, Ser. No. 487,338
Int. Cl.[5] G01S *13/60*
U.S. Cl. 342—158 **10 Claims**

1. A scanning vehicle radar sensor, comprising:

support means;



a plurality of transmitting elements formed on the support means in predetermined relation to each other for scanning a predetermined pattern relative to a vehicle on which the sensor is mounted;

a passive phased transmitting array means formed on the support means, having a plurality of inputs, and a plurality of outputs connected to the transmitting antenna elements respectively;

radar transmitter means;

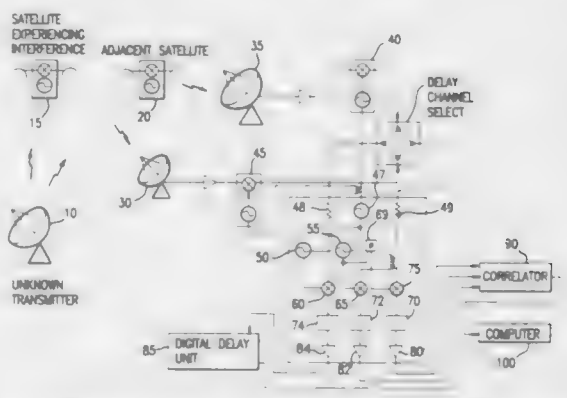
electronic transmitting switch means for sequentially connecting an output of the transmitter means to the inputs of the transmitting array means, and thereby scanning the transmitting antenna elements respectively;

a plurality of receiving antenna elements formed on the support means in predetermined relation to each other and to the transmitting antenna elements respectively for scanning said predetermined pattern;

a passive phase receiving array means formed on the support means, having a plurality of inputs connected to the receiving antenna elements respectively, and a plurality of outputs;

radar receiving means; and

electronic receiving switch means for scanning the receiving antenna elements in synchronism with operation of the transmitting switch means by sequentially connecting an input of the receiver means to the outputs of the receiving array means respectively;



the support means comprising a flexible sheet having a surface on which the transmitting and receiving antenna elements are formed for facing away from the vehicle, the sheet being capable of flexure for conforming to a non-planar surface of the vehicle on which the sensor is to be mounted.

5,008,679

METHOD AND SYSTEM FOR LOCATING AN UNKNOWN TRANSMITTER

John E. Effland, Gaithersburg, Md.; John M. Gipson, Silver Spring, Md.; David B. Shaffer, Annapolis, Md., and John C. Webber, Herndon, Va., assignors to Interferometrics Incorporated, Vienna, Va.

Filed Jan. 31, 1990, Ser. No. 472,837
Int. Cl.[5] H04B *7/185;* **G01S** *5/02, 3/02, 1/24*
U.S. Cl. 342—353 **21 Claims**

1. A method of locating an unknown radio-frequency trans-

mitter by remote and passive observation, comprising the steps of:

(a) receiving a signal radiated from the transmitter into space, a plurality of receivers at different locations receiving the radiated signal;

(b) retransmitting, from each of the plurality of receivers, the signal radiated from the transmitter to a plurality of antennas, each at a known location, one of each of the antennas receiving the retransmtited signal from one of the receivers, each of the received retransmitted signals being delayed by a first path length equal to a distance between the transmitter and one of the receivers and by a second path length equal to a distance between one of the receivers and one of the antennas;

(c) receiving the retransmitted signals by the antennas;

(d) converting the received retransmitted signals to a plurality of digital signals;

(e) performing pre-detection cross-correlation on the plurality of digital signals to obtain a set of data from which a time difference of arrival calculation and a frequency difference of arrival calculation can be made;

(f) performing the time difference of arrival calculation which compensates for a relative delay value in the received retransmitted signals from the receivers, the relative delay value being a function of the first path lengths, the second path lengths, and a value equal to the speed of light;

(g) performing the frequency difference of arrival calculation which compensates for a relative frequency value in the received retransmitted signals from the receivers, the relative frequency value being related to a difference between a first relative velocity of one of the receivers with respect to the velocity of Earth and a second relative velocity of another of the receivers with respect to the velocity of Earth;

(h) repeating each of the prior steps a plurality of times; and

(i) determining the location of the transmitter by generating isodelay lines of position based on a plurality of the time difference of arrival calculations, by generating isodoppler lines of position based on a plurality of the frequency difference of arrival calculations, and locating the intersections of paired, generated isodelay and isodoppler lines of position, the intersections defining a region in which the transmitter is located.

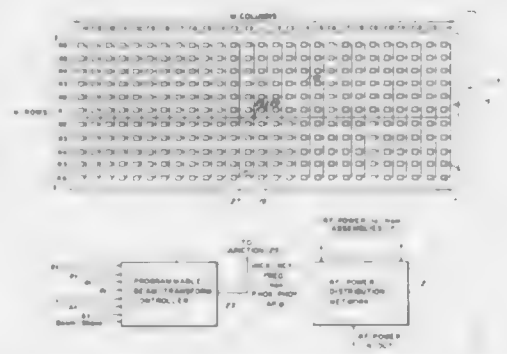
5,008,680

PROGRAMMABLE BEAM TRANSFORM AND BEAM STEERING CONTROL SYSTEM FOR A PHASED ARRAY RADAR ANTENNA

Jefferson M. Willey, Columbia, Md.; James J. Alter, Fairfax Station, and Jules P. Letellier, Springfield, both of Va., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Apr. 29, 1988, Ser. No. 187,804

Int. Cl.[5] H01Q *3/22, 3/24, 3/26*



U.S. Cl. 342—372 **18 Claims**

1. A programmable beam transform system for a phased array antenna, said system comprising:

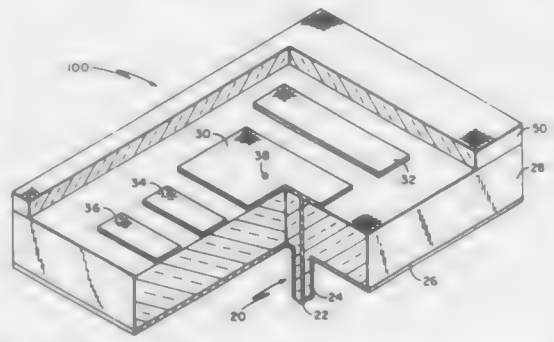
an array of assemblies contained in said antenna, each said assembly containing its own associated internally-stored data; and

a programmable beam transform controller responsive to a plurality of programmable input signals for selectively generating and applying a plurality of control signals to each of said assemblies to enable said assemblies to collectively perform both beam steering and beam-shaping operations;

each of said assemblies modifying said plurality of control signals applied thereto as a function of its associated internally-stored data to phase shift associated energy applied thereto in order to cause said assemblies to collectively

transmit and/or receive an energy beam at any desired beam position and with any desired beam pattern.

5,008,681



MICROSTRIP ANTENNA WITH PARASITIC ELEMENTS

Nunzio M. Cavallaro, Methuen; John F. Toth, Reading, and Cleo J. Alexander, Marlborough, all of Mass., assignors to Raytheon Company, Lexington, Mass.

Continuation of Ser. No. 332,145, Apr. 3, 1989, abandoned. This application Jun. 8, 1990, Ser. No. 536,043

Int. Cl.[5] H01Q *1/380, 13/080, 19/300*

U.S. Cl. 343—700 MS **6 Claims**

5. An antenna comprising:

a plurality of elements disposed along a first direction in an array, each one of the plurality of elements having a center, a width and a length, the length of each one of the plurality disposed in a direction along the first direction and the width of each one of the plurality of elements disposed in a direction orthogonal to the first direction, the plurality of elements comprising:

(a) a patch radiator element having a width approximately 0.380 of a wavelength of radio frequency (RF) energy propagating therein and a length approximately 0.494 of a wavelength of the RF energy;

(b) a reflector element having a width approximately 0.494 of a wavelength of the RF energy and a length approximately 0.304 of a wavelength of the RF energy, the center of the reflector element disposed approximately 0.570 of a wavelength of the RF energy from the center of the patch radiator element, and

(c) a director element having a width approximately 0.266 of a wavelength of the RF energy and a length of 0.114 of a wavelength of the RF energy, the center of the director element disposed approximately 0.456 of a wavelength of the RF energy from the center of the patch radiator element.

PORTABLE ANTENNA FOR MOUNTING ON INSIDE OF MOTOR VEHICLE

Herbert R. Blaese, 3314 Olcott Ave., Chicago, Ill. 60634

Continuation of Ser. No. 459,939, Jan. 2, 1990, Pat. No. 4,990,928. This application Sep. 17, 1990, Ser. No. 583,667

Int. Cl.[5] H01Q *1/100, 1/320, 9/000, 1/120*

U.S. Cl. 343—713 **7 Claims**

1. A portable antenna for mounting adjacent the lower window ledge of a motor vehicle which comprises:

a housing;

a radiator having a distal end and a proximal end, the proximal end being located within the housing and the distal end being located outside of the housing;

an electrical cable coupled to the housing;

a support member coupled to the housing, the support member extending generally in the opposite direction of the radiator and having a portion for insertion and retention between the side window and the lower window ledge of the door frame of a motor vehicle with the radiator being located on the inside of the vehicle; and

means connecting said housing to said support member.

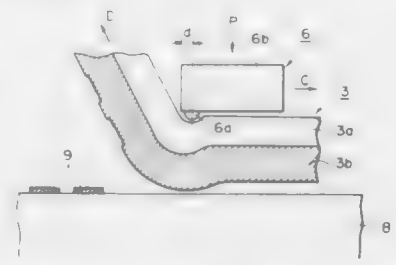
THERMAL TRANSFER RECORDING METHOD



Takayuki Suzuki, Saitama, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 16, 1989, Ser. No. 367,262

Claims priority, application Japan, Jun. 17, 1988, 63-148088

Int. Cl.[5] G01D *15/10*

U.S. Cl. 346—1.1 **5 Claims**

1. A thermal transfer recording method, comprising:

providing a thermal transfer material comprising a support and a heat-transferable ink layer which is capable of providing a melt viscosity such that said melt viscosity decreases in the direction of from the support side toward the surface side thereof, said thermal transfer material being housed in a cassette whereby said thermal transfer material can be reused by turning said cassette over;

superimposing the thermal transfer material on a recording medium so that the heat-transferable ink layer contacts the recording medium;

heating the thermal transfer material from the support side thereof by means of a recording head corresponding to an image signal; and

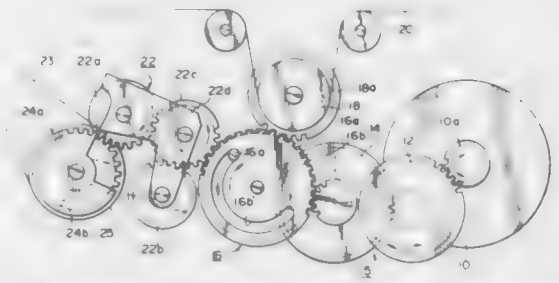
separating the thermal transfer material from the recording medium immediately after the heating;

reversing said thermal transfer material when said thermal transfer material is exhausted by turning said cassette over;

wherein said recording head comprises a substrate and a heat-generating member disposed thereon; and distance from the center of said heat-generating member to the trailing end of the substrate disposed downstream of the heat-generating member with respect to the movement of the thermal transfer material being 1 mm or shorter.

5,008,684

HEAD DRIVING APPARATUS FOR THERMAL PRINTER



Hiroshi Kurafuji, Tokyo, Japan, assignor to Citizen Watch Co., Ltd., Tokyo, Japan

Filed Apr. 9, 1990, Ser. No. 506,854

Claims priority, application Japan, Apr. 12, 1989, 1-92061

Int. Cl.[5] B41J *2/32*

U.S. Cl. 346—76 PH **4 Claims**

1. An apparatus for driving a thermal head in a thermal printer, comprising:

(a) a carriage for supporting the thermal head in confronting relation to a platen on which a print paper is to be supported, said carriage being movable in a forward direction along a longitudinal path parallel to the axis of the platen, with the thermal head pressed against the platen via an ink ribbon and the print paper, during forward movement for printing, and said carriage being movable in a backward direction along the longitudinal path to return to its original position, with the thermal head off the platen, during returning;

(b) a support shaft for supporting thereon said carriage in such a manner that said carriage is slidable along said support shaft longitudinally thereof;

(c) a carriage driving mechanism for driving said carriage to move on and along said support shaft in said forward and backward directions, said carriage driving mechanism including a drive motor rotatable forwardly and reversely corresponding to the forward and backward movements of said carriage, a reduction gear train operatively connected to a driving shaft of said drive motor, and a carriage feed wheel, said carriage feed wheel being composed of a lower gear having a engaging pawl and meshable with said reduction gear train for performing the forward and backward movements of said carriage, and an upper gear having a play groove engageable with said engaging pawl of said lower gear, said upper gear being pivotable coaxially of said lower gear, said upper gear being rotatable as a unit with said lower gear, with said engaging pawl being in engagement with one of opposite ends of said play groove during the forward movement and the returning of said carriage; and

(d) a head loading mechanism for bringing the thermal head into and out of the platen at respective ends of the forward and backward movements of said carriage, said head loading mechanism including a pulley operatively connected to said support shaft of said carriage driving mechanism by a belt, upper and lower sector wheels each having a tooth-free portion and a toothed portion and coaxially connected to said pulley, a carriage driving idle wheel normally meshing with said lower gear of said carriage feed wheel, and upper and lower idle gears locatable in

confronting relation to the respective tooth-free portions of said upper and lower sector wheels for idle rotation during the forward and backward movements of said carriage, said upper and lower idle gears being meshable with the respective toothed portions of said upper and lower sector wheels for angular movement through a predetermined angle while said engaging pawl of said lower gear slides in and along said play groove of said upper gear as said drive motor is rotated reversely when said carriage is switched over between the forward movement and the backward movement, whereby said support shaft of said carriage is angularly moved through said predetermined angle, in response to the angular movement of said upper and lower sector wheels, to bring the thermal head into and out of engagement with the print paper on said platen.

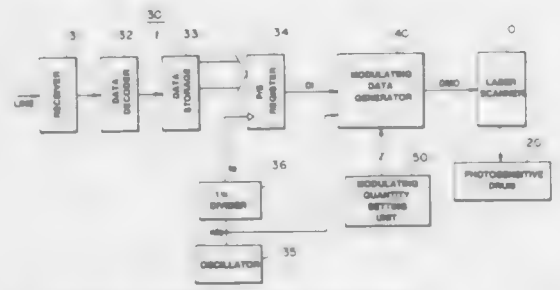
LASER GENERATOR FOR PRODUCING MODULATING DATA THEREFOR



Seiji Arai, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jan. 19, 1989, Ser. No. 299,185

Claims priority, application Japan, Jan. 22, 1988, 63-122841

Int. Cl.[5] G01D *15/14;* **B41J** *2/47*

U.S. Cl. 346—108 **10 Claims**

1. A laser generating apparatus comprising:

means for generating serial data corresponding to image information in accordance with an appropriate data transferring clock, the data transferring clock having a frequency;

means for generating a clock signal having a frequency which is n times that of the frequency of the data transferring clock where n is a natural number;

modulating data generating means for delaying the serial data by a desired quantity in accordance with the generated clock signal and for outputting modulating data indicative of the logical sum of the delayed serial data and the serial data; and

laser scanner for receiving the modulating data, for modulating a laser beam in accordance with the received modulating data, and for forming a latent image on a photosensitive body, the latent image corresponding to the image information, by irradiating and scanning the modulated beam onto and over the photosensitive body.

5,008,686

OPTICAL SCANNING DEVICE FOR SCANNING A PREDETERMINED SURFACE WITH A PLURALITY OF LIGHT BEAMS

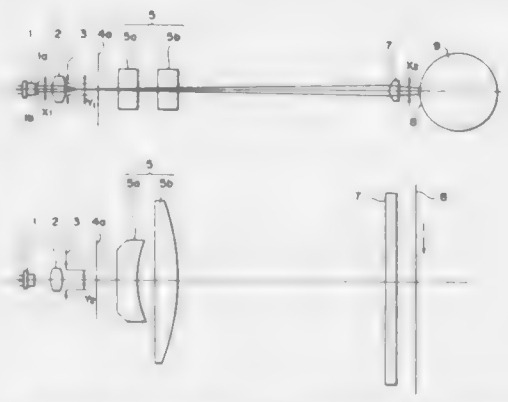
Hiroshi Saito, Kawasaki, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 16, 1989, Ser. No. 394,542

Claims priority, application Japan, Aug. 19, 1988, 63-206043

Int. Cl.[5] G01D *9/00*

U.S. Cl. 346—108 **8 Claims**



4. An optical scanning device comprising:

a light source having a plurality of light emitting portions arranged in a sub scanning direction;

first optical means for directing a plurality of light beams from said light source to a deflector;

a deflector for deflecting the plurality of light beams from said first optical means;

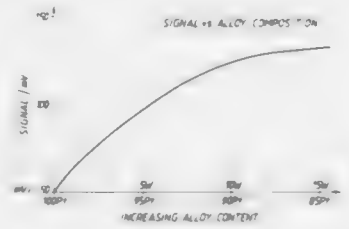
second optical means for directing the plurality of light beams from said deflector to a third optical means, said second optical means being afocal in the sub scanning

direction and having the f-θ characteristic in a main scanning direction; and

third optical means, provided commonly for the plurality of light beams, for directing the plurality of light beams from said second optical means onto a predetermined surface, said third optical means being anamorphic and having different imaging magnifications in the main scanning direction and the sub scanning direction.

5,008,687

DATA STORAGE MEDIUM



Robert J. Longman, Coton; Peter R. Helfet, and Michael J. Abrams, both of London, all of England, assignors to Plasmon Limited, Royston, England

Filed Feb. 9, 1989, Ser. No. 309,343

Claims priority, application United Kingdom, Feb. 9, 1988, 8802930

Int. Cl.[5] G01D *9/00;* **B32B** *3/24;* **G03C** *1/00;* **B05D** *3/00*

U.S. Cl. 346—135.1 **15 Claims**

1. A data storage medium which is responsive to incident electromagnetic radiation and the surface of a surface region of which includes a layer of heat sensitive plastics material which undergoes a large volume change upon degradation and which has a textured surface pattern in the from of a regular array of grooves or protuberances, the dimensions of the surface features which constitute said textured surface pattern being in the sub-micron range, and wherein said textured surface pattern is overcoated with a thin film of an alloy, said thin alloy film and the surface region of said plastics material in contact with said thin alloy film together constituting a recording layer which undergoes a change in response to said incident electromagnetic radiation whereby said thin alloy film is deformed from its original physical configuration without undergoing rupture, said alloy comprising (1) a first component which is at least one of ruthenium, rhodium, palladium, osmium, iridium and platinum; and (2) at least one metallic element from

Groups Va, VIa, VIIa, and Ib of the Periodic Table of elements according to Mendeleev; and said film conforming substantially to said textured surface pattern, and said thin film constituting means for absorbing said electromagnetic energy without impairing the continuity of said thin film and conducting energy from said incident electromagnetic radiation to cause degradation of said plastics material which undergoes a local volume change and correspondingly changes the surface configuration of said thin film for, the recordation of information.

PLASTIC SUBSTRATE FOR THERMAL INK JET PRINTER

Alfred I-Tsung Pan, Sunnyvale; Eric G. Hanson, Burlingame; Christopher A. Schantz, Redwood City, and Winthrop D. Childers, San Diego, all of Calif., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Continuation-in-part of Ser. No. 168,718, Mar. 16, 1988, Pat. No. 4,926,197. This application Mar. 9, 1990, Ser. No. 491,141

Int. Cl.[5] B41J *2/05*

U.S. Cl. 346—140 R **19 Claims**

1. A thermal ink jet printer print head, comprising:

a plastic base;

a metallization layer overlying the plastic base, the metallization layer having a thickness of from about 50 Angstroms to about 1000 Angstroms;

a dielectric structure overlying the metallization layer, the dielectric structure including

a metallic buffer layer overlying the metallization layer, the buffer layer having a thickness of greater than about 700 Angstroms, and

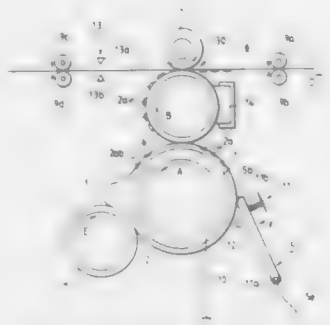
a layer of a dielectric material overlying the metallic buffer layer;

a resistor overlying the dielectric structure; and

an orifice plate with an orifice therein and an ink channel overlying the thin film resistor and dielectric structure.

5,008,690

IMAGE RECORDING APPARATUS FOR TRANSFERRING INK PATTERNS FORMED BY SELECTIVE APPLICATION OF ENERGY THROUGH ELECTRODES OF A RECORDING HEAD CONTROLLABLY BIASED AGAINST INK TRANSPORTED ON A ROLLER



Norihiko Koizumi; Hiroshi Tanioka, both of Yokohama; Noboru Toyama; Kozo Arahara, both of Kawasaki, and Toshiya Yuasa, Mitaka, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Dec. 8, 1988, Ser. No. 281,453

Claims priority, application Japan, Dec. 10, 1987, 62-311025; Jan. 12, 1988, 63-003117; Jan. 22, 1988, 63-010847; Jan. 22, 1988, 63-010849

MULTI-COLOR ELECTROPHOTOGRAPH APPARATUS

Takao Kumasaka, Takahagi, and Yuzuru Simazaki, Hitachi, both of Japan, assignors to Hitachi, Ltd. and Hitachi Koki Co., Ltd., both of Tokyo, Japan

Filed Sep. 15, 1989, Ser. No. 407,859

Claims priority, application Japan, Sep. 21, 1988, 63-234999

Int. Cl.[5] G01D *15/00*

U.S. Cl. 346—157 **24 Claims**

1. A multi-color electrophotograph apparatus comprising:

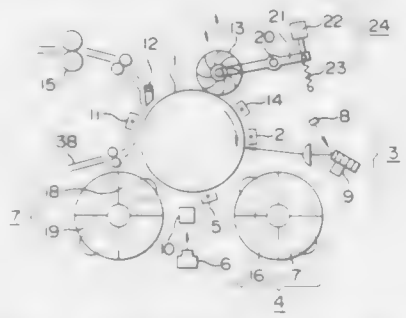
a photosensitive drum;

a first means for producing an image, disposed in proximity to said photosensitive drum, said first means comprising;

a first charging element;

a first exposure station; and

a first developer; and



a second means for producing an image, disposed in proximity to said photosensitive drum, said second means comprising,

a second charging element;

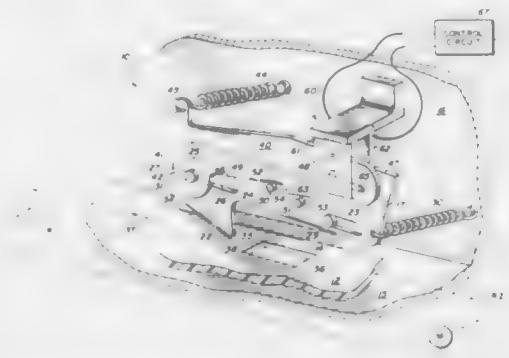
a second exposure station, and

a second developer;

wherein at least one of said first and second developers has

a two-color change function, and a multi-color printing operation is carried out in at most two rotations of said photosensitive drum.

5,008,692



FILM METERING APPARATUS AND METHOD WITH DRIVE SPEED REDUCTION

Conrad Diehl, Rochester; David C. Smart, Fairport, and Wayne E. Stiehler, Spencerport, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Feb. 28, 1990, Ser. No. 486,488

Int. Cl.[5] G03B *1/12*

U.S. Cl. 354—173.1 **18 Claims**

1. In a camera having a housing, means defining an exposure plane within said housing, and means for advancing a strip of film in a frame-to-frame advance direction along said exposure plane, said film having a plurality of perforations located at predetermined frame metering intervals along said film, frame metering apparatus comprising:

first and second guide pins fixedly located on said housing;

an elongated pawl including a film perforation sensing tooth and first and second lift pins; said pawl being formed with an elongated slot and integral adjacent longitudinal and ramp surfaces; and said pawl being mounted for rotational and longitudinal movement relative to said housing, with said first guide pin engaging said slot and said second guide pin proximate said straight and ramp surfaces;

means biasing said pawl in a longitudinal direction, with said ramp surface being urged away from said second guide pin;

means biasing said pawl in a rotational direction about said first guide pin, with said tooth being urged toward said exposure plane and said longitudinal surface being urged toward said second guide pin;

an elongated blade disposed generally parallel to said pawl in engagement for rotation about said second guide pin; said blade being formed with a stepped surface having a first section proximate said first lift pin and having a second section proximate said second lift pin;

means biasing said blade in a rotational direction about said second guide pin, with said stepped surface being urged into contract with said first and second lift pins; and

means for detecting when said second section is in contact with said second lift pin;

said pawl, blade and biasing means being relatively dimensioned, configured and adapted so that said tooth is urged to engage in a perforation, with said longitudinal surface in contact with said second guide pin and said second section in contact with said second lift pin, when said film is moved in said advancement direction toward a position approaching registration of a next available exposure frame; so that said second section contact with said second lift pin is terminated and said first section is brought into contact with said first lift pin when said film reaches said position of registration; and so that said ramp surface is brought into engagement with said second guide pin against the bias of said longitudinal direction biasing means to disengage said tooth from said perforation in response to movement of said tooth with said film, when said film is moved beyond said registration position further in said advancement direction.

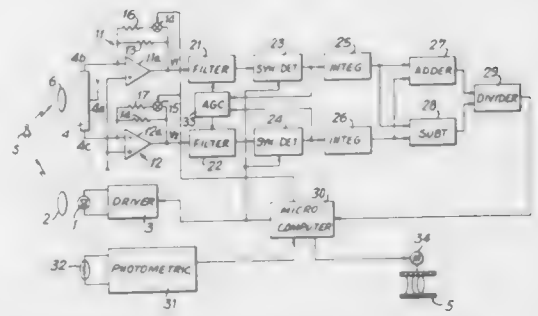
RANGEFINDER FOR CAMERA



Shinji Nagaoka; Koji Sato, and Michio Kawai, all of Chiba, Japan, assignors to Seikosha Co., Ltd., Tokyo, Japan

Filed Jun. 22, 1989, Ser. No. 369,794

Claims priority, application Japan, Jun. 30, 1988, 63-164461

Int. Cl.[5] G03B *3/00;* **G01C** *3/08*

U.S. Cl. 354—403 **14 Claims**

1. A rangefinder for use in a camera, comprising:

(a) light-emitting means for emitting light toward a subject to be photographed;

(b) spot light position detector means for producing an output current signal in response to said light reflected

from said subject, said spot light position detector means being disposed at a given distance from the light-emitting means;

(c) photometric means for measuring the brightness of said subject and incident extraneous light surrounding said subject, and for producing a brightness signal corresponding thereto; and

(d) circuit means for producing an output distance signal corresponding to the distance of the camera from said subject, in response to said output current signal, said circuit means having an amplification function and including:

(i) current-to-voltage converter means for converting the output current signal from the detector means into an output voltage signal;

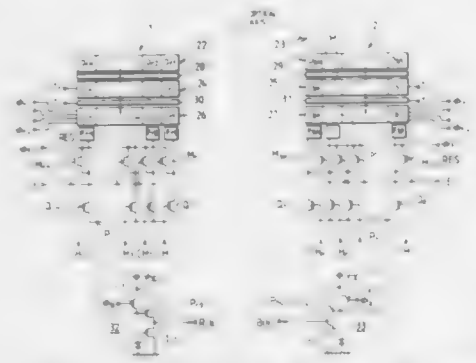
(ii) arithmetic means for arithmetically treating the output voltage signal from the current-to-voltage converter means to produce said output distance signal; and

(iii) gain control means for varying the gain of said amplification function of said circuit means in accordance with said brightness signal.

5,008,696

PHASE DIFFERENCE DETECTING APPARATUS

Takashi Miida; Nozomu Ozaki; Shigenori Baba, and Kunimitsu Kousaka, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan



Filed Jul. 7, 1988, Ser. No. 216,354

Claims priority, application Japan, Jul. 7, 1987, 62-167906

The portion of the term of this patent subsequent to Jul. 31, 2007, has been disclaimed.

Int. Cl.[5] G03B *13/00*

U.S. Cl. 354—408 4 Claims

1. A phase difference detecting apparatus for detecting a relative distance between a pair of focused images obtained from subject luminous flux passed through an objective lens to thereby judge a focusing state of said objective lens, comprising:

a first signal generating means including,

a first light-receiving section constituted by picture elements arranged in a row so as to receive a first one of said focused images,

a first signal reading-out section for transferring, in a predetermined direction, signals generated in said respective picture elements of said first light-receiving section and at the same time outputting said signals in parallel, with respect to each other, through floating gates of a first CCD, and

means for converting said signals output in parallel from said floating gates of said first CCD into a first time series signal and outputting said first time series signal;

a second signal generating means including,

a second light-receiving section constituted by picture elements arranged in a row to receive a second one of said focused images,

a second signal reading-out section for transferring, in a predetermined direction, signals generated in said respective picture elements of said second light-receiving section and at the same time outputting said signals in parallel, with respect to each other, through floating gates of a second CCD, and

means for converting said signals output in parallel from said floating gates of said second CCD into a second time series signal which has a predetermined quantity of relative movement relative to said first time series signal and outputting said second time series signal;

switching-capacitor integrator means including a plurality of capacitive elements and switching elements for intermittently connecting said capacitive elements to each other, and for receiving said first and second time series signals; and

control means for comparing sizes of said first and second time series signals with each other to thereby generate a control signal corresponding to a relation of size between said first and second time series signals, and controlling said switching elements on the basis of said control signal to cause said switching-capacitor integrator means to generate an electric charge corresponding to an integrated value of an absolute value of a difference between said first and second time series signals and to cause said switching-capacitor integrator means to generate, as a correlation value, an integrated value on the basis of said first and second time series signals in predetermined numbers whenever said quantity of relative movement is changed in order to provide a signal indicative of a phase difference between said first and second time series signals.

IMAGE RECORDING SYSTEM AND METHOD

Stephen A. Noble, Rochester, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.

Filed May 31, 1990, Ser. No. 531,215

Int. Cl.[5] G03H *7/00, 15/05;* **H04N** *5/225, 3/14*

U.S. Cl. 354—413 10 Claims

1. An image recording system for simultaneously recording images of a subject in electronic and photosensitive media, comprising:

a photographic camera for recording a photographic image of said subject on said photosensitive medium, said photographic camera including means for supplying a flash request signal;

a video camera including a solid state image sensor for capturing an image of said subject on said image sensor, said video camera including video signal processing circuits for converting image information from said image sensor into a video signal and a video timing generator including image transfer clocking means for controlling transfer of the image information from said image sensor to said video processing circuits;

flash means responsive to said flash request signal for flash illuminating said subject to allow simultaneous image capture by said photographic and video cameras; and

reset means responsive to said flash request signal for interrupting operation of said clocking means at the beginning of a flash illumination and for restarting the clocking means following conclusion of the flash illumination to initiate, at the beginning of an image field, the transfer of image information from the imaging device to the video signal processing circuits.

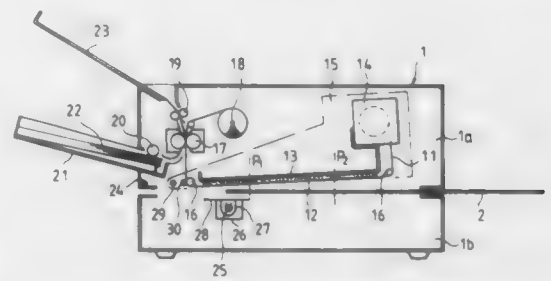
COLOR IMAGE RECORDING APPARATUS USING INTERMEDIATE IMAGE SHEET



Tsugio Okamoto, Kani, Japan, assignor to Brother Kogyo Kabushiki Kaisha, Japan

Filed Nov. 25, 1988, Ser. No. 276,016

Claims priority, application Japan, Nov. 27, 1987, 62-181514[U]

Int. Cl.[5] G03B *27/32*

U.S. Cl. 355—27 38 Claims

1. An image recording apparatus for recording an image of an original on a first sheet, said apparatus using a second sheet and a third sheet, said second sheet carrying thereon at least one monochromatic color image corresponding to a color component of the original image and a machine readable data including arrangement information and exposure information representative of a recording condition for recording the color image on said third sheet, said apparatus comprising:

means for reading said machine readable data and providing an instruction regarding the recording condition;

means for irradiating light onto said third sheet through said second sheet to record a latent image on said third sheet corresponding to the color image on said second sheet;

means for controlling said irradiating means in response to said instruction; and

means for developing the latent image and providing a visible image on said first sheet.

PHOTOGRAPHIC PRINTER

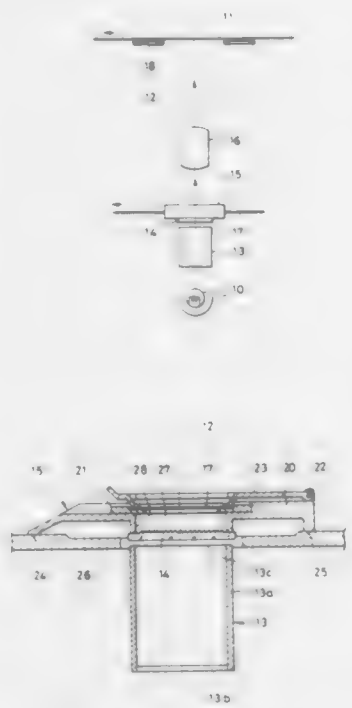
Kanji Tokuda, Kanagawa, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Aug. 9, 1990, Ser. No. 564,516

Claims priority, application Japan, Aug. 18, 1989, 1-213704

Int. Cl.[5] G03B *27/72*

U.S. Cl. 355—35 12 Claims



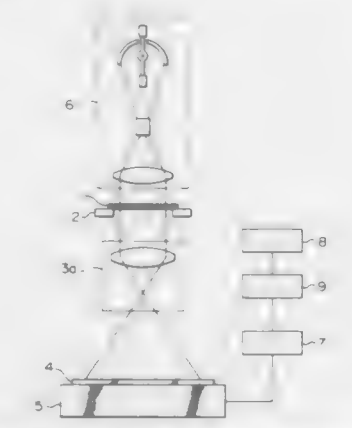
1. A photographic printer comprising:

a light source for emitting a printing light;

a film carrier for holding a photographic film to be printed; and

an anisotropic diffusion plate for diffusing light only in a

direction perpendicular to a lengthwise direction of said photographic film, said anisotropic diffusion plate being



fixed to said film carrier between said photographic film and said light source.

EXPOSURE METHOD AND APPARATUS

Tsutomu Tanaka, Yokohama; Yoshitada Oshida, Fujisawa; Masataka Shiba, Yokohama; Naoto Nakashima, Kurita, and Ryuichi Funatsu, Yokohama, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Aug. 31, 1989, Ser. No. 401,619
Claims priority, application Japan, Sep. 7, 1988, 63-222355
Int. Cl.[5] G03B *27/68, 27/42*
U.S. Cl. 355—52 **46 Claims**

1. An enlargement projection type exposure method comprising the steps of:

a. projecting a circuit pattern of a mask through a lens system onto a substrate before exposure to form a pattern;

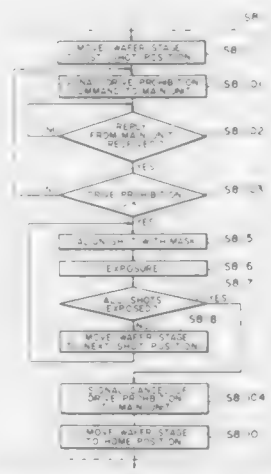
b. comparing the projected pattern on the substrate with design values therefor;

c. measuring an image distortion of the projected circuit pattern inherent in the lens system;

d. storing the measured image distortion in means for storing;

e. calculating control deviations of a surface level of the substrate to correct the measured image distortion stored in the storing means;

f. generating a fine displacement to elastically deform a shape of the substrate in accordance with the calculated control deviations; and



g. exposing the circuit pattern of the mask onto the substrate by projecting and enlarging the pattern through the lens system.

5,008,703

EXPOSURE APPARATUS AND CONTROL OF THE SAME

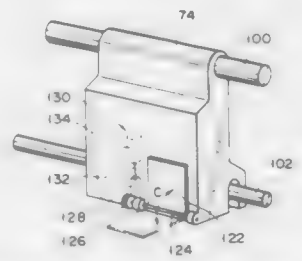
Eigo Kawakami, Ebina; Kunitaka Ozawa, Isehara; Koji Uda, Yokohama; Isamu Shimoda, Zama, and Shunichi Uzawa, Tokyo, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Sep. 6, 1989, Ser. No. 407,434
Claims priority, application Japan, Sep. 9, 1988, 63-224711
Int. Cl.[5] G03B *27/42*
U.S. Cl. 355—53 **9 Claims**

1. An exposure apparatus for printing, on a workpiece, a pattern formed on an original, said apparatus comprising:

exposure means for aligning the original and the workpiece, and/or for exposing the workpiece to the original with radiation energy;

driving means having no participation in the aligning operation and/or in the exposure operation of said exposure means; and



control means comprising means for determining whether the exposure means is performing the aligning and/or the exposure operation, said control means further comprising means for prohibiting the operation of said driving means on the basis of the determination when said exposure means performs the aligning operation and/or the exposure operation.

5,008,704

METHOD OF FORMING ORIGINAL IMAGE AND ADDITIONAL IMAGE, AND APPARATUS FOR PERFORMING SAME

Junji Watanabe, Yokohama, and Yuji Ishikawa, Tokyo, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Apr. 13, 1989, Ser. No. 337,738
Claims priority, application Japan, Apr. 15, 1988, 63-93106
Int. Cl.[5] G03G *15/00*
U.S. Cl. 355—202 **24 Claims**

1. An image forming apparatus for forming an image identical to an original image and an additional pattern image, both on a moving image carrier, having means for forming the image corresponding to the original image of the image carrier, and means for making visible the image and the additional pattern image which are formed on the image carrier, comprising:

means for entering data representing the specific pattern image;

means for generating pattern data corresponding to the data entered by said entering means; and

means for forming the pattern image corresponding to the pattern data generated by the pattern data generating means on the image carrier;

wherein said additional pattern image forming means is provided along a surface of the image carrier between an exposure section at which the image corresponding to the original image is formed on the image carrier and a developer at which both the image and the additional image are developed; and

said additional pattern image forming means is provided with shutter means for shutting off an incident light supplied to the exposure section, said shutter means having a width narrower than an illumination range of said additional pattern image forming means, measured in a direction normal to a direction in which the image carrier moves.

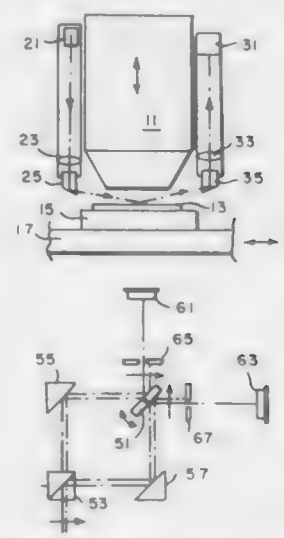
AUTOFOCUS SYSTEM FOR MICROLITHOGRAPHY

Glenn L. Sindledecker, Lexington, Mass., assignor to General Signal Corporation, Stamford, Conn.

Filed Apr. 23, 1990, Ser. No. 513,7[illegible]
Int. Cl.[5] G03B *27/52*
U.S. Cl. 355—43 **6 Claims**

1. In a microlithographic system, apparatus for relatively positioning a lens and an object which is to be exposed through the lens, said apparatus comprising:

means for illuminating, at a shallow angle, a spot on the surface of the object which is approximately on the lens axis, the position of the spot being thereby a function of the spacing between the lens and the object;



lens means for viewing said spot at a shallow angle and projecting a corresponding beam of light along a preselected path;

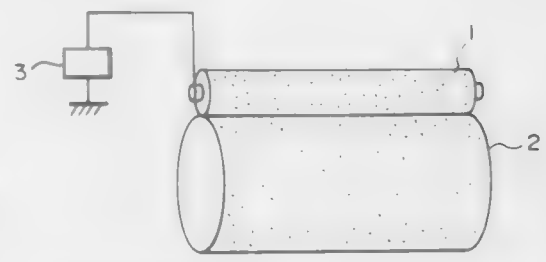
along said path of projection, a beam splitter for dividing said beam;

angularly oscillatable mirror means providing a pair of reflective surfaces in fixed relation to each other;

means for directing the split beams at respective ones of said reflective surfaces;

respective means for detecting each of the split beams after reflection from the respective reflective surfaces of said mirror means and generating respective pulse signals each

corresponding to the passing of the respective spot image past a predetermined position; and



servo means responsive to the relative timing of the two pulse signals for adjusting the relative positions of the lens and the object.

1. A copier in which documents are recycled, comprising:

a plurality of paper feeding means each for feeding paper sheets of a different size;

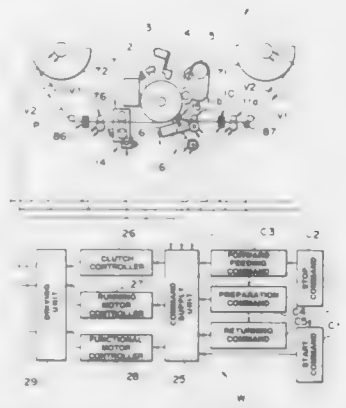
copying means for copying documents on paper sheets which individually match said documents in size;

a recycling automatic document feeding device loaded with a recycling stack of documents having a plurality of sizes for sequentially transporting said documents one by one to an image exposing station of said copying means;

a finisher for automatically binding copied paper sheets discharged from said copying means while regulating a stacking condition of said copied paper sheets;

document size sensing means for sensing the sizes of the documents being transported to the exposing station by said automatic document feeding device;

main control means for controlling said copying means and said automatic document feeding device such that a plurality of control operations are selectively performed;



finisher control means for controlling said finisher such that the copied paper sheets produced by the control operations of said main control means are bound and discharged,

wherein said plurality of control operations comprises a control operation in which said automatic document feeding device circulates all of the documents once while causing said document size sensing means to sense the sizes of all of said documents;

only the documents of a same size are copied while said automatic document feeding device circulates all of the documents once, the documents of the largest size or the smallest size sensed by said document sensing means being first; and

the copying of the documents of a same size is repeated a number of times associated with a number of sizes of documents sensed by said document size sensing means

ELECTRICALLY-ERASABLE, ELECTRICALLY-PROGRAMMABLE READ-ONLY MEMORY CELL WITH SELF-ALIGNED TUNNEL

Manzur Gill, Rosharon; Sung-Wei Lin, Houston; C. Rinn Cleavelin, Lubbock, and David J. McElroy, Rosenberg, all of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 219,529, Jul. 15, 1988, abandoned. This application Mar. 15, 1990, Ser. No. 494,042
Int. Cl.[5] H01L *29/68, 29/34;* **G11C** *11/34*
U.S. Cl. 357—23.5 **22 Claims**

1. An electrically erasable and programmable memory cell formed at a face of a semiconductor layer of a first conductivity type, comprising:

a thick insulator region selectably grown at said face from said semiconductor layer, a lateral margin of said insulator region being sloped with respect to said face, said thick insulator region having a thickness;

first and second source/drain regions implanted into said face with a dopant to be of a second conductivity type opposite said first conductivity type;

an oxide region grown on said first source/drain region, a lateral margin of said oxide region being sloped with respect to said face, said oxide region having a thickness, a junction of said sloped lateral margin of said oxide region and said sloped lateral margin of said thick insulator region creating a thin insulator transition area, at least a portion of said thin transition area adjoining said first source/drain region;

insulator material within said thin insulator transition area etched back to expose said semiconductor layer, a thin tunnel insulator grown on said exposed semiconductor layer within said thin transition area, a width of said thin tunnel insulator between said thick insulator region and said oxide region being independent of said thicknesses of said thick insulator region and said oxide region;

a channel area of said semiconductor layer extending between said first and said second source/drain regions, a floating gate formed over said tunnel insulator and insulatively disposed over at least a portion of said channel area; and

a control gate insulatively disposed adjacent said floating gate.

5,008,722

NON-VOLATILE MEMORY

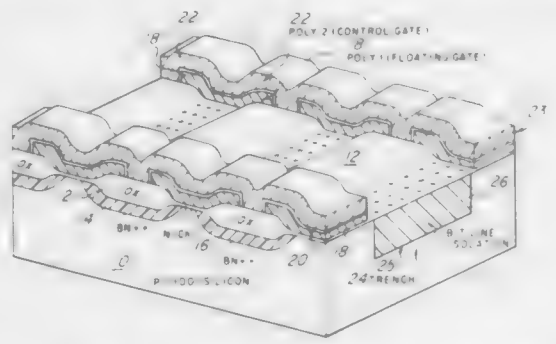
Agerico L. Esquivel, Dallas, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 31,329, Mar. 27, 1987, abandoned, which is a division of Ser. No. 844,915, Mar. 27, 1986, abandoned. This application May 31, 1989, Ser. No. 363,366
Int. Cl.[5] H01L *29/68, 29/00, 27/02;* **G11C** *11/34*
U.S. Cl. 357—23.5 **34 Claims**

1. A non-volatile memory cell array comprising:

a semiconductor body;

a plurality of bitline diffusions;



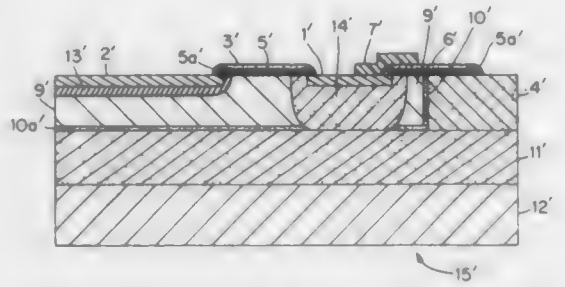
a plurality of wordlines which are not parallel to said bit line diffusions, said plural wordlines being respectively mutually parallel;

a plurality of floating gates underlying said wordlines at locations in between said bitline diffusions;

a plurality of transistor channel locations, each disposed substantially under a floating gate; and

a plurality of isolation trenches, each filled with a dielectric

material and extending into said semicondutor body, each of said trenches disposed between a pair of channel locations which are disposed between the same bitline diffusions and which are associated with adjacent wordlines, said trenches having edges aligned with said floating gates so that said floating gates do not overlap said trenches.



5,008,723

MOS THIN FILM TRANSISTOR

Leonard A. van der Have, Ames, Iowa, assignor to Kopin Corporation, Taunton, Mass.

Filed Dec. 29, 1989, Ser. No. 458,590
Int. Cl.[5] H01L 29/78, 49/02, 27/13
U.S. Cl. 357—23.7 12 Claims

1. In a metal-oxide semiconductor transistor having a drain region, and a source region formed in a crystalline semiconductor body layer provided over a planar surface of a semiconductor substrate wafer, and a gate electrode with a gate oxide beneath said gate electrode, the improvement comprising:

(a) a buried insulator layer formed on the semiconductor body between said crystalline semiconductor body layer and said substrate and covering said planar surface;

(b) said drain region comprising an upper drain region and a lower lightly doped region extending to said insulator layer and the dopant level of the lower region being less than that of the upper region and which is sufficient to cause conversion of the semiconductor body layer in the lower region; and

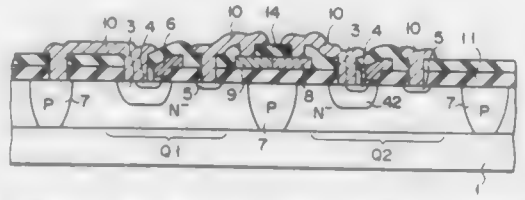
(c) said source region not extending to said insulator.

5,008,724

SEMICONDUCTOR DEVICE

Koji Shirai, Kawasaki, and Ken Kawamura, Yokohama, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Division of Ser. No. 160,764, Feb. 26, 1988. This application Jul. 3, 1990, Ser. No. 547,361
Claims priority, application Japan, Feb. 27, 1987, 62-44252
Int. Cl.[5] H01L 27/01, 29/06
U.S. Cl. 357—23.13 4 Claims



1. A semiconductor device comprising:

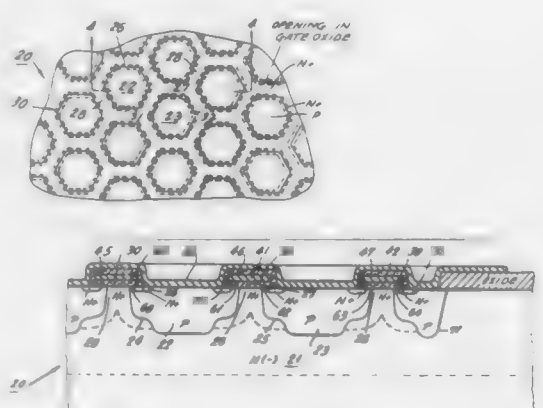
a semiconductor substrate of a first conductivity type;

an element isolation-layer of a second conductivity type, said element isolation-layer dividing said semiconductor substrate into first and second parts;

a first field effect transistor formed in the first part of said semiconductor substrate and having a source electrode, a drain electrode, and a gate electrode;

a second field effect transistor formed in the second part of the semiconductor substrate and having a source electrode, a drain electrode and a gate electrode;

an insulation film formed on said semiconductor substrate; and



a diode formed on said insulation film and having an anode electrode and a cathode electrode, said anode electrode being connected to said source electrode of said first field effect transistor and said cathode electrode being connected to said drain electrode of said second field effect transistor.

5,008,725

PLURAL POLYGON SOURCE PATTERN FOR MOSFET

Alexander Lidow, Manhattan Beach; Thomas Herman, Redondo Beach, and Vladimir Rumennik, El Segundo, all of Calif., assignors to International Rectifier Corporation, El Segundo, Calif.

Continuation of Ser. No. 243,544, Mar. 13, 1981, abandoned, which is a continuation of Ser. No. 38,662, May 14, 1979, abandoned. This application Dec. 23, 1988, Ser. No. 291,423
Int. Cl.[5] H01L 29/100, 29/780, 29/060, 27/100
U.S. Cl. 357—23.4 14 Claims

1. A high power MOSFET device having more than 1000 parallel-connected individual FET devices closely packed into a relatively small area comprising:

a thin wafer of semiconductor material having first and second spaced, parallel planar surfaces; at least a first portion of the thickness of said wafer which extends from said first planar surface consisting of an epitaxially deposited region of a first conductivity type;

a plurality of symmetrically disposed laterally distributed hexagonal base regions each having a second conductivity type formed in said epitaxially deposited region and extending for a given depth beneath said first planar surface;

said hexagonal base regions spaced at said first surface from surrounding ones by a symmetric hexagonal lattice of semiconductor material of said first conductivity type;

each side of each of said hexagonal base regions being parallel to an adjacent side of another of said hexagonal base regions;

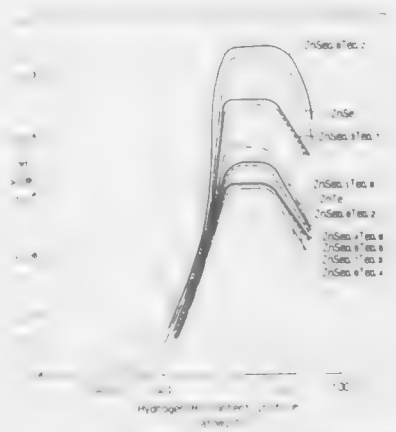
a hexagonal annular source region of said first conductivity type formed in an outer peripheral region of each of said hexagonal base regions and extending downwardly from said first planar surface to a depth less than the depth of said base regions;

an outer rim of each of said annular source regions being radially inwardly spaced from an outer periphery of its respective hexagonal base region to form an annular channel between each of said outer rims of said annular source regions and said symmetric hexagonal lattice of semiconductor material of said first portion of said wafer;

a common source electrode formed on said first planar surface and connected to a plurality of said annular source regions and to interiorly adjacent surface areas of their said respective hexagonal base regions;

a drain electrode connected to said second planar surface of said wafer;

an insulation layer means on said first planar surface and overlying at least said annular channels; and



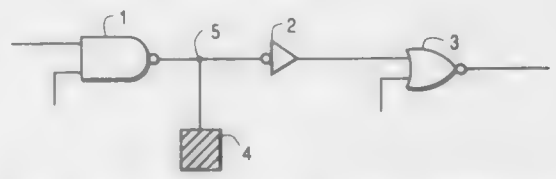
a polysilicon gate electrode atop said insulation layer means and operable to invert said annular channels.

5,008,726

PIN JUNCTION PHOTOVOLTAIC ELEMENT WITH P OR N-TYPE SEMICONDUCTOR LAYER COMPRISING NON-SINGLE CRYSTAL MATERIAL CONTAINING ZN, SE, TE, H IN AMOUNT OF 1 TO 4 ATOMIC % AND A DOPAND AND I-TYPE SEMICONDUCTOR LAYER COMPRISING NON-SINGLE CRYSTAL SI(H,F) MATERIAL

Katsumi Nakagawa, Nagahama; Shunichi Ishihara, Hikone; Masahiro Kanai, Tokyo; Tsutomu Murakami, Nagahama; Kozo Arao, Hikone; Yasushi Fujioka, and Akira Sakai, both of Nagahama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 18, 1988, Ser. No. 273,070
Claims priority, application Japan, Nov. 20, 1987, 62-291684
Int. Cl.[5] H01L 27/14, 31/00, 29/18, 29/161
U.S. Cl. 357—30 8 Claims



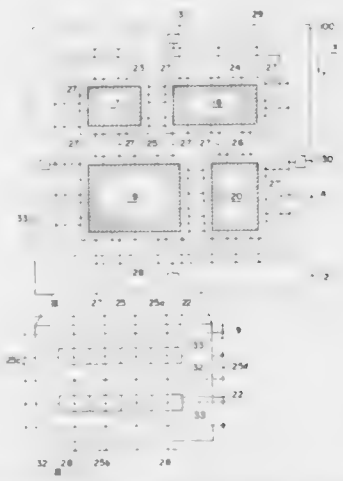
1. An improved pin junction photovoltaic element which comprises a p-type semiconductor layer, an i-type semiconductor layer and an n-type semiconductor layer being stacked, characterized in that at least one of said p-type semiconductor layer and said n-type semiconductor layer comprises a p-type or n-type film comprised of zinc atoms, selenium atoms, tellurium atoms and hydrogen atoms; the quantitative ratio of said selenium atoms to said tellurium atoms is in the range of from 1:9 to 3:7 in terms of atomic ratio in said film: the amount of said hydrogen atoms in said film is in the range of from 1 to 4 atomic %; said film contains crystal grain domains in a proportion of 65 to 85 vol % per unit volume: and said film contains a dopant of p-type or n-type; and said i-type semiconductor layer comprises a non-single crystal film containing silicon atoms and at least one kind of hydrogen atoms and fluorine atoms.

5,008,727

STANDARD CELL HAVING TEST PAD FOR PROBING AND SEMICONDUCTOR INTEGRATED CIRCUIT DEVICE CONTAINING THE STANDARD CELLS

Joji Katsura, Nishinomiya; Yoshiyuki Takagi, Osaka, and Shigeru Watari, Nara, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Kadoma, Japan

Filed Jan. 23, 1989, Ser. No. 299,686
Claims priority, application Japan, Jan. 22, 1988, 63-12924; May 16, 1988, 63-118522; Jun. 21, 1988, 63-153234; Oct. 14, 1988, 63-260045
Int. Cl.[5] H01L 27/02
U.S. Cl. 357—40 7 Claims



1. In a standard cell comprising a plurality of different types of standard cells, a circuit cell containing at least one test pad for probing comprising one of said plurality of standard cells.

5,008,728

SEMICONDUCTOR INTEGRATED CIRCUIT DEVICE HAVING AN IMPROVED ARRANGEMENT OF POWER SOURCE LINES

Takeshi Yamamura, Zama; Seiji Endo, Kawasaki; Kazuyuki Kawauchi, Yokohama, and Hiroki Korenaga, Ichikawa, all of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Sep. 14, 1989, Ser. No. 409,553
Claims priority, application Japan, Sep. 19, 1988, 63-234161
Int. Cl.[5] H01L 27/10
U.S. Cl. 357—45 19 Claims

1. A semiconductor integrated circuit device comprising:

a plurality of functional blocks each executing respective logic operations and arranged in an internal area on a semiconductor chip;

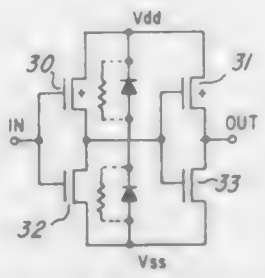
a first power source line arranged so as to surround said

internal area and said plurality of functional blocks, said first power source line being a closed-loop line;

second power source lines provided for each functional block of said plurality of functional blocks so as to surround each functional block on said chip, each of said second power source lines being a closed-loop line; and

third power source lines mutually connecting said second power source lines of said functional blocks and connecting said second power source lines and said first power source line, said third power source lines connecting said second power source lines with other second power source lines and said second power source lines with said first power source line at a plurality of portions on said first and second power source lines.

5,008,729



LASER PROGRAMMING OF SEMICONDUCTOR DEVICES USING DIODE MAKE-LINK STRUCTURE

Kendall S. Wills, and Paul A. Rodriguez, both of Houston, Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 237,260, Aug. 26, 1988, abandoned, which is a division of Ser. No. 621,837, Jun. 18, 1984, abandoned. This application Sep. 28, 1989, Ser. No. 415,445

Int. Cl.[5] H01L *27/02*

U.S. Cl. 357—51 18 Claims

1. An integrated circuit with laser programmable links in a semiconductor body comprising:

(a) a first PN junction formed in a region of said body having a first conductivity type with a programming area within the PN junction for receiving a laser beam, said first PN junction being separate and distinct from other electrical components and normally presenting a high resistance to current flow in a certain direction;

(b) a second PN junction formed in a region of said body having a second conductivity type with a programming area within the PN junction for receiving a laser beam, said second PN junction being separate and distinct from other electrical components and normally presenting a high resistance to current flow in a particular direction;

(c) a circuit including said first and second PN junctions and having an input and an output, said output clamped at a first level if said first PN junction is make-link programmed to form a low resistance to current flow in said certain direction, and said output clamped at a second level if said second PN junction is make-link programmed to form a low resistance to current flow in said particular direction.

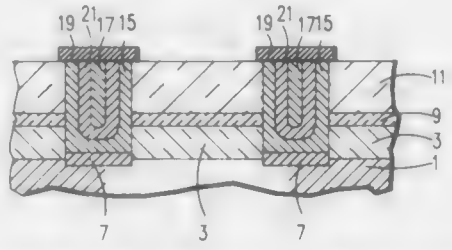
5,008,730

CONTACT STUD STRUCTURE FOR SEMICONDUCTOR DEVICES

Hung-Chang W. Huang, San Jose, Calif., and Paul A. Totta, Poughkeepsie, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Continuation of Ser. No. 252,836, Oct. 3, 1988, abandoned. This application Dec. 18, 1989, Ser. No. 455,790

Int. Cl.[5] H01L *23/48, 29/46, 29/64, 29/34*



U.S. Cl. 357—68 20 Claims

1. A contact stud structure for the connection of semiconductor device components formed in a substrate to the wiring for interconnecting said device components to other device components comprising:

(a) an insulator layer having an etch-stop layer deposited on said substrate, said insulator layer having at least one opening at the location of one of the semiconductor device components formed in said substrate,

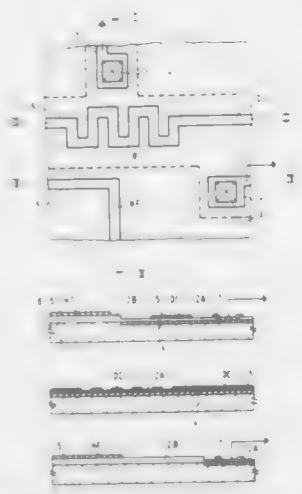
(b) a first metal layer deposited in said opening of said insulator layer and lining said opening in said insulator layer,

(c) a second metal layer deposited conformably onto said first metal layer, and

(d) a third metal layer deposited onto said second metal layer, said second and third metal layers being selected from the group of refractory metals with said third metal layer filling said opening in said insulator layer wherein said second and third metal layers are different from each other, and wherein said first metal layer makes a direct physical contact with the wiring for interconnecting said device components.

5,008,731

INTEGRATED SEMICONDUCTOR CIRCUIT WITH DECOUPLED D.C. WIRING



Robert E. J. Van De Grift; Martien Van Der Veen, and André J. Linssen, all of Eindhoven, Netherlands, assignors to U.S. Philip Corp., New York, N.Y.

Continuation of Ser. No. 235,250, Aug. 22, 1988, abandoned. This application Feb. 16, 1990, Ser. No. 483,290

Claims priority, application Netherlands, Aug. 26, 1987, 8701997

Int. Cl.[5] H01L *29/44*

U.S. Cl. 357—71 7 Claims

1. A monolithic integrated semiconductor circuit comprising a semiconductor body, a semiconductor region adjoining a surface of said semiconductor body and covered with an electrically insulating layer, the semiconductor region including a plurality of semiconductor circuit elements interconnected by conductor tracks disposed on the insulating layer and comprising the wiring of the circuit, said wiring including means for

carrying only D.C. information and comprising at least one first conductor track, and said wiring including means for carrying A.C. information and comprising at least one second conductor track, said insulating layer having a first layer portion under only said second conductor track and a second, substantially thinner adjacent layer portion under only said first conductor track and located alongside said first layer portion, said first and second conductor tracks being substantially on different levels, and a connection conductor connected to a part of the semiconductor surface, said second layer portion being located on said part of the semiconductor surface which is connected to said connection conductor.

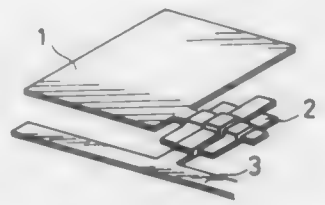
THIN FILM TWO TERMINAL ELEMENT



Hitoshi Kondō, Machida; Eiichi Ohta, and Yuji Kimura, both of Yokohama, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan

Filed Nov. 28, 1989, Ser. No. 442,731

Claims priority, application Japan, Dec. 9, 1988, 63-311391

Int. Cl.[5] H01L *23/48, 23/54*

U.S. Cl. 357—71 4 Claims

1. A thin film two terminal element, comprising:

an insulating substrate;

a transparent electrode disposed on the insulating substrate;

a lower metallic electrode disposed on the insulating substrate so as to partially overlap the transparent electrode and formed by a metal having a standard electrode potential in an aqueous solution equal to or higher than that of the transparent electrode;

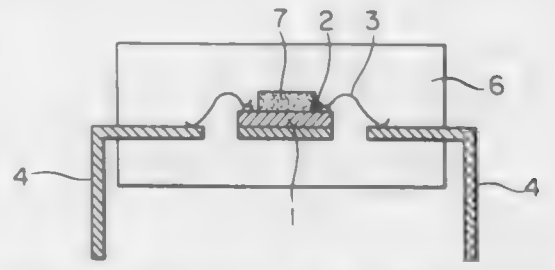
an insulating film disposed on the lower metallic electrode and formed by a hard carbon film including at least one of amorphous and microcrystal properties with carbon and hydrogen atoms as a main structure forming element; and

an upper metallic electrode disposed on the insulating film and formed by a metal having a standard free energy in the production of an oxide at a room temperature equal to or greater than that in the production of H_2O or CO_2.

5,008,733

SEMICONDUCTOR DEVICE

Katsutoshi Mine; Yoshitsugu Morita, and Satoshi Miyamae, all of Ichihara, Japan, assignors to Toray Silicone Company, Limited, Tokyo, Japan



Continuation of Ser. No. 629,823, filed as PCT JP83/00405 on Oct. 11, 1983. This application Feb. 26, 1988, Ser. No. 161,164 Feb. 26, 1988, Ser. No. 161,164

Claims priority, application Japan, Oct. 11, 1982, 57-196928

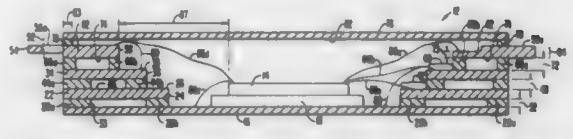
Int. Cl.[5] H01L *23/28, 23/30*

U.S. Cl. 357—72 15 Claims

1. A process for forming a semiconductor device having a protective coating which comprises applying a heat-bondable, previously cured silicone to at least a major portion of the

surface of the semiconductor device and heat-bonding the silicone to said surface.

5,008,734



STADIUM-STEPPED PACKAGE FOR AN INTEGRATED CIRCUIT WITH AIR DIELECTRIC

Vivek B. Dutta, Cupertino; Jeffrey C. Demmin, Mt. View; Mark L. DiOrio, and Jon T. Ewanich, both of Cupertino, all of Calif., assignors to National Semiconductor Corporation, Santa Clara, Calif.

Filed Dec. 20, 1989, Ser. No. 454,802

Int. Cl.[5] H01L *23/12, 23/48*

U.S. Cl. 357—74 16 Claims

1. A package for an integrated circuit component, the component having a plurality of contact pads on its surface, the package comprising:

means for supporting said integrated circuit component;

a first layer, connected to said means for supporting, having at least a first electrically conductive portion;

a second layer with at least a first edge, said second layer having at least a first area which overlies and is spaced from said first layer, said second layer having at least a second electrically conductive portion;

means for providing electrical connection between at least one of said contact pads and at least one of said first electrically conductive portion and said second electrically conductive portion; and

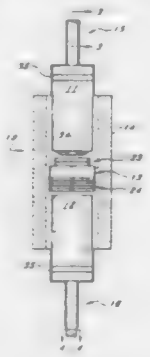
at least a first dielectric material positioned between said first area and said at least part of said first layer, wherein said first dielectric material is a gaseous material.

5,008,735

PACKAGED DIODE FOR HIGH TEMPERATURE OPERATION

John A. Edmond, Apex; Douglas G. Waltz, Durham, both of N.C.; Muni M. Mitchell, Huntington, N.Y.; Mohammad Sedigh, New York, and Roman Hamerski, Smithtown, both of N.Y., assignors to General Instrument Corporation, N.Y. and Cree Research, Inc., N.C.

Filed Dec. 7, 1989, Ser. No. 447,213



Int. Cl.[5] H01L *23/02*

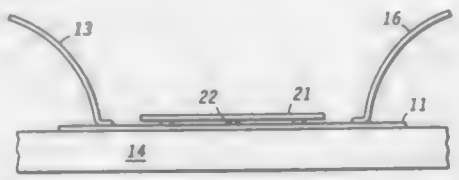
U.S. Cl. 357—74 29 Claims

1. A packaged diode suitable for operation at temperatures about 200° C. and during temperature excursions between −65° C. and at least 350° C., the packaged diode comprising:

a diode formed of silicon carbide and having respective p and n portions with a p-n junction therebetween, and that is stable and that will exhibit satisfactory diode character-

istics at temperatures greater than 200° C. and over temperature excursions between −65° C. and 350° C.;
ohmic contacts to opposite sides of said junction diode for making electrical contact to the respective p and n portions of said junction diode, and formed of materials that can physically withstand temperature excursions between −65° C. and 350° C. while maintaining physical and electrical contact with said diode and while avoiding unfavorable physical, chemical and metallurgical reactions with adjacent materials at such temperatures and during such temperature excursions;
an electrode adjacent each of said ohmic contacts and in electrical contact therewith and formed of an electrically conductive material that has a coefficient of thermal expansion similar to the coefficient of thermal expansion of silicon carbide for providing structural support to said junction diode and electrical contact with said junction diode;
a lead to each of said electrodes and in contact therewith opposite each said electrode's contact with said diode,

each said lead being formed of an electrically conductive material and joined to said electrode by a brazing alloy that comprises an alloy of gold and nickel in which the amount of gold present by weight is greater than the amount of nickel present by weight by an amount sufficient for said alloy to remain malleable and maintain an integral joint between said electrodes and said leads when said electrodes and said leads have thermal coefficients of linear expansion that differ substantially from one another when said electrodes and leads are subjected to repeated thermal excursions between temperatures of about −65° C. to 350° C. or greater; and
a glass package surrounding said diode and at least portions of said electrodes for maintaining said electrodes in physical and electrical contact with said ohmic contacts, said package being formed of a glass that has a coefficient of expansion similar enough to the coefficient of expansion of said electrode material for the resulting packaged diode to remain integral when subjected to repeated thermal excursions between temperatures of about −65° C. to 350° C. or greater.



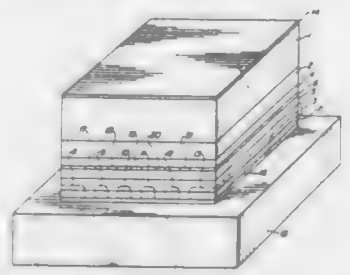
5,008,736

THERMAL PROTECTION METHOD FOR A POWER DEVICE

Robert B. Davies, and Robert B. Jarrett, both of Tempe, Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Nov. 20, 1989, Ser. No. 438,382
Int. Cl.[5] H01L *23/36*
U.S. Cl. 357—75 **11 Claims**

1. A thermally protected switch comprising:
a first chip having the switch formed thereon and having an electrode wherein the switch is on when a control signal is present on the electrode; and a second chip having control circuitry formed on a top side, the control circuitry further comprising a temperature sensitive portion, a means for shunting the control signal from the electrode when the temperature sensitive portion is a predetermined temperature, and a means for thermally coupling the first chip to the temperature sensitive portion of the control circuitry, wherein the means for thermally coupling is



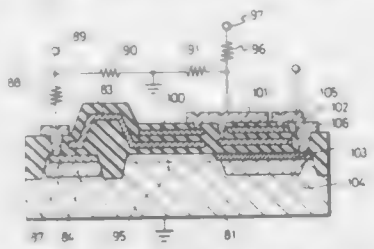
located over a primary heat generation point of the first chip and the second chip is mounted on the first chip so that active areas of the two chips face each other.

5,008,737

DIAMOND COMPOSITE HEAT SINK FOR USE WITH SEMICONDUCTOR DEVICES

Robert D. Burnham, Wheaton, and Ricardo S. Sussmann, Naperville, both of Ill., assignors to Amoco Corporation, Chicago, Ill.

Filed Oct. 11, 1988, Ser. No. 255,259
Int. Cl.[5] H01L *23/36*
U.S. Cl. 357—81 **16 Claims**



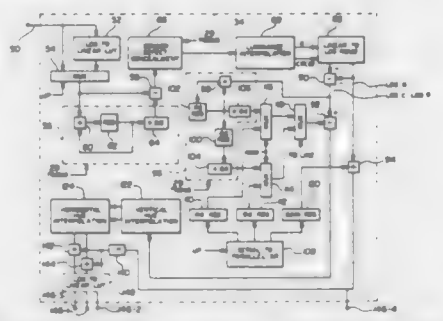
1. A structure comprising a semiconductor in thermal contact with a heat-conductive composite which is comprised of a metal matrix in which diamond particles have been thoroughly mixed and embedded wherein the proportions of said diamond particles and said metal are selected to form a composite having a coefficient of thermal expansion which is substantially the same as that of said semiconductor, and wherein said diamond particles have a largest dimension which is smaller than about 3 μm.

5,008,738

SEMICONDUCTOR VARIABLE CAPACITANCE ELEMENT

Yoshio Hattori, Tokyo, Japan, assignor to Seiko Instruments Inc., Japan

Filed Nov. 9, 1988, Ser. No. 269,435
Claims priority, application Japan, Nov. 11, 1987, 62-284862
Int. Cl.[5] H01L *29/78, 29/68, 29/92*
U.S. Cl. 357—23.6 **15 Claims**



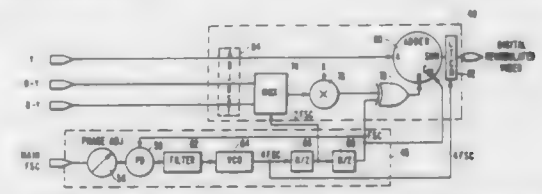
1. A semiconductor variable capacitance element electrically connectable to an external circuit, comprising:
a semiconductor substrate having a major surface and a capacitive region under the major surface of the semiconductor substrate;
an insulating film disposed on the major surface of the semiconductor substrate;
a floating electrode disposed on the insulating film and electrically insulated from the semiconductor substrate through the insulating film for storing electric charge to build up an electrical potential in the floating electrode according to the stored amount of electric charge to thereby determine the amount of capacitance of the capacitive region;
a charge control electrode formed in the semiconductor substrate for injecting electric charge into the floating electrode;
a first capacitance electrode electrically insulated from the semiconductor substrate through the insulating film and capacitively coupled to the floating electrode;
blocking means for blocking an application of a DC voltage from the external circuit between the first capacitance electrode and the capacitive region; and
bias means for applying a bias voltage between the capacitive region and the first capacitance electrode.

5,008,739

REAL-TIME DIGITAL PROCESSOR FOR PRODUCING FULL RESOLUTION COLOR SIGNALS FROM A MULTI-COLOR IMAGE SENSOR

Lionel J. D'Luna; Robert H. Hibbard, and Kenneth A. Parulski, all of Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Feb. 13, 1989, Ser. No. 310,419
Int. Cl.[5] H04N *9/07, 9/04*
U.S. Cl. 358—21 R **9 Claims**



1. A digital circuit for generating a fully interpolated color signal from a single, multi-color image sensor having a two-dimensional pattern of photosites producing luminance and chrominance image signals corresponding to discrete, and respectively separate, pixel locations, said circuit comprising:
(a) a first digital processing section for operating upon signals that are linearly related to the sensor signal level; said first section including:
a black reference clamp for establishing a black reference value from the average black signal value of a predetermined number of pixels on the image sensor;
means for subtracting the black reference value from each image signal;
means for replacing image signals obtained from defective pixels with image signals from nearby pixels of the same color; and
means for interpolating additional luminance values for the pixel locations that produce chrominance signals, said interpolating means combining the signal values of nearby luminance pixels according to a predetermined algorithm, said interpolating means providing therefrom a fully interpolated stream of luminance signals and an uninterpolated stream of chrominance signals; and
(b) a second digital processing section for operating upon signals that are logarithmically related to the sensor signal level, said second section including:
means for generating logarithmic luminance and chrominance signals from the fully interpolated luminance image signals and from the uninterpolated chrominance image signals;
means for generating a log hue signal from the log chrominance and log luminance signals;
means operating upon the log hue signal for controlling white balance according to an offset value subtracted from the log hue signal;
means operating upon the log luminance image signal to modify signal gain according to a gain offset value input to the second processing section;
means for interpolating additional hue values for the pixel locations that produce luminance signals, said hue interpolating means combining the hue signal values of nearby chrominance pixel locations according to a predetermined algorithm; and
means for generating a fully interpolated color signal from said interpolated hue and luminance image signals.

5,008,740

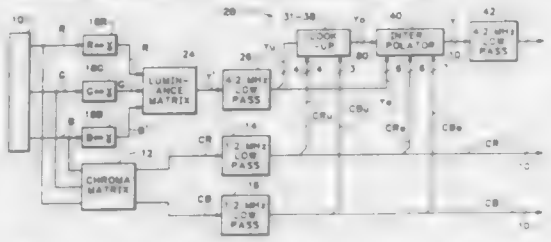
APPARATUS AND METHOD FOR CREATING DIGITALLY REMODULATED VIDEO FROM DIGITLS COMPONENTS

Larry G. Phillips; Edwin R. Meyer, and David C. Greene, all of Knoxville, Tenn., assignors to North American Philips Corp., New York, N.Y.

Filed Apr. 14, 1989, Ser. No. 339,044
Int. Cl.[5] H04N *9/65*
U.S. Cl. 358—23 **18 Claims**

1. An encoder for remodulating digital video luminance (Y) and color difference components (R−Y, B−Y), comprising:
(a) converting means for converting said digital color difference components into two's complement format;
(b) means for conducting a digital quadrature modulation on said digital color difference to effectively provide quadrature modulated signals R−Y, B−Y, −(R−Y), and −(B−Y) in a desired repeating sequence;
(c) addition means for digitally adding said luminance signal to said digital quadrature modulated signals, the sum of said luminance and quadrature modulated color difference color difference signals providing a digital remodulated video signal suitable for conversion into an analog remodulated video signal; and
(d) said means for conducting a digital quadrature modulation comprising a first clock signal having high and low polarities, an exclusive OR gate means coupled to said two's complement format color difference components and to said first clock signal for passing said two's complement color difference component when said first clock signal is of low polarity, and for inverting the bits of said two's complement color difference component when said first color signal is of high polarity, and said means for conducting a digital quadrature modulation further comprising an adding means coupled to an output of said exclusive OR gate means and to said first clock signal for adding said first clock signal to the output of said exclusive OR gate means.

5,008,741



METHOD AND APPARATUS FOR PROCESSING COMPONENT SIGNALS TO PRESERVE HIGH FREQUENCY INTENSITY INFORMATION

David L. Knierim, Wilsonville, and Gary L. Brown, Lake Oswego, both of Oreg., assignors to Tektronix, Inc., Beaverton, Oreg.

Filed Apr. 7, 1989, Ser. No. 334,829
Int. Cl.[5] H04N *9/64, 11/14*
U.S. Cl. 358—32 **26 Claims**

1. A method of processing a video signal in component form, comprising:

(a) generating two chroma component signals which have a selected bandwidth and are GAMMA corrected,
(b) generating a linear luminance component signal which has a greater bandwidth than the chroma component signals and is not GAMMA corrected, and

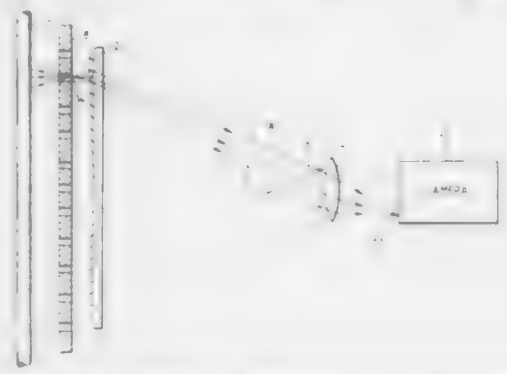
(c) GAMMA correcting the linear luminance component signal by combining the linear luminance component signal and the chroma component signals to provide a GAMMA-corrected luminance component signal having a greater bandwidth than the GAMMA-corrected chroma component signals.

5,008,742

DOT SIGNAL CONVERSION METHOD

Takao Shigaki, and Osamu Shimazaki, both of Kaisei, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Continuation-in-part of Ser. No. 319,907, Mar. 6, 1989, abandoned, which is a continuation of Ser. No. 924,817, Oct. 30, 1986, abandoned. This application Nov. 9, 1989, Ser. No. 433,442
Claims priority, application Japan, Nov. 9, 1985, 60-251572
Int. Cl.[5] H04N 1/46
U.S. Cl. 358—79 5 Claims



1. A dot signal conversion method comprising the steps of:
reading a color original for three color separation by an image input device to obtain density signals of respective colors;
converting the density signals of respective colors from the image input device into equivalent neutral density signals and then into dot signals, wherein said dot signals include dot percentages for color specimens, and wherein said neutral density signals are color-processed according to a predetermined formula and then converted to said dot signals by using dot signal generating tables, and
feeding the dot signals into an image output device, said image output device having been used to prepare Y, M, C, and black color specimens in accordance with input test dot signals, whereby said Y, M, and C color specimens generate gray when the input dot signals are input to said output device so as to make color separation films Y, M and C of which dot percentages are changed, and Y, M and C printing plates are made based upon said color separation films and printing is performed by overlapping said Y, M and C printing plates, wherein said dot signal generating tables are prepared for each color Y, M, C, and black from the relationship between the visual density and dot percentage of each Y, M, C and black color specimen prepared in accordance with the input test dot signals.

TELECENTRIC IMAGING SYSTEM OPTICAL INSPECTION MACHINE USING THE SAME AND METHOD FOR CORRECTING OPTICAL DISTORTION PRODUCED THEREBY

Yigal Katzir, Holon, and Joseph Kochba, Yavne, both of Israel, assignors to Orbot Systems Ltd., Yavne, Israel

Filed Mar. 17, 1989, Ser. No. 324,716
Claims priority, application Israel, Mar. 24, 1988, 85862
Int. Cl.[5] H04N 7/18
U.S. Cl. 358—101 10 Claims

4. An optical inspection machine of the line-scanning type employing a telecentric imaging system, comprising a column capable of translatory movement, an object stage capable of translatory movement in a direction substantially perpendicular to the translatory movement of said column, a transparent window on said object stage, means to mount said object on said window an extended source of light behind said window, a line-scanning camera mounted on the head of said column, an objective lens adapted to image said object on the sensor plane of said camera, a field lens, optically coaxial with said objective lens and located in proximity to said object to be imaged and an aperture stop for said field lens, wherein said field lens is a Fresnel lens, said aperture stop is located at the back focal point of said Fresnel lens and is constituted by the entrance pupil of said imaging objective, whereby the system objective/field lens is rendered telecentric.

METHOD AND APPARATUS FOR PICTURE MOTION MEASUREMENT USING PICTURE CORRELATION AS A FUNCTION OF DISPLACEMENT

Gerard M. X. Fernando, Croydon, England, and Aldo Giardina, Geneva, Switzerland, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 2, 1989, Ser. No. 388,421
Claims priority, application United Kingdom, Sep. 5, 1988, 8820837
Int. Cl.[5] H04N 7/12
U.S. Cl. 358—105 5 Claims

1. A method of picture motion measurement comprising correlating two pictures to determine correlation as a function of displacement thereby to determine one or more peak correlation values corresponding to respective motion vectors, said method being characterized by the steps of:-
(i) locating a sample point of maximum correlation value in said correlation function associated with a peak correlation value,
(ii) determining from the sample points immediately surrounding said point of maximum value a second sample point which is associated with the steepest gradient between said surrounding and said maximum value sample points,
(iii) determining the difference (d1) in magnitude between that of said maximum sample point and that of said second sample point, or other quantity proportional thereto,
(iv) determining the difference (d2) in magnitude between that of said maximum sample point and that of a third of said surrounding sample points which is colinear with said maximum and said second sample point but remote from

said second sample point or other quantity proportional thereto, and
(v) comparing the results produced by steps (iii) and (iv) to determine the location of said peak correlation value associated with said sample point of maximum correlation value to an accuracy better than the interval between adjacent sample points.

CLOCK SYNCHRONIZED DIGITAL TV MOTION DETECTOR

Jon S. Willoughby, Oxford, Pa., assignor to Burle Technologies, Inc., Wilmington, Del.

Filed Dec. 21, 1989, Ser. No. 454,179
Int. Cl.[5] H04N 7/18
U.S. Cl. 358—105 4 Claims

1. In a TV motion detector circuit of the type which includes an edge detector circuit receiving and processing a TV video signal, with an edge detector circuit output connected to and feeding an output signal to a digital edge memory which stores the edge detector circuit output signal for a selected number of TV sweep cycles before producing an output signal representing the edge detector circuit output signal on digital edge memory output, with the digital edge memory connected to and driven by an address counter, and with the address counter connected to and driven by a clock signal source, the improvement comprising:
an EXCLUSIVE OR circuit with two inputs and an output, with a first input interconnected with the output of the edge detector circuit and the second input interconnected with the output of the digital edge memory;
a shift register with a signal input, a clock input, and at least two outputs, the clock input interconnected with the clock signal source, and the signal input interconnected with the output of the EXCLUSIVE OR circuit; and
a multiple input circuit which produces an alarm output signal when all its inputs have the same input signal, with each of its inputs interconnected with an output of the shift register.

HIGH DEFINITION TELEVISION SIGNAL PROCESSING INCLUDING SUBSAMPLING AND MOTION COMPENSATION

Philippe Bernard, and Marie-Jean Colaitis, both of Cesson Sevigne Cedex, France, assignors to Centre National d'Etudes des Telecommunications, Paris, France

Filed Jun. 16, 1989, Ser. No. 366,884
Claims priority, application France, Jun. 16, 1988, 88 08096
Int. Cl.[5] A04N 7/12
U.S. Cl. 358—133 9 Claims

1. A method of broadcasting high definition television programs over a channel having a narrow bandwidth, comprising:
subjecting a signal resulting from analysis of a source picture to spatio-temporal subsampling and to non-linear movement compensation filtering, and transmitting the points representing a same picture frame as signals over at least two successive transmission fields (t1, t2); and transmitting, along with said signals, assistance data (DA) defining a field of motion vectors,
further comprising, for improving a compatible picture displayed by a receiver devoid of means for the assistance data, subjecting each of the transmission fields other than the first transmission field (t1) corresponding to a same analyzed source frame to a predetermined time attenuation in the direction of motion of picture areas having a high time activity so as to give rise to a modified transmission field (t'2), the degree of said attenuation being selected responsive to the respective motion vector and leading to assigning, to each point of said areas, a position intermediate between its position in the analyzed source frame and its position anticipated in the direction of motion.

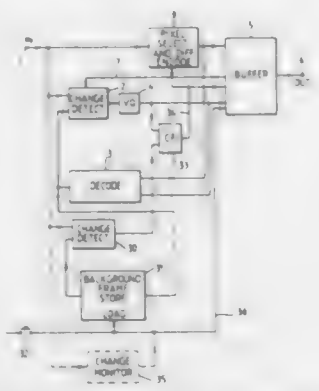
SIGNAL CODING

Michael D. Carr, and Anthony R. Leaning, both of Ipswich, England, assignors to British Telecommunications public limited company, United Kingdom



PCT No. PCT/GB88/00871, § 371 Date Jun. 2, 1989, § 102(e) Date Jun. 2, 1989, PCT Pub. No. WO89/04101, PCT Pub. Date May 5, 1989

PCT Filed Oct. 17, 1988, Ser. No. 364,442

Claims priority, application United Kingdom, Oct. 19, 1987, 8724789

Int. Cl.[5] H04N *7/13*

U.S. Cl. 358—136 **10 Claims**

1. A method of coding an image comprising, for each of a plurality of blocks of an image:

(i) comparing picture elements of the block with those of the corresponding block of a previously coded image to produce a matrix of values each indicating whether the corresponding element is, in accordance with a predetermined criterion, deemed to have changed between the two images;

(ii) matching the matrix to one of a predetermined set of such matrices each of which identifies a region of the block as being deemed to have changed, and generating a codeword identifying that one matrix of the set;

(iii) comparing picture elements of the block with those of the corresponding block of a reference image composed of blocks from at least one earlier frame to determine whether the block is, in accordance with a predetermined criterion, deemed to have changed between the two images;

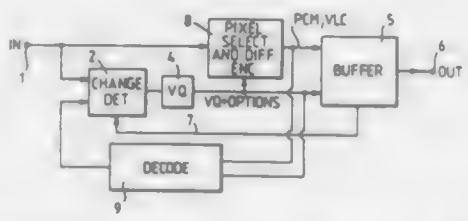
(iv) coding for output those elements within the identified region, unless all the elements within the region are identified by comparison step (iii) as being unchanged relative to the reference image, whereupon a codeword indicating this is generated.

5,008,748

SIGNAL CODING

Michael D. Carr; Maurice G. Perini; John O'Donnell; Anthony B. Leaning, and Anthony R. Leaning, all of Ipswich, England, assignors to British Telecommunications public limited company, United Kingdom

PCT No. PCT/GB88/00709, § 371 Date Jun. 2, 1989, § 102(e) Date Jun. 2, 1989, PCT Pub. No. WO89/02206, PCT Pub. Date Mar. 9, 1989



PCT Filed Aug. 26, 1988, Ser. No. 364,441

Claims priority, application United Kingdom, Aug. 28, 1987, 8720390; Oct. 19, 1987, 8724790

Int. Cl.[5] H04N *7/13*

U.S. Cl. 358—136 **12 Claims**

1. A method of coding an image comprising, for the image area or for each of a plurality of individual areas thereof, selecting that one of a plurality of possible sequences of the picture elements within the area which has the highest correlation between successive elements in the sequence, and supplying representations of those elements to an output; wherein some of the representations are the differences between values

of the relevant element and a prediction based on the value of at least the immediately preceding element in the selected sequence.

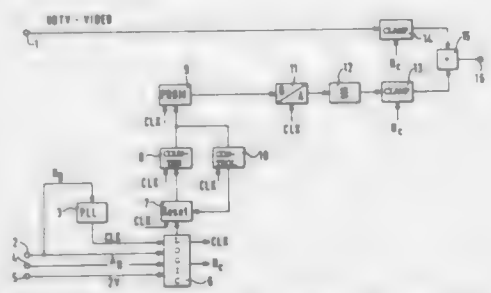
METHOD AND APPARATUS FOR GENERATING AN AUXILIARY TIMING SIGNAL IN THE HORIZONTAL BLANKING INTERVAL OF A VIDEO SIGNAL



Holger Ruckert, Reinheim, Fed. Rep. of Germany, assignor to BTS Broadcast Television Systems GmbH, Darmstadt, Fed. Rep. of Germany

Filed Mar. 2, 1990, Ser. No. 487,533

Claims priority, application Fed. Rep. of Germany, Mar. 25, 1989, 3909845; Mar. 25, 1989, 3909847

Int. Cl.[5] H04N *7/04, 5/06*

U.S. Cl. 358—147 **13 Claims**

10. Apparatus for inserting an auxiliary signal into the horizontal blanking intervals of an analog video signal, said auxiliary signal including reference oscillations at a frequency locked to a clock frequency itself locked to the horizontal scan frequency, comprising:

means (3) for deriving a signal (CLK) of said clock frequency from said horizontal scan frequency of said video signal;

means (6, 7, 8, 10) activated by said clock frequency signal (CLK) only during said blanking intervals, responsive to said clock frequency signal (CLK), a horizontal blanking interval signal (A_H) and a vertical synchronizing signal (2V) both derived from said video signal, for producing a sequence of address signals in each of said horizontal blanking intervals;

read only memory means (9) responsive to said address signals for generating a digital signal representative of said auxiliary signal;

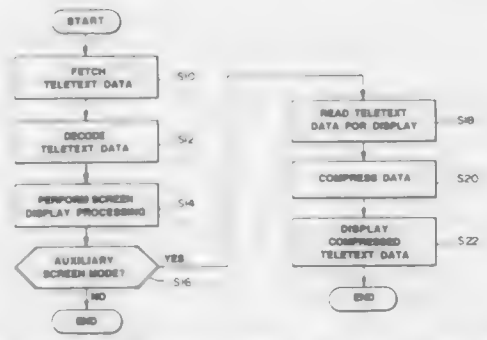
means (11) for converting said digital signal representative of said auxiliary signal into an analog signal;

means (12) for low-pass filtering said analog signal to produce said auxiliary signal, and

means (15) for inserting said auxiliary signal into the horizontal blanking intervals of said analog video signal.

5,008,750

TELEVISION RECEIVER WITH TELETEXT RECEIVING FUNCTION AND METHOD OF SUPERIMPOSING TELETEXT PICTURE ON TELEVISION PICTURE



Takao Gomikawa, Saitama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Feb. 28, 1990, Ser. No. 486,232

Claims priority, application Japan, Feb. 28, 1989, 1-49037

Int. Cl.[5] H04N *7/087*

U.S. Cl. 358—147 **10 Claims**

10. A method for superimposing a teletext picture on a television picture, comprising the steps of:

receiving television broadcast signals including teletext data

detecting video signals from said received signals;

displaying the video signals detected by said detecting step;

extracting said teletext data from said

detected video signals;

temporarily storing said extracted teletext data;

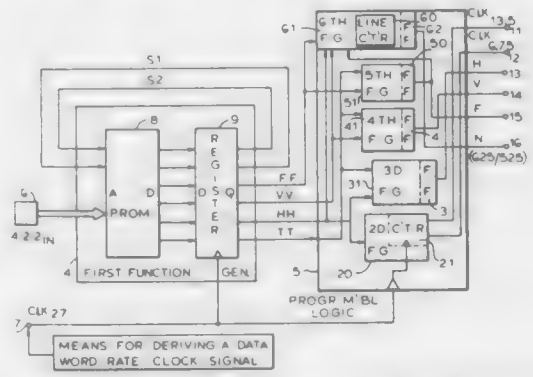
dividing the stored teletext data for one picture into block data corresponding to picture blocks of a predetermined size and judging the densities of the respective blocks with the two blocks adjacent in the horizontal direction of each of said respective block as a unit;

selecting any one of a plurality of compressing means for compressing said block data by different rules; and

displaying as an auxiliary picture the teletext data compressed by the selected compressing means.

5,008,751

APPARATUS SYSTEM FOR DERIVING SYNCHRONIZING INFORMATION FROM A DIGITAL VIDEO SIGNAL



Gerhard Wischermann, Weiterstadt, Fed. Rep. of Germany, assignor to BTS Broadcast Television Systems GmbH, Darmstadt, Fed. Rep. of Germany

Filed Feb. 8, 1990, Ser. No. 477,293

Claims priority, application Fed. Rep. of Germany, Feb. 24, 1989, 3905669

Int. Cl.[5] H04N *5/04*

U.S. Cl. 358—148 **18 Claims**

1. Apparatus system for deriving synchronizing information from a digital video signal containing said synchronizing information in sync words, the arrival of each of which is announced by a preceding data word preamble of predetermined content, said system comprising:

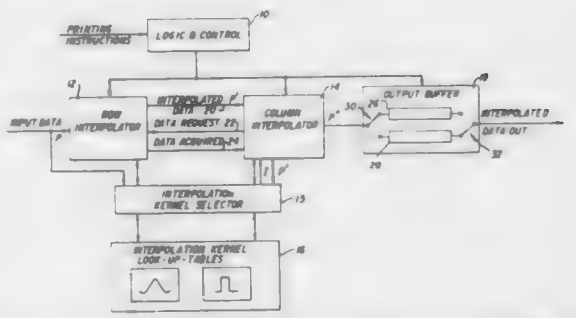
means for deriving a data word rate clock signal (CLK_{27}) from said video signal;

a clocked first function generator (4), having a clock input connected to said means for deriving said clock signal, for clocking of said function generator thereby, and having a video signal input and a multi-bit output;

means for supplying said video signal ($4{:}2{:}2_{IN}$) to said video signal input of said function generator,

said function generator having an internally stored program for producing at respective bit outputs of said multi-bit output, in response to said video signal, the contents of the bit places of said sync words of said video signal containing synchronizing information (FF, VV, HH) and an additional one-bit signal (TT) which designates when a sync word is present.

5,008,752



DIGITAL IMAGE INTERPOLATOR WITH MULTIPLE INTERPOLATION ALGORITHMS

Lance Van Nostrand, Rochester, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.

Filed Jun. 16, 1989, Ser. No. 368,458

Int. Cl.[5] H04N *5/14*

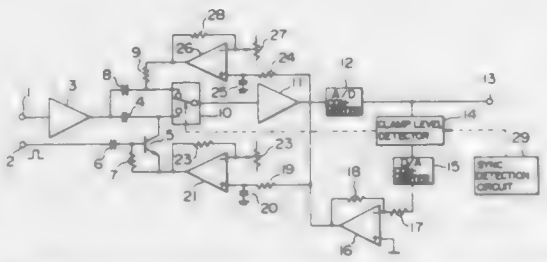
U.S. Cl. 358—160 **4 Claims**

1. Apparatus for performing interpolation on an input digital image signal having pixel values representing rows and columns of pixels, to produce an interpolated digital image that has more (magnified) or fewer (reduced) pixels, comprising:

a. an interpolation kernel lookup table containing first and second interpolation kernel coefficients;

b. row interpolator means for receiving the input digital image signal, and interpolating in row direction, by retrieving interpolation coefficient values from the interpolation kernel lookup table, and applying the coefficient values to a subset of pixel values in a row to produce interpolated pixel values;

c. column interpolator means for receiving rows of interpolated pixel values from the row interpolator means and preforming interpolation in a column direction by retrieving interpolation coefficient values from the interpolation lookup table, and applying the coefficient values to subsets of pixel values in a column; and



d. interpolation selection means for receiving the input digital image signal input to the row interpolator means, and in response thereto, for selecting said first or second interpolation kernel for row interpolation, and for receiving the interpolated signal values from the row interpolation means, and in response thereto, for selecting said first or second interpolation kernel for column interpolation.

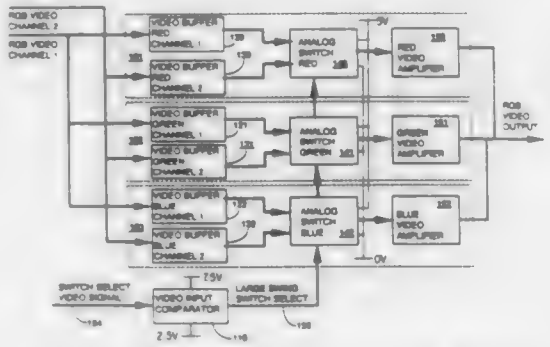
5,008,753

CLAMP SYSTEM USED FOR TELEVISION SIGNAL

Hiromu Kitaura, Osakasayama; Mitsuo Isobe, Osaka; Isao Kawahara, Hirakata; Yoshio Hiraiwchi, Osaka; Yuichi Ninomiya; Yoshimichi Ohtsuka, both of Kawasaki, and Yoshinori Izumi, Tokyo, all of Japan, assignors to Matsushita Electric Industrial Co., Osaka and Nippon Hoso Kyokai, Tokyo, both of, Japan

Filed Feb. 23, 1989, Ser. No. 314,090
Int. Cl.[5] H04N *5/18*
U.S. Cl. 358—171 7 Claims

1. A television signal clamp system comprising: a first clamp means for clamping an input television signal once every N horizontal blanking periods by a clamp pulse to a an externally supplied clamp control voltage to provide a first clamped television signal output, N being a positive integer of one or more, a second clamp means for controlling a DC potential of said input television signal by adding an externally applied clamp control voltage to the input television signal to provide a second clamped television signal output, a switch means for selecting one of said first clamp means and said second clamp means, a clamp level detection means for detecting a DC potential of a reference potential signal period existing in one of said first clamped television signal output and said second clamped television signal output of said first clamp means and said second clamp means selected by said switch means and a control voltage production means, cooperating with said clamp level detection means, for producing said clamp control voltages for the first clamp means and said second clamp means, wherein said switch means selects the first clamp means at a time of throwing in power and switching channels when prompt clamp start is required, and said switch means selects the second clamp means under normal conditions.



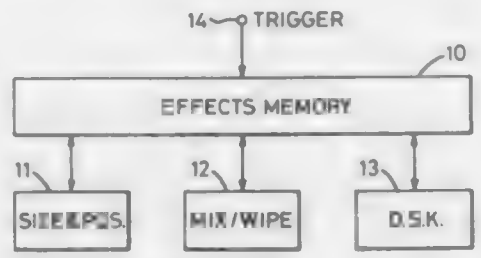
5,008,754

ANALOG CONTROLLED MIXER

Neil F. Trevett, Kingston upon Thames, and Malcolm E. Wilson, Bridport, both of England, assignors to Du Pont Pixel Systems, Limited, United Kingdom

Filed Mar. 22, 1989, Ser. No. 327,242
Claims priority, application United Kingdom, Mar. 23, 1988, 8806881
Int. Cl.[5] H04N *5/265, 5/272*
U.S. Cl. 358—183 20 Claims

1. A video signal mixer, comprising:
(a) first and second generator means for providing first and second analog video signals containing first and second video data, respectively;
(b) third generator means for providing a third analog video signal containing third video data which can vary, at video data rate, independently of said first and second video data; and
(c) analog switch means having:
(i) first and second inputs for receiving said first and second analog video signals, respectively;
(ii) a third switch select input for receiving said third analog video signal; and
(iii) an output providing an output signal, said output signal being selected from said first and second analog



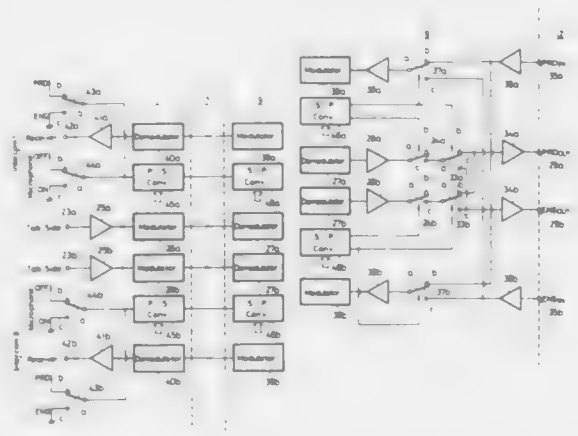
video signals in dependence upon said third analog video signal.

5,008,755

DIGITAL VIDEO SPECIAL EFFECT SYSTEM

Adrian R. Brain, Reading, England, assignor to Abekas Video Systems Ltd., United Kingdom

Filed Apr. 12, 1990, Ser. No. 508,263
Claims priority, application United Kingdom, Apr. 21, 1989, 8909079
Int. Cl.[5] H04N *5/262*
U.S. Cl. 358—183 2 Claims



1. A digital special effect system, including:
(a) a first special effect means for receiving digital video information relating to a first picture sequence and for implementing transitions so as to provide video information representing a transitioned first picture sequence;
(b) a second special effedt means for receiving digital video information relating to a second picture sequence, for receiving the video information representing the transitioned first picture sequence, and for implementing transitions for merging or replacing the transitioned first picture sequence with a transitioned second picture sequence; and
(c) a common memory means for storing data relating to the video information representing the transitioned first picture sequence, data relating to the video information representing the transitioned second picture sequence, and commands for causing the first special effect means and the second special effect means to cooperate on a common time-line, wherein the system automatically adjusts durations of said picture sequences, in accordance with input data relating to said merging or replacing, to produce a required total effect.

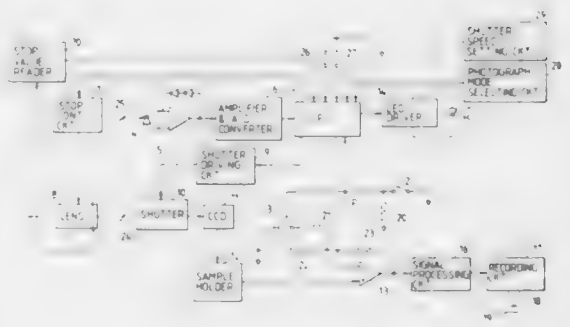
5,008,756

VIDEO CAMERA SYSTEM WITH AUDIO SWITCHING CIRCUIT

Takashi Nakamura; Yoshimi Yasukochi; Tamotsu Munakata, and Masaharu Nakashima, all of c/o Sony Corporation, 7±, Kitashinagawa 6-chome, Shinagawa-Ku, Tokyo, Japan

Filed Apr. 17, 1990, Ser. No. 509,761
Claims priority, application Japan, Apr. 21, 1989, 1-P102091; Apr. 25, 1989, 1-P105076
Int. Cl.[5] H04N *5/30*
U.S. Cl. 358—210 5 Claims

1. A video camera system comprising:
a camera head unit having imager means for generating a video signal and a microphone for generating an audio signal;
a camera control unit for controlling said camera head unit;
connecting means for connecting said camera head unit and said camera control unit and for transmitting said video signal of said imager means and said audio signal of said microphone in said camera head unit to said camera control unit;
output means for outputting said audio signal from said camera control unit;
switching means provided within said camera control unit for selectively permitting said output means to output said audio signal transmitted from said microphone; and
control means provided within said camera head unit for controlling said switching means.



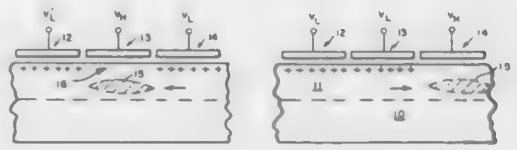
5,008,757

ELECTRONIC STILL CAMERA

Keita Kimura, Kawasaki, and Tetsuya Yamamoto, Hasuda, both of Japan, assignors to Nikon Corporation, Tokyo, Japan

Filed Aug. 14, 1989, Ser. No. 393,131
Claims priority, application Japan, Aug. 24, 1988, 63-210072
Int. Cl.[5] H04N *3/14, 5/335, 5/238, 5/225*
U.S. Cl. 358—213.13 6 Claims

1. An electronic still camera, comprising:
photoelectric converter means for converting light from an object into an electrical signal;
amplifying-recording means for amplifying said electrical signal and for recording the amplified signal on a recording medium;
selecting means for selecting one of plural amplification gains so that said amplifying-recording means amplifies said electrical signal on the basis on the selected amplification gain;
calculating means for calculating an exposure time for said photoelectric converter means in accordance with the



selected amplification gain and the luminance of an object to be photographed;
determining means for determining a longest permissible exposure time, irrespective of the luminance of an object to be photographed, in accordance with the selected amplification gain; and
alarm means for detecting that the calculated exposure time is longer than the longest permissible exposure time and generating an alarm signal.

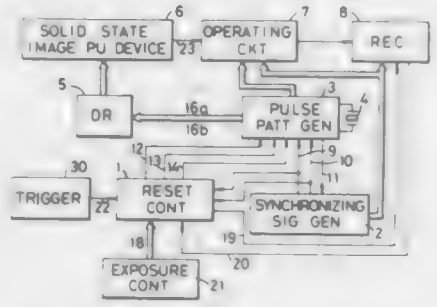
5,008,758

SUPPRESSING DARK CURRENT IN CHARGE-COUPLED DEVICES

Barry E. Burke, Lexington, Mass., assignor to Massachusetts Institute of Technology, Cambridge, Mass.

Filed May 24, 1989, Ser. No. 356,778
Int. Cl.[5] H04N *3/14*
U.S. Cl. 358—213.16 15 Claims

1. A method for suppressing dark current in a first region of an MIS device, said first region having a charge packet therein, further non-liberated charges of one polarity spontaneously arising in said first region, said method comprising the steps of
(1) transferring said charge packet from said first region to a second region of said device; and
(2) supplying charges of a polarity opposite to said one polarity to said first region, said opposite polarity charges combining with said further non-liberated charges to prevent the liberation thereof into said charge pocket so as



to prevent the generation of dark current in said first region.

5,008,759

STILL IMAGE RECORDING APPARATUS WITH SOLID STATE PICKUP DEVICE

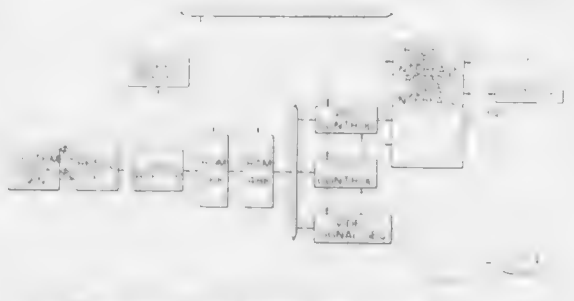
Masahiro Juen, Tokyo, Japan, assignor to Nikon Corporation, Tokyo, Japan

Filed Jul. 18, 1988, Ser. No. 220,571
Claims priority, application Japan, Jul. 22, 1987, 62-182841
Int. Cl.[5] H04N *5/76*
U.S. Cl. 358—335 **3 Claims**

1. An apparatus having solid state image pickup means including a light-receiving unit for storing electric charges, gate means, and a transfer unit which is shielded from light, generating means for generating synchronizing signals periodically at a predetermined period, recording means for recording an output from said solid state image pickup means on a recording medium, and drive means for outputting first drive signals for causing said gate means to transfer stored electric charges from said light-receiving unit to said transfer unit and second drive signals for causing said transfer unit to output electric charges from said image pickup means to said recording means, and comprising:

start means for outputting a start signal to start a charge storage operation of said light-receiving unit of said image pickup means;

determining means for determining charge storage time of said light-receiving unit; and



control means for causing said drive means to output a first drive signal independently of said synchronizing signals in response to said start signal, and for causing said drive means to output another first drive signal independently of said synchronizing signals in response to completion of the determined charge storage time, said control means inhibiting said drive means from outputting said second drive signals during an interval from completion of said determined charge storage time to a subsequent first generation of a synchronizing signal, and thereafter causing said drive means to output first and second drive signals in synchronism with said synchronizing signals.

5,008,760

IMAGE PROCESSING SYSTEM

Katsuichi Shimizu, Kunitachi; Takehiko Shibata, Kokubunji; Yoshikazu Yokomizo, Kawagoe; Akira Suzuki, Kawasaki; Koichi Murakami, Yokohama; Tadashi Yoshida, Tokyo; Masaharu Tsukada, Kawasaki; Nao Nagashima, and Ken Miyagi, both of Yokohama, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 884,677, Jul. 17, 1986, abandoned, which is a continuation of Ser. No. 647,414, Sep. 5, 1984, abandoned, which is a continuation of Ser. No. 311,864, Oct. 15, 1981, abandoned. This application Aug. 30, 1989, Ser. No. 401,482
Claims priority, application Japan, Oct. 17, 1980, 55-145293; Oct. 31, 1980, 55-154464; Dec. 16, 1980, 55-177677; Dec. 16, 1980, 55-177678; Dec. 16, 1980, 55-177679; Dec. 16, 1980, 55-177680; Dec. 16, 1980, 55-177681
Int. Cl.[5] H04N *1/00*
U.S. Cl. 358—451 **22 Claims**

1. An image processing system comprising:

means for reading an image of an original and generating an image signal representing the original image;

manual instruction means for providing an instruction necessary for execution of an image processing;

external operation means permitting manual entry of an image processing data set which defines a partial area of the original and an image processing for the partial area;

storage means adapted to store plural image processing data sets entered by said external operation means;

read out means operable to selectively read out from said storage means the image processing data set in accordance with the instruction from said instruction means; and

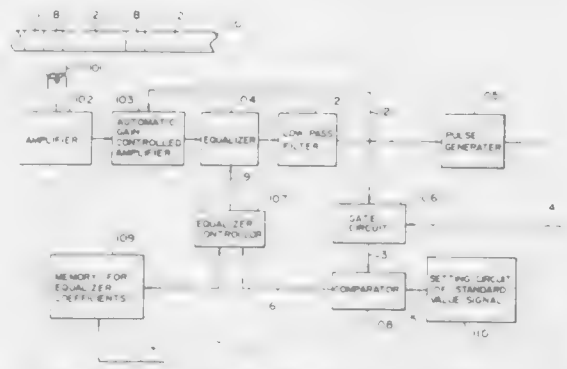
data processing means for processing an image signal corresponding to the partial area from among the image signals from said reading means, without necessity for operation of said external operation means, in accordance with the image processing data set read out from said storage means, and for outputting a processed image signal.

5,008,761

READOUT CIRCUIT IN MAGNETIC RECORDING DEVICE

Nobumasa Nishiyama, Hachioji; Makoto Saito, Tokyo; Yasuhide Ouchi, Koganei; Yasuhiro Katoh, Tokyo; Yoshihisa Kamo, Kokubunji; Makoto Koizumi, Hachioji; Hajime Aoi, Tachikawa; Naoki Sato, Hachioji, and Reijiro Tsuchiya, Kokubunji, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of Ser. No. 248,123, Sep. 23, 1988, Pat. No. 4,907,100. This application Mar. 5, 1990, Ser. No. 489,322
Claims priority, application Japan, Sep. 24, 1987, 62-237129; Dec. 21, 1987, 62-321210; Dec. 21, 1987, 62-321223
The portion of the term of this patent subsequent to Mar. 6, 2007, has been disclaimed.
Int. Cl.[5] G11B *5/09*
U.S. Cl. 360—45 **10 Claims**



1. A readout circuit in a magnetic recording device comprising:

a magnetic head for reading a read out signal from a recording medium on which there are recorded test data, said test data having a read out signal which becomes an isolated waveform;

an equalizer for shaping said read out signal waveform;

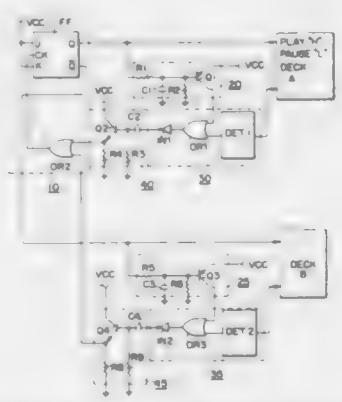
detection means for detecting a distance between more than two level points in one waveform included in said read out signal waveform shaped by said equalizer;

a comparator means for comparing the distance between the level points in said waveform detected by said detection means with a reference value;

means for operating said detection means and said comparator means during at least a period when said magnetic head reads the test data;

an equalizer controller for controlling said equalizer so that the distance between the level points in the waveform detected by said detection means may be consistent with said reference value;

a pulse generator for forming a peak pulse from said read out signal shaped by said equalizer; and



a data detection unit for forming a digital data signal from said peak formed by said pulse generator.

5,008,762

PARALLEL AND CONTINUOUS PLAYBACK CIRCUIT FOR AN AUDIO CASSETTE DECK OF THE DOUBLE-DECK TYPE

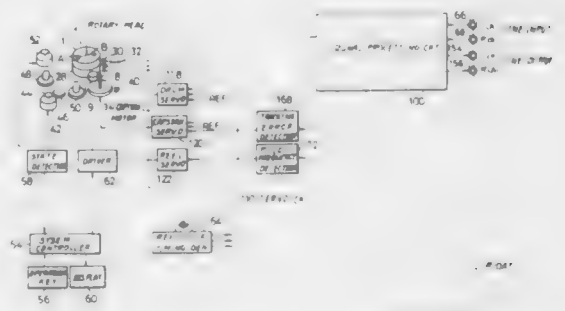
Song G. Sung, Seoul, Rep. of Korea, assignor to SamSung Electronics Co., Ltd., Kyung Ki-Do, Rep. of Korea

Filed Jul. 10, 1989, Ser. No. 377,084
Int. Cl.[5] G11B *15/12, 15/18*
U.S. Cl. 360—61 **6 Claims**

1. A parallel and continuous playback circuit for an audio cassette deck of the double-deck type having a first and second deck with each deck having a playback head and a playback mode and a pause mode, comprising:

signal detection means for detecting the signal from the playback head of each of said first deck and said second deck and for detecting the playback of an unrecorded blank portion of a tape in the first deck and in the second deck;

pulse generator means operably connected with said signal detection means, for generating an arbitrary pulse signal in response to the detection by said signal detection means of the playback of an unrecorded blank portion of a tape in any one of the first deck and the second deck, said pulse signal identifying in which of said first and second decks said unrecorded blank tape portion is being played back; and



deck selector means operably connected with said pulse generator means and responsive to said pulse signal therefrom, for putting the one, of said first and second decks in which it is detected by said signal detection means that the unrecorded blank tape portion is being played back, into its said pause mode and for putting the other of said first and second decks into its said playback mode.

ROTATION CONTROL DEVICE FOR A ROTARY HEAD IN A MAGNETIC RECORDING AND REPRODUCING DEVICE

Mamoru Horino, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

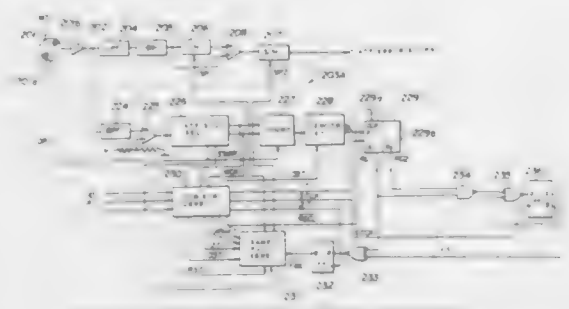
Filed Jul. 14, 1988, Ser. No. 219,044
Claims priority, application Japan, Jul. 17, 1987, 62-178559
Int. Cl.[5] G11B *5/52*
U.S. Cl. 360—70 **5 Claims**

1. A rotation control device for a rotary head in a magnetic recording and reproducing device comprising:

a rotary head including frequency generating means for producing a frequency detection signal at a period determined by equally dividing one rotation of the drum and phase generating means for detecting a rotation reference position of the drum and providing a phase detection signal independent of the frequency detection signal;

means for generating a phase reference signal as a reference signal for the phase detection signal;

means for generating a frequency reference signal as a reference signal for the frequency detection signal; and



control means for controlling said rotary head by adjusting rotation phase of the drum to a predetermined state by the controlling rotation of the drum in accordance with a phase error between the phase detection signal and the phase reference signal and a phase error between the frequency detection signal and the frequency reference signal in such a manner that the phase detection signal is locked with the phase reference signal at a predetermined phase difference and the frequency detection signal is locked with the frequency reference signal at a predetermined phase difference.

5,008,764

ROTARY HEAD TYPE DIGITAL SIGNAL REPRODUCING APPARATUS WITH SLOW TAPE SPEED MODE AND IMPROVED TRACKING CONTROL

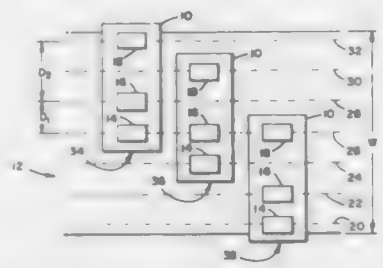
Shiro Yoshida, Machoshi; Yasuhiro Yamada, Yokosuka, and Shoji Ueno, Zama, all of Japan, assignors to Victor Company of Japan, Ltd., Kanagawa, Japan

Continuation-in-part of Ser. No. 91,085, Aug. 31, 1987, Pat. No. 4,839,755. This application Mar. 16, 1988, Ser. No. 168,700
Claims priority, application Japan, Sep. 5, 1986, 61-209243; Oct. 2, 1986, 61-234961; Mar. 18, 1987, 62-63505
The portion of the term of this patent subsequent to Jun. 13, 2006, has been disclaimed.
Int. Cl.[5] G11B *5/584, 15/467*
U.S. Cl. 360—77.15 4 Claims

1. A rotary head type digital signal reproducing apparatus for playing a magnetic tape pre-recorded with a time division multiplexed signal in one of first and second modes, said time division multiplexed signal comprising pulse code modulated audio data which is obtained by subjecting an original audio signal to a pulse code modulation and a tracking reference signal, said tracking reference signal which amounts to a predetermined time period being time division multiplexed before and after said pulse code modulated audio data which amounts to a certain time period, said time division multiplexed signal being recorded on successive tracks formed obliquely to a longitudinal direction of the magnetic tape by two rotary magnetic heads, during the recording in said second mode, a data quantity per unit time, a frequency of said tracking reference signal, a rotational speed of the rotary magnetic heads and a tape transport speed of the magnetic tape being one-half those in said first mode, said rotary head type digital signal reproducing apparatus comprising:

reproducing means including two rotary magnetic heads for reproducing pre-recorded signals from the magnetic tape;

means for setting the tape transport speed to a speed identical to that in said second mode and for setting the rotational speed of the rotary magnetic heads to a speed identical to that in said first mode when playing the magnetic tape pre-recorded in said second mode; and



tracking control means for controlling tracking of the rotary magnetic heads based on reproduced tracking reference signals reproduced by said reproducing means, said reproduced tracking reference signals including out of reproduced signals obtained from said reproducing means during successive first through fourth scans made by the rotary magnetic heads with respect to two mutually adjacent tracks on the magnetic tape a reproduced tracking reference signal obtained in an end portion of said first scan and a reproduced tracking reference signal obtained in a beginning portion of said second scan immediately after said first scan, said first and second scans being successive scans in which a large reproduced output is obtainable by the rotary magnetic heads from said two mutually adjacent tracks compared to said third and fourth scans.

METHOD AND APPARATUS FOR READING OR WRITING ON TAPE USING A SERVO POSITIONED MULTIPLE CHANNEL HEAD

Robert J. Youngquist, White Bear Lake, Minn., assignor to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Filed Jan. 17, 1989, Ser. No. 298,186
Int. Cl.[5] G11B *5/584, 5/29*
U.S. Cl. 360—77.12 21 Claims

1. A method of reading or writing data on tape, comprising:

providing a tape having a plurality of parallel, longitudinally extending sections along which tracks of data may be recorded and reproduced, and along one of which sections is located at least a first dedicated servo track containing prestored position information, all said sections being adjacent to each other and having the same predetermined width;

providing a multiple channel head having at least three channels, the center-to-center distance between at least two of the channels being equal to the center-to-center distance between adjacent sections, and the center-to-center distance between a third channel and the closest of the other channels being equal to twice the center-to-center distance between said adjacent sections, for accessing at each of a limited number of predetermined positions said dedicated servo track and at least one of said sections along which data may be recorded and reproduced each channel having at least one element for reading data from or writing data on the tape; and

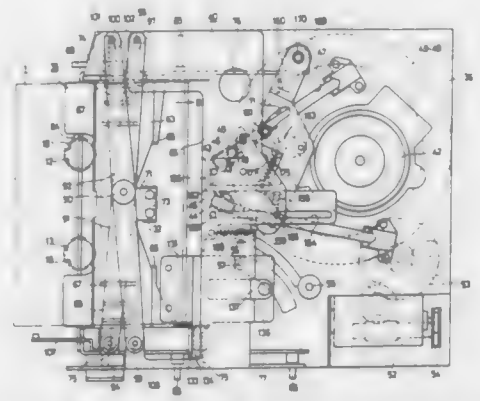
using the position information on a dedicated servo track to controllably transversely position the head proximate to one of the predetermined positions, one of said channels thereby always being positioned to reproduce said prestored position information while the other channels access said additional sections along which data tracks may be located.

5,008,766

TAPE CASSETTE ATTACHMENT DEVICE WITH CLOSURE PLATE ACTUATED INSERTION SENSOR

Hiroyuki Chigasaki, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Jun. 28, 1989, Ser. No. 372,451
Claims priority, application Japan, Jun. 28, 1988, 63-160286
Int. Cl.[5] G11B *15/675*
U.S. Cl. 360—96.5 3 Claims



1. A tape cassette attachment device comprising a cassette holder into which a tape cassette rotatably accommodating a pair of tape reels carrying a magnetic tape wound thereon,

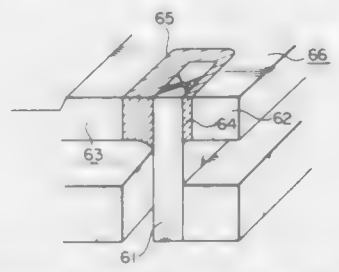
a slide guide frame supporting said cassette holder for vertical movement and supported for horizontal movement with respect to a chassis of a main body, said slide guide frame being reciprocating between a first position in which said tape cassette is enabled to be inserted into or detached from said cassette holder and a second position in which the tape reels of said tape cassette are in register with reel drive shafts of said chassis, and vertically shifting said cassette holder at said second position,

locking and holding means for locking and holding said slide guide frame at said first position with respect to said chassis for inhibiting the shifting of said slide guide frame, and

means for sensing the tape insertion, said means sensing that said tape cassette has been inserted to a prescribed position in said cassette holder and releasing locking of said locking and holding means

wherein a closure plate movable between a closed position of closing a pair of reel drive shaft insertion openings formed at least on the bottom surface of the cassette half and an open position of opening said reel drive shaft insertion openings is mounted to the outer bottom surface of the cassette half and a turnable lid is provided for opening or closing an aperture on the front side of the cassette half;

wherein the cassette holder includes control projection means on the bottom plate thereof, said control projection means controlling the movement of said closure plate in opposition to the inserting operation of said tape cassette and shifting said closure plate from said closure position to said opening position on the occasion of the shifting of said cassette half; and



wherein said tape cassette insertion sensor means is at a position of being thrust and controlled by the cassette half only when the tape cassette is introduced into said cassette holder and said closure plate is shifted completely to said opening position by said control projection means, said sensor means being at a position of being not thrust and controlled by said cassette half when said closure plate is not shifted completely to said opening position.

5,008,767

FLYING-TYPE COMPOSITE MAGNETIC HEAD HAVING MAGNETIC CORE WITH IMPROVED FLATNESS OF AIR-BEARING SURFACE

Hitoshi Iwata, Kumagaya; Kazumi Noguchi, Kamikawa; Toshikazu Nishiyama, Fukaya, and Tadashi Shinohara, Chiyoda, all of Japan, assignors to Hitachi Metals, Ltd., Tokyo, Japan

Filed Jan. 23, 1989, Ser. No. 299,536
Claims priority, application Japan, Jan. 22, 1988, 63-12343
Int. Cl.[5] G11B *5/60*
U.S. Cl. 360—103 24 Claims

1. A flying-type composite magnetic head comprising: a slider made of a non-magnetic ceramic and having side rails extending longitudinally on both lateral sides of said head; a slit extending longitudinally in one of said side rails; and a magnetic core constituted by a pair of core pieces bonded to each other with a first glass and fixed in said slit with a second glass, wherein

(a) at least one opposing surfaces of said core pieces is formed with an Fe-Al-Si thin layer;

(b) said opposing surfaces constitute a magnetic gap of said magnetic core;

(c) said magnetic core and said slit are shaped such that there are sufficient gaps between said magnetic core and both inner surfaces of said slit at least in a region exposed to an air-bearing surface of said magnetic head, and that said magnetic core is in contact with one of the inner surfaces of said slit in a region distant from said air-bearing surface; and

(d) said gaps on both sides of said magnetic core in a region exposed to said air bearing surface are filled with said second glass, whereby said air-bearing surface including said magnetic core has improved flatness.

5,008,768

DISK HEAD ASSEMBLY FLEXURE WITH SLOPED RAMP SUPPORT STRUCTURE

Carl J. Carlson, Poway; Mourad Zarouri, San Diego, and Warren Coon, Poway, all of Calif., assignors to Computer & Communications Technology Corp., San Diego, Calif.

Filed Mar. 27, 1989, Ser. No. 328,869
Int. Cl.[5] G11B *5/48*
U.S. Cl. 360—104 17 Claims

1. A disk drive flexure comprising:

(a) a support structure having an attachment end for connection to a load beam of a disk drive and a pair of parallel spaced-apart outriggers, each outrigger being connected at one end to the attachment end of the support structure and having a distal end with a connection edge approximately perpendicular to the longitudinal axis of the outrigger;

(b) a tongue situated approximately parallel to and spaced apart from the support structure, the tongue having an elongated main body with lateral extensions on either side of the main body with lateral extensions on either side of the main body and at one end thereof, each lateral extension extending sideways from the main body of the tongue to at least the connection edge of the distal end of one of spaced apart outriggers, and each having a connection edge approximately parallel to and spaced apart from the connection edge of the distal end of said outrigger; and

(c) a pair of sloped connecting ramps, each coupled at one end to the connection edge of the distal end of an outrigger, and at the other end to the connection edge of a lateral extension of the tongue, such that the height of the ramps spaces the tongue apart from the support structure.

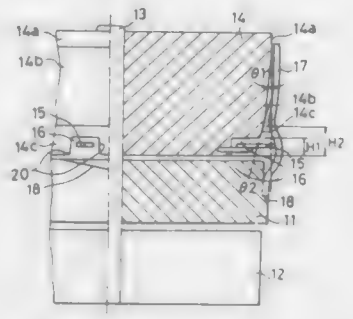
ROTARY HEAD TYPE MAGNETIC RECORDING/REPRODUCING DEVICE

Koji Kaneko, and Yasuyuki Sugino, both of Higashi-Hiroshima, Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan



Filed Jan. 12, 1990, Ser. No. 464,222
Claims priority, application Japan, Jan. 12, 1989, 1-7028
Int. Cl.[5] G11B *15/60*
U.S. Cl. 360—130.24 4 Claims

1. A rotary head type magnetic recording/reproducing device comprising:

a stationary drum having at an outer surface thereof a spiral cut portion for guiding a magnetic tape;

a motor having a rotary shaft penetrating said stationary drum; and

a rotary drum disposed coaxially with said stationary drum and secured to said rotary shaft, said rotary drum comprising a cylindrical portion which is slightly greater in diameter than said stationary drum, a first truncated cone portion integrally connected to said cylindrical portion at

a bottom thereof and decreasing in diameter in a direction toward said stationary drum at a first taper angle, and a second truncated cone portion integrally connected to a top surface of said first truncated cone portion at a bottom thereof and decreasing in diameter in said direction toward said stationary drum at a second taper angle which is greater than said first taper angle, said rotary drum having an opening at a portion adjacent to a top end of said second truncated cone portion, said opening accommodating a magnetic head.

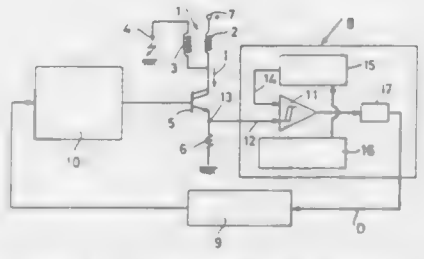
DIAGNOSTIC CIRCUIT FOR UNITS PROVIDING CURRENT CONTROL AND PROTECTION AGAINST EXCESSIVE HEAT DISSIPATION FOR SEMICONDUCTOR POWER DEVICES



Sergio Palara, Acicastello, Italy, assignor to SGS-Thomson Microelectronics s.r.l., Agrate Brianza, Italy

Filed Dec. 6, 1989, Ser. No. 446,857

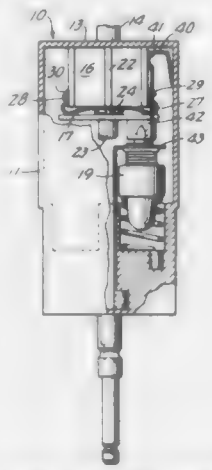
Claims priority, application Italy, Dec. 13, 1988, 22924 A/88

Int. Cl.[5] H02N *3/087*

U.S. Cl. 361—103 **11 Claims**

1. A diagnostic and control circuit for operating a semiconductor power device through periodic firing and quenching states comprising a comparator having a first input connected to the power device so as to be supplied with a voltage proportional to a current passing through the power device and a second input connected to a reference voltage generator, a signal generator connected to an output of said comparator so as to generate a diagnostic signal whenever the comparator output indicates the periodic growth of said proportional voltage beyond a reference voltage generated by said reference voltage generator, and means sensitive to the temperature of the power device which act on said reference voltage generator so as to reduce said reference voltage in response to a temperature increase beyond a preset limit.

5,008,772



TELEPHONE CIRCUIT PROTECTOR MODULE HAVING PLURAL CIRCUIT GROUNDING MEANS

Helmuth Neuwirth, Garden City; Carl Meyerhoefer, Dix Hills; William V. Carney, Oyster Bay, and Peter L. Visconti, Baldwin, all of N.Y., assignors to Porta Systems Corp., Syosset, N.Y.

Filed Sep. 24, 1990, Ser. No. 587,072

Int. Cl.[5] H02H *3/22*

U.S. Cl. 361—119 **3 Claims**

1. In a subscriber circuit telephone protector module including a housing, excess voltage and current protector means disposed within said housing for grounding currents having voltage and current flow above predetermined levels, the improvement comprising: said excess voltage means including

a three-element gas tube having a central electrode and first and second end electrodes, a gas tube fail safe device including an elongated metallic clip contacting said center electrode and maintained in insulated relation relative to said end electrodes by fusible members; a ground assembly including an elongated ground pin extending outwardly of said housing and having an inner end terminal, a transversely extending ground plane member carried by said inner end; said center electrode having a laterally extending contact pin penetrating said ground plane member for electrical communication therewith, said elongated clip being carried by said contact pin; a pair of test point contacts each contacting a respective end electrode independently of said fusible means at a first end thereof, and having a transversely extending second end overlying said ground plane member cylindrical insulator means spacing said second end from said ground plane member; a pair of long contacts each having first and second ends, said first end contacting said second end of a respective test point contact wherein corresponding through orifices in each of said test point contact and said long contact are aligned; and a pair of thermally actuated heat coils, each carried by a respective long contact and having extensible point contact means penetrating said aligned orifices to contact said ground plane member upon heat coil actuation; whereby each of said three element gas tube and fail safe device are in constant contact with said ground plane member, and said heat coils are selectively in contact with said ground plane member; said gas tube serving to ground voltage surges in the range of 200 to 300 volts, said fail safe device serving to ground sustained current surges, and said heat coils becoming operative in the presence of sneak currents in the range of under one ampere.

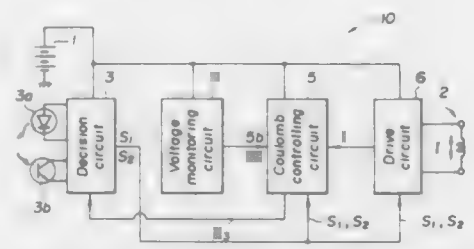
SOLENOID VALVE CONTROL CIRCUIT



Takao Yoshida; Toshio Ikeda; Takhiro Douke, and Toshio Eki, all of Kanagawa, Japan, assignors to Toto, Ltd., Fukuoka, Japan

Filed Nov. 21, 1988, Ser. No. 273,835

Claims priority, application Japan, Nov. 20, 1987, 62-294800; Nov. 20, 1987, 62-294801

Int. Cl.[5] H01H *47/32*

U.S. Cl. 361—187 **48 Claims**

1. A solenoid valve control circuit for operatively connecting a battery to a solenoid to energize the solenoid to actuate a valve, said control circuit including coulomb controlling means for controllably supplying an electric quantity to the solenoid,

wherein said electric quantity if a required electric quantity corresponding to the voltage of said battery,

said coulomb controlling means comprising means for supplying said required electric quantity to said solenoid,

a decision circuit for producing an energizing signal indicating that said battery is to be connected to said solenoid under a prescribed condition; and

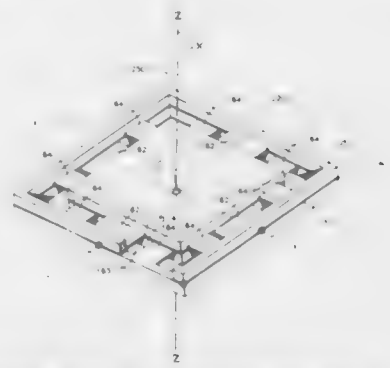
a solenoid valve drive circuit responsive to said energizing signal for operatively connecting said battery to said solenoid to energize said solenoid, and

wherein said coulomb controlling means comprises:

a power supply voltage monitoring circuit for monitoring the voltage of said battery and producing a signal corresponding to the battery voltage; and

a coulomb_controlling circuit for monitoring the electric quantity supplied from said battery to said solenoid and for producing a de-energizing signal based on the signal from said power supply voltage monitoring circuit when the electric quantity supplied to said solenoid is equal to said required electric quantity corresponding to said battery voltage.

5,008,774



CAPACITIVE ACCELEROMETER WITH MID-PLANE PROOF MASS

Robert H. Bullis, Avon, and James L. Swindal, East Hampton, both of Conn., assignors to United Technologies Corporation, Hartford, Conn.

Filed Feb. 28, 1989, Ser. No. 317,258

Int. Cl.[5] G01P *15/02;* **H01G** *7/00*

U.S. Cl. 361—283 **7 Claims**

1. A solid-state silicon accelerometer comprising:

a three-plate capacitor including fixed top and bottom plates and a silicon movable sensing plate having a top surface separated from said top plate by a top gap and a bottom surface separated from said bottom plate by a bottom gap, defining a reference midplane and being connected to support members by flexible connections extending across a support gap between said silicon sensing plate and said support members to move between said top and bottom plates in response to acceleration along an acceleration axis perpendicular to said reference midplane, whereby acceleration along said acceleration axis displaces said silicon sensing plate from said reference midplane and alters the capacitance between said silicon sensing plate and said top and bottom plates, in which;

said top and bottom plates and said support members are bonded together to form a rigid structure;

said silicon sensing plate is connected to said support members by at least one pair of flexures extending a predetermined hinge width along opposite sides of said sensing plate and having a predetermined hinge length less than the length of said sensing plate, so that a communication path is established between a top chamber between said top and said silicon sensing plates and a bottom chamber between said bottom and said silicon sensing plates;

at least one chamber has motion stops disposed therein and grooves to facilitate squeeze-film damping in one of said silicon sensing plate and said fixed plate; and

electronic means for measuring the capacitance of at least one of said chambers, characterized in that:

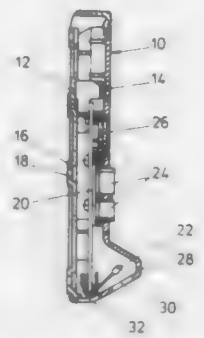
said silicon sensing plate is formed from top and bottom silicon slabs bonded together at an interface region, each of said silicon slabs being boron doped on a flexure surface abutting said interface region, and is connected to said support members by flexures lying substantially in said flexure surfaces and being disposed about said support gap in a predetermined pattern, whereby said top and bottom silicon slabs combine to form a composite sensing plate connected to said support members by said at least one pair of flexures disposed symmetrically in said top and

bottom plates and substantially in said sensing plate midplane,

said top silicon slab, a corresponding top slab portion of said support members and a corresponding top slab flexure and said bottom silicon slab, a corresponding bottom slab portion of said support member and a corresponding bottom slab flexure being micromachined from a block of silicon.

5,008,775

SENSOR AND CONTROL MODULE WITH IMPROVED SENSOR ISOLATION



Juergen Schindler, Gross-Gerau-Wallerstaedten, and Hartwig Heinen, Bruchkoebel, both of Fed. Rep. of Germany, assignors to Honeywell Regelsysteme GmbH, Fed. Rep. of Germany

Filed Sep. 11, 1989, Ser. No. 405,481

Claims priority, application Fed. Rep. of Germany, Sep. 13, 1988, 8811566[U]

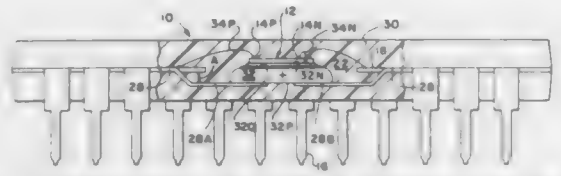
Int. Cl.[5] H05K *7/20*

U.S. Cl. 361—383 **7 Claims**

1. A sensor and control module comprising a housing having air slots in the upper and lower portions, at least one sensing element located in the lower portion of said housing,

a control circuit board producing heat mounted in said upper portion and said lower portion of said housing and connected to said sensing element, at least one manually actuable control element located on an exterior surface of said housing and connected to said circuit board, whereby said housing provides a chimney effect as heat of said circuit board causes air to be drawn through said air slots of said lower portion past said sensing element and said circuit board to exit through said air slots in said upper portion.

5,008,776



ZERO POWER IC MODULE

Daniel Queyssac, Dallas, Tex., assignor to SGS-Thomson Microelectronics, Inc., Carrollton, Tex.

Filed Jun. 6, 1990, Ser. No. 531,150

Int. Cl.[5] H05K *7/00*

U.S. Cl. 361—392 **15 Claims**

1. A device package for providing electrical power to an electronic circuit device comprising, in combination:

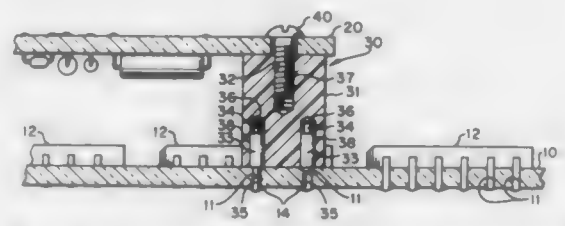
a body of non-conductive material;

a finger lead assembly encapsulated within said body of non-conductive material, said finger lead assembly including a plurality of conductive finger leads, with one of said finger leads defining a power lead;

a battery having a positive polarity power terminal and a negative polarity power terminal, one of said battery power terminals being mounted onto said power lead; and,

an electronic circuit device encapuslated within said body of non-conductive material and coupled to one of said battery power terminals opposite of said battery terminal mounted onto said power lead.

5,008,777



AUXILIARY BOARD SPACER ARRANGEMENT

William F. Burns, Plano, Ill., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Oct. 14, 1988, Ser. No. 257,654

Int. Cl.[5] H05K *1/14*

U.S. Cl. 361—412 **21 Claims**

17. An arrangement of connected first and second circuit boards comprising:

at least one first board, each first board comprising at least one mounting hole;

a second board, comprising a plurality of circuit component holes for mounting discrete components and integrated circuits; and

at least one spacer means, each spacer means for spatially attaching the at least one first board to the second board;

wherein each of the spacer means comprises:

at least one body having a means defining a hole at one end;

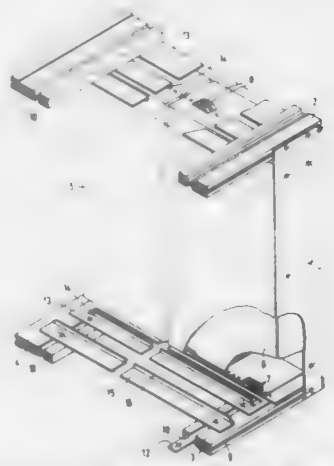
pin means protruding from the at least one body at an end opposite the one end, and inserted into the circuit component holes of the second board, and soldered to the second board for connecting the spacer means to the second board; and

a fastening device inserted through one of the mounting holes of one of the first boards and into the means defining a hole in the at least one body, for connecting the spacer means to a first board, wherein the pin means comprises two pins, wherein a protruding section of each of the two pins is of cylindrical shape, and wherein each of the two pins comprises a tapered top portion.

5,008,778

ACCOMMODATION DEVICE WITH SHIELDED CIRCUIT BOARDS

Gerhard Peyerl, Nuremberg, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.



Filed Oct. 17, 1988, Ser. No. 258,405

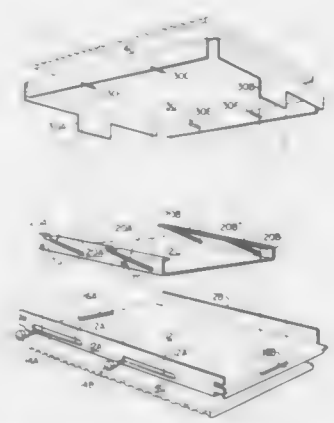
Claims priority, application Fed. Rep. of Germany, Oct. 20, 1987, 3735456

Int. Cl.[5] H05K *7/14, 7/18*

U.S. Cl. 361—415 **3 Claims**

1. A framework for mounting circuit boards of a predetermined size which are housed in shielded housings whose walls include grooves and said framework for also mounting circuit boards of said predetermined size which are outside shielded housings, said framework having ridges which serve as guide means for insertion into said grooves in said shielded housings, said framework having carriers with grooves which serve as support means for said circuit boards which are outside shielded housings.

5,008,779



SHELF ASSEMBLY HAVING INFINITELY VERTICALLY ADJUSTABLE TOP SURFACE

Garland R. Salmon, Durham, N.C., assignor to Newton Instrument Company, Butner, N.C.

Filed Jun. 21, 1990, Ser. No. 542,250

Int. Cl.[5] H05K *7/14*

U.S. Cl. 361—415 **18 Claims**

1. A vertically adjustable shelf assembly for use in storage cabinets and the like comprising:

a shelf base adapted to be secured to a storage cabinet and having a bottom support surface, said base further having a front wall extending along at least a portion of the length of the front side thereof and defining at least one generally horizontally extending elongate opening therein;

vertical adjustment means positioned on said support surface of said base and adapted for lateral slidable movement therein, said adjustment means comprising a member having front and rear sides and front wall and a rear wall extending along at least a portion of the length of the front and rear sides thereof, respectively, and each defining at least one elongate guide surface extending generally laterally upwardly, said vertical adjustment means further comprising lateral movement means secured to said front wall thereof and extending through said at least one elongate opening in the front wall of said base so that lateral movement of said lateral movement mean will laterally translate said vertical adjustment means relative to said base; and

a shelf top movably secured relative to said shelf base so as to prevent lateral movement thereof while allowing vertical movement relative to said base, said top having front and rear sides and a front wall and rear wall extending along at least a portion of the length of the front and rear sides thereof, respectively, and guide surface engagement means extending inwardly from said front and rear walls and into operative engagement with said at least one laterally upwardly extending guide surface in each of said front and rear walls of said vertical adjustment means so that selective lateral movement of said vertical adjustment means in a direction to urge said guide surface engagement means upwardly along said guide surfaces therein serves to vertically raise said top, and lateral movement of said vertical adjustment means in a direction to urge said guide surface engagement means downwardly along said guide surfaces therein serves to vertically lower said top.

NUMBER PLATE INCLUDING LUMINOUS CHARACTERS

Masaaki Mastuoka, Tokyo, Japan, assignor to World Auto Plate Ltd., Tokyo, Japan

Filed Apr. 14, 1989, Ser. No. 339,195

Claims priority, application Japan, Apr. 18, 1988, 63-50996[U]; Apr. 18, 1988, 63-50997[U]

Int. Cl.[5] B60Q *1/56*

U.S. Cl. 362—83.2 **10 Claims**

1. A number plate including luminous characters of the type comprising

a number plate having a plurality of character portions punched therefrom,

a plate molded of transparent or translucent synthetic resin adhesively secured to said number plate,

illuminating bulbs for illuminating said character portions disposed behind said number plate, and

a light scattering plate made from a transparent or translucent material and having a light scattering region with a number of quadrangular pyramid-shaped projections formed thereon, each of which has an apex angle which is about 140°, in an area only corresponding to positions where said illuminating bulbs are disposed, said light scattering plate being interposed between said number plate and said illuminating bulbs.

LIGHTING EQUIPMENT FOR A KEY RING

Howard Wang, No. 7, Alley 14, Lane 64, Ching Ping Rd., Chung Ho City, Taipei Hsien, Taiwan

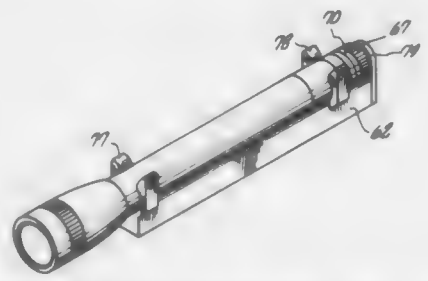
Filed May 17, 1990, Ser. No. 524,573

Int. Cl.[5] F21V *33/00*

U.S. Cl. 362—116 **2 Claims**

1. A lighting equipment for a key ring comprising a cylindrical tube having a profile formed in a bottom thereof, said profile having a pair of lower grooves and a pair of higher grooves; a barrel being substantially received in said cylindrical tube with an upper end extending beyond said cylindrical tube, a notch being vertically formed in said upper end of said barrel; a ring element being provided around said upper end of said barrel and contacting an upper end of said cylindrical tube, a tongue being integrally formed on said ring element and extends toward a center thereof, said tongue extending through said notch toward a center of said barrel; a light bulb which has two prongs being received in said upper end of said barrel, one of said prongs being integrally fixed to said tongue so that said one prong is electrically connected to said tongue, a resilient leg being coupled to an other prong; a spring and at least one cell being received in a lower end of said barrel; a bracket being provided between said barrel and said cylindrical tube, said bracket and said cell being biased downward by said spring; a rod extending through a center of said bottom of said cylindrical tube and being coupled to said bracket; a pin being laterally provided on said rod; and said key ring being strung on a lower end of said rod; and said pin being actuated to follow said profile so that both ends of said pin are laid in either said upper grooves or said lower grooves and so that a center electrode of an uppermost cell is actuated either to contact or to be separated from said resilient leg in order to turn on or turn off said light bulb.

5,008,785



RECHARGEABLE MINIATURE FLASHLIGHT

Anthony Maglica, Ontario; Ralph E. Johnson, Los Alamitos, and Armis L. Lewis, Cucamonga, all of Calif., assignors to Mag Instrument, Inc., Ontario, Calif.

Continuation-in-part of Ser. No. 34,918, Apr. 6, 1987, abandoned, which is a continuation of Ser. No. 828,729, Feb. 11, 1986, Pat. No. 4,658,336, which is a continuation of Ser. No. 648,032, Sep. 6, 1984, Pat. No. 4,577,263. This application Oct. 23, 1987, Ser. No. 111,538

Int. Cl.[5] F21L *7/00*

U.S. Cl. 362—183 **30 Claims**

1. A miniature rechargeable flashlight system including a flashlight and a recharger,

the flashlight comprising:

battery retaining means;

a lamp bulb;

means for holding the lamp bulb;

a substantially parabolic reflector;

a substantially planar lens;

means for retaining the reflector and the lens at one end of said battery retaining means;

means for eletrically coupling first and second electrodes of said lamp bulb to battery electrodes;

a tail cap at said other end of said battery retaining means including a positive conductive means and a negative conductive means adapted to respectively contact separate electrical contacts of said recharger; and

means to cause one way current flow through said negative conductive means;

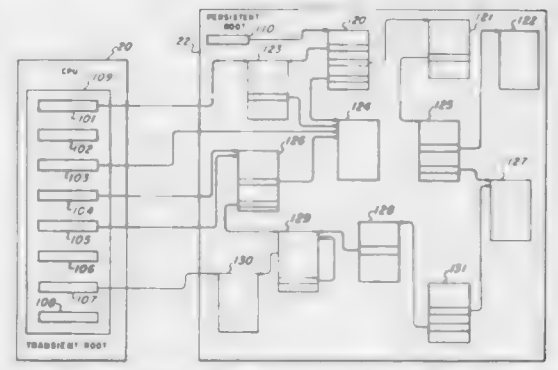
the recharger comprising:

a housing adapted to accommodate said flashlight;

a circuit for regulation of constant charging current provided to said flashlight;

and wherein the separate electrical contacts are positive and negative contacts for contacting with said positive conductive means and said negative conductive means of said flashlight.

5,008,786



RECOVERABLE VIRTUAL MEMORY HAVING PERSISTANT OBJECTS

Satish M. Thatte, Richardson, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Continuation-in-part of Ser. No. 774,828, Sep. 11, 1985. This application Nov. 19, 1986, Ser. No. 932,813

Int. Cl.[5] G06F *11/00*

U.S. Cl. 364—200 **10 Claims**

1. A computer system having a recoverable virtual memory, comprising:

(a) a virtual memory having a random access memory and a backing store:

(b) a plurality of pages stored in the backing store, each of said pages corresponding to a virtual memory page;

(c) a plurality of memory objects allocated within said virtual memory, said memory objects interconnected by pointers;

(d) a persistent root having a pointer to a memory object, wherein all memory objects in the transitive closure of said persistent root define a set of long term objects not subject to reclamation by the system during garbage collection;

(e) means for taking checkpoints of the current state of said virtual memory at selected times, said means including means for materializing a sibling page corresponding to each of a plurality of said virtual memory pages, wherein the latest written version of a virtual memory page and its respective sibling page which was written before a current checkpoint state is used to define the checkpoint state; and

(f) a state indicator identified with each virtual memory page and each sibling page for indicating which of said virtual memory or sibling pages stored in the backing store comprise a most recent checkpoint.

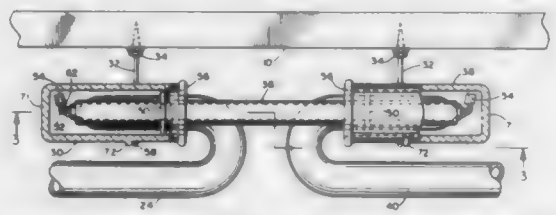
5,008,787

SYSTEM FOR INSULATED SUPPORT OF NEON LIGHTS

Albert Sklar, and Barbara Sklar, both of 3513 Villa Ter., San Diego, Calif. 92104

Filed Jul. 2, 1990, Ser. No. 546,713

Int. Cl.[5] F21V *23/02*



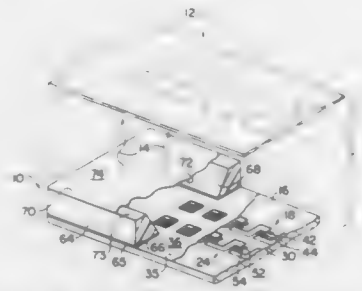
U.S. Cl. 362—221 **5 Claims**

1. In the installation and support of neon tubes having cylindrical glass encased high voltage wires electrically connected to the cylindrical ends of neon tubes, the improvement comprising:

a cylindrical glass cup having two aligned, intersecting and joined longitudinal bores;

the cylindrical end of the glass encased high voltage wire being slidably positionable in one bore and the cylindrical end of the neon tube being slidably positionable in the other bore;

a resilient O-ring for encircling the two adjacent ends of the respective glass sleeve and neon tube electrode,



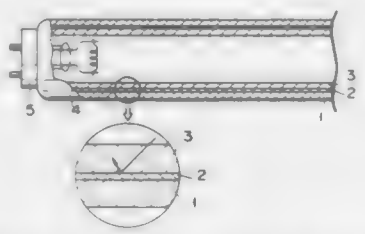
and said O-ring being resiliently compressible in the space between the inner surface of the glass cup and the outer surfaces of the electrode and glass sleeve, holding the electrode and glass sleeve in position in the glass cup.

5,008,788

MULTI-COLOR ILLUMINATION APPARATUS

John M. Palinkas, Harwinton, Conn., assignor to Electronic Research Associates, Inc., Winsted, Conn.

Filed Apr. 2, 1990, Ser. No. 502,977
Int. Cl.[5] F21V *9/00*
U.S. Cl. 362—231 **14 Claims**



1. Multi-color illumination apparatus, comprising:
substrate means having a generally planar surface for carrying foil leaf means defining a plurality of electrical circuit paths;
at least one first light diode (LED) means for emitting light of a first color in response to a first excitation voltage signal applied to the LED;
at least one second light emitting diode (LED) means for emitting light of a second color in response to a second excitation voltage signal applied to the LED;
said first and second LED's defining an LED color pair;
reflective white masking means for covering said surface of said substrate means and having openings therethrough whereby the area of said substrate surface in registry with said openings in said white masking means is exposed;
one electrical circuit path of said plurality including a first plurality of foil leaf areas arranged in a spaced relation to one another and defining a first electrical circuit path for physically and electrically connecting the anode of said first or second LED of one LED color pair and the cathode of the other of said first or second LED of said one LED color pair to one another and to said first electrical circuit path;
a second electrical circuit path of said plurality including a second plurality of foil leaf areas, a first portion of said plurality of foil leaf areas arranged in a spaced relation to one another and one-for-one with said first plurality of foil leaf areas defining said first electrical circuit path, said first portion of said second plurality of foil leaf areas comprising said second electrical circuit path and being electrically connected to the cathode of said first or second LED of said one LED color pair and the anode of the other of said first or second LED of said one LED color pair;
said second plurality of foil leaf areas including a second portion of foil leaf areas disposed generally oppositely said first portion and substantially in registry with said first plurality of foil leaf areas, said second portion of foil leaf areas being arranged in a spaced relation to one another and physically and eclectically connecting the anode of said first or second LED of a second LED color pair and the cathode of the other of said first or second LED of said second LED color pair to one another and to said second electrical circuit path;
a third electrical circuit path of said plurality including a third plurality of foil leaf areas arranged in a spaced relation to one another and one-for-one with said second portion of foil leaf areas and substantially in registry with said first portion of foil leaf areas of said second plurality of foil leaf areas, said third plurality of foil leaf areas being electrically connected to the cathode of said first or second LED of said second LED color pair and the anode of the other of said first or second LED of said second LED color pair, and
said one and second LED color pairs being located substantially in registry with said openings in said white masking means.

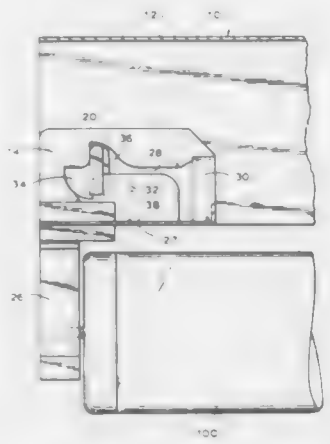
5,008,789

FLUORESCENT LAMP HAVING ULTRAVIOLET REFLECTING LAYER

Kiyotaka Arai; Hirofumi Sumoto, and Keizi Ichinomiya, all of Anan, Japan, assignors to Nichia Kagaku Kogyo K.K., Tokushima, Japan

Filed Feb. 14, 1990, Ser. No. 479,967
Claims priority, application Japan, Feb. 22, 1989, 1-44488
Int. Cl.[5] F21M *3/14*
U.S. Cl. 362—255 **4 Claims**

1. A fluorescent lamp comprising a bulb, an ultraviolet reflecting layer consisting essentially of a nonemission material formed on an inner surface of the bulb, and a light-emitting layer formed on the ultraviolet reflecting layer and excited to emit light upon discharge, wherein the nonemission material consists essentially of α-alumina having an average grain size of 0.05 μm to 2 μm, and the coating amount of the ultraviolet reflecting layer on the inner surface of the bulb if 0.05 to 5 mg/cm^2.



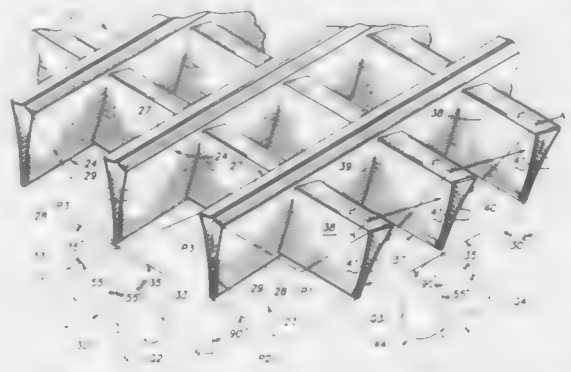
5,008,790

FLUORESCENT-TYPE FIXTURE HAVING REMOVABLE FOLD-OUT LAMP SOCKETS

William C. Fabbri, Billerica, Mass., assignor to Genlyte, Inc., Wilmington, Mass.

Filed Mar. 14, 1989, Ser. No. 323,285
Int. Cl.[5] F21S *3/00*
U.S. Cl. 362—220 **5 Claims**

1. A fluorescent light fixture comprising:
a housing including a guide means comprising a tab with an L-shaped cross section inwardly extending from said housing;
at least one socket assembly comprising at least one fluorescent light socket and a channel for engaging said guide means including an enlarged portion within said channel for rotating said socket assembly with respect to said housing from a first position wherein said light socket is positioned to engage a fluorescent light bulb and a second position wherein said light socket is protected within said housing;
wherein said enlarged portion is comprised of two quarter circles of a common center and a diameter substantially



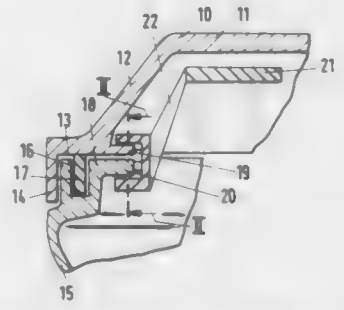
equal to a length of said tab, said quarter circles each having an edge in parallel to an unenlarged portion of said channel, and said quarter circles having 90 degrees therebetween; and
wherein said socket assembly can be removed from said housing by a straight-line movement from said second position.

5,008,791

LOW DIRECT GLARE AND WALL WASH PARABOLIC LIGHTING GRID

Ronald N. Caferro, 1520 Rockwood Blvd., Spokane, Wash. 99203

Filed Jul. 19, 1990, Ser. No. 555,250
Int. Cl.[5] F21V *11/06*
U.S. Cl. 362—290 **15 Claims**



1. A lighting system for a room having a ceiling and a wall, the lighting system comprising:
a light;
a light grid;
a frame mounting the light grid to the ceiling below the light so light therefrom will pass through the grid;
wherein the light grid is comprised of intersecting first and second sets of parallel elongated parabolic louvers;
wherein the louvers of at least one of the first or second sets are angularly oriented to nadir and spaced apart to confine light passing downwardly therethrough to an asymmetrical candlepower distribution curve, including a wall washing quadrant on one side thereof and a low direct glare distribution quadrant including a cut off angle of approximately 45 to 70 degrees from nadir on an opposite side thereof; and
wherein the light and light grid are placed adjacent the wall such that the wall washing quadrant is oriented toward the wall to illuminate the wall to the ceiling.

5,008,792

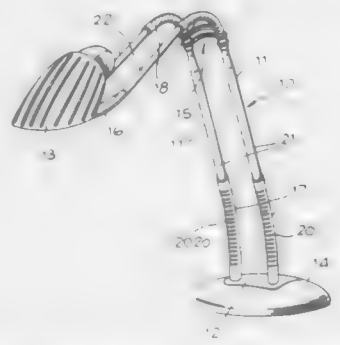
DEVICE FOR LOCKING AN OPTICALLY TRANSPARENT TROUGH TO A HOUSING OF AN EXTENDED-FIELD LIGHT

Heinz Liedtke, Dortmund; Cornelius Ploeger, Fröndenberg-Frömern, and Wilmut Görner, Mudau, all of Fed. Rep. of Germany, assignors to ABB CEAG Licht- und Stromversorgungstechnik GmbH, Soest, Fed. Rep. of Germany

Filed Mar. 26, 1990, Ser. No. 499,027
Claims priority, application Fed. Rep. of Germany, Mar. 25, 1989, 3909890
Int. Cl.[5] F21V *21/00*
U.S. Cl. 362—374 **6 Claims**

1. An apparatus comprising an optically transparent trough of an extended-field light, a housing, and a device for locking said trough to said housing, said trough and said housing each having a respective mutually adjacent edge disposed one above the other and at least one respective inwardly projecting mutually parallel projection disposed at said edge being oriented in the same direction and disposed one above the other in an assembled condition of said trough and said housing forming at least one pair of projections, and said locking device including a slider element being manually longitudinally displaceably guided in said housing between a releasing position and a locking position from outside said housing, and at least one grip each being coupled with said slider element for each pair of projections, said at least one grip having jaws receiving said pair of projections therebetween upon displacement of said slider element from said releasing position to said locking position.

5,008,793



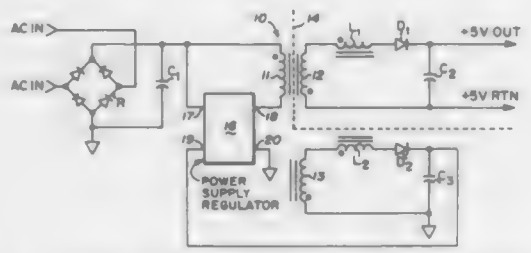
GUIDABLE ARM, PARTICULARLY FOR FREE-POSITIONING LAMPS

Stephan Copeland, New York, N.Y., assignor to FLOS S.p.A., Bovezzo, Italy

Filed May 7, 1990, Ser. No. 524,220
Int. Cl.[5] F21S *3/12;* **F21V** *21/32*
U.S. Cl. 362—413 **6 Claims**

1. Guidable arm particularly for free-positioning lamps of the type with a stand anchored to a base attached to a free end holding a lamp head, characterized by the fact that it is made up of two stems (11) equal to one another, separated in a parallel manner, rotating around their own axis, on and with respect to the fixed base, with these stems being interconnected by at least one flexible intermediate spacer (15) and being equipped at their free end with joints (16) holding the lamp head, by the fact that each of the said stems (11) comprises two goose-neck portions (17,18) separated from one another along the same stem and each made up of a flexible tube (19) and a sheath (20) of each goose-neck (17,18) has crosswise slits (20') on two diametrically opposed areas contained between two uninter-

rupted lateral strips (20″) parallel to the axis of the stem, in such a way as to permit the bending of the goose-neck in a



direction orthogonal to the slits and not laterally toward the uninterrupted strips.

5,008,794

REGULATED FLYBACK CONVERTER WITH SPIKE SUPPRESSING COUPLED INDUCTORS

Brooks R. Leman, Santa Clara, Calif., assignor to Power Integrations, Inc., Mountain View, Calif.

Filed Dec. 21, 1989, Ser. No. 455,601
Int. Cl.[5] H02M *3/335*
U.S. Cl. 363—21 **5 Claims**

1. In a flyback power supply that includes a transformer having a winding for power input, a first secondary winding for output, a first filter comprising a rectifier and a capacitor, a second secondary winding subject to voltage spikes caused by leakage inductance, and a second filter comprising a rectifier and a capacitor subject to peak charging to the leading edge of said voltage spikes, the improvement comprising:

a first inductor connected in series with the first secondary winding so that current flowing from the first secondary winding passes through the first inductor,

a second inductor connected in series with the second secondary winding so that current flowing from the second secondary winding passes through the second inductor, and

said first and second inductors being coupled inductors wound on the same core with a turns ratio and dot polarity connection set so that voltage developed across the second inductor is slightly higher than the leading edge voltage spike to which the second secondary winding is subject for blocking current flow during the interval of the leading edge of the voltage waveform to cause said second filter to properly peak charge to the plateau of said voltage waveform.

5,008,795

SWITCHED CAPACITOR INTERLEAVED FORWARD POWER CONVERTER

David W. Parsley, Draper, Utah, and Hubert C. Martin, Jr., Temecula, Calif., assignors to Unisys Corporation, Blue Bell, Pa.

Filed Mar. 23, 1990, Ser. No. 498,863
Int. Cl.[5] H02M *3/335*
U.S. Cl. 363—20 **8 Claims**

1. A DC-to-DC interleaved timing forward converter for applying a first voltage from an input power source to an output load at a second voltage, comprising:

first and second electrical transformers having a predetermined turns ratio,

a capacitor sequentially coupled to both said first and second transformers for filtering said first and second voltages, and

switch means for selectively switching aid first and second transformers alternately and sequentially to said input power source, said capacitor, and said output load, so that said capacitor applies a first potential to said first transoformer during a first time interval when said first transformer is not connected to said input power source by said switch means, and also applies said first potential to said second transformer opposing said first voltage during said first time interval, and so that said capacitor applies a second potential to said second transformer during a second time interval when said second transformer is not connected to said input power source by said switch means and also applies said second potential to said first transformer opposing said first voltage during said second time interval,

said switch means being further arranged so that said first and second transformers are connected to said output load in time interleaved fashion,

said first electrical transformer compring a primary winding and a secondary winding,

said second electrical transformer comprising a primary winding and a secondary winding,

each of said transformers being connected with an opposing polarity sense between said primary winding and said secondary winding, and with the same polarity sense, respectively, with respect to said input power source and with respect to said load,

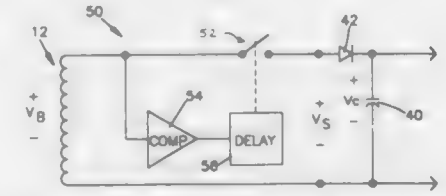
wherein said switch means further comprises:

first switch means for connecting said primary winding of said first electrical transformer to said input power source in a first position and to said capacitor in a second position, and second switch means for connecting said primary winding of said second electrical transformer to said input power source in a first position and to said capacitor in a second position,

said first and second switch means operatively engaged so as to apply said input power source to said primary winding of said first and second electrical transformers in time phase opposition so as to minimize current deviations of said input power source.

5,008,796

APPARATUS AND METHOD FOR IMPROVING LOAD REGULATION IN SWITCHING POWER SUPPLIES



William M. Johnson, Lexington, Ky., assignor to International Business Machines Corporation, Armonk, N.Y.

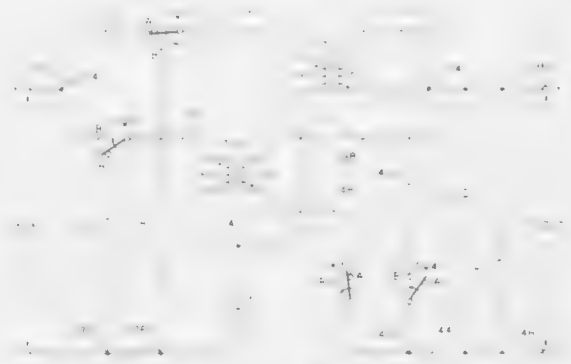
Filed Jun. 6, 1990, Ser. No. 533,973
Int. Cl.[5] H02M *3/335*
U.S. Cl. 363—21 **22 Claims**

1. A circuit for limiting the effects of overshoot in a transformer of the type having a primary winding and a secondary winding, the secondary winding being coupled to a load and the circuit having an output, the circuit comprising:

winding means operatively connected to the transformer for generating a winding voltage which varies in response to a change in voltage generated across the primary winding;

switching means for selectively communicating the winding voltage to the circuit output, the switching means having the capacity to be disposed in one of a first position and a second position, the winding voltage being communicated to the output of the circuit when the switching means is disposed in the first position; and

switch actuating means responsive to the winding means for disposing the switching means in the first position a predetermined time interval after the winding voltage has exceeded a predetermined reference voltage;



whereby the winding voltage is communicated to the output of the circuit and the effects of overshoot are eliminated in the output voltage of the circuit.

5,008,797

POWER CONVERTER UTILIZING LINE REPLACEABLE UNITS

Sunil Patel; Robert Ligon, and P. John Dhyanchand, all of Rockford, Ill., assignors to Sundstrand Corporation, Rockford, Ill.

Filed Dec. 20, 1989, Ser. No. 453,974
Int. Cl.[5] H02M *1/14*
U.S. Cl. 363—43 **13 Claims**

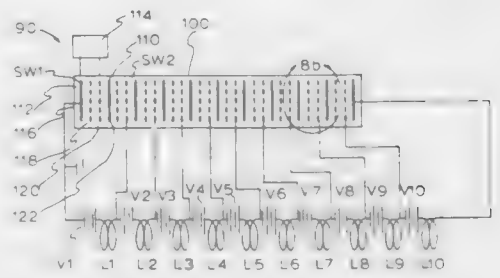
1. A modular line replaceable unit (LRU) connectable to and operable in conjunction with another substantially identical modular LRU to form a stepped-waveform inverter, comprising:

a power switch;

means coupled to the power switch for controlling same including a synchronization input which is responsive to a synchronization signal to synchronize the operation of the power switch to the other modular LRU when the modular LRU's are to be operated in conjunction with one another;

a transformer having a primary winding coupled to the power switch and a secondary winding;

means for packaging the power switch, the controlling means and the transformer as a unit; and



terminals accessible from outside the unit connected to the power switch and the transformer secondary winding including a terminal connected to the synchronization input.

5,008,798

COMPACT HIGH VOLTAGE POWER SUPPLY

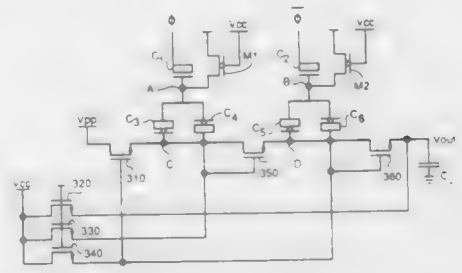
Robin T. Harvey, Thousand Oaks, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed Dec. 21, 1989, Ser. No. 454,675
Int. Cl.[5] H02M *3/18*
U.S. Cl. 363—59 **23 Claims**

2. A high voltage power supply comprising;

energy storage means;

supply means for charging said energy storage means; and



switching means for switching said energy storage means into electrical contact with a load, said switching means including at least one interruptible switch, wherein said interruptible switch is a cold cathode grid-controlled, crossed field plasma switch.

5,008,799

BACK-TO-BACK CAPACITOR CHARGE PUMPS

Antonio J. Montalvo, 850 Cole St., San Francisco, Calif. 94117

Filed Apr. 5, 1990, Ser. No. 505,292
Int. Cl.[5] H02M *3/18*
U.S. Cl. 363—60 **12 Claims**

1. A charge pump apparatus comprising:

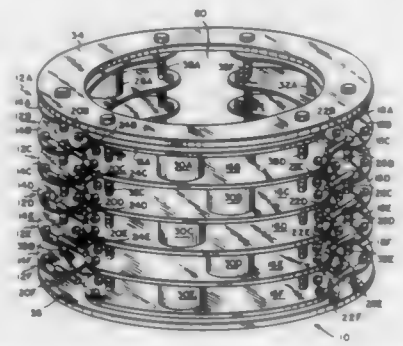
first capacitor means for providing capacitance, said first capacitance means having first and second leads, and said first capacitor means being of the type having first and second mutually exclusive states, such that when the voltage on said first lead of said capacitor means exceeds the voltage on said second lead of said capacitor means by a threshold voltage, said capacitor means is in the first state, and said capacitor means is in the second state otherwise;

second capacitor means for providing capacitance, said second capacitor means also having first and second leads, and first and second states as in said first capacitor means, said second lead of said second capacitor means connected to said first lead of said first capacitor means forming a common input lead, said second lead of said first capacitor means and said first lead of said second capacitor means forming a common output lead;

charge pumping means having an input lead and an output lead, the voltage on said output lead increases in response to a signal received on said input lead, said output lead of

said charge pumping means connected to said common input lead of said first and second capacitor means;

diode means for transferring voltage unidirectionally, said diode means having first and second leads, said first lead of said diode connected to said common output lead of said first and second capacitor means, and said second lead of said diode means forming an output lead for said charge pump apparatus, such that current flows from said first lead of said diode means to said second lead of said diode means when the voltage on said first lead of said diode exceeds the voltage on said second lead of said diode; and



voltage clamp means connected to said output lead of said charge pumping means, for ensuring that voltage on said output lead of said charging means does not fall below predetermined voltage.

5,008,800

HIGH VOLTAGE POWER SUPPLY

Robert W. Klinkowstein, Winchester, Mass., assignor to Science Research Laboratory, Inc., Somerville, Mass.

Filed Mar. 2, 1990, Ser. No. 488,744
Int. Cl.[5] H02M *7/25*
U.S. Cl. 363—61 **30 Claims**

1. A high voltage multistage cascade rectifier power supply comprising:

equipotential conductor plate means on each side of each of said stages, each of said plate means including a DC potential plate means and an AC potential plate means;

capacitor means between the AC plate means and between the DC plate means defining each stage;

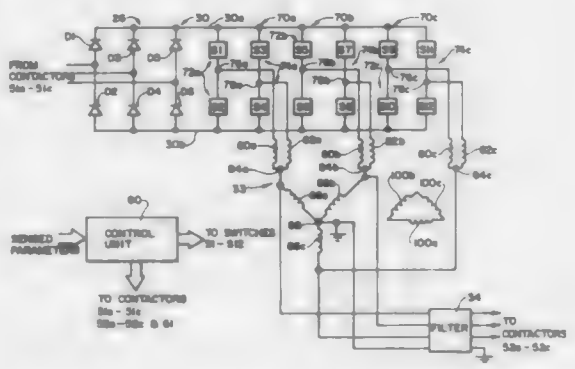
first rectifier means interconnecting selected DC plate means of one conductor plate means defining a given stage to selected AC plate means of the other conductor plate means defining the stage; and

second rectifier means for interconnecting selected DC and AC plate means of a given conductor plate means.

5,008,801

VSCF POWER CONVERSION SYSTEM USING AN OUTPUT AUTOTRANSFORMER

Timothy F. Glennon, Rockford, Ill., assignor to Sundstrand Corporation, Rockford, Ill.



Filed Dec. 11, 1989, Ser. No. 448,311
Int. Cl.[5] H02M *7/521*
U.S. Cl. 363—132 **11 Claims**

1. A power converter for converting DC power supplied on a DC rail into AC power for an AC load, comprising:

an inverter including first and second switches coupled to the DC rail;

an autotransformer including first and second winding portions having first ends coupled to the first and second switches, respectively, and second ends connected together at a common junction, the autotransformer further including a third winding portion having first and second ends coupled to the common junction and a particular DC potential, respectively;

means for operating the inverter switches to convert the DC potential on the DC rail into AC power at the common junction; and

means coupled between the common junction and the AC load for supplying the AC power to the AC load.

5,008,802

DYNAMIC INPUT METHOD AND APPARATUS FOR PROGRAMMABLE CONTROLLER

Tatsuo Itoh; Hisayoshi Ito, and Kiyomi Murasaki, all of Aichi, Japan, assignors to Mitsubishi Denki K. K., Tokyo, Japan

Filed Jan. 10, 1989, Ser. No. 295,323
Claims priority, application Japan, Jan. 11, 1988, 63-3380
Int. Cl.[5] G05B *19/04*
U.S. Cl. 364—140 **2 Claims**

1. A dynamic input method for a programmable controller comprising the steps of:

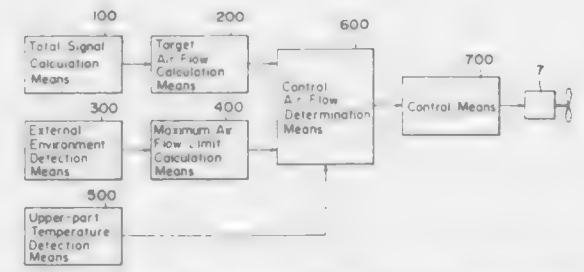
applying a block pointer signal generated by a control section to an input circuit section and a signal delay circuit section;

loading input data into said input circuit section at the block specified by said block pointer signal;

delaying said block pointer signal applied to said signal delay circuit section for a period of time greater than the period corresponding to a delay of time from said application of said block pointer signal to said input circuit section to the output of said block pointer signal from said signal delay circuit section. to form a delayed block pointer signal;

transferring said delayed block pointer signal to said control section;

loading into said control section said input data which has been loaded to said input circuit section and specified by said block pointer signal when said delayed block pointer signal is applied to said control section; and



renewing said block pointer signal, by outputting another block pointer signal which points to a different block.

5,008,803

APPARATUS FOR CONTROLLING AN AIR FLOW OF AN AUTOMOBILE AIR-CONDITIONER

Katsumi Iida, Konan, Japan, assignor to Diesel Kiki Co., Ltd., Tokyo, Japan

Filed Apr. 11, 1989, Ser. No. 338,931
Claims priority, application Japan, May 16, 1988, 63-118882
Int. Cl.[5] F25B *29/00*; **G05B** *13/02*
U.S. Cl. 364—148 **3 Claims**

1. An apparatus for controlling air flow in an air-conditioner of a motor vehicle, said apparatus comprising:

(a) total signal calculation means for calculating a thermal load of the air-conditioner based on at least a desired temperature of the air inside a passenger compartment of the motor vehicle and on a temperature representative of that of the air inside the passenger compartment, and for issuing a total signal indicative of the calculated thermal load;

(b) target air flow calculation means operatively connected to said total signal calculation means for receiving said total signal and for calculating, based on said total signal, a target air flow to be supplied to the passenger compartment;

(c) external environment detection means for detecting an environmental condition outside the passenger compartment which exerts an influence upon an air-conditioning state of the passenger compartment;

(d) maximum air flow limit calculation means operatively connected to said external environment detection means for calculating a limit value for the maximum air flow to be supplied to the passenger compartment, according to the environmental condition detected by said external environment detection means;

(e) upper-part temperature detection means for detecting the temperature of air at an upper part of the passenger compartment;

(f) control air flow determination means operatively connected to said upper-part temperature detecting means for establishing a control mode in which the air flow in the air-conditioner is regulated to said target air flow until temperature of the air at the upper part of the passenger compartment, as detected by said upper-part temperature detecting means, becomes lower than a predetermined temperature, and operatively connected to said maximum air flow limit calculation means for substituting said target air flow with said limit value calculated by said maximum air flow limit calculation means to establish a control mode in which the air flow in the air-conditioner is regulated to said limit value once the temperature of the air at the upper portion of the passenger compartment, as detected by said upper-part temperature detection means, has become lower than the predetermined temperature; and

(g) control means for controlling the rotational speed of a blower of the air-conditioner according to the control mode established by said air flow determination means.

5,008,804

ROBOTIC TELEVISION-CAMERA DOLLY SYSTEM

Gary B. Gordon, Saratoga, Calif., and Robert R. Gonnelli, Valley Cottage, N.Y., assignors to Total Spectrum Manufacturing Inc., Valley Cottage, N.Y.

Continuation of Ser. No. 228,933, Jun. 23, 1988, Pat. No. 4,959,798. This application Aug. 30, 1990, Ser. No. 574,852
Int. Cl.[5] F16M *3/00*
U.S. Cl. 364—167.01 **17 Claims**

1. A positioning system for moving a dolly member along a substantially planar surface, said dolly member having a rotation axis normal to said planar surface and a translation axis parallel to said planar surface, said system comprising:

a target means for defining a reference point and a reference direction on said planar surface;

driving means for moving said dolly member on said planar surface;

detection means affixed to said dolly member for detecting said target means; and

processor means coupling said detection means to said driving means, said processor means

controlling said driving means to move said dolly member on said planar surface by dead reckoning to a vicinity of said target means; and

in response to an output of said detecting means, controlling said driving means to move said dolly member to bring the translation axis thereof parallel to the reference direction defined by said target means, and to bring the rotation axis of said dolly member into coincidence with the reference point defined by said target means.

REAL TIME, FAIL SAFE PROCESS CONTROL SYSTEM AND METHOD

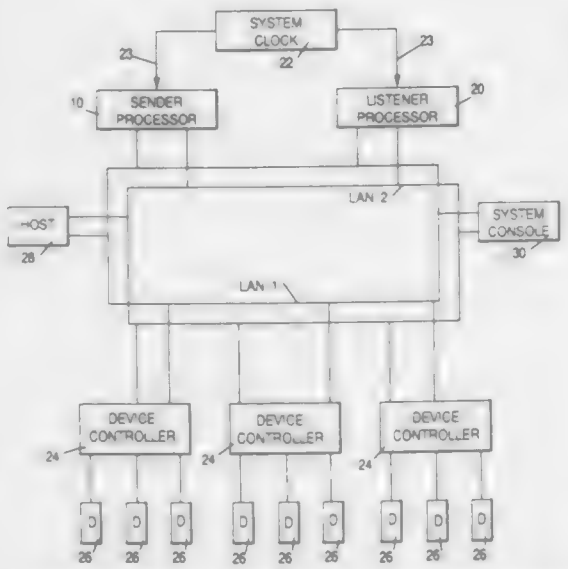
Carolyn A. B. Fiebig, Burtonsville; Mike R. Fuqua, Frederick; Suresh K. Gursahaney, Gaithersburg; Gregg M. Margosian, Germantown, and Mark H. Weiss, Gaithersburg, all of Md., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Aug. 3, 1989, Ser. No. 389,023
Int. Cl.[5] G06F *11/20*
U.S. Cl. 364—184 **15 Claims**

1. A fail safe data processing system for real time control of a plurality of devices, comprising:

a LAN having a plurality of devices coupled thereto, for communicating device control messages to said plurality of devices;

a system clock for generating a periodic time base for said system;



a first data processor operating in a sender mode, having a clock input coupled to said system clock, coupled to said LAN and having a memory storing a first control schedule table, a processor status table and a control program, for sequentially executing instruction steps in said control program for accessing data from said first control schedule table and generating a first sequence of device command messages, and outputting said messages to said LAN

for transmission to said plurality of devices and for updating a health status of said first processor in said processor status table;

a second data processor operating in a listener mode, having a clock input coupled to said system clock, coupled to said LAN and having a memory storing a second control schedule table and a control program, for sequentially executing instruction steps in said control program therein for accessing data from said second control schedule table and generating a second sequence of device command messages which are the same as said first sequence, and buffering said second sequence of device command messages in a listener data buffer;

said second data processor receiving said first sequence of command messages on said LAN and transferring said first sequence from said LAN to a receive data buffer in said second data processor;

a compare means in said second data processor coupled to said listener data buffer and to said receive data buffer, for comparing said first sequence of device command messages with said second sequence of device command messages;

a listener takeover means in said second data processor coupled to said compare means, for outputting a takeover request on said LAN to said first data processor when said first sequence of device command messages are not the same as said second sequence of device command messages, said listener takeover means further starting a takeover interval timer in said second data processor to expire at a predetermined timeout value;

a takeover response means in said first data processor coupled to said LAN, for receiving said takeover request and in response thereto, checking said processor status table to determine whether said first processor is able to continue operating in said sender mode;

said takeover response means outputting through said LAN to said second processor an agreement message if said processor status table indicates that said first processor is not able to continue said sender mode, said listener takeover means in said second data processor, in response thereto, changing said second processor to said sender mode, accessing said second sequence of device command messages in said listener data buffer and outputting over said LAN, device command messages to said plurality of devices.

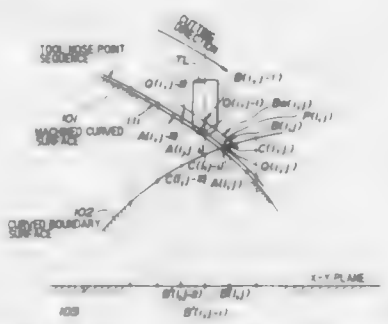
METHOD OF CREATING NC DATA FOR MACHINING CURVED SURFACES

Masaki Seki; Koji Samukawa, and Osamu Hanaoka, all of Tokyo, Japan, assignors to Fanuc Ltd, Minamitsuru, Japan



PCT No. PCT/JP88/00386, § 371 Date Dec. 12, 1988, § 102(e) Date Dec. 12, 1988, PCT Pub. No. WO88/08560, PCT Pub. Date Nov. 3, 1988

PCT Filed Apr. 20, 1988, Ser. No. 290,288

Claims priority, application Japan, Apr. 21, 1987, 62-98151

Int. Cl.[5] G05B *19/42*; G06F *15/46*

U.S. Cl. 364—191 **3 Claims**

1. A method of automatically creating NC data in an NC data creating apparatus and machining a curved surface, comprising:

a first step of inputting data specifying a first three-dimensional surface and data specifying a second three-dimensional surface that defines a cutting boundary in a depth direction of said first three-dimensional surface;

a second step of generating a first plurality of point-sequence paths defining said first three-dimensional surface and generating a second plurality of point-sequence paths that define said second three-dimensional surface;

a third step of determining a tool nose point sequence corresponding to a point sequence on said first curved surface based on said first plurality of point-sequence paths;

a fourth step of determining a projected point sequence obtained by projecting said tool nose point sequence onto a reference plane, and determining a projected point sequence on said second curved surface obtained by projecting said first-mentioned point sequence onto said second curved surface;

a fifth step of checking if a line segment connecting the tool nose point sequence and a line segment connecting the projected point sequence on said second curved surface intersect and if they do intersect, determining a point of intersection P(i,j);

a sixth step of creating NC data up to a point of said intersection P(i,j) if the line segments intersect; and

a seventh step of subsequently machining a curved surface by performing a pick-feed using the NC data.

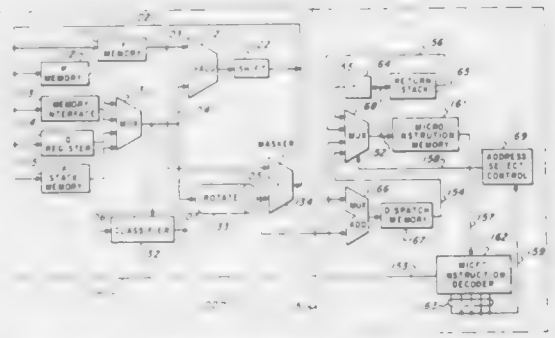
DATA PROCESSING APPARATUS WITH ABBREVIATED JUMP FIELD

Steven D. Krueger, Dallas, and Michael J. Amundsen, Austin, both of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Continuation of Ser. No. 628,071, Jul. 5, 1984, abandoned. This application Apr. 27, 1990, Ser. No. 517,979

Int. Cl.[5] G06F *9/32, 9/38, 9/26*



U.S. Cl. 364—200 **10 Claims**

1. A data processing apparatus comprising:

an instruction memory for storing therein a sequence of multiple instruction words, each instruction word specifying a data processing function, each of said instruction words having a limited control field for specifying preselected next possible instruction words, wherein said limited control fields is an instruction of said multiple instruction words;

a data processing unit for performing data processing functions on data words under control of recalled data instruction words;

an instruction control means for controlling the recall of instruction words from said instruction memory, said instruction control means determining the next sequential instruction to be recalled from said instruction memory

based upon the current instruction word in combination with control parameters for said data processing apparatus;

an instruction decode means connected to said data processing unit and to said instruction control means for decoding instruction words recalled from said instruction memory by said instruction control means, wherein said instruction decode means recalls the next instruction word based upon the value found in the limited control field of the current instruction.

CONSOLIDATION OF COMMANDS IN A BUFFERED INPUT/OUTPUT DEVICE

William J. Fries, Merritt Island; Donald Kleinschnitz, and T. Craig Nelson, both of Melbourne, all of Fla., assignors to Storage Technology Corporation, Louisville, Colo.

Filed Jun. 23, 1988, Ser. No. 210,719

Int. Cl.[5] G06F *9/318, 3/12*

U.S. Cl. 364—200 **7 Claims**

1. In a data processing system which includes a host computer, a channel coupling said host computer to a line printer, and a buffer within said line printer for buffering commands received across said channel from said host computer, wherein said received commands optionally include a data field containing data to be output by said line printer, a method of consolidating said commands in said line printer comprising the steps of:

checking each said command received by said buffer to determine whether it includes output data for said line printer;

assigning a pointer in said buffer to each said command not having output data associated therewith that is received prior to a command having output data associated therewith, each subsequent said command not having output data associated therewith that is received prior to said command having output data associated therewith being assigned a pointer lower in priority than the pointer assigned to an immediately previously buffered command not having output data associated therewith;

assigning a pointer in said buffer to a first of said received commands having output data associated therewith, said pointer assigned to said first received command being lower in priority than the pointer assigned to said immediately previously buffered command not having output data associated therewith;

combining each said check command not having output data with said first command;

printing said output data; and

executing said combined commands.

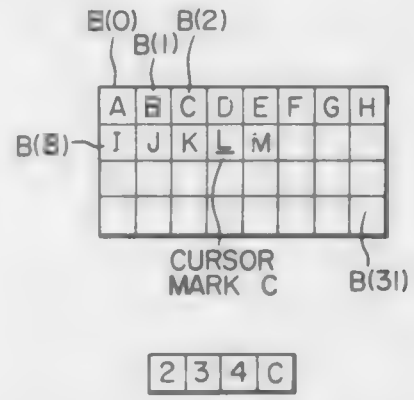
DATA PROCESSOR CAPABLE OF OUTPUTTING CODES REPRESENTING DISPLAYED PATTERNS



Katsumi Matsaki, Sagamihara, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 719,030, Apr. 3, 1985, abandoned, which is a continuation of Ser. No. 351,457, Feb. 23, 1982, abandoned. This application Jan. 12, 1987, Ser. No. 4,849

Claims priority, application Japan, Mar. 2, 1981, 56-29542

Int. Cl.[5] G06F *3/14*

U.S. Cl. 364—200 **8 Claims**

1. An information processing apparatus comprising:

keyboard means for entering character information, said keyboard means having manual instruction means for recalling character information;

memory means for storing character information entered from said keyboard means, said memory means storing character information in the form of encoded signal information;

converting means connected to said memory means for converting character information stored in said memory means to corresponding character pattern information;

display means connected to said converting means for displaying the character pattern information converted from corresponding character information by said converting means; and

control means connected to said keyboard means for recalling encoded signal information corresponding to character pattern information being displayed by said display means and for displaying said character information in the form of encoded signal information on said display means when instructed by said manual instruction means, said

control means recalling said character information in the form of corresponding encoded signal information stored in said memory means after said character pattern information is displayed by said display means, said control means comprising cursor control means for specifying particular character pattern information being displayed by said display means for which the corresponding encoded signal information is to be displayed, said cursor control means specifying said particular character pattern with a cursor.

SYSTEM FOR DISPLAYING DIFFERENT SUBSETS OF SCREEN VIEWS, ENTERING DIFFERENT AMOUNT OF INFORMATION, AND DETERMINING CORRECTNESS OF INPUT DEPENDENT UPON CURRENT USER INPUT

William C. Kessel, Watertown; John L. Laclaire, Cambridge; Andrew L. Lui, West Newton; Michael H. Locke, Lakeville, and Herbert I. Britt, Cambridge, all of Mass., assignors to Process Modeling Investment Corp., Wilmington, Del.

Filed Sep. 29, 1988, Ser. No. 251,514

Int. Cl.[5] G06F *15/403, 15/46*

U.S. Cl. 364—200 **20 Claims**

19. A method of forming an input file for a computer controlled model process simulation device, comprising the steps of:

displaying on a video display, controlled by computer means, an ordered series of screen views to provide an arranged course for user entry of data for forming a complete input file, at least one screen view providing input fields for receiving data entered by the user through an input device coupled to the computer means;

providing to a user on each screen view a state of completeness and prompts directing the user through the arranged course;

determining correctness of data currently entered by the user for one input field according to data which was entered by the user for other input fields, and if correct, updating the state of completeness provided by each screen view, a complete state being established when a complete and error free input file is formable from the user entered data, amount of user entered data to form a complete input file being a function of content of data entered by the user along the arranged course;

forming a changeable subset of the ordered series of screen views in response to the updating of the state of completeness, the subset providing that portion of the arranged course for user entry of data necessary to enable a complete input file to be formed with data entered by the user thus far;

displaying the subset upon user command;

updating the state of completeness with each user entry of data in a screen view of the subset; and

changing the subset in response to each updating of the state of completeness.

CONTROL MECHANISM FOR ZERO-ORIGIN DATA SPACES

Casper A. Scalzi, Poughkeepsie, and Richard J. Schmalz, Wappingers Falls, both of N.Y., assignors to International Business Machines Corp., Armonk, N.Y.

Filed Feb. 10, 1988, Ser. No. 154,688

Int. Cl.[5] G06F *12/00*

U.S. Cl. 364—200 **6 Claims**

1. In a central processing complex comprising a CPU, main storage, system resources connected to the CPU and to the main storage, and an operating system supporting a plurality of virtual address spaces containing instructions and data, each of said virtual address spaces comprising virtual addresses at least one range of said virtual addresses being termed a segment, said segment having an included range of virtual addresses termed a page, a mechanism for supporting two distinct virtual address space types,

a program address space type comprising one or more program address spaces in which at least one common range of virtual addresses represents virtual storage that is common to all such program address spaces, and

a data address space type comprising one or more data spaces in which said at least one common range of virtual addresses represents virtual storage unique to each data space,

said mechanism comprising:

(a) storage access control means for accessing main storage using a real address;

(b) translator means for translating any supplied virtual address, supplied by a supplying one of said virtual address spaces and associated with a first one of said virtual address spaces, into an associated real address for use by said storage access control in accessing main storage,

(c) segment table descriptor (STD) selector means, within said CPU, for associating an STD with said any supplied virtual address,

(d) tale means in main storage comprising a segment table, located by each STD, said segment table having segment table entries, each of said segment table entries locating a page table, said table means usable by said translator means in translating said any supplied virtual address,

(e) a dynamic lookaside table (DLAT) coupled to said storage access control and having DLAT entries comprising a DLAT virtual address associated with a particular virtual address space, a corresponding previously translated DLAT real address, and segment table origin ID having a plurality of possible values, one possible value being a common indicator indicating that the DLAT virtual address in the entry having the common indicator falls within said at least one common range, said DLAT entries usable by said storage access control for bypassing said translator means for translating any supplied virtual address,

(f) a data space indicator associated with said any supplied virtual address and identifying said any supplied virtual address as being associated with either any one of said one or more program address spaces (the being said to be "off") or any one of said one or more data spaces (then being said to be "on"), and

(g) DLAT read control means, coupled to said DLAT, and responsive to said data space indicator, for directly obtaining from the DLAT the associated real address for use by said storage access control means, thus permitting bypass of the translator means when said data space indicator is "off" if:

(1) said any supplied virtual address matches the DLAT virtual address of a first one of said DLAT entries, and said DLAT entry has the common indicator, so that said first one of said DLAT entries for said any supplied virtual address is shared by all of said program address spaces,

but directly obtaining from the DLAT the associated real address thus permitting bypass of the translator means when said data space indicator is "on" only if:

(1) said any supplied virtual address matches the DLAT virtual address of a second one of said DLAT entries, and

(2) the particular virtual address space associated with the DLAT virtual address of the second one of said DLAT entries is the data space containing said any supplied virtual address, so that the second one of said DLAT entries cannot be shared among said data spaces, even if it has the common indicator.

CONTEXT SWITCHING METHOD AND APPARATUS FOR USE IN A VECTOR PROCESSING SYSTEM

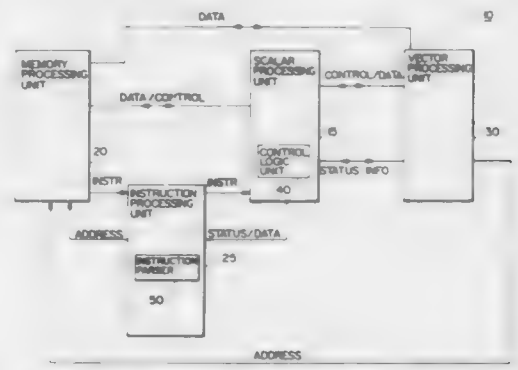
Dileep P. Bhandarkar, Shrewsbury, Mass.; Dave Cutler, Bellevue, Wash.; Wayne Cardoza, Merrimack, N.H.; Rich Witek, Littleton, Mass., and Dave Orbits, Redmond, Wash., assignors to Digital Equipment Corporation, Maynard, Mass.

Filed Mar. 18, 1988, Ser. No. 170,399

Int. Cl.[5] G06F *9/46, 15/16, 15/347*

U.S. Cl. 364—200 **13 Claims**

1. A multitasking data processing system for alternately executing portions of a plurality of processes, said processes consisting of sequences of instructions which can include vector instructions involving data processing operations on vector quantities and scalar instructions involving data processing operations on nonvector quantities, the one of said plurality of processes currently being executed by said data processing system being called a current process, and the data processing system comprising:



a memory having a plurality of portions, each of the portions corresponding to a different one of said processes;

scalar processing means for executing scalar instructions;

vector processing means for executing vector instructions in said processes, said vector processing means including vector state means for storing state information describing an execution state of said vector processing means;

instruction decoding means, coupled to said scalar processing means and said vector processing means, for identifying and routing the scalar instructions and vector instructions in the processes to said scalar processing means and said vector processing means, respectively;

vector instruction identifying means, coupled to said instruction decoding means, for recognizing when said current process is about to execute one of said vector instructions;

last user indicating means for identifying as a last vector user process the one of said processes for which said vector processing means most recently executed a vector instruction; and

saving means, coupled to said vector instruction identifying means and said last user indicating means, for causing said data processing system to store said vector state information in said memory at one of the locations corresponding to the last vector user process when said vector instruction identifying means recognizes both that said current process is about to execute a vector instruction and that said last vector user process is different from said current process.

MULTI-CACHE DATA STORAGE SYSTEM

David P. Crane; Terence M. Cole, both of Reading, and Geoffrey Poskitt, Camberley, all of England, assignors to International Computers Limited, London, England

Filed Oct. 21, 1988, Ser. No. 261,033

Claims priority, application United Kingdom, Dec. 5, 1987, 8728494

Int. Cl.[5] G06F *13/00*

U.S. Cl. 364—200 **2 Claims**

1. A cache unit comprising:

(A) means for receiving a virtual address comprising first, second and third portions,

(B) means for receiving an input physical address comprising first and second portions,

(C) a data cache RAM for holding a plurality of data items,

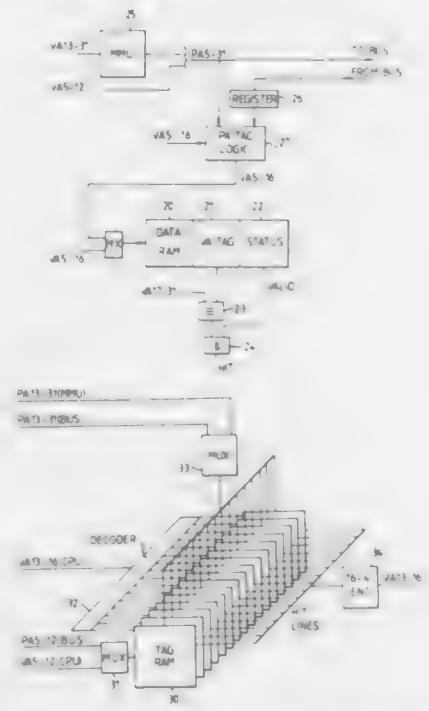
(D) first multiplexing means for selecting one of the following to address the data cache RAM:

(i) the first and second portions of the virtual address,

(ii) the first portion of the input physical address and a reconstructed second portion of the virtual address,

(E) a memory management unit for translating the virtual address to form an output physical address comprising first and second portions, the first portion of the output physical address being equal to the first portion of the virtual address, and the second portion of the output physical address being derived from the second and third portions of the virtual address,

(F) a plurality of tag RAMS, each of which holds a plurality of physical address tags, each tag RAM having address, data and write enable inputs, and having a HIT output



which indicates a match between data applied to the data input and a currently addressed tag in that tag RAM,

(G) second multiplexing means for selecting one of the following to be applied in parallel to the address inputs of all the tag RAMs:

(i) the first portion of the virtual address,

(ii) the first portion of the physical address,

(H) third multiplexing means for selecting one of the following to be applied in parallel to the data inputs of all the tag RAMs:

(i) the second portion of the output physical address,

(ii) the second portion of the input physical address,

(I) a decoder having an input connected to receive the second portion of the virtual address and having a plurality of outputs connected to the write enable inputs of the respective tag RAMs, and

(J) an encoder having a plurality of inputs connected to receive the HIT outputs of the respective tag RAMs, and having an output which supplies said reconstructed second portion of the virtual address.

METHOD AND APPARATUS FOR UPDATING SYSTEM SOFTWARE FOR A PLURALITY OF DATA PROCESSING UNITS IN A COMMUNICATION NETWORK

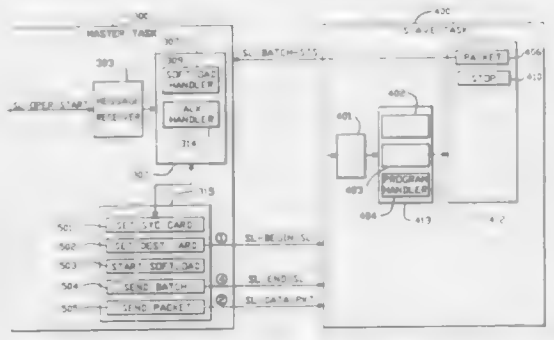
Ashish Mathur, Sunnyvale, Calif., assignor to Network Equipment Technologies, Inc., Redwood City, Calif.

Filed Aug. 15, 1988, Ser. No. 232,293

Int. Cl.[5] G06F *15/00, 11/00*

U.S. Cl. 364—200 **21 Claims**

12. In a communication network having a plurality of processing units distributed among multiple nodes linked by communication channels where each of the processing units is coupled to at least one memory unit and where each memory unit has a status identification, maintenance apparatus for updating system software among the processing units from a first version to a second version comprising:



first means in a source node for receiving the second version;

second means coupled to the first means for transmitting the second version through the network to one or more specified memory units in one or more other nodes, including means for assigning a first status to the specified memory units, and means for changing the first status to a second status upon successfully communicating the second version thereto,

for at least one of said other nodes,

third means for initiating a trial use of the second version in a processing unit of the one of said other nodes, including means for changing the status of memory units containing the second version to a third status;

fourth means for detecting whether the second version operates successfully or fails to operate successfully during the trial use;

said fourth means including, in response to a detection that the second version fails to operate successfully during the trial use means, for restoring the one of said other nodes to the first version, including means for changing the memory units containing the second version to the second status; and

fifth means, in response to a detection that the second version operates successfully during the trial use, for designating the second version as a preferred version of system software, including means for changing the status of the memory units containing the second version to a fourth status.

PARALLEL PROCESSOR

W. Daniel Hillis, Brookline, Mass., assignor to Thinking Machines Corporation, Cambridge, Mass.

Continuation of ser. No. 499,474, May 31, 1983, Pat. No. 4,814,973. This application Jun. 27, 1988, Ser. No. 184,739

Int. Cl.[5] G06F *15/16*

U.S. Cl. 364—200 **16 Claims**

1. Message switching apparatus comprising:

a plurality of message inputs on which messages are received;

a plurality of message outputs on which messages are transmitted;

storage means for storing said messages, said storage means having a plurality of inputs and an equal number of outputs;

an array of logic cells equal in number to a product of the number of message inputs and the number of storage means inputs, said array of logic cells being organized in two dimensions hereinafter referred to as rows and columns, the number of rows equaling the number of storage means inputs and the number of columns equaling the number of message inputs.

each logic cell except those at the edges of the array comprising:

(a) means for receiving a message from a cell in an adjacent row,

(b) means for receiving a message from a cell in an adjacent column,

(c) means for transmitting a message to a cell in an adjacent column,

(d) means for transmitting a message to a cell in an adjacent row,

(e) means for transmitting a message to one of said message outputs, and

(f) logic means for steering a message to an adjacent row, and adjacent column or a message output,

each logic cell in one of the rows at the edge of the array comprising:

(a) means for receiving a message from one of said plurality of message inputs,

(b) means for receiving a message from a cell in adjacent column,

(c) means for transmitting a message to a cell in an adjacent column,

(d) means for transmitting a message to a cell in an adjacent column,

(e) means for transmitting a message to one of said message outputs, and

(f) logic means for steering a message to an adjacent row, an adjacent column or a message output.

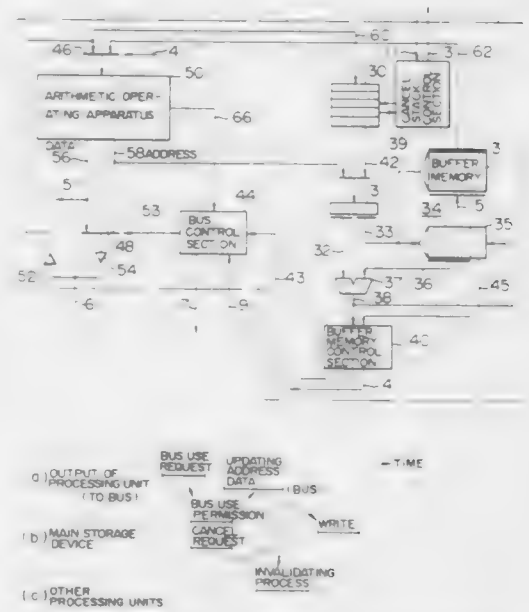
METHOD AND APPARATUS FOR TRANSFERRING ADDRESSES AND INFORMATION IN A BUFFER MEMORY AND A COMMON MAIN STORAGE DEVICE



Masabumi Shibata; Akira Ishiyama, and Takeshi Takemoto, all of Hadano, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Jul. 22, 1988, Ser. No. 222,841

Claims priority, application Japan, Jul. 24, 1987, 62-183721

Int. Cl.[5] G06F *9/00*

U.S. Cl. 364—200 **17 Claims**

1. An information processing apparatus comprising.

a bus;

a main storage device connected to said bus, said main storage device containing updatable information and addresses corresponding to said information,

a plurality of processing units connected to said bus such that said processing units continuously monitor the bus, each one of said processing units including a buffer memory having copies of selected portions of the updatable information and the corresponding addresses and means for updating the information; and,

a plurality of signal lines for said each one of said processing units, said signal lines connecting said processing units and said main storage for passing signals between said processing units and said main storage, without requiring access to said bus, said plurality of signal lines including:

a bus use request line, for sending a bus use request signal from a processing unit of said processing units to said main storage in order to pass updated information from said processing unit to said main storage over said bus;

a cancel request line for sending a cancel request signal from said main storage to each of said processing units other than said processing unit which sent said bus use request signal, in order to invalidate buffer memory information corresponding to the address of the updated information, wherein each of said processing units receiving said cancel request signal checks the buffer memory for an address corresponding to the address of the updated information and invalidates the information corresponding to that address, whereby invalidation of information in each of said processing units receiving said cancel request signal is obtained without the requirement of accessing the bus to send at least one of said bus use request signal and said cancel request signal.

METHOD AND APPARATUS FOR RECONSTRUCTING A TOKEN FROM A TOKEN FRAGMENT

Alexander K. Bocast, 2206 S. Dinwiddie St., Arlington, Va. 22206, assignor to Alexander K. Bocast, Arlington, Va.

Filed Apr. 24, 1989, Ser. No. 342,085
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—200 **21 Claims**

MICROFICHE APPENDIX INCLUDED
(1 Microfiche, 37 Pages)

1. In a data processing system wherein messages comprising tokens, or strings of characters, may be corrupted into fragments which must be reconstructed into the original tokens, a method of reconstructing an original token from an input string containing at least one unreconstructed token consisting of at least one character, a character being at least one symbol for a letter, a numeral, a punctuation element, or other element of a token, the unreconstructed token having a first end and second end, the method comprising the steps of iteratively calculating and recording at least two indices for the unreconstructed token and at least two indices for a comparison vocabulary string having at least one character, the vocabulary string having a first end and a second end, the iterative calculation involving comparisons of characters in the unreconstructed token with characters in the vocabulary string, at least one of the indices serving both to point to a character of the unreconstructed token for comparison with a character of the vocabulary string and to indicate a position within the unreconstructed token from either the first end or the second end of the unreconstructed token, the position being determined by a series of successful character comparisons, a successful character comparison occurring when a character in the unreconstructed token matches a character in the vocabulary string, the at least one index being revised upon each successful character comparison, whereby a measure of likelihood that the vocabulary string is a reconstruction of the original token is determined.

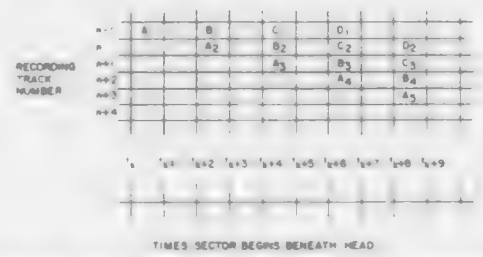
MEMORY SPACED ARRAY

George G. Gorbatenko, 924 Sierra La. NE., Rochester, Minn. 55904



Continuation of Ser. No. 105,872, Oct. 7, 1987, abandoned. This application Jul. 19, 1989, Ser. No. 383,235
Int. Cl.[5] G06F *7/00, 13/00*
U.S. Cl. 364—200 **78 Claims**

1. A method for storing discrete information representations at, and retrieving such discrete information representations from, any of a plurality of storage locations in an alterable state material provided in a storage means with said plurality of storage locations including first and second sequential pluralities of said storage locations therein each of which has its said storage locations arranged in a sequential order, said storage means being capable of permitting access successively to said storage locations in each of said first and second sequential pluralities thereof only in its said sequential order for purposes of such storing and retrieving and, after permitting access to a selected said storage location in one of said first and second sequential pluralities thereof for such a purpose, being capable of permitting that next following access for such a purpose to a corresponding said storage location in that other said sequential plurality remaining which is first available for such a following access, said method comprising:

receiving at a first input in said storage means a first sequence of said discrete information representations;

storing said first sequence of discrete information representations in said first sequential plurality of storage locations in said alterable state material;

receiving at a second input in said storage means a second sequence of said discrete information representations

where each said discrete information representation in said first sequence thereof, if retrieved by said storage means and provided at a first output thereof, is to have either of a selected one of (i) its following said discrete information representation in said first sequence, if any, and (ii) a corresponding said discrete information representation in said second sequence, directly retrievable thereafter and provided at a second output of said storage means; and

storing each of said discrete information representations in said second sequence thereof in a said storage location selected from that portion of those said storage locations in said second sequential plurality thereof included in its sequential order onward from that said storage location therein corresponding, as aforesaid, to that said storage location in said first sequential plurality thereof in which is stored that discrete information representation in said first sequence thereof to which that said second sequence discrete information representation being stored corresponds.

METHOD OF RAPIDLY OPENING DISK FILES IDENTIFIED BY PATH NAMES

Kenneth W. Christopher, Jr., Lighthouse Point; Barry A. Feigenbaum; Jin Kim, both of Boca Raton, and Douglas C. Love, Delray Beach, all of Fla., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 30, 1987, Ser. No. 32,210
Int. Cl.[5] G06F *12/02, 15/40*
U.S. Cl. 364—200 **10 Claims**

1. A method of operating a personal computer system having a first disk drive including a first disk in which is stored a tree structure of directories and files, said directories and said files being stored in different clusters on said disk, each directory containing a list of directory entries identifying files and directories stored therein, each directory entry for a directory containing information including a directory name and starting cluster where such directory is stored on said disk, each directory entry for a file containing information including a file name and starting cluster where such file is stored on said disk, said data processing system further comprising a main memory for storing data, said data stored in said memory being accessible at a rate substantially faster than the rate at which data stored on said disk can be accessed, said method comprising the steps of:

(a) creating in said main memory a first cache containing a predetermined number of cache entries for storing a history of paths to most recently used files in said disk drive, said cache entries including one cache entry for each file and one cache entry for each directory to such file, a cache entry for a directory containing the directory entry for such directory, a cache entry for a file containing the directory entry for such file;

(b) in response to an initial request to open a given file nested in a path of directories where such request identifies said given file by its file name and each of said directories in said path by their directory names, accessing said disk at least once for each directory and at least once for said given file and reading from said disk the directory entries corresponding to said given file and to each directory in said path to said given file;

(c) storing said directory entries read in step (b) in cache entries in said cache and forming a chain to create a history of said path to said given file;

(d) in response to a subsequent request to open said given file, searching through said cache entries in said chain to locate said directory entry therein for said given file; and

(e) opening said given file by using said directory entry located in step (d).

5,008,821

COMPUTERIZED PROCESS AND SYSTEM FOR ASSIGNING AND DELIVERING FEED TO ANIMALS IN A FEEDLOT

William C. Pratt, Canyon, and William D. McKillip, Amarillo, both of Tex., assignors to Micro Chemical, Inc., Amarillo, Tex.

Continuation-in-part of Ser. No. 85,073, Aug. 12, 1987. This application Jan. 26, 1988, Ser. No. 148,685
Int. Cl.[5] A01K *5/02*
U.S. Cl. 364—413.01 **23 Claims**

1. A system for assigning feed to feed bunks in a feedlot, comprising:

computer means programmed for receiving, storing, and displaying feed consumption data for each of a plurality of animal pens in the feedlot;

data entry means accessible at each of said animal pens for entering feed assignment data for the feed bunk associated with an animal pen and for communicating said assignment data to the computer means; and

display means accessible at each of said animal pens and communicating with the computer means for displaying the feed consumption data for the animal pen;

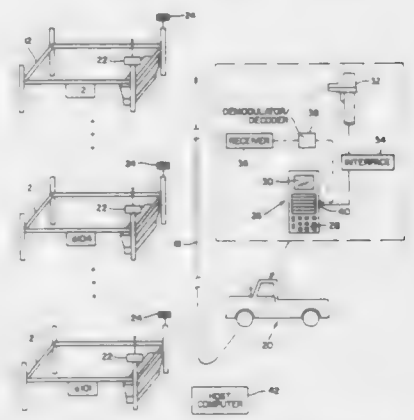
identification means associated with each animal pen for identifying the animal pen;

the data entry means including means for reading the identification means.

13. A process for assigning feed to feed bunks in a feedlot, comprising:

driving to an animal pen having an associated feed bunk for which feed is to be assigned;

entering pen identification data for the pen in a computer programmed to store data about each pen;



observing the condition of the feed bunk for making a feed assignment;

entering feed assignment data for the feed bunk into the computer for recording with the pen identification;

repeating the above steps until feed has been assigned to each feed bunk; and

gathering the entered data for determining the feed to be delivered to the animal pens;

the entering of pen identification data comprising reading the pen identification on the animal pen by machine.

17. A process for delivering feed rations to feed bunks in a feedlot, comprising:

storing in a computer for selective display feed delivery data for each of a plurality of animal pens in the feedlot, each pen having an associated feed bunk, said data including the type of feed ration for each pen;

loading a feed truck with a ration quantity for said delivery;

driving to one of the animal pens for delivering the ration quantity;

entering in the computer pen identification data;

checking via the computer the pen identification data against the type of ration to determine if the ration type is to be dispensed to the pen;

monitoring the ration quantity as it is being dispensed into the feed bunk associated with the pen;

repeating the above steps for each animal pen; and

recording for each pen the actual quantities dispensed;

the entering of pen identification data comprising reading the pen identification on the animal pen by machine.

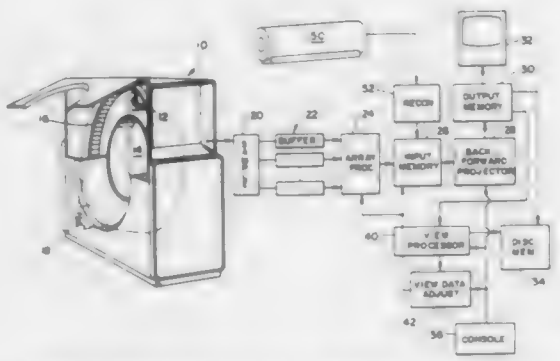
5,008,822

COMBINED HIGH SPEED BACKPROJECTION AND FORWARD PROJECTION PROCESSOR FOR CT SYSTEMS

Carl J. Brunnett, Willoughby Hills; Allen B. Zachary, Cleveland, and Holly C. Heiple, Cleveland Hts., all of Ohio, assignors to Picker International, Inc., Highland Hts., Ohio

Filed Nov. 25, 1988, Ser. No. 276,859
Int. Cl.[5] G06F *15/42*
U.S. Cl. 364—413.21 **18 Claims**

1. A diagnostic imaging system comprising:



a CT scanner for generating CT views of radiation intensity data, each CT view including view data elements which correspond to an intensity of radiation along a corresponding ray through a scan circle;

an array processor means for processing a plurality of the CT views;

a non-invasive examination means for generating diagnostic data indicative in interior regions of a subject;

an image reconstruction means for reconstructing the diagnostic data into an image representation;

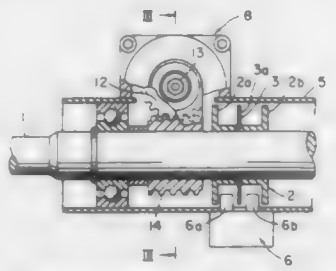
a combined backprojector and forward projector means for backprojecting views into an image representation and for

forward projecting data of the image representation into view representations;

an input memory which is connected with an input of the combined backprojector and forward projector means for selectively loading the image representation data into the combined backprojector and forward projector means to be forward projected into the view representations, the input memory being operatively connected with the image reconstruction means.

5,008,823

METHOD AND APPARATUS FOR DETERMINING FAILURE OF VEHICLE STEERING SENSING DEVICE



Akira Takahashi, Tokyo, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 9, 1990, Ser. No. 491,204

Claims priority, application Japan, Mar. 14, 1989, 1-61442

Int. Cl.[5] G01M *19/00;* **B62D** *1/00*

U.S. Cl. 364—424.03 **5 Claims**

1. A method of determining a failure of a steering sensing device of a steering shaft mounted on a motor vehicle, comprising the steps of:

detecting steering angle of the steering shaft from a neutral position by a steering angle sensor;

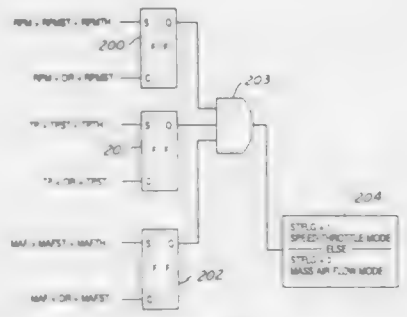
sensing a steering speed of the steering shaft by means of a steering speed sensor;

calculating a variation with time of the steering angle detected by the steering angle sensor;

comparing the variation with the steering speed; and

determining a failure of at least one of the steering angle sensor and the steering speed sensor when the difference or a ratio between the variation and the steering speed is outside a predetermined range.

5,008,824



HYBRID AIR CHARGE CALCULATION SYSTEM

Walter F. Clark, Plymouth, and Bor-Dong Chen, Dearborn, both of Mich., assignors to Ford Motor Company, Dearborn, Mich.

Filed Jun. 19, 1989, Ser. No. 368,001

Int. Cl.[5] G06F *15/20*

U.S. Cl. 364—431.05 **6 Claims**

1 A method of determining air charge into an internal combustion engine including the steps of:

deciding between using either a mass airflow sensor mode determination or a speed throttle mode of calculation as a function of engine RPM, throttle position, and mass airflow;

using a mass airflow sensor reading to determine air charge if the mass airflow mode has been chosen;

using a speed throttle look-up table to obtain air charge if the speed throttle mode has been chosen;

providing a first Q output from a first flip-flop having a set input of one when engine RPM is greater than a first RPM constant and having a clear input of one when RPM is less than a second RMP constant wherein the first RPM constant is the sum of an engine speed threshold necessary to exit the mass airflow mode plus an engine speed hysteresis to enter the speed throttle mode and the second RPM constant is the engine speed threshold necessary to exit the mass airflow mode;

providing a second Q output from a second flip-flop having a set input which is one when throttle position is greater than a first throttle position constant and having a clear input of one when throttle position is less than or equal to a second throttle position constant;

providing a third Q output from a third flip-flop having a set input which is one when mass airflow is greater than a first mass airflow constant and a clear input which is one when mass airflow is less than or equal to a second mass airflow constant;

coupling the three Q outputs of said first, second and third flip-flops as inputs of an AND logic; and

choosing speed throttle mode when the output of the AND logic is one and choosing mass airflow mode when the output of the AND logic is zero.

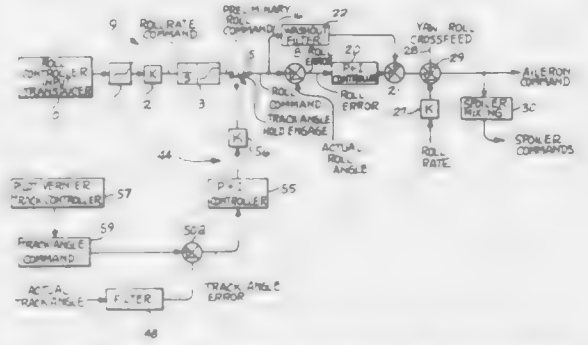
5,008,825

APPARATUS AND METHODS FOR AUTOMATICALLY MAINTAINING AIRCRAFT TRACK ANGLE

Arun A. Nadkarni, 12836 NE. 135th St., Kirkland, Wash. 98034, and Mithra M. K. V. Sankrithi, 4554 143rd Ave., SE., Bellevue, Wash. 98006

Filed May 1, 1989, Ser. No. 346,432

Int. Cl.[5] B60C *13/18*



U.S. Cl. 364—434 **47 Claims**

1. A control system for an aircraft, the control system comprising:

a. roll input means, (i) which are movable by a pilot of the aircraft, for generating a first command signal which is a function of an input made by the pilot to the roll input means so as to control a roll angle of the aircraft and (ii) which are movable in a manner that when the roll input means are in a neutral position there is no rolling moment applied to the aircraft in response to the first command signal;

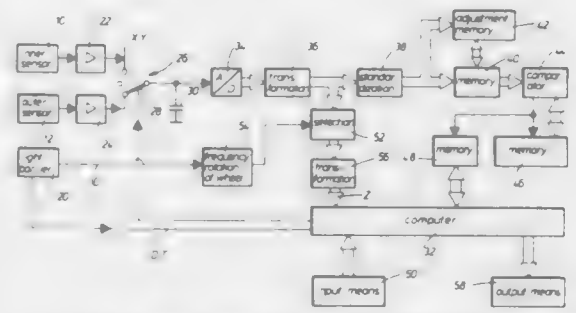
b. means for generating a second command signal, as a function of a selected navigation angle, for controlling a roll angle of the aircraft so as to maintain the selected navigation angle;

c. aircraft rolling means for generating a rolling moment on the aircraft; and

d. control means for causing the aircraft rolling means to respond to the first command signal from the roll input means, unless the roll input means is in the neutral position and the first command signal is within a calculated roll angle threshold value, in which case the aircraft rolling means is caused to respond to the second command signal so as to maintain the selected navigation angle.

5,008,826

METHOD AND APPARATUS FOR BALANCING A WHEEL OF A VEHICLE OR THE LIKE



Alfons Staudinger, Munich, and Hermann Bux, Pöcking/Possenhofen, both of Fed. Rep. of Germany, assignors to A. Rohé GmbH, Schollkrippen, Fed. Rep. of Germany

Filed Feb. 2, 1989, Ser. No. 305,395

Claims priority, application Fed. Rep. of Germany, Feb. 4, 1988, 3803325

Int. Cl.[5] G01M *1/22*

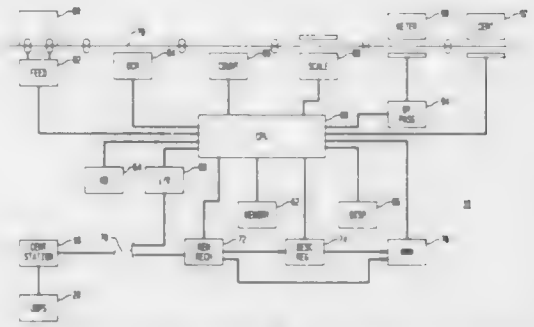
U.S. Cl. 364—463 **23 Claims**

10. Method for analyzing a wheel of a vehicle with a balancing machine comprising a shaft on which a wheel being mounted thereon is rotatable, electrical sensors being coupled to the shaft and issuing sensor output signals when forces are applied to the wheel, and a computer calculating and issuing unbalance values from the sensor output values in connection with specific wheel data being peculiar for the wheel to be balanced, wherein

the sensor output signals in case of a driven wheel are transformed into an unbalance frequency spectrum, and

the unbalance values are calculated from the unbalance frequency spectrum.

5,008,827



CENTRAL POSTAGE DATA COMMUNICATION NETWORK

Ronald P. Sansone, Weston; Karl H. Schumacher, Westport, both of Conn.; Raymond Kesting, Purdys, N.Y.; Joseph W. Wall, Monroe, and Uday W. Joshi, Wilton, both of Conn., assignors to Pitney Bowes Inc., Stamford, Conn.

Filed Dec. 16, 1988, Ser. No. 285,891

Int. Cl.[5] G07B *17/00*

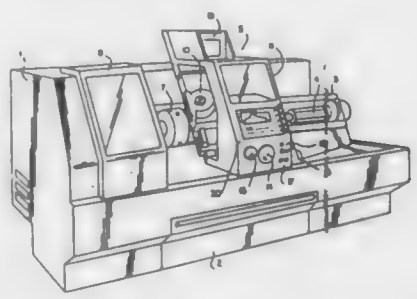
U.S. Cl. 364—464.02 **68 Claims**

1. A communication system for processing information for distribution, comprising: a central data station, a plurality of user stations, each of said user stations including a plurality of components forming a path for the proper distribution of said information, a communication link interconnecting said user stations with said central data station, said central data station including means for periodically interrogating via said link a user station for determining the operational status of each of said components, said user station including as one of its components a certification means for certifying that all said components are operational, and means for applying a visual indication of said certification to said information when distributed.

5,008,828

TOOL LATHE PROVIDED WITH IMPROVED CONTROL MEANS

Jean C. Pinard, Chevagnes; Bernard Jacquard, Yzeure, and André Besancon, Moulins, all of France, assignors to Societe Somab S.A., Moulins, France



PCT No. PCT/FR88/00048, § 371 Date Oct. 3, 1988, § 102(e) Date Oct. 3, 1988, PCT Pub. No. WO88/05936, PCT Pub. Date Aug. 11, 1988

PCT Filed Jan. 28, 1988, Ser. No. 264,969

Claims priority, application France, Jan. 30, 1987, 87 01430

Int. Cl.[5] G06F *15/00*

U.S. Cl. 364—474.28 **9 Claims**

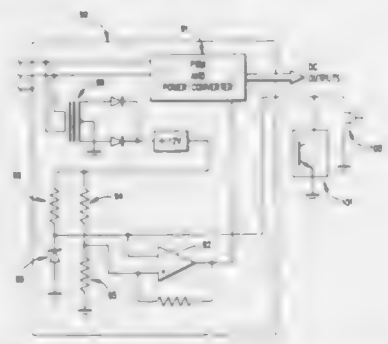
1. A center lathe type tool lathe, having a tool and a rotating chuck and capable of advancing the tool such that the advance of the tool is a function of the rotation (n) of the chuck, such lathe being capable of performing the operations of turning (displacement of the tool parallel to the axis of the rod), of facing (displacement of the tool perpendicularly to the axis of the rod), of linear threading interpolation (rapid displacement of the tool in proportion to the angle of rotation of the rod), of

taper joining (succession of a linear interpolation, of a partial circular interpolation and of a second linear interpolation), said lathe employing a means of calculation and digital control known and located in a computer/operator center, also called a processor or automaton, which center effects the displacement of the tool, it also being possible for said tool lathe to comprise a means for electronically machining a countour and copying said contour, which electronic contour and copying means comprises:

a first means for selecting at least one machining contour or tool path from a plurality of elementary paths comprising turning, facing, linear interpolation path and circular interpolation path and threading,

a second means which, when the tool has been manually brought by means of a pair of levers into an initial position (x_o, e_o) calls one or successively more parameters of this path of the group of parameters comprising a turning length, a final facing pass diameter, an angle of taper, a machining radius, a threading pitch (advance per turn), and in order to follow one parameter, introduces the digital value of this parameter,

a third means, whereby the type of machining contour selected is displayed, and the parameter or parameters are called and their digital values are introduced, and,



a handling means, whereby a machining contour having been selected and the tool being in the starting position, triggers the displacement of the tool on its path or, alternatively stops the tool at any point of its path.

5,008,829

PERSONAL COMPUTER POWER SUPPLY

Roger L. Cox, Plantation; Michael J. DeLoye, Boynton Beach, and Robert L. Myers, Boca Raton, all of Fla., assignors to International Business Machines Corporation, Armonk, N.Y.

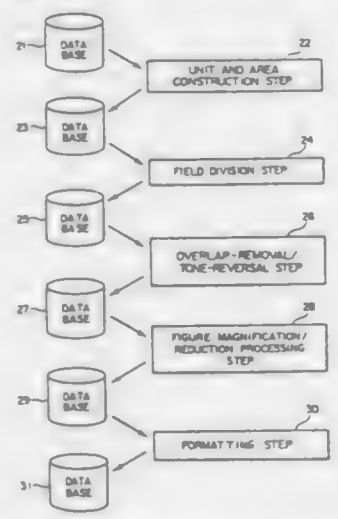
Filed Jun. 14, 1990, Ser. No. 536,751
Int. Cl.[5] G06F *15/20*
U.S. Cl. 364—480 **10 Claims**

8. A microcomputer comprising:

electrically powered data processing and storage components for processing and storing digital data, and

a pulse width modulation switching power supply for connection with an alternating current electrical main supply and for supplying direct current electrical power to said data processing and storage components for enabling operation thereof, said power supply comprising:

a controllable pulse width modulator for responding to the presence and absence of a low voltage direct current electrical signal by enabling and disabling the supply of electrical power to said data processing and storage components, and



a signal generator circuit operatively connected with said controllable component and with an alternating current electrical main supply for controllably deriving from the main supply a low voltage direct current signal for delivery to said controllable component, said signal generator circuit comprising a comparator, a first signal circuit for supplying to the comparator a low voltage direct current reference signal, and a controllable second signal circuit for controllably supplying to the comparator a low voltage enable/disable signal varying between a first voltage and a second, higher voltage, said comparator when supplied with said reference signal and said enable/disable signal having said first voltage delivering to said controllable component said first mentioned signal, whereby a user of the microcomputer may control energization of the electrically powered data processing and storage components by controlling the application of said low voltage direct current signal from said signal generator circuit to said controllable component.

5,008,830

METHOD OF PREPARING DRAWING DATA FOR CHARGED BEAM EXPOSURE SYSTEM

Koichi Moriizumi, and Takeshi Fujino, both of Itami, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Dec. 1, 1988, Ser. No. 278,452
Claims priority, application Japan, Aug. 10, 1988, 63-198032
Int. Cl.[5] G06F *15/60, 15/20*
U.S. Cl. 364—490 **8 Claims**

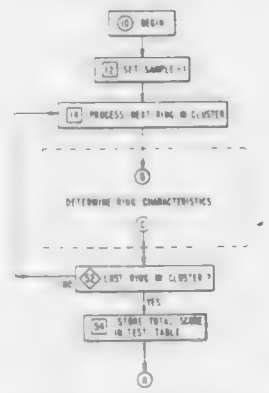
1. A method of preparing drawing data for a charged beam exposure system comprising:

constructing from pattern data describing features representing elements in a semiconductor integrated circuit, a pattern having a total area, at least one reiterative unit, each reiterative unit representing a repeating sub-pattern of features, a plurality of identical reiterative units being disposed in a respective array, the respective reiterative units being contiguously disposed without any gaps therebetween in the respective arrays, each array representing a subarea within the total area;

converting the pattern data into first figure processing data including pattern data for the total area and for each of the sub-areas and corresponding reiterative units;

dividing the first figure processing data into a plurality of fields, each field chosen to accommodate characteristics of a charged beam exposure system and representing a portion of the total area, some of the fields representing areas including part or all of an array, each field including any part of an array including only a whole number of reiterative units of the respective array, to form second figure processing data;

performing figure modification processing of the second figure processing data for each field, separately processing second figure processing data representing areas in each field, if any, not including any reiterative units and representing areas in each field, if any, including reiterative units to form third figure processing data; and



converting the third figure processing data into drawing data for the charged beam exposure system.

5,008,831

METHOD FOR PRODUCING HIGH QUALITY CHEMICAL STRUCTURE DIAGRAMS

Alfred P. Feldman, Columbia, Md., assignor to The United States of America as represented by the Department of Health and Human Services, Washington, D.C.

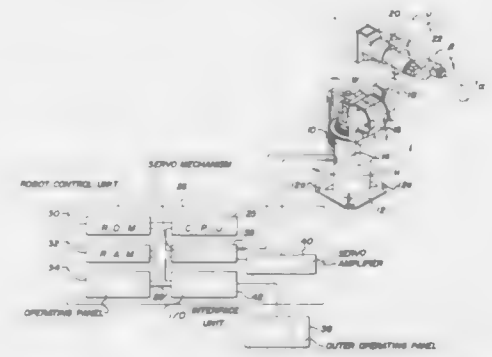
Filed Jan. 12, 1989, Ser. No. 296,019
Int. Cl.[5] G06F *15/46*
U.S. Cl. 364—496 **8 Claims**

1. A computer operated method for transforming a first chemical structure's appearance, comprising

storing within a computer information representative of a series of parameters applicable to chemical structures, and values corresponding to the parameters;

entering a first chemical structure into the computer as a first array;

establishing which of the stored parameters are present in the first chemical structure and operating on the values present therein to establish a first score; and



printing the structure corresponding to the first score.

5,008,832

INDUSTRIAL ROBOT ABLE TO SET MOTION CONDITIONS DEPENDING ON POSTURE OF INSTALLATION THEREOF

Nobutoshi Torii, Hachioji; Hitoshi Mizuno, and Katsuyuki Muraki, both of Yamanashi, all of Japan, assignors to Fanuc Ltd., Yamanashi, Japan

PCT No. PCT/JP89/00016, § 371 Date Sep. 5, 1989, § 102(e) Date Sep. 5, 1989, PCT Pub. No. WO89/06180, PCT Pub. Date Jul. 13, 1989
PCT Filed Jan. 9, 1989, Ser. No. 415,209
Claims priority, application Japan, Jan. 9, 1988, 63-1810
Int. Cl.[5] G05B *19/18;* **B25J** *9/16, 13/00*
U.S. Cl. 364—513 **12 Claims**

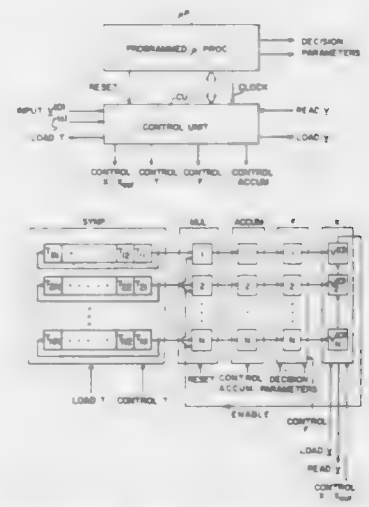
1. An industrial robot able to automatically set operating conditions in accordance with an installation position of the industrial robot comprising:

a robot unit provided with at least movable elements each movable element movable about an articulatory axis, and a base element to be fixedly installed at a site at which the industrial robot is to be used;

a robot control unit provided with a first data storage unit for storing basic control data for robot operation, a second data storage unit for storing control data externally input, and a control function unit for controlling motion of said movable elements based on said control data stored in said first and second data storage units;

a predetermined storage region provided in said first data storage unit for storing (a) data about various installation positions of said robot unit with respect to a predetermined reference installation position of said robot unit, and (b) data about operating conditions for various installation positions of said robot unit;

an input unit for providing said control function unit of said robot control unit with data indicating an installation position of said robot unit during use of said robot unit; and



a setting unit for reading out the operation conditions, corresponding to the data indicating the installation position of the robot unit provided by said input unit, from said predetermined storage region of said first data storage unit and for automatically setting externally input operating conditions in said second data storage unit of said robot control unit.

5,008,833

PARALLEL OPTOELECTRONIC NEURAL NETWORK PROCESSORS

Aharon J. Agranat; Charles F. Neugebauer, both of Pasadena, and Amnon Yariv, San Marino, all of Calif., assignors to California Institute of Technology, Pasadena, Calif.

Continuation-in-part of Ser. No. 273,099, Nov. 18, 1988, abandoned, which is a continuation-in-part of Ser. No. 34,593, Apr. 6, 1987, abandoned. This application Mar. 19, 1990, Ser. No. 495,781
Int. Cl.[5] G06F *15/18*
U.S. Cl. 364—513 **10 Claims**

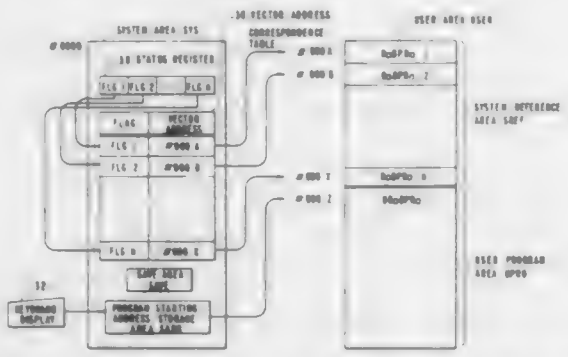
1. An optoelectronic neural network of N neurons connected to each other by synapses, in which the state of said neurons is given by a vector $\underline{V}=V_1, V_2, \ldots V_j \ldots V_N$, where V_j is the state of the j'th neuron, and the strength of the synaptic interaction between the neurons is defined by a matrix T, where T_{ij} is a value representing the strength of the interaction between neurons specified in the i'th row and j'th column of said matrix, said neural network being implemented by an electronic system comprising

means for storing said interaction matrix T, comprising a spatial light modulator for producing a pattern of light intensity corresponding to spatial distribution of said val-

ues T_{ij} of said matrix T, and an array of photodetectors spatially distributed to separately receive said values T_{ij},
means for storing said state vector $\underline{V}$, said vector storing means having a column of N registers, one for each vector element V_j constituting a neuron,
means for multiplying said matrix T with said state vector $\underline{V}$, and
means for summing the products of said multiplication for each row of said matrix to produce a current

$$I_i = \sum_j T_{ij} V_j,$$

where I_i is the current for the i'th row of said matrix corresponding to the j'th neuron of said state vector,
means responsive to said current sums I_i, for producing new values V_j for said state vector in accordance with predetermined decision parameters, and
means for storing said new values V_i of said state vector in said column of N registers.

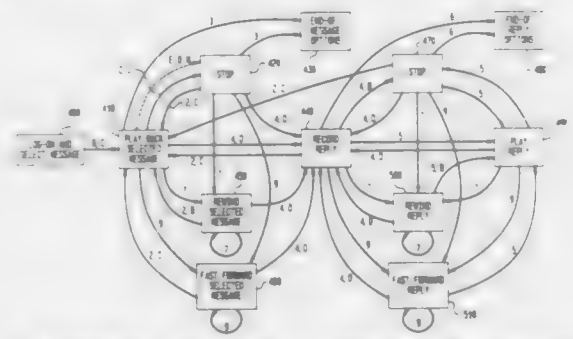


5,008,834

ROBOT CONTROL APPARATUS

Tohru Mizuno, Tama, and Takayuki Ito, Minamitsuru, both of Japan, assignors to Fanuc Ltd., Minamitsuru, Japan

PCT No. PCT/JP88/00362, § 371 Date Oct. 28, 1988, § 102(e) Date Oct. 28, 1988, PCT Pub. No. WO88/07916, PCT Pub. Date Oct. 20, 1988
PCT Filed Apr. 9, 1988, Ser. No. 265,673
Claims priority, application Japan, Apr. 10, 1987, 62-088331
Int. Cl.[5] G05B *19/00;* **B25J** *9/16*
U.S. Cl. 364—513 **6 Claims**



1. A robot control system for controlling the motion of a robot using a system program having first and second parts and a user program, said system comprising:
storage means for storing the system program and the user program, said storage means having a system area and a user area, the first part of the system program being stored in the system area and providing a plurality of flags indicating operating status of the robot, the second part of the system program being stored in the user area and including monitor programs corresponding to the flags, the system area of said storage means includes at least
register means for storing the flags; and
a correspondence table for providing the predetermined location of the monitor programs within the user area based upon the flags; and
processor means for continuously monitoring the operating status of the robot based on the system program and for processing the user program to generate motion commands for the robot, said processor means monitors the operating status of the robot by jumping from the first part of the system program to the second part.

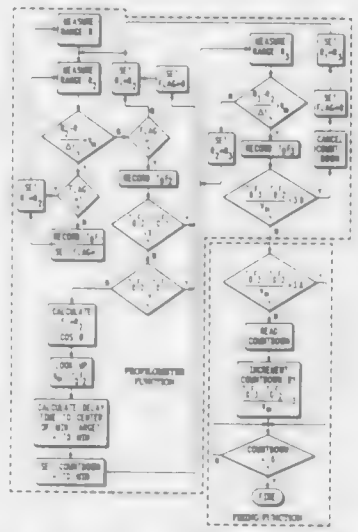
5,008,835

METHOD AND APPARATUS FOR STORING AND FORWARDING VOICE SIGNALS AND GENERATING REPLIES

Emil F. Jachmann, 13 High St., Greenwich, Conn. 06830; Jeremy Saltzman, 24 Highbrook Rd., Norwalk, Conn. 06851; David B. Chamberlin, 11 Hunter Ridge, Monroe, Conn. 06468; Nicholas A. D'Agosto, 68 Sterling Rd., Trumbull, Conn. 06611; Mark Harris, 64 Roger White Dr., New Haven, Conn. 06511, and Jy-hong Su, 14 Hunters La., Norwalk, Conn. 06850

Filed Dec. 28, 1987, Ser. No. 138,417
Int. Cl.[5] G10L *5/00;* **G06F** *13/00*
U.S. Cl. 364—513.5 **19 Claims**

1. Apparatus for storing and forwarding voice signals, comprising:
(a) voice mail means for storage and retrieval of said voice signals, said voice mail means having a playback state for playback of selected voice signals and a record state for recording reply voice signals;
(b) station means for input and output of said voice signals;
(c) said station means further comprising signal input means for input of first and second control signals, said first control signal causing said voice mail means to exit said playback state and enter said record reply state, whereby a user of said apparatus may record reply voice signals to said selected voice signals at any point in said playback state, and said second control signal causing said voice mail means to exit said record reply mode and return to said playback mode.



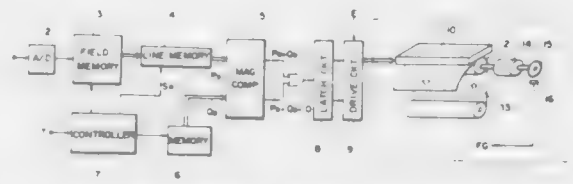
5,008,836

METHOD OF RECOGNIZING SELECTED OBJECTS

Robert W. Withers, Overgaard, and Robert H. Johnson, Scottsdale, both of Ariz., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Jul. 20, 1989, Ser. No. 382,359
Int. Cl.[5] G06F *15/00*
U.S. Cl. 364—516 **4 Claims**

1. A method of recognizig, during a fly-over, selected objects having a known height and width, comprising the steps of:
periodically measuring the range to the ground at a predetermined angle with the surface of the ground;
comparing adjacent measurements to determine changes in range;
measuring the rate of change of the range;
measuring the time from a first change in range, after an object is indicated, to a second subsequent change in range to determine the height of the object;



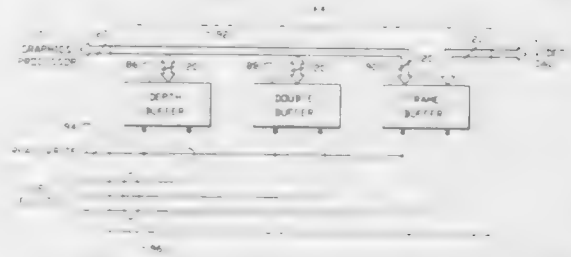
comparing the measured height to the known height to determine if the height of the object is an acceptable height for the selected object;
measuring the time from the second subsequent change in range to a third subsequent change in range to determine the width of the object; and
comparing the measured width of the object of the known width to determine if the object is the selected object.

5,008,837

GRAY SCALE GENERATING CIRCUIT FOR THERMAL PRINTER

Yasushi Hirumi, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Dec. 15, 1989, Ser. No. 451,148
Claims priority, application Japan, Jan. 10, 1989, 1-001983
Int. Cl.[5] G06K *15/00*
U.S. Cl. 364—519 **15 Claims**



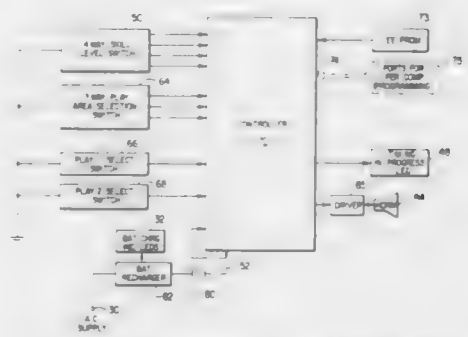
1. A gray scale signal generating circuit for a thermal printer, comprising:
memory means for storing image data to be printed;
means for generating PWM driving pulses of said image data stored in said memory means;
means for generating a zero level driving pulse; and
means for supplying said PWM driving pulses and said zero level driving pulse to a thermal head drive circuit so that a print image is obtained even when said image data is at a zero level.

5,008,838

METHOD FOR SIMULTANEOUS INITIALIZATION OF A DOUBLE BUFFER AND A FRAME BUFFER

Brian M. Kelleher, and Zahid Hussain, both of Palo Alto, Calif., assignors to Digital Corporation, Maynard, Mass.

Filed Nov. 17, 1989, Ser. No. 438,649
Int. Cl.[5] G06F *3/14*
U.S. Cl. 364—522 **10 Claims**



1. In a graphics image rendering system including a graphics processor, a graphics display screen, double buffer means for storing pixel color information and depth buffer means for storing pixel depth information, a method for initializing the depth buffer means and the double buffer means comprising the steps of:
writing to each pixel storage element of the double buffer means a binary value representing a background color to appear on the graphics display screen; and
writing to each pixel storage element of the depth buffer means the binary value representing the background color to appear on the graphics display screen.

5,008,839

SPORTS TRAINING APPARATUS

John D. Goodwin; Samuel D. Goodwin, both of 1605 Slattery Bldg., Shreveport, La. 71101; Wilford House, 506 Pineacres Dr., Shreveport, La. 71107, and James Farrar, 727 Unadella, Shreveport, La. 71106

Filed Feb. 16, 1989, Ser. No. 312,079
Int. Cl.[5] G06F *15/44;* **A63B** *69/00*
U.S. Cl. 364—550 **15 Claims**

1. A sports training apparatus for injecting actual game timing into team practice comprising:
an on/off means for powering on the apparatus; a skill level selector means for selecting a skill level from a group consisting of pre-high school, high school, college, and professional skill levels; an area selector means for selecting an area from a group consisting of infield, outfield and catcher areas for corresponding play practice; and a plurality of play selection and initiation means for producing a play selection and play initiation signal;
a signaling means for producing a signal indicating a time period for completing the selected play has expired; and
a control means having a memory means for storing information including a plurality of skill levels and time periods for each of the skill levels, a timing means connected to

the memory means for receiving time periods and outputting signals indicative of the expiration of the time periods, a plurality of sense circuits for connecting the controller to: the on/off means for sensing power on, the skill level selector means for sensing the skill level selection, the area selector means for sensing the area selection, and the plurality of play selection and initiation means for sensing a play selection; an information fetching means connected to the memory means and responsive to the outputs of the skill level selector means, area selector means, and play selection and initiation means sense circuits for fetching the corresponding time period for the timing means and initiating the timing means for timing the time period, said timing means including a signal producing means connected to the signaling means for outputting a signal to the signaling means whereby the signaling means is activated to signal the expiration of the time period for use in determining the timely completion of the play.

MULTI-ZONE MICROPROCESSOR FIRE CONTROL APPARATUS

Alfred V. DePierro, Woodbury, N.Y., assignor to Napco Security Systems, Inc., Amityville, N.Y.

Filed May 27, 1988, Ser. No. 199,772

Int. Cl.[5] G08B *17/00*

U.S. Cl. 364—550 **20 Claims**

1. A fire control system including a plurality of zones, each zone associated with a smoke detector and arranged in at least a two wire loop, with said smoke detector positioned across said two wires to provide a low impedance condition upon detection of smoke indicative of a fire in that zone and to provide a high impedance when smoke is not detected, comprising

biasing means for each loop to allow a current to flow in each loop indicative of a normal condition as distinguished from a low impedance condition across said loop as caused by said smoke detector;

multiplexer means having one input for each loop and having a control input to provide at an ouptut the condition of each loop in a selected sequence as controlled by a signal applied to said control input;

a microprocessor means having output means coupled to said multiplexer control input for controlling the same;

comparator means having inputs coupled to said multiplexer output and outputs coupled to said microprocessor means to enable said microprocessor to store the condition of each loop indicative of each zone and as to whether said loop is in a normal condition or a low impedance condition;

a keyboard coupled to said microprocessor means for causing said microprocessor to recognize selected key depressions indicative of a one man test mode, whereby when said mode is recognized said microprocessor means responds to low impedance conditions of selected loops as being intentionally implemented during a predetermined period to notify a user of said test mode in order to verify an intentional implemented low impedance condition of said loop as caused by an associated smoke detector with said microprocessor coupled to said biasing means to interrupt said current flow in said loop for a given period to allow said intentional condition to clear back to normal indicative of the completion of said one man test mode.

NON-INVASIVE SYSTEM AND METHOD FOR INSPECTION OF VALVES

John W. McElroy, Newtown Square, Pa., assignor to Liberty Technology Center, Inc., Conshohocken, Pa.

Filed Jul. 28, 1989, Ser. No. 387,223

Int. Cl.[5] G21C *17/00*; G08B *21/00*; G01D *7/00*

U.S. Cl. 364—551.01 **22 Claims**

1. A non-invasive monitoring system for a valve of the type including a housing and a movable element mounted in the housing for movement between an open position and a closed position and intermediate positions between the open and closed positions comprising:

(a) first means for both detecting acoustic energy produced by the valve during a monitoring interval and generating data representative of the detected acoustic energy;

(b) second means for both detecting signals indicative of the position of the movable element during the monitoring interval and generating data representative of the detected signals; and

(c) third means coupled to the first and second means for simultaneously receiving the data generated by the first and second means and providing data from which a condition of the valve can be determined by a user.

5,008,842

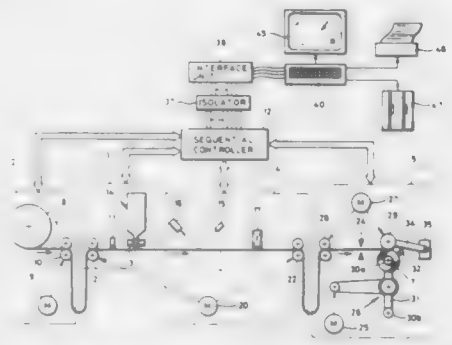
METHOD OF SEQUENTIAL MONITORING AND APPARATUS FOR PRACTICING THE SAME

Tetsuji Nagai; Katura Torii, and Yoshio Ohno, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Oct. 19, 1988, Ser. No. 260,012

Claims priority, application Japan, Oct. 19, 1987, 62-263236

Int. Cl.[5] G06F *15/46*



U.S. Cl. 364—551.01 **15 Claims**

1. A method of sequential monitoring for monitoring a production line which includes working groups whose work operations are controlled by a sequential controller, comprising the steps of:

receiving electrical signals from detectors, one of said detectors being provided in each of a plurality of working groups distributed along a said production line, each of said working groups performing a different plurality of work operations;

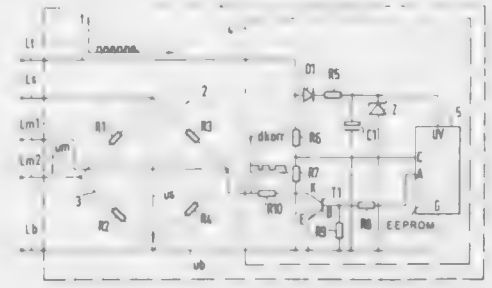
storing first data generated from said received signals and representative of the order of outputting and the time intervals of said electrical signals;

producing a sequence pattern based on said stored first data and representative of a sequence of work operations performed within at least one of said working groups as well as representative of a time interval within which each of said work operations has been performed a plurality of times; and

monitoring the working conditions of said plurality of working groups by comparing said sequence pattern with said electrical signals received after producing said sequence pattern.

5,008,843

SENSOR HAVING AN ANSWERBACK DEVICE



Wolf-Dieter Poelsler, and Bernd Baumann, both of Weissach, Fed. Rep. of Germany, assignors to Dr. Ing. h.c.F. Porsche AG, Fed. Rep. of Germany

Filed Dec. 23, 1988, Ser. No. 289,325

Claims priority, application Fed. Rep. of Germany, Dec. 23, 1987, 3743846

Int. Cl.[5] G01L *25/00*

U.S. Cl. 364—571.02 **9 Claims**

2. An arrangement for the detection and evaluation of a physical magnitude, comprising:

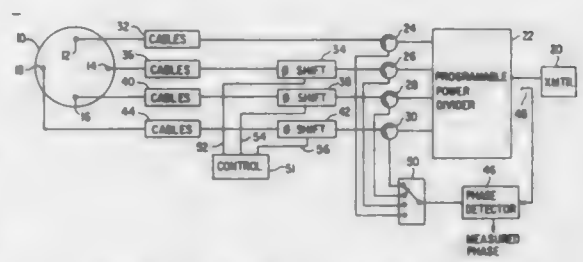
a measuring sensor device having:

a physical-electrical transducer having an output and a measuring bridge containing only passive devices, said transducer converting physical magnitudes into equivalent analog electrical magnitudes; and

an answerback device coupled to the transducer and having a non-volatile memory which stores correction data of the measuring sensor device, said answerback device having an output at which is provided a data bit flow serially read out of the non-volatile memory, the answerback device also having a controllable switching element connected in parallel to a branch of the measuring bridge, said switching element in a first condition being high-ohmic with respect to said branch, and being controlled by the answerback device into a second condition to tune the measuring bridge so as to transmit correction data, said controllable switching element being switched on and off by the answerback device according to the data bit flow serially read out of said memory device; and

an evaluation circuit structurally separate from the measuring sensor device and connected to the output of the transducer by electrical lines over which measured values of the measuring sensor device are transmitted, said evaluation circuit detecting changes in said output of the measuring bridge to reconstruct said correction data, and said evaluation circuit using the correction data to correct the electrical magnitudes output by the transducer.

5,008,844



COLLISION AVOIDANCE TRANSMIT SYSTEM WITH AUTOCALIBRATION

Constantinos S. Kyriakos, Boca Raton, and Henri Baran, Coral Springs, both of Fla., assignors to Allied-Signal Inc., Morris Township, Morris County, N.J.

Filed Jan. 10, 1990, Ser. No. 463,181

Int. Cl.[5] G01S *7/40, 3/02*

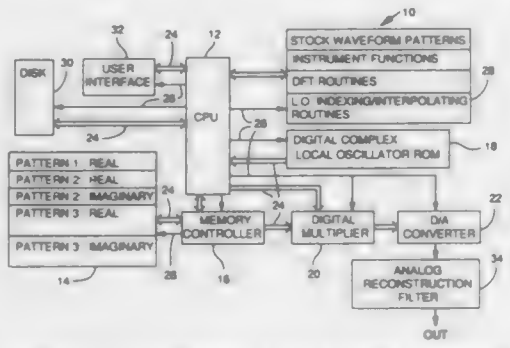
U.S. Cl. 364—571.05 **12 Claims**

1. A calibration method for a transmitter having a first, a second, a third and a fourth element circumferentially positioned with a 90 degree spacing in an antenna array such that the first and the third elements are oppositively positioned and the second and the fourth elements are oppositively positioned, the first, the second, the third and the fourth element being selectively connectable through a first, a second, a third and a fourth channel, respectively, of components to a transmitter or to a first input of a phase detector, the transmitter being connected to the second input of the phase detector, comprising the steps of:

determining the phase difference between a first and a third channel by transmitting a signal between the first element and a first element adjacent the first and third elements to obtain a first phase detector output, by transmitting the signal between the third element and the first element adjacent the first and third elements to obtain a second phase detector output and by inserting a first phase shift in the third channel such that the first and second phase detector outputs are equal;

determining the phase difference between a second and fourth channel by transmitting between the second element and a first element adjacent the second and fourth elements to obtain a third phase detector output, by transmitting between the fourth element and the element adjacent the second and fourth elements to obtain a fourth phase detector output and by inserting a second phase shift in the fourth channel such that the third and fourth phase detector outputs are equal;

transmitting between the first and third elements with the first phase shift inserted into the third channel to obtain a fifth phase detector output; and



transmitting between the second and fourth elements with the second phase shift inserted into the fourth channel to obtain a sixth phase detector output and inserting a third phase shift in the second channel such that the fifth and sixth phase detector outputs are equal.

5,008,845

METHOD AND APPARATUS FOR GENERATING A CHIRP SIGNAL

James L. Adcock, Seattle, Wash., assignor to Hewlett-Packard Company, Palo Alto, Calif.

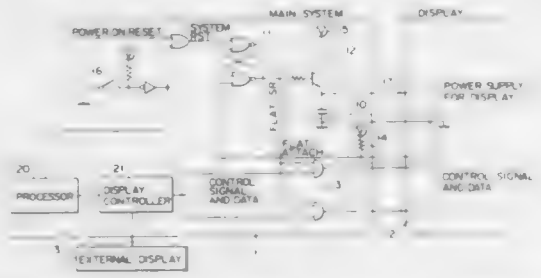
Filed Apr. 27, 1989, Ser. No. 344,777
Int. Cl.[5] G01V 1/36
U.S. Cl. 364—576 14 Claims

1. A method for generating a chirp signal comprising the steps:

generating a sequence of samples characterizing a flat chirp in the frequency domain according to the formula e^{jkw2};

performing a finite inverse Fourier transform on said sequence to find the time domain sequence corresponding thereto, said sequence exhibiting a sin(x)/x ripple therein;

storing digital data corresponding to said transformed sequence in a memory; and



reading said digital data from memory to produce an output data stream corresponding to a digitized chirp that is flat in the frequency domain.

5,008,846

POWER AND SIGNAL SUPPLY CONTROL DEVICE

Akifumi Inoue, Fussa, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Nov. 27, 1989, Ser. No. 441,757
Claims priority, application Japan, Nov. 30, 1988, 63-302469
Int. Cl.[5] G06F 1/00
U.S. Cl. 364—707 18 Claims

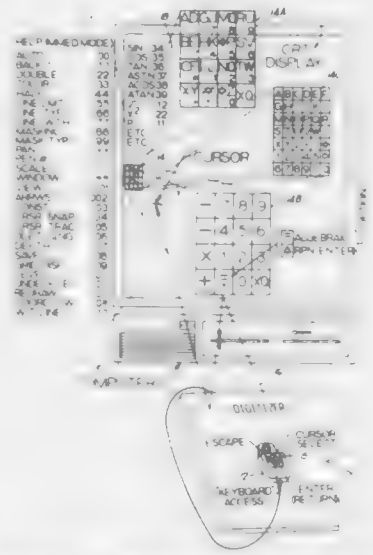
1. A device for controlling supply of power and signals from a main system comprising:

a display which is configured to be connected to and disconnected from said main system;

detecting means for detecting whether said display is connected to said main system or not;

supply instructing means responsive to said detecting means, and a reset signal applied thereto, for automatically generating an instruction signal for instructing the supply of power and signals to said display responsive to said reset signal and until said detecting means detects that said display is not connected to said system;

power control means responsive to the instruction signal for controlling the supply of power to said display to be supplied while said instruction signal instructs said supply of power and signals; and



signal controlling means, responsive to the instruction signal, for controlling the supply of the signals to said display to be supplied while said instruction signal instructs said supply of power and signals.

5,008,847

CURSOR SELECTED KEYBOARD KEYS DISPLAYED ON THE COMPUTER SCREEN FOR ENTERING ALPHANUMERIC CHARACTERS AND INSTRUCTIONS, PARTICULARLY FOR CREATING COMPUTER AIDED DESIGN AND DRAFTING PATTERNS

James M. Lapeyre, New Orleans, La., assignor to The Laitram Corporation, New Orleans, La.

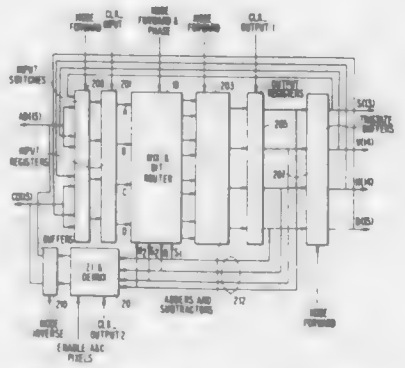
Continuation-in-part of Ser. No. 844,872, Mar. 27, 1986, abandoned, which is a continuation-in-part of Ser. No. 459,998, Jan. 21, 1983, Pat. No. 4,547,860. This application Jun. 10, 1987, Ser. No. 60,225
Int. Cl.[5] G06F 3/023
U.S. Cl. 364—709.16 4 Claims

1. In a computer system operable with selection control means for placing a cursor position on a visible display screen for displaying graphic patterns,

means for displaying on a portion of said screen a virtual keyborad array presenting a plurality of virtual keys at respective keyboard locaitons having thereat symbols identifying both a set of computer reproducible patterns and a set of computer command instructions to be selected by moving the cursor to identify the respective virtual keys,

manually positionable keystroking means responsive to the cursor position on said display screen for selecting a desired one of the virtual keys on said screen and initiating a computer command operation corresponding to a symbol identified at the selected virtual key loation displayed on the screen.

means for operating the computer in a mode requiring two keystrokes per entry thereby to reduce the number of virtual keys and corresponding display space required on the computer screen for selection of said sets of patterns and commands, and



means for displaying one set of virual key configurations on the screen for the first keystroke showing the key function and activating the keys to operate to perform that function, and for replacing the key configuration with another set of virtual keys with displayed key functions on the screen for the second keystroke in response to the first keystroke.

5,008,848

CIRCUIT FOR PERFORMING S-TRANSFORM

Samuel O. Akiwumi-Assani, Beacon, N.Y., assignor to North American Philips Corporation, New York, N.Y.

Filed May 30, 1989, Ser. No. 358,982
Int. Cl.[5] G06F 15/332
U.S. Cl. 364—725 10 Claims

1. Apparatus for calculating a data transformation which includes at least two successive arithmetic operations, the apparatus comprising:

(a) a first set of terminals for receiving a plurality of input data signals in parallel;

(b) a single stage comprising a plurality of means, disposed in parallel, for performing arithmetic operations;

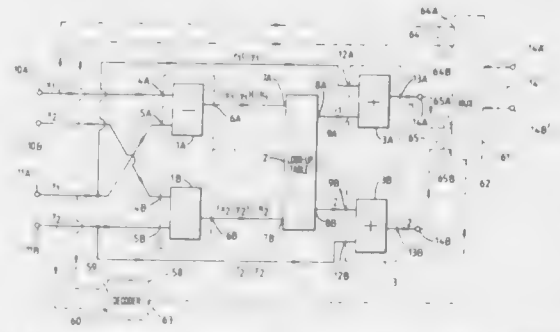
(c) means for feeding results of a first set of arithmetic operations back to said single stage so that said single stage subsequently performs a second set of arithmetic operations on said results; and

(d) a second set of terminals for supplying a plurality of transformed data signals wherein

(e) the data transformation is the S-transform;

(f) the first set of terminals is for receiving signals representing four data points arranged in a 2×2 array;

(g) each means for performing comprises a respective adder/subtracter; and



(h) the second set of terminals is for supplying signals representing four coefficients of the S-transform.

5,008,849

APPARATUS ADDING VALUES REPRESENTED AS RESIDUES IN MODULO ARITHMETIC

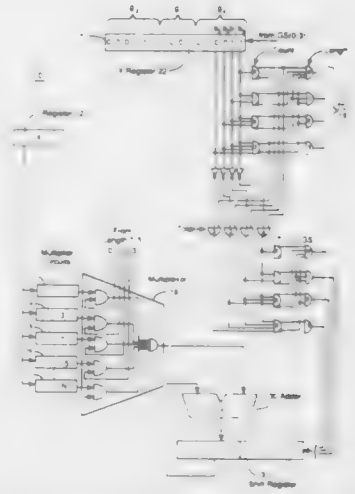
Ian A. Burgess, Horley; Andrew M. Dennis, Redhill, and Christopher B. Marshall, Lindfield, all of England, assignors to U.S. Philips Corporation, New York, N.Y.

Filed May 1, 1989, Ser. No. 345,391
Claims priority, application United Kingdom, Apr. 29, 1988, 8810167
Int. Cl.[5] G06F 7/72
U.S. Cl. 364—746 5 Claims

4. Apparatus for generating a residue representation modulo p−1 of the power index i to which a generator g has to be raised to give the value X+A·Y is modulo p arithmetic in response to the application to said apparatus of input residue representations modulo p−1 of x, where $g^x=X$, and y, where $g^y=Y$, wherein the residue representation of i, x, and y, each consist of a respective plurality of n residue components modulo a uniform set of respective intergers which are mutually prime and the product of which is equal to p+1, the apparatus comprising:

(a) for each said integer, a separate input subtractor for receiving the input residue representations with respect to that integer,

(b) a look-up table fed by the outputs of all subtractors for generating, upon reception of the subtraction results with respect to each pair or representations of x and y, a plurality of n residue components, each modulo a respective said integer and each at a respective look-up table output and together constituting a residue representation modulo p−1 of the power index j to which g has to be raised to give the value g^k+A, in response to the application to an input of the look-up table of a residue representation modulo p−1 of any member of a set of values of k, and



(c) for each said integer, a separate adder for on a first adder input receiving the residue representation with respect to that integer of one of the input residue representations and a second adder input receiving the look-up table output corresponding to that integer for by means of addition modulo that integer collectively generating a residue representation of the sum of values received modulo p−1, wherein allowable values for A are +1, −1.

5,008,850

CIRCUITRY FOR MULTIPLYING BINARY NUMBERS

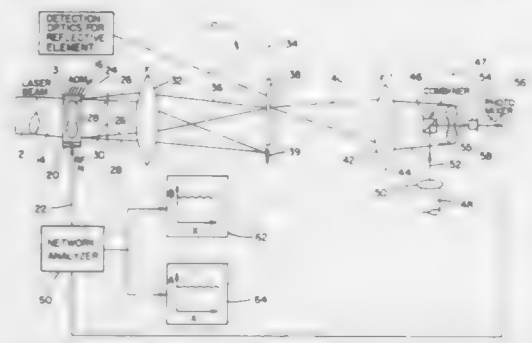
Eric H. Jensen, Livermore, Calif., assignor to Sun Microsystems, Inc., Mountain View, Calif.

Filed May 25, 1990, Ser. No. 528,937
Int. Cl.[5] G06F 7/52
U.S. Cl. 364—760 40 Claims

1. A circuit for multiplying a first and a second binary number, said first and second binary numbers comprising of one or more ordered groups of ordered bits, each of said bits having a value of one or zero, bits having a value of one being located contiguously in the lower order bits of said groups, and bits having a value of zero being located in the remaining higher order bits of said groups, said circuit comprising:

(a) a first and a second register means for holding said first and second binary numbers;

(b) generating means coupled to said first and second register means for generating a partial product for each of said ordered groups of said first binary number, each of said partial products being equal to said second binary number multiplied by one of said ordered groups; and



(c) accumulating means coupled to said generating means for accumulating each of said generated partial products, the product of the first and second binary numbers being equal to the accumulation of the partial products.

5,008,851

OPTICAL HETERODYNING SYSTEM AND METHOD FOR RAPID OPTICAL PHASE AND AMPLITUDE MEASUREMENTS

Robert W. Brandstetter, Levittown; Benjamin J. Pernick, Forest Hills; Nils J. Fonneland, Lake Ronkonkoma, and Stephen J. Caputi, Centerport, all of N.Y., assignors to Grumman Aerospace Corporation, Bethpage, N.Y.

Filed Mar. 27, 1989, Ser. No. 328,637
Int. Cl.[5] G06G *7/00;* **G02F** *1/11;* **G01B** *9/02*
U.S. Cl. 364—807 **16 Claims**

1. A system for obtaining optical phase and amplitude measurements comprising:

means for modulating a coherent light beam with a multifrequency electrical input signal to form an image;

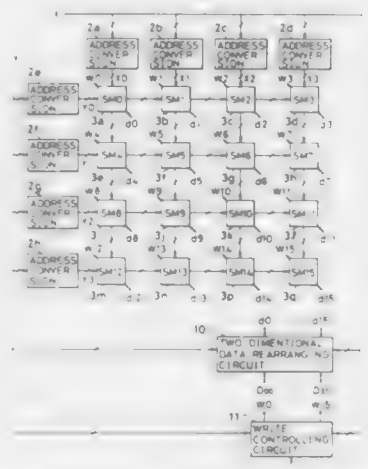
means for Fourier transforming said image to produce a scanning coherent light beam in the Fourier plane, said scanning coherent light beam interacts with an optical component located in the Fourier plane to form a modulated transformed image in the frequency plane;

means for inverse Fourier transforming said modulated transformed image for detecting an electrical output signal therefrom from which amplitude and phase measurements of said modulated transformed image is determined; and

analyzer means for determining said amplitude and phase measurements of said modulated transformed image from said electrical output signal and for storing said amplitude and phase measurements, said analyzer means compares said amplitude and phase measurements of said modulated transformed image to the amplitude and phase measurements of a reference transformed image to quantitatively measure the amplitude and phase of said optical component.

5,008,852

PARALLEL ACCESSIBLE MEMORY DEVICE



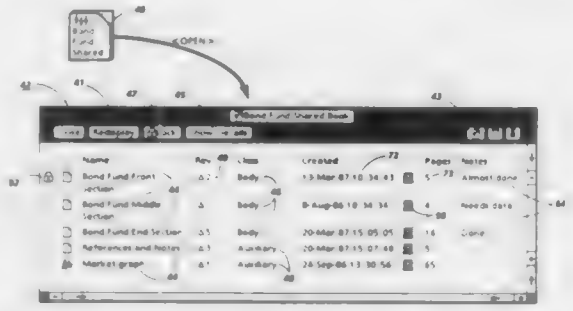
Hiroshi Mizoguchi, Tokyo, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Mar. 30, 1988, Ser. No. 175,484
Claims priority, application Japan, Mar. 31, 1987, 62-076489
Int. Cl.[5] G06F *12/00, 12/06;* **G11C** *8/00*
U.S. Cl. 364—900 **8 Claims**

1. A parallel accessible M-dimensional memory device, comprising:

N_i column submemories for i-th dimension (i=1, . . . , M) where N_i is a positive integer, each one of the N_i column submemories having $1/N_1 \times N_2 \times \ldots \times N_n$ capacity of a total memory capacity of the device, each one of the N_i column submemories having addresses addressed by an integer submemory address S_j=0, 1, 2, . . . (j=0, 1, . . . , N_i-1) labeling rows within each column submemory, the addresses of the N_i column submemories being also addressed by an M-dimensional integer input address X_i=0, 1, 2, . . . (i=1, . . . , M) labeling the addresses of all of the N_i column submemories collectively, and where (j+1)-th one of the N_i column submemories stores (j+1+nN_i)-th data for i-th dimension, (n=0, 1, . . .):

address converting means for obtaining N_i submemory addresses S_j for N_i data to be parallel accessed, for the M-dimensional input addresses X_i supplied externally; and



data rearranging means for rearranging the N_i data read out from the N_i submemory addresses S_j of the N_i submemories obtained by the address converting means, in accordance with the M-dimensional input address X_i, such that the N_i data are arranged in an order labeled by the M-dimensional input address X_i.

5,008,853

REPRESENTATION OF COLLABORATIVE MULTI-USER ACTIVITIES RELATIVE TO SHARED STRUCTURED DATA OBJECTS IN A NETWORKED WORKSTATION ENVIRONMENT

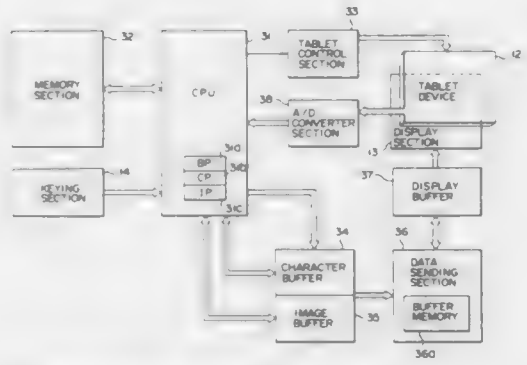
Sara A. Bly, Mountain View; A. Brady Farrand, Berkeley; Jeffery D. Hodges, Newark; Michael D. Kupfer, Mountain View; Brian T. Lewis, Palo Alto; William J. Maybury, Torrance; Michael L. Tallan, Mountain View, and Stephen B. Tom, San Francisco, all of Calif., assignors to Xerox Corporation, Stamford, Conn.

Filed Dec. 2, 1987, Ser. No. 127,993
Int. Cl.[5] G06F *3/14*
U.S. Cl. 364—900 **20 Claims**

1. A method for operating a collaborative system that includes a plurality of workstations each having a respective display and a respective user input device, the collaborative system further including shared data, each of the workstations being connected for accessing the shared data, the shared data including a set of parts, the method comprising the steps of:

presenting on the respective display of a first one of the workstations a local representation of the shared data; the local representation of the shared data including, for each of the parts of the shared data, a respective small-scale representation occupying a small part of the first workstation's respective display;

presenting on the respective display of a second one of the workstations a full-scale representation of a first one of the parts of the shared data, the full-scale representation occupying a substantial part of the second workstation's respective display; and



after receiving from the second workstation's respective user input device a signal requesting an operation affecting the first part of the shared data, including in the first part's respective small-scale representation an indication of the operation affecting the first part.

5,008,854

POCKET SIZE DATA STORAGE APPARATUS WITH TABLET DEVICE FOR INPUTTING IMAGE DATA

Junichi Maeda; Tsuguo Yanai; Kazuto Yamamoto; Yuji Kuriyama, and Haruo Yamamoto, all of Tokyo, Japan, assignors to Casio Computer Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 235,709, Aug. 19, 1988, abandoned, which is a continuation of Ser. No. 946,712, Dec. 24, 1986, abandoned. This application Oct. 16, 1989, Ser. No. 423,604
Claims priority, application Japan, Jun. 19, 1986, 61-93502[U]
Int. Cl.[5] G06F *3/02*
U.S. Cl. 364—900 **18 Claims**

1. A data storage apparatus, comprising:

image-data-input means for inputting image data;

character-data-input means having a plurality of character keys, for inputting character data;

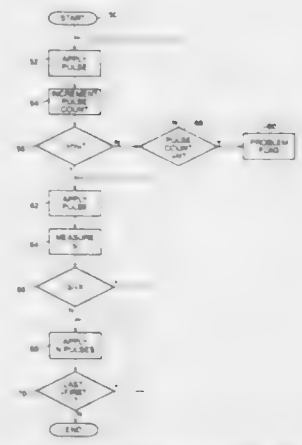
data-file-producing means for producing a data file one section of which includes image data input from said image-data-input means and another section of which includes character data input from said character-data-input means;

memory means for storing a plurality of the data files produced by said data-file-producing means, wherein for each data file a first area of the memory means stores the one section of the data file, and a second area of the memory means stores the other section of the data file;

display means for displaying image data and character data stored in said memory means;

character data detecting means for retrieving character data included in the other section of each of the plurality of data files stored in said memory means, and for supplying a plurality of said retrieved character data to said display means;

designating means for selecting one of the plurality of the retrieved character data displayed on said display means belonging to a particular data file; and



memory-data-input means for outputting image data to said display means from a first area of said memory means which stores image data from one section of the particular data file which includes in its other section the retrieved character data selected by said designating means.

5,008,855

METHOD OF PROGRAMMING ANTI-FUSE ELEMENT

Abelshafy A. Eltoukhy, San Jose, and David H. Gluss, Woodside, both of Calif., assignors to Actel Corporation, Sunnyvale, Calif.

Filed Jul. 18, 1989, Ser. No. 381,630
Int. Cl.[5] G11C *7/00, 11/21*
U.S. Cl. 365—96 **1 Claim**

1. A method of programming an anti-fuse including the steps of:

(1) Applying voltage pulses to said anti-fuse, said voltage pulses including a first portion having a first amplitude less than the voltage necessary to program said anti-fuse, and having a second portion having a second amplitude equal to the voltage necessary to program said anti-fuse,

(2) Measuring the current drawn by said anti-fuse from said second portion of said voltage pulse,

(3) Determining whether said current drawn by said anti-fuse exceeds a predetermined threshold,

(4) Repeating steps 1 through 3 if said current does exceed predetermined threshold,

(5) Applying a series of pulses to said anti-fuse if said current does exceed said predetermined threshold,

(6) Measuring the difference in current drawn by said anti-fuse between successive ones of the voltage pulses applied in step 5,

(7) Repeating step 5 if said difference in current exceeds a predetermined threshold,

(8) Applying a fixed number of pulses if said difference does not exceed said predetermined threshold,

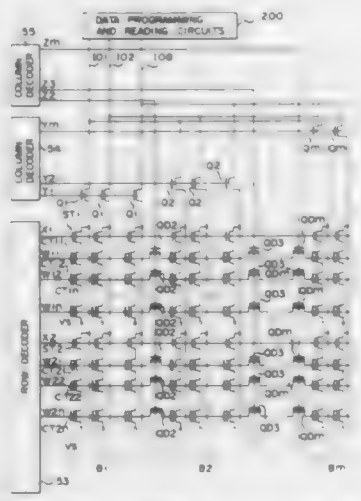
(9) Measuring the current drawn by said anti-fuse at the first and last ones of said fixed number of pulses,

(10) Repeating step 9 if the difference between the current drawn during said first and last ones of said fixed number of rules exceeds a predetermined threshold.

5,008,856

ELECTRICALLY PROGRAMMABLE NONVOLATILE SEMICONDUCTOR MEMORY DEVICE WITH NAND CELL STRUCTURE

Hiroshi Iwahashi, Yokohama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan



Filed Jun. 28, 1988, Ser. No. 212,649
Claims priority, application Japan, Jun. 29, 1987, 62-161625; Jun. 30, 1987, 62-163023; Dec. 23, 1987, 62-325686
Int. Cl.[5] G11C *11/40*
U.S. Cl. 360—185 **36 Claims**

1. A nonvolatile semiconductor memory device comprising:

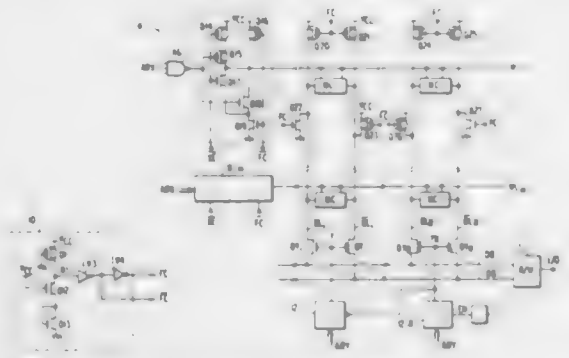
a memory cell array having memory cells arranged in matrix form and each of said memory cells is formed by a plurality of serially connected cell transistors, each of said cell transistors, having a control gate, a floating gate, a source and a drain;

selection means for selecting one of said memory cells and one of said cell transistors of a selected memory cell; and

data programming means for programming a binary data to said cell transistor, connected to said memory cell, said data programming means applying a first potential to said control gate of said selected cell transistor and applying a second potential to said drain of said selected cell transistor when said binary data is a first logic level, said second potential being higher than said first potential, said first

and second applied potential tunneling electrons to said drain from said floating gate of said cell transistor, and said data program means applying a third potential to said drain of said selected cell transistor and applying a fourth potential to said control gate of said selected cell transistor when said binary data is a second logic level, said fourth potential being higher than said third potential, said third and fourth applied potential tunneling electrons to said floating gate from said drain of said cell transistor.

5,008,857



SEMICONDUCTOR MEMORY DEVICE PROVIDED WITH AN IMPROVED SYSTEM FOR DETECTING THE POSITIONS USING A REDUNDANT STRUCTURE

Akane Mizoguchi, Tokyo, Japan, assignor to NEC Corporation, Tokyo, Japan

Continuation of Ser. No. 385,528, Jul. 27, 1989, abandoned. This application Aug. 8, 1990, Ser. No. 563,890

Int. Cl.[5] G11C *13/00*

U.S. Cl. 365—200 **5 Claims**

1. A semiconductor memory device comprising:

a plurality of normal memory cells;

at least one redundant memory cell;

means for receiving address information;

a selection circuit coupled to said normal memory cells and said redundant memory cell, said selection circuit operatively selecting one of said normal memory cells in accordance with said address information when said normal memory cell corresponding to said address information is operable and selecting said redundant memory cell when said normal memory cell corresponding to said address information is defective;

a read-write circuit coupled to said selection circuit for performing a read operation of the selected memory cell in a read mode and a write operation to the selected memory cell in a write operation;

a power voltage terminal for receiving a power voltage;

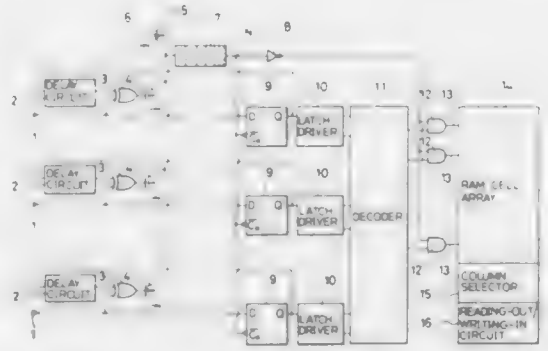
a detection circuit coupled to said power voltage terminal for generating a detection signal when said power voltage is initiated to be applied to said power voltage terminal;

a first initializing circuit for setting said normal memory cells at a first logic state in response to said detection signal; and

a second initializing circuit for setting said redundant memory cell at a second logic state different from said first logic state in response to said detection signal.

5,008,858

ASYNCHRONOUS SEMICONDUCTOR MEMORY HAVING ADDRESS TRANSITION DETECTOR



Setsuko Ikeda, Tokyo, Japan, assignor to NEC Corporation, Japan

Filed Aug. 24, 1989, Ser. No. 398,235

Claims priority, application Japan, Aug. 25, 1988, 63-212227

Int. Cl.[5] G11C *7/00*

U.S. Cl. 365—233.5 **4 Claims**

1. An asynchronous semiconductor memory comprising a memory cell array including a plurality of memory cells, means for receiving address signals , a detection circuit including a latch circuit, said detection circuit generating a detection signal when at least one of said address signals is changed;

a first transistor in said detecting circuit;

a second transistor opposite polarity of said first transistor having a source connected to a power source terminal;

an invertor; and

a programmable delay circuit including delay circuit elements having delay amounts corresponding to desired clock widths, said delay circuit elements being series-connected to constitute a multi-stage delay circuit having an input terminal connected to a drain of said second transistor and connected to a drain of said first transistor and having an output terminal connected to said invertor and to said latch circuit of said detecting circuit, a delay time of said programmable delay circuit being programmed to one of a plurality of predetermined values, means for applying said detection signal to the input terminal of said multi-stage delay circuit to generate a delay signal at the output terminal thereof, a decoder responsive to said address signals for operatively selecting at least one of said memory cells, and control means responsive to said delay signal for enabling said decoder.

ACOUSTIC TRANSPONDER RECEIVER CIRCUIT

Reginald Cyr, Santa Barbara, Calif., assignor to United States of America, Washington, D.C.

Filed Dec. 7, 1988, Ser. No. 281,139

Int. Cl.[5] H04B *1/59*

U.S. Cl. 367—2 **4 Claims**

1. A transponder receiver circuit, comprising:

(a) Transducer means for receiving a first input signal and for receiving a second input signal;

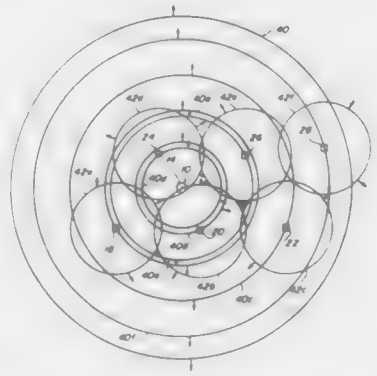
(b) A detector means connected to the transducer means for initiating a first navigate signal in response to the first input signal and for initiating a first command signal in response to the second input signal;

(c) Means for supplying electrical power in response to the first command signal;

(d) Another detector means connected to the transducer means and activatable by said electrical power, for initiating a second navigate signal in response tot he second input signal and for initiating a second command signal in response to the second input signal; and

(e) Means for initiating a first response signal in response to the first navigate signal and for initiating a second response signal in response to both the first command signal and the second command signal.

5,008,860



POSITION AND VELOCITY MEASURING SYSTEM

Thomas P. Riley, Westport, Mass.; Martin Buffman, Little Compton, R.I., and Reginald J. Cyr, Santa Barbara, Calif., assignors to United States of America, Washington, D.C.

Filed Mar. 16, 1989, Ser. No. 336,452

Int. Cl.[5] H04B *1/59*

U.S. Cl. 367—6 **1 Claim**

1. A position and velocity determining system for a vehicle in an ocean, comprising;

(a) first means located on a vehicle for transmitting either a first acoustic pulse or a second acoustic signal toward an area of an ocean floor;

(b) a plurality of two functioned receiver-transmitters substantially fixed in known locations of said area, each having a first function for receiving the first acoustic pulse and for immediately responding by transmitting an acoustic pulse at a unique frequency that is known to the vehicle, and each having a second function for receiving the second acoustic signal and for transmitting an acoustic signal of a unique fixed frequency that is known to the vehicle, the latter transmissions continuing for at least several seconds;

(c) third means located on the vehicle for receiving the acoustic pulses;

(d) fourth means located on the vehicle for determining the time difference between the transmission of the first acoustic pulse and the reception of the acoustic pulses from the receiver-transmitter;

(e) fifth means located on the vehicle for determining the positions of the vehicle relative to said known locations, based on said time differences;

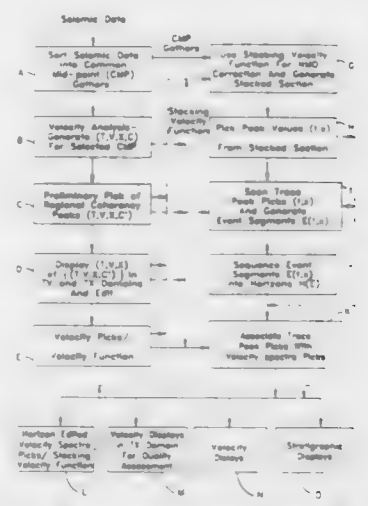
(f) sixth means located on the vehicle for receiving the acoustic signals from the receiver-transmitters;

(g) seventh means located on the vehicle for determining the apparent frequencies of the acoustic signals received from the receiver-transmitters;

(h) eighth means located on the vehicle for determining any differences in frequency between the apparent frequencies and the unique fixed frequencies of the acoustic signals received from the receivers-transmitters; and

(i) ninth means located on the vehicle for determining the velocities of the vehicle relative to said locations, based on determined differences in frequency and said determined positions of the vehicle relative to said known locations.

5,008,861



GEOPHYSICAL EXPLORATION BY AUTOMATICALLY PICKING AND ASSOCIATING STACKED SEISMIC SECTIONS WITH REGIONAL COHERENCY PEAKS OF VELOCITY SPECTRA

John N. Gallagher, Tulsa, Okla., assignor to Amoco Corporation, Chicago, Ill.

Filed Mar. 6, 1989, Ser. No. 319,609

Int. Cl.[5] G01V *1/36, 1/34*

U.S. Cl. 367—59 **52 Claims**

1. A method of processing seismic data for geophysical exploration comprising:

providing a first set of data points generated from seismic traces;

providing a second set of data points generated from seismic traces;

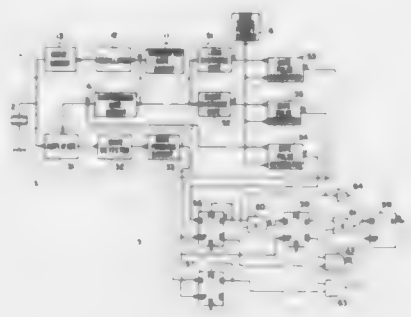
the second set of data points having a smaller number of data points therein than the first set of data points;

the first and second sets of data points having a common parameter represented by a variable in each of the first and second sets of data points; and

editing the first set by associating data points of the first set to data points of the second set according to the variable in each of the first and second sets of data points representing the common parameter and generating a set of one-to-one corresponding data points of the first and second sets, the set of one to one corresponding data points comprising a set of associated data points in which each data point of the second data set is associated with one and only one data point from the first data set.

5,008,862

OBJECT DETECTING SWITCH DEVICE



Hiroshi Shimamoto, Yokohama; Hideyuki Suzaki, Obtsu; Yukio Yamaguchi, Nagaokakyo, and Atsushi Kawano, Nagoya, all of Japan, assignors to Omron Tateisi Electronics Co., Kyoto, Japan

Continuation of Ser. No. 92,358, Sep. 2, 1987, abandoned. This application Jan. 18, 1990, Ser. No. 465,603

Claims priority, application Japan, Sep. 2, 1986, 61-207455

Int. Cl.[5] G01S *15/08*

U.S. Cl. 367—105 **9 Claims**

1. A switch device, comprising:

a transducer for emitting ultrasonic pulses to and receiving reflected ultrasonic pulses from an object;

a driving means for driving the transducer with at least one original drive signal;

a processor for processing a plurality of said reflected ultrasonic pulses from the transducer;

gate pulse generating means for generating a plurality of gate pulses allowing detection of at least two of first, second and third reflected ultrasonic pulses corresponding to each of said at least one original drive signals;

a pulse variation means for varying duration of any of said plurality of gate pulses; and

determination means for determining a distance from the transducer to said object utilizing said plurality of gate pulses and at least two of said first, second or third reflected ultrasonic pulses.

5,008,863

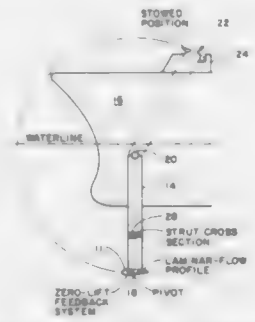
LOW NOISE SONAR SUPPORT SYSTEM

Frank S. Archibald, State College, Pa., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Jun. 4, 1979, Ser. No. 47,551

Int. Cl.[5] H04R *17/00*

U.S. Cl. 367—165 **2 Claims**



1. A sonar support system for deploying a sonar array remote from a vessel comprising:

a transversely extended hydrofoil-shaped member adapted for deployment beneath said vessel, said transverse member being pivotable in the streamed position and further including means for determining the position of zero lift therein at various vessel attitudes and means including a feedback system for pivoting said transverse member to a zero-lift position and maintaining said member at said position;

a sonar array positioned in said transverse member;

a pair of struts for supporting said transverse member, one at each end;

rotatable means connected to said struts and extending from said vessel for supporting and rotating said struts, said rotatable means further including coaxial rods which extend a distance from each side of said vessel's hull sufficient to allow clearance therefrom of said struts, said struts being joined at an outwardly extending angle to said rotatable means so as to extend substantially parallel to

said vessel's hull when in the vertically upward position, said struts being turned at an inwardly extending angle substantially at the vessel's gunwhale in the vertically upward position so as to converge and said transverse member connected to said converging struts at points sufficient to allow clearance of said vessel's underbody when in the vertically downward position;

a sonar system in said vessel and means connecting said sonar array to said sonar system;

means for rotating said rotatable means so as to pivot said transverse member between a position beneath said vessel, clear of the bow thereof, and a position on the deck of said vessel; and

means on the deck of said vessel for nesting said transverse member, whereby said sonar array may be deployed at selected depths beneath said vessel and readily removed for maintenance and when necessary to limit the draft of the vessel.

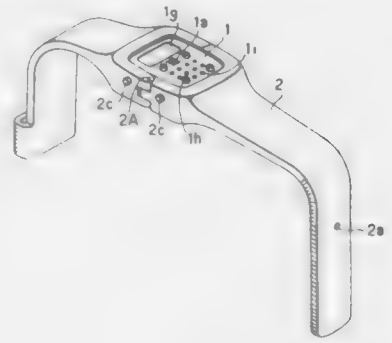
5,008,864

PORTABLE RADIO TELEPHONE DEVICE

Kunitoshi Yoshitake, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 24, 1990, Ser. No. 571,810

Claims priority, application Japan, Feb. 15, 1990, 2-34659



Int. Cl.[5] G04B *47/00;* **H04M** *1/05*

U.S. Cl. 368—10 **4 Claims**

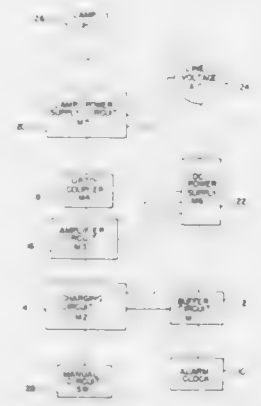
1. A portable radiotelephone device in which a radio device body is carried in the form of a wristwatch with a carrying strap, said radiotelephone device comprising:

a power source portion and an antenna portion for said radio device body provided on said carrying strap; and

a voice transmission tube connected to a transmitter or a receiver of said radio device body, provided within said

carrying strap and terminating at a predetermined position of said carrying strap.

5,008,865



LIGHT SOURCE WITH GRADUALLY CHANGING INTENSITY

Blaine P. Shaffer, 12305 9th Ave., SW., Seattle, Wash. 98146, and William G. Haab, Bothell, Wash., assignors to Blaine P. Shaffer, Seattle, Wash.

Continuation-in-part of Ser. No. 221,716, Jul. 20, 1988, abandoned. This application May 17, 1990, Ser. No. 525,877

Int. Cl.[5] G06B *47/00;* **G04C** *21/16*

U.S. Cl. 368—10 **1 Claim**

1. An apparatus for varying the brightness of a light in a smooth and gradual manner, comprising:

an A.C. power supply source means for providing power to said light at a frequency and power generally available on a power distribution system, said A.C. power supply having zero crossings;

a zero crossing sensor means for sensing each zero crossing of said A.C. power supply and outputting a zero crossing signal at each of said zero crossings;

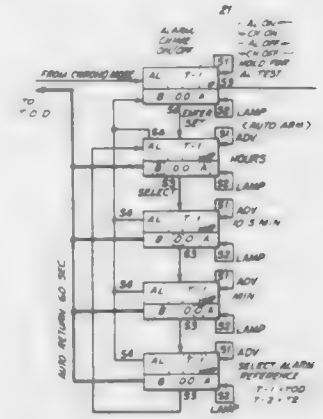
an oscillator circuit coupled to the output of said zero crossing sensor and receiving said zero crossing signals, said oscillator circuit outputting an oscillating frequency signal having a plurality of zero crossing points in between each zero of said A.C. power supply and at least one of said oscillator zero crossings occurring simultaneously with said A.C. power supply zero crossings;

a micro computer circuit having an internal timing clock controlled by said oscillator's zero crossings to ensure that said timing clock generates pulses whose occurrence is exactly positioned relative to said zero cross of said A.C. signal, said micro computer circuit including a trigger, a pulse output line, and an input signal line, said trigger pulse output line going high at a selected time after said A.C. signal zero crossing as measured by said internal timing clock, said selected time being variable from a first time after said zero crossing to a second time after said zero crossing, said second time occurring more closely after said A.C. zero crossing than said first time occurs after said A.C. zero crossing, said selected time gradually varying from said first time to said second time after said input signal goes high;

a gate circuit coupled to said trigger pulse output line, said gate circuit going high when said trigger pulse line goes high; and

a triac circuit having its gate coupled to said gate circuit for causing said triac circuit to turn on and provide power to said light from said trigger pulse output going high until said A.C. power supply passes through a subsequent zero crossing to thus control the intensity of said light based on said selected time of said trigger output line going high.

5,008,866



ALARM SETTING PROGRAM FOR ALARM TIMEPIECE WITH ALTERNATE TIME ZONE

Tom Thinesen, San Jose, Calif., assignor to Timex Corporation, Middlebury, Conn.

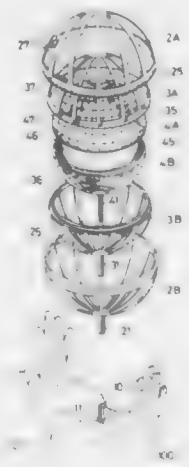
Filed Jan. 16, 1990, Ser. No. 466,101

Int. Cl.[5] G04B *19/22*

U.S. Cl. 368—21 **4 Claims**

1. In a multimode electronic timepiece having a display, an audible alarm device, a plurality of manually actuated switches, and an integrated circuit programmed to keep time and to provide a plurality of modes, including time-of-day, alternate time zone and alarm setting modes, said integrated circuit also being programmed to permit an operator to set time-of-day in response to actuation of selected switches, to set alternate time zone time in response to actuation of selected switches and to set alarm set time in an alarm setting mode in response to actuation of selected switches, said integrated circuit having a memory location for storing time-of-day and being programmed to selectively actuate said audible alarm device when said alarm set time corresponds to time-of-day in said memory location, the improvement comprising:

flag means selected in response to actuation of one of said switches while in said alarm setting mode adapted to



select either said alternate time zone time or time-of-day, whereby said audible alarm device may be actuated when the alarm set time corresponds either to time-of-day or to alternate time zone in response to setting of said flag means.

5,008,[illegible]7

ORNAMENTAL CLOCK WITH DECORATIVE TIME INDICATING DEVICE

Wei C. Ko, No. 36, Alley 53, Lane 514, Chung Cheng Rd., Hsin Chuang City, Taipei Hsien, Taiwan

Filed Jul. 23, 1990, Ser. No. 555,604
Int. Cl.[5] G04B *19/22*
U.S. Cl. 368—[illegible] 4 Claims

1. An ornamental clock with decorative time indicating device comprising:

a clock machanism **5**;

a clock base **100** for receiving said clock machanism **5** having a connector **10'** formed with outer thread extending upward from the clock base **100**;

an original hour, minute and second indicating connectors **20'**, **30'**, **40'** being co-axially provided within said connector **10'** and extending upward thereform with their respective height;

a thread sleeve member **10**, **10A**, **10B** formed with a lower inner thread hole **11**, **11A**, **11B** and an upper small diameter through hole **12**, **12A**, **12B**, said inner thread hole **11**, **11A**, **11B** being screwed on said outer thread of said connector **10'** of said clock base **100**;

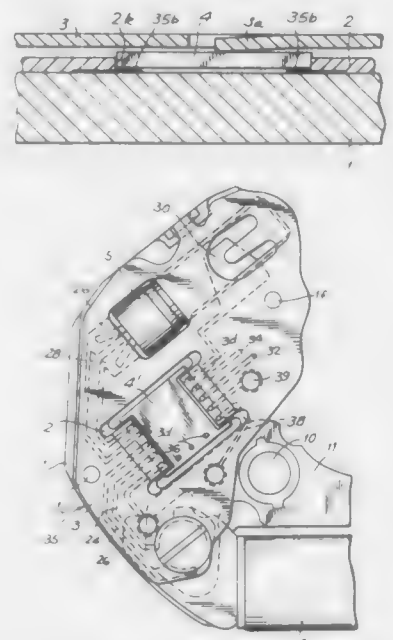
a decorative hour indicator **2**;

an hour indicator rotating shaft **20**, **20A**, inner surface **22**, **22A** of lower end of which is tightly fitted to the upper end of said original hour indicating connector **20'**, and outer surface of upper end **23** of which is associated with said decorative hour indicator **2**;

a decorative minute indicator **3**;

a minute indicator rotating shaft **30**, **30A**, outer surface of lower end **31** of which closely rotatably contacts with inner surface **24** of upper end of said hour indicating rotating shaft **20**, **20A**, and inner surface of lower end **32** of which is tightly fitted to said original minute indicator connector **30'**, and the outer surface **33** of upper end of which is associated with said decorative minute indicator **3**;

a decorative second indicator **4**; and



a second indicator rotating shaft **40**, **40A**, outer surface of lower end **41** of which closely rotatably contacts with inner surface **34** of upper end of said minute indicator rotating shaft **30**, **30A**, and inner surface of lower end **42** of which is tightly fitted to said original second indicator connector **40'**, and outer surface **43**, **43A** of upper end of which is associated with said decorative second indicator **4**.

5,008,868

STRUCTURE FOR MOUNTING AN INTEGRATED CIRCUIT

Toshimasa Ikegami, Suwa, Japan, assignor to Seiko Epson Corporation, Tokyo, Japan

Filed Mar. 4, 1988, Ser. No. 164,299
Claims priority, application Japan, Mar. 5, 1987, 62-50584; Nov. 6, 1987, 62-280502; Nov. 6, 1987, 62-169704
Int. Cl.[5] G04C *23/00*; G04B *37/00*
U.S. Cl. 368—88 23 Claims

1. A structure for mounting an integrated circuit chip ("IC chip") having a plurality of chip terminals within a timepiece, comprising:

a timepiece frame;

an insulating circuit substrate supported on the frame and formed with a chip receiving opening for receiving and positioning the IC chip in the plane of the substrate;

a circuit pattern having circuit terminal portions formed as leaf springs selectively formed on the circuit substrate overhanging within said chip receiving opening, the circuit terminal portions being adapted to contact corresponding chip terminals when the IC chip is mounted on the circuit substrate; and

biasing means for biasing one of the IC chip or circuit terminal portions towards each other so that the chip terminal portions come into conductive contact with the circuit terminal portions for forming a circuit between the circuit pattern and the IC chip, whereby the IC chip is supported between the frame and the biasing means without the need for adhesives or additional containment structure.

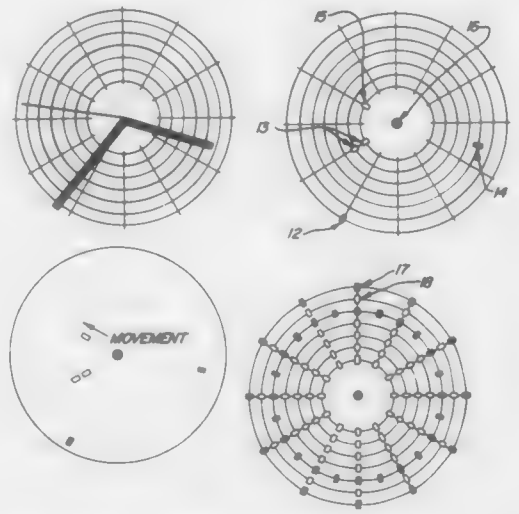
5,008,869

TRANSPARENT DIAL FACE WATCH WITH REPLACEABLE VISUAL DISPLAY

Mark Dweck, Great Neck, N.Y., assignor to Colony Corporation, Scarsdale, N.Y.

Filed Apr. 11, 1990, Ser. No. 507,951
Int. Cl.[5] G04B *19/06*, *19/04*
U.S. Cl. 368—228 10 Claims

1. A watch comprising a transparent front member, visually-perceptive liquid crystal indicia of time contained in said transparent front member, rear watch stemless mechanism means for controlling the liquid crystal display of said visually-perceptive indicia of time in said transparent front member, and means in juxtaposed relation with said transparent front member for retaining within said watch a visual display observable through said transparent front member and liquid crystal indicia, said retaining means comprising unobstructed stem free compartment means arranged between said transparent front member and said rear watch mechanism means for freely receiving and retaining said visual display in juxtaposed relation to said visually-perceptive indicia of time, whereby said display can be observed through said transparent front member simultaneously with said visually-perceptive indicia of time.



5,008,870

FIFO CLOCK

James R. Vessa, 8833 Bay Pointe Dr., Tampa, Fla. 33615

Filed Jun. 28, 1988, Ser. No. 212,471
Int. Cl.[5] G04C *17/00*
U.S. Cl. 368—242 16 Claims

1. An electronic timepiece comprising:

a display having a center position and twelve columns, each of said twelve columns having at least five display elements extending in a radial direction from said center position, respective display elements of each of said twelve columns further defining at least five concentric rows, one row of at least said five rows defining a five minute hand row an other row of said plurality of rows being an hour hand row, each of said display elements selectively operable to produce a visual signal when energized, and

means for selectively energizing display elements of said twelve columns, said means for energizing having a timebase and means for timekeeping, said means for timekeeping having means for sequentially radially energizing at least four display elements along a selected column of said twelve columns, whereby said at least four display elements are illuminated by said means for timekeeping such that the illumination of each display element denotes the passage of a unit of time being registered by said display.

DICTATE/TRANSCRIBE CONTROL FOR DIGITAL DICTATION SYSTEM

Joseph A. Howells, 10 Old Woods Rd., Brookfield Center, Conn. 06804; Emil F. Jachmann, 34 Harborview Pl., Stratford, Conn. 06497, and Robert L. Rubenstein, 46 Mohawk Dr., Norwalk, Conn. 06855

Filed Dec. 22, 1988, Ser. No. 289,555
Int. Cl.[5] G11B *27/031*
U.S. Cl. 369—28 14 Claims

1. A digital dictation system having a central store accessible concurrently by at least one dictator to record and/or receive messages at a changing dictator position in said store and by a transcriptionist to transcribe messages from a changing transcriptionist position in said store, said system comprising.

dictate review means for enabling a dictator to review a message then being transcribed by said transcriptionist;

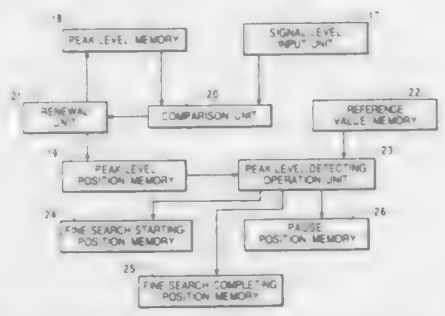
record means operable by said dictator to record information including an edit in the message then being transcribed by said transcriptionist; and

transcribe playback means conditioned automatically to play back to said transcriptionist at least the edit in the message recorded by said dictator if said edit is made at a portion of the message which has been transcribed by said transcriptionist.

5,008,872

OPTICAL DISC REPRODUCTION APPARATUS WHICH DETECTS MAXIMUM AUDIO SIGNAL LEVEL RECORDED ON AN OPTICAL DISK

Haruhisa Tomoda, Neyagawa, and Yasuomi Shimada, Katano, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan



Filed Mar. 21, 1988, Ser. No. 171,471
Claims priority, application Japan, Mar. 20, 1987, 62-66431
Int. Cl.[5] G11B *21/10*, *21/12*
U.S. Cl. 369—32 14 Claims

1. An optical disc reproduction apparatus for audibly reproducing signals recorded on an optical disc and for detecting a peak audio level of signals recorded on the optical disc, the optical disc having on a surface thereof a plurality of generally concentric recording tracks, said optical disc reproduction apparatus comprising:

a reading means for reading the signals recorded on the optical disc and for outputting an audible signal in accordance with the thus read signals on the optical disc;

a signal level detecting means for detecting and outputting

an audio signal level of the signals recorded on the optical disc and read by said reading means;
a peak level memory means for storing a maximum value of the audio signal level detected by said signal level detecting means;
a peak level position memory means for storing a location on the optical disc of the signals having the value of the audio signal level stored in said peak level memory means;
a comparing means for comparing a value of the audio signal level stored in said peak level memory means and a value of the audio signal level output by said signal level detecting means;
a renewal means for resetting the value stored in said peak level memory means and the location stored in said peak level position memory means when the value of the audio signal level output by said signal level detecting means exceeds the value of the audio signal level stored in said peak level memory means;
a reference value memory means for storing a plurality of preselected reference values;

an operating means for effecting a first search of the optical disc by causing said reading means to sequentially read every N tracks of the optical disc, and for storing in said peak level position memory means a first location on the optical disc in which a maximum value of the audio signal level was detected during said first search, and for effecting a second search of the optical disc by calculating a start-search location and an end-search location based on the first location on the optical disc and reference values stored in said reference value memory means and by causing said reading means to sequentially read every M tracks on the optical disc from the start-search location to the end-search location, and for storing in said peak level position memory means a second location on the optical disc in which a maximum value of the audio signal level was detected during said second search, and for calculating a pause position on the optical disc in accordance with the second location on the optical disc and the reference values stored in said reference value memory means; and,
a means for storing said start-search location, said end-search location, and said pause position,
wherein N and M are integers and M is less than N.

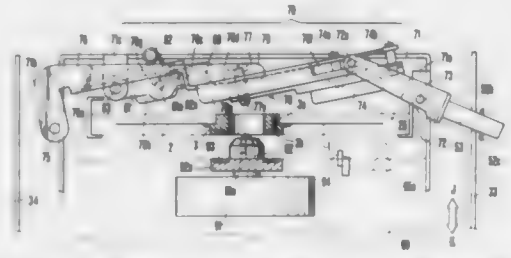
5,008,873

TILT ADJUSTMENT MECHANISM FOR OBJECT LENS DRIVING DEVICE

Toshiyuki Tanaka, Osaka, and Etsuji Minami, Nara, both of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed May 4, 1989, Ser. No. 347,210
Claims priority, application Japan, May 7, 1988, 63-111286
Int. Cl.[5] G11B *7/08*
U.S. Cl. 369—44.14 **6 Claims**

1. A tilt adjustment mechanism for an object lens driving device, wherein the tilt of an object lens driving device (**4**) with respect to a housing (**3**) provided with an optical system is adjusted so that the central axis of an object lens (**6**) provided to said object lens driving device and adapted for forming a light spot on a recording medium (**1***a*) is substantially parallel to an optical axis (**7***a*) of a light beam of said optical system irradiated on said object lens, in which the information is optically written to or read from said recording medium (**1***a*), said tilt adjustment mechanism comprising
a base (**13**) holding the object lens driving device;
a housing (**3**) including a supporting point (**17**) supporting the base and two adjustment points (**20***a*, **20***b*; **20***c*; **20***d*), said supporting point and the adjustment points being so arranged that a straight line interconnecting said one supporting point and one of said adjustment points substantially make a right angle with a straight line interconnecting said one supporting point and the other of said adjustment points, said housing also including a concave portion (**17**) formed at said supporting point on the surface thereof facing to said base,



a spherical supporting member (**14**) fitted into said concave portion and interposed between said base and said housing to perform a point contact therewith; and
adjustment screws (**18***a*, **18***b*; **18***c*; **18***d*) provided at each of said two adjustment points for modifying the distance between said base and said housing;
wherein, at each of the two adjustment points, one of said base and said housing has a screw hole (**19***a*; **19***c*; **19***d*) and the other has holding means (**3***c*; **13***d*, **23***a*, **23***b*, **25***a*, **25***b*, **26***a*, **26***b*; **25***c*; **25***d*) for holding each of said adjustment screws for meshing with said screw hole.

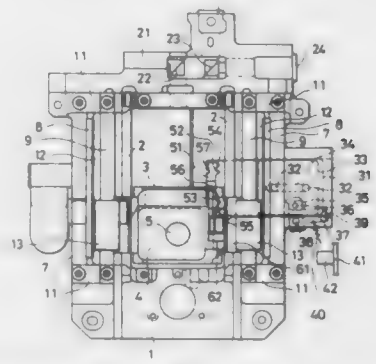
OPTICAL DISC REPRODUCING APPARATUS HAVING DISPLAY INDICATING PROGRAM STATUS

Haruhisa Tomoda, Kashihara, and Yasuomi Shimada, Ikoma, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Sep. 7, 1988, Ser. No. 241,235
Claims priority, application Japan, Sep. 8, 1987, 62-224341
Int. Cl.[5] G11B *7/28, 27/02*
U.S. Cl. 369—85 **2 Claims**



1. A programming device of an optical disc reproducing apparatus, the optical disc reproducing apparatus for reproducing recorded information recorded on an optical disc, the recorded information including a plurality of discrete audio selections and index numbers identifying each of the plurality of discrete audio selections and playing time information indicating the playing time of each of the plurality of discrete audio selections, the programming device for programming the playing sequence of the plurality of discrete audio selections for recording onto a magnetic recording medium having first and second recording sides, said programming device comprising:
signal detection means for detecting the recording information recorded on the optical disc;
recording time input means for inputting of a recording time of the magnetic recording medium;
recording the memory means, coupled to said recording time input means, for storing the recording time of the magnetic recording medium;
arithmetic means, coupled to said signal detecting means and said recording time memory means, for determining which of the discrete audio selections are to be recorded on each of the first and second recording sides of the magnetic tape in accordance with the recording time of the magnetic tape and the playing time information of the discrete audio selections, and for calculating respectively for each of the first and second recording sides of the magnetic tape first and second remainder times denoting a difference between the recording time of the first and second recording sides and a total of the playing times of the discrete audio selections to be recorded on the first and second recording sides;
a first side audio selection memory means, coupled to said arithmetic means, for storing the index numbers of the discrete audio selections determined by said arithmetic means to be recorded on the first side of the magnetic recording medium;
a second side audio selection memory means, coupled to said arithmetic means, for storing the index numbers of the discrete audio selections determined by said arithmetic means to be recorded on the second side of the magnetic medium;
a first side display memory means, coupled to said arithmetic means and said first audio selection memory means, for storing as first side display information at least one of the first remainder time calculated by said arithmetic means and the index numbers stored in said first side audio selection memory means;
a second side display memory means, coupled to said arithmetic means and said second audio selection memory means, for storing as second side display information at least one of the second remainder time calculated by said arithmetic means and the index numbers stored in said second side audio selection memory means; and,
a display means, having a first display region and a second display region and coupled to said first and second side display memory means, for displaying in said first display region the first side display information stored in said first side display memory means and for displaying in said second display region the second side display information stored in said second side display memory means.

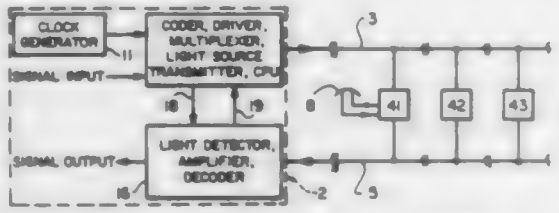
CARRIAGE LOCK APPARATUS

Toshio Nakagishi, Tokyo, Japan, assignor to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 8, 1989, Ser. No. 437,971
Claims priority, application Japan, Nov. 14, 1988, 63-287410
Int. Cl.[5] G11B *17/00, 17/30*
U.S. Cl. 369—244 **20 Claims**

1. A carriage lock apparatus, comprising:
a head for recording or playing back information on a rotating disk;
a carriage on which said head is mounted;
first means for moving said carriage in a radial direction on said disk;
first engaging means, said first engaging means having a first engaging portion with a first pitch that moves in association with a movement of said carriage in the radial direction of said disk;
second engaging means, said second engaging means having a second engaging portion with a second pitch that is different from said first pitch of said first engaging portion, said second engaging portion being located at a specific position so that said second engaging portion can engage said first engaging portion; and
means for engaging or disengaging said first and second engaging portions.

5,008,877



OPTICAL SIGNAL RECOVERY FOR DISTRIBUTION COMMUNICATION SYSTEM

Frank H. Levinson, Redwood City, Calif., assignor to Raychem Corp., Menlo Park, Calif.

Continuation-in-part of Ser. No. 935,458, Nov. 25, 1986. This application Nov. 12, 1987, Ser. No. 120,308

Int. Cl.[5] H04J *14/08*

U.S. Cl. 370—4 **16 Claims**

1. A distribution communication system, comprising:

a head end including a transmitter, a receiver, and a clock generator which generates a system clock frequency from which a packet transmission frequency can be derived;

a plurality of terminals remote from the head end;

first means for transmitting first information from the transmitter to the remote terminals and for transmitting second information from the remote terminals to the head end receiver, the first information being encoded so that the system clock frequency is derivable therefrom by the remote terminals, the terminals transmitting the second information onto a talk bus in an asynchronous time multiplexed packet format utilizing a plurality of packets which are out of phase with one another, the second information being transmitted at a transmission frequency;

second means for transmitting the system clock frequency within the head end from the clock generator to the head end receiver along a communication path different from that defined by the first means and which is located entirely within the head end.

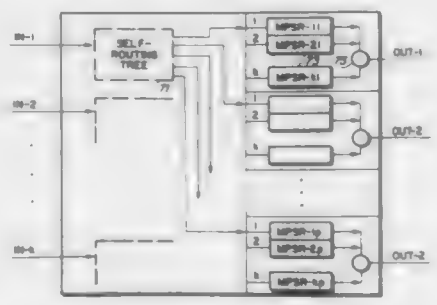
HIGH-SPEED MODULAR SWITCHING APPARATUS FOR CIRCUIT AND PACKET SWITCHED TRAFFIC



Hamid Ahmadi, Somers, N.Y.; Johannes G. Beha; Wolfgang E. Denzel, both of Waederswil, Switzerland; Antonius P. Engbersen, Richterswil; Ronald P. Luijten, Oberrieden, both of Switzerland; Charles A. Murphy, Raleigh, N.C., and Erich Port, Rueschlikon, Switzerland, assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 14, 1988, Ser. No. 257,656

Claims priority, application European Pat. Off., Nov. 30, 1987, 87115341

Int. Cl.[5] H04J *3/26*

U.S. Cl. 370—60 **8 Claims**

1. Apparatus for transferring packet switched or circuit switched information from a plurality of incoming transmission links connected to an input switch adapter means through a self-routing switching fabric means to an output switch adapter means to a plurality of output ports attached via an output switch adapter means to a plurality of outgoing transmission links employing a plurality of minipackets, comprising:

(a) input switch adapter means for receiving the packet switched or circuit switched information from the incoming transmission links and for forming a minipacket from the packet switched or circuit switched information including a local routing address;

(b) self-routing switching fabric means consisting of at least one set of parallel switching slices and having a plurality of input ports and output ports, the parallel switching slices having non-overlapping paths between input ports and output ports, the input ports receiving the minipackets from the input switch adapter means and sending the minipackets through the self routing switching fabric to an output port specified in the local routing address; and

(c) output switch adapter means for joining the output port of the self-routing switching fabric means to an outgoing transmission link and for converting the common information format to packet switched or circuit switched information to transmit on the outgoing transmission link.

LAN WITH INTEROPERATIVE MULTIPLE OPERATIONAL CAPABILITIES

Michael A. Fischer; William M. Cox, and Floyd H. McDougall, all of San Antonio, Tex., assignors to Datapoint Corporation, San Antonio, Tex.

Filed Nov. 14, 1988, Ser. No. 270,641

Int. Cl.[5] H04J *3/02, 3/24*

U.S. Cl. 370—85.2 **115 Claims**

1. A local area network or LAN, comprising:

a plurality of at least three nodes which include a first group having at least two of said nodes therein and a second group having at least two of said nodes therein;

a communication medium connecting the nodes;

interface means associated with the first group of nodes and operative for supplying signals to the medium to establish network operational activity and for communicating information between selected nodes in predetermined signals applied at selected regularly occurring intervals in compliance with a first predetermined communication protocol;

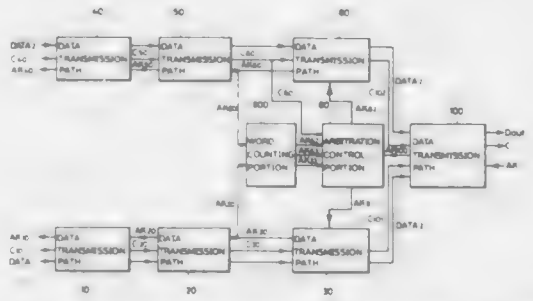
interface means associated with the second group of nodes and operative for supplying signals to the medium to establish network operational activity and for communicating information between selected nodes in predetermined signals applied at selected regularly occurring intervals in compliance with a second predetermined communication protocol; and wherein:

the first and second protocols are different; and

the signals are applied in predetermined patterns to create network operational activity in both protocols while simultaneously communicating information in a selected one of the first or second protocols.

5,008,880

DATA TRANSMISSION APPARATUS



Daisuke Azuma, Nara, Japan, assignor to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Mar. 14, 1989, Ser. No. 323,021

Claims priority, application Japan, Mar. 14, 1988, 63-61587; Mar. 14, 1988, 63-61588

Int. Cl.[5] H04J *3/26*

U.S. Cl. 370—85.6 **20 Claims**

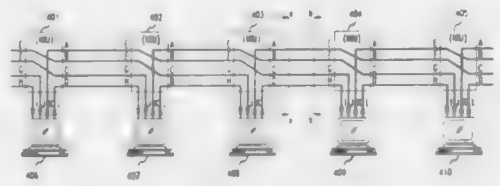
1. A data transmission apparatus for sending out to a succeeding stage in series a plurality of data applied from a preceding stage, comprising:

a plurality of single direction first data transmission paths receiving the plurality of data applied from said preceding stage, priorities being respectively given to the plurality of single direction first data transmission paths,

a second data transmission path selectively receiving data from any one of said plurality of first data transmission paths for outputting the data to said succeeding stage, and

control means for controlling the priority of data transmitted from said plurality of first transmission paths to said second data transmission path so that when each of said plurality of transmission paths simultaneously receive data for transmission to said second data transmission path the data from said plurality of transmission paths will be forwarded to said second transmission path in order of said priority.

5,008,881



CHORDAL RING NETWORK

Mark J. Karol, Fair Haven, N.J., assignor to AT&T Bell Laboratories, Murry Hill, N.J.

Filed May 18, 1990, Ser. No. 526,097

Int. Cl.[5] H04R *3/00*

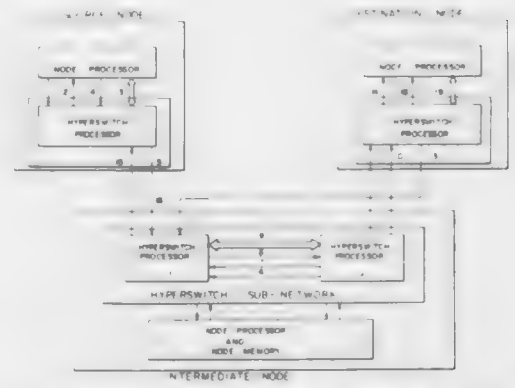
U.S. Cl. 370—85.150 **9 Claims**

1. A chordal network comprising:

a plurality of Network Interface Units (NIUs), each NIU including a plurality of inputs in a predetermined sequence, a plurality of outputs in a predetermined sequence, at least two user equipment ports, and a plurality of connections from predetermined inputs to predetermined outputs, at least one connection being cut within the NIU to form two ends, the ends each being routed to a separate user equipment port, at least two NIUs being substantially identical, and including a substantially identical sequence of inputs;

a multiple portion communications medium, each portion connecting two NIUs and comprising a plurality of channels, at least one portion connecting two identical NIUs, each channel in the portion connecting two identical NIUs connecting a separate output of a first NIU to a separate input of a second NIU, each output of the first NIU also being connected to a separate input of the first NIU, the input to the first NIU and to the second NIU differing in their respective positions in the sequence of inputs by a fixed number of positions for each channel in the portion.

5,008,882



METHOD AND APPARATUS FOR ELIMINATING UNSUCCESSFUL TRIES IN A SEARCH TREE

John C. Peterson, Alta Loma; Edward Chow, San Dimas, and Herb S. Madan, Marina del Rey, all of Calif., assignors to California Institute of Technology, Pasadena, Calif.

Filed Aug. 17, 1987, Ser. No. 86,722

Int. Cl.[5] H04J *3/24*

U.S. Cl. 370—94.3 **51 Claims**

1. A method of searching for a best-first path from an originating computer ("node") through any number of intermediate node(s) to a destination node, when said nodes are connected in a cube-configured network having a plurality of path sections interconnecting the originating, intermediate and destination nodes, comprising the steps of:

trying individual path sections of the network in a preferred order of paths which lead from the originating to the destination node;

eliminating from the order of paths to be tried, those path sections terminating at a destination node and found busy; and

latching the first non-busy terminal path section of the preferred order which completes a path from the originating to said destination node.

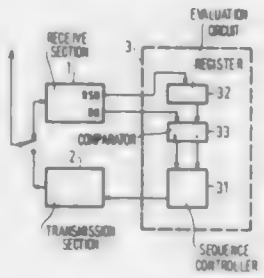
5,008,883

COMMUNICATION SYSTEM

Alfons Eizenhöfer, Altdorf, and Georg Von Harten, Nürnberg, both of Fed. Rep. of Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Apr. 14, 1989, Ser. No. 339,275

Claims priority, application Fed. Rep. of Germany, Apr. 28, 1988, 3814355



Int. Cl.[5] H04J *3/00*

U.S. Cl. 370—95.1 **15 Claims**

1. A communication system having at least one central arrangement and a plurality of mutually independent subscriber stations, in which a subscriber station, after transmission of a request for access, awaits an authorization for access to be granted by the central arrangement, characterized in that the subscriber station repeats its request for access, once it has established that another subscriber station, which transmitted its request for access at a later instant, has received an authorization for access,

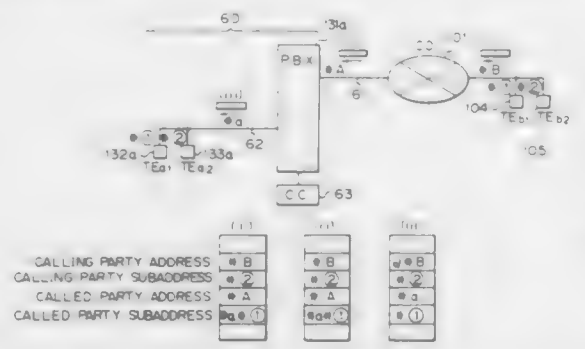
wherein the subscriber station, when transmitting a request

for access, stores an identification code which indicates the time rank of its request for access in the order of the

requests for access, from further subscriber stations, occurring on a control channel.

5,008,884

PRIVATE AUTOMATIC BRANCH EXCHANGE SYSTEM WITH LINE ACCESSING NUMBER ADDING FEATURE



Shigehiko Yazawa; Toru Ogawa; Haruo Moritomo, all of Kawasaki; Yoshiaki Suya, Yokohama, and Mikio Nakayama, Tokyo, all of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed May 2, 1989, Ser. No. 346,544

Claims priority, application Japan, May 10, 1988, 63-111698; Sep. 12, 1988, 63-227904

Int. Cl.[5] H04J *3/02, 3/12, 3/08*

U.S. Cl. 370—110.1 **24 Claims**

1. A private automatic branch exchange system having an extension line connectable to an extension terminal and being operatively connected through a communication line and through a public network to a calling party terminal, comprising;

switching network means for switching between the communication line and the extension line;

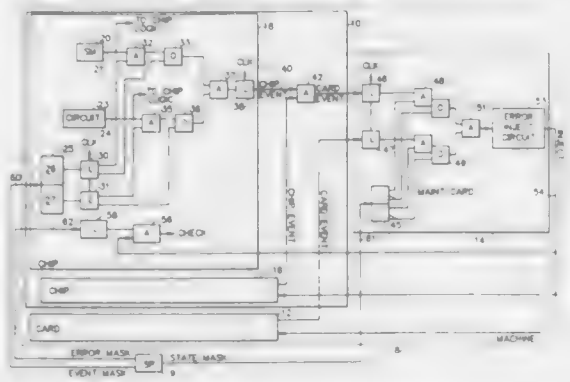
control means, operatively connected to said switching network means, for controlling the switching operation of said switching network means, said control means comprising

line accessing number adding means for forming incoming information by adding a line accessing number to incoming call information so that the communication line is accessible by the extension terminal, and

means for transmitting said incoming information to the extension terminal; and

call back means cooperating with the extension terminal for performing a call back operation based on said line accessing number.

5,008,885



EVENT-CONTROLLED ERROR INJECTION SYSTEM

Kevin C. Huang, Endicott, N.Y.; Karl H. Kutz, Berlin; Timothy J. McNamara, Endicott, N.Y.; Victoria E. Seals, Alpharetta, Ga., and Gregory S. Still, Endwell, N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Dec. 29, 1988, Ser. No. 291,544

Int. Cl.[5] G06F *11/00*

U.S. Cl. 371—3 **10 Claims**

1. In a processing machine in which a plurality of machine events occur over time, a system for injecting simulated errors into said machine for test and evaluation of machine processes, comprising:

a programmable mask means in said machine for providing a masking signal identifying a mask-defined machine event;

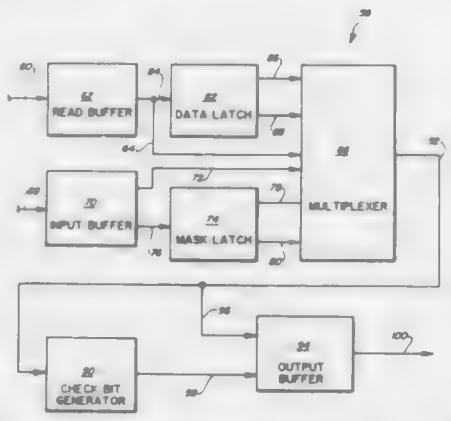
a machine event detector in said machine for providing an event signal indicating a machine event;

comparison means connected to said programmable mask means and to said machine event detector for indicating the occurrence of said mask-defined machine state in response to said masking signal and said event signal;

count means connected to said comparison means for counting occurrences of said mask-defined machine event; and

programmable error injection means, connected to said count means, for injecting an error into said machine upon said count means reaching a certain count.

5,008,886



READ-MODIFY-WRITE OPERATION

Kumar Chinnaswamy, Milford; Michael A. Gagliardo, Shrewsbury; Paul M. Goodwin, Framingham; John J. Lynch, Wayland, and James E. Tessari, Arlington, all of Mass., assignors to Digital Equipment Corporation, Maynard, Mass.

Filed Jan. 27, 1989, Ser. No. 303,621

Int. Cl.[5] G06F *11/10*

U.S. Cl. 371—40.2 **16 Claims**

1. A method of merging read data from a digital computer memory with new input data including mask field bits to modify said read data for rewriting into said memory, comprising the steps of:

latching a first selected number of data bits from said read data;

latching a second selected number of data bits from said new input data;

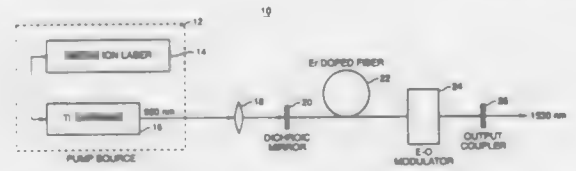
latching said mask field bits corresponding to said latched new input data bits;

multiplexing said latched read data bits with said latched new input data bits according to said latched mask field bits to form said first selected number of merged data bits;

generating a third selected number of check bits with said merged data bits according to an error correction code; and

combining said merged data bits with said check bits to form modified write data.

5,008,887



MODE-LOCKED FIBER LASER

James D. Kafka, 928 Wright Ave. #302, Mountain View, Calif. 94043, and Thomas M. Baer, 537 Drucilla Dr., Mountain View, Calif. 94040

Filed Apr. 19, 1989, Ser. No. 340,448

Int. Cl.[5] H01S *3/30*

U.S. Cl. 372—6 **41 Claims**

1. A mode-locked fiber laser, including:

a pump source,

a linear laser cavity including a single mode doped optical fiber, said cavity having a first end defined by an output coupler, said output coupler being partially transmissive at the laser output wavelength, and having a second end defined by a dichroic mirror having a high reflectivity at the laser output wavelength an a high transmissibility at the wavelength of radiation emitted from said pump source,

a broad bandwidth electro-optic modulator in said cavity,

means for coupling radiation from said pump source into said laser cavity, and

control means for operating said modulator such that its turn off and turn on times are shorter than 2 nanosecond and such that its repetition rate is Xc/2nL, where x is an integer from 1 to 1,000,000, C is the speed of light, n is the index of refraction of the fiber, and L is the total length of said optical fiber n is the index of fraction of the fiber, and L is the length of said optical fiber.

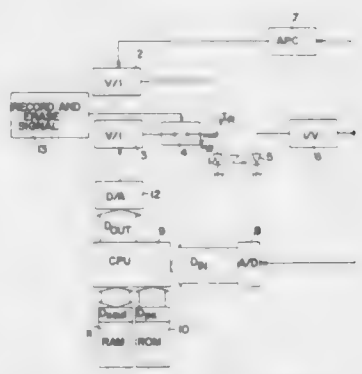
5,008,888

SEMICONDUCTOR LASER DRIVING APPARATUS

Tomiyuki Numata, Tenri; Takashi Iwaki, Nara; Kunio Kojima, Nara, and Toshihisa DeGuchi, Nara, all of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Jul. 21, 1989, Ser. No. 384,213

Claims priority, application Japan, Jul. 22, 1988, 63-184088



Int. Cl.[5] H01S *3/10*

U.S. Cl. 372—29 **5 Claims**

1. In a semiconductor laser driving apparatus for supplying a driving current to a semiconductor laser device of an optical disk recording and reproducing system, the level of which is changed to adjust the optical output of the semiconductor laser device to one of plural levels corresponding to positions of an optical disk which is irradiated by a laser beam emitted from said laser device, said apparatus comprises:

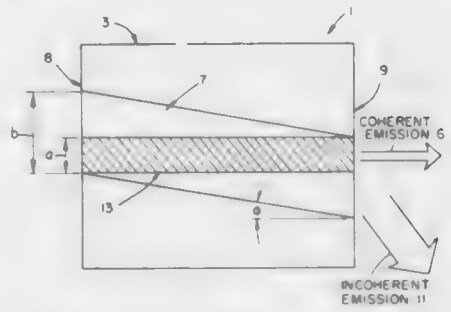
a current supplying means for sequentially supplying plural reference driving currents having a different level to said laser device;

a monitoring means for detecting the optical output level of said laser device when each of said reference driving currents is supplied to said laser device;

a setting means for setting several optimum values on the basis of the detected optical output levels; and

a selecting means for selecting one of said several optimum values, depending upon the irradiated position on the irradiated optical disk.

5,008,889



HIGH-ACCURACY WAVELENGTH STABILIZATION OF ANGLED-STRIPE SUPER LUMINESCENT LASER DIODE SOURCES

Keith E. Wilson, 1104 Hugh Reid Dr., Arcadia, Calif. 91007

Filed Nov. 6, 1989, Ser. No. 432,581

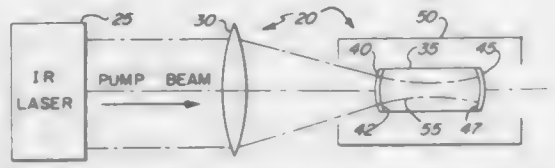
Int. Cl.[5] H01S *3/13*

U.S. Cl. 372—32 **26 Claims**

1. An optical device comprising:

a superluminescent diode including means for simultaneously emitting both coherent light and incoherent light;

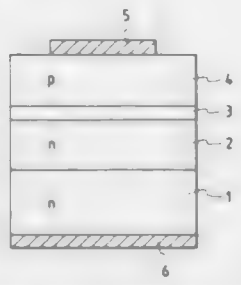
means for exciting said superluminescent diode into simultaneously emitting a beam of coherent light and a beam of incoherent light which can be spatially separated;



first means external to said diode for channeling light;

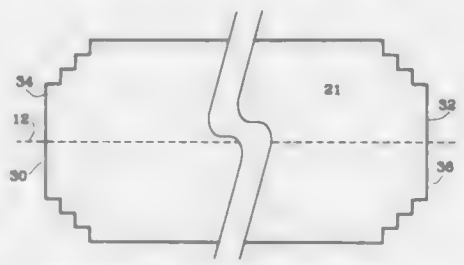
first means for coupling at least a portion of said beam of coherent light into said first means for channeling light;

second means external to said diode for channeling light; and



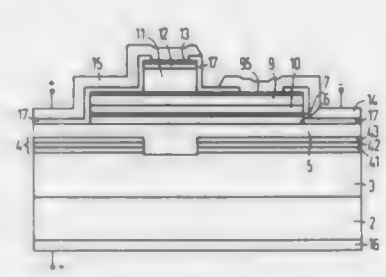
second means for coupling at least a portion of said beam of incoherent light into said second means for channeling light.

5,008,890
RED, GREEN, BLUE UPCONVERSION LASER PUMPED BY SINGLE WAVELENGTH INFRARED LASER SOURCE
Ross A. McFarlane, Thousand Oaks, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.
Filed May 1, 1990, Ser. No. 517,085
Int. Cl.[5] H01S 3/16
U.S. Cl. 372—41 43 Claims



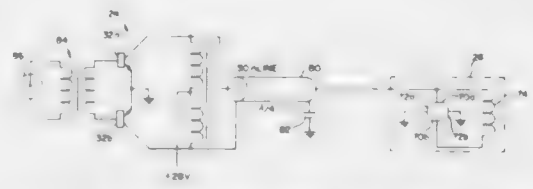
1. A red green blue upconversion laser system pumped by a single pump laser source, comprising:
a laser rod fabricated from a host material doped with a rare earth ion;
a pump laser source for generating a pump beam substantially at a single infrared pump wavelength;
a first upconversion laser mirror disposed adjacent a first end of the laser rod through which the pump beam passes into the laser rod, said first mirror characterized by high transmissivity at the pump beam wavelength and high reflectivity at the red, green and blue upconversion wavelengths; and
a second upconversion laser mirror mounted adjacent a second end of the laser rod and characterized by a transmissivity in the range of 1% to 10% at the red, green and blue upconversion wavelengths.

5,008,891
SEMICONDUCTOR LIGHT-EMITTING DEVICES
Yoshio Morita, Osaka, Japan, assignor to Matsushita Electric Industrial Co., Ltd., Japan
Filed Apr. 10, 1990, Ser. No. 507,273
Claims priority, application Japan, Apr. 11, 1989, 1-91325
Int. Cl.[5] H01S 3/19
U.S. Cl. 372—45 16 Claims



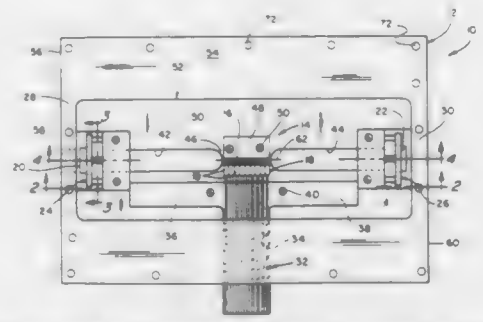
1. A semiconductor light-emitting device comprising a substrate and a combination of semiconductor laser layers disposed on said substrate in a double heterostructure laser configuration, said layers comprising:
a p-type semiconductor cladding layer formed of $Cu(Al_aGa_{1-a})(S_bSe_{1-b})_2$ where $0 \leqq a \leqq 1$ and $0 \leqq b \leqq 1$;
an n-type semiconductor cladding layer formed of $(Zn_cCd_{1-c})(S_dSe_{1-d})$, where $0 \leqq c \leqq 1$ and $0 \leqq d \leqq 1$; and
an activation layer disposed between said n-type cladding layer and p-type cladding layer and formed of $Cu(Al_aGa_{1-a})(S_bSe_{1-b})_2$;
each of said p-type cladding layer, n-type cladding layer and activation layer having an identical value of lattice constant to that of said substrate.

5,008,892
SEMICONDUCTOR LASER DIODES
Barbara T. Landesman, Placitas, N. Mex., assignor to Talandic Research Corporation, Azusa, Calif.
Filed Dec. 27, 1989, Ser. No. 457,251
Int. Cl.[5] H01S 3/19, 3/08
U.S. Cl. 372—45 5 Claims



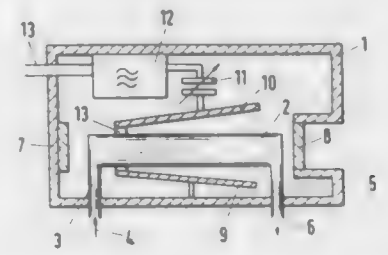
3. A semiconductor laser diode comprising:
a resonant semiconductor laser waveguide cavity: means for establishing lasing in the waveguide cavity; and
means for enhancing oblate-spheroidal lasing modes therein.

5,008,893
TUNABLE SEMICONDUCTOR LASER
Markus-Christian Amann, Munich; Gerhard Baumann, Ottobrunn; Jochen Heinen, Haar, and Wolfgang Thulke, Munich, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed Feb. 15, 1990, Ser. No. 480,825
Claims priority, application European Pat. Off., Feb. 15, 1989, 89102596.7
Int. Cl.[5] H01S 3/19
U.S. Cl. 372—50 29 Claims



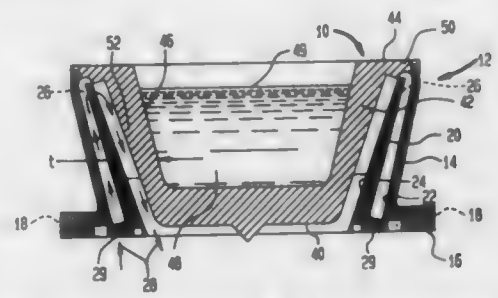
1. A tunable semiconductor laser comprising a substrate upon which are arranged an active layer in which a laser cavity is formed, a tuning layer, and a first contact, a second contact, and a third contact, said active layer (6) and said tuning layer (9, 90) formed as a sandwich, a central layer (10) of semiconductor material which is a current conductor is grown between said active layer (6) and said tuning layer (9, 90), said central layer (10) has such a thickness and so high a doping concentration as to provide the required minimum charge carrier density and electrical conductivity for said central layer (10), a barrier layer (4) which is interrupted by a stripe-shaped region is provided for a lateral limitation of the current conduction to this stripe-shaped region; said tuning layer (9, 90) is arranged on said barrier layer (4) which faces away from said substrate, a first contact layer (95, 950) is applied onto said tuning layer (9, 90) and said first contact (14) is applied onto said first contact layer, a ridge waveguide (11, 12, 13) formed according to MCRW principle above said strip-shaped region, said ridge waveguide formed by a strip-shaped cladding layer (11), a second contact layer (12) which is applied thereon and by a contact strip (13) of metal which is applied onto said second contact layer, said second contact (15) applied onto said contact strip (13), said third contact (16) is situated on that side of said barrier layer (4) which is opposite to said second contact (15), said cladding layer (11) and said second contact layer (12) doped for a first electrical conductivity type, and said tuning layer (9, 90), said first contact layer (95, 950), said central layer (10) and at least layered portions of said barrier layer (4) are doped for a second opposite electrical conductivity type.

5,008,894
DRIVE SYSTEM FOR RF-EXCITED GAS LASERS
Peter Laakmann, Seattle, Wash., assignor to Synrad, Incorporated, Bothell, Wash.
Filed Mar. 30, 1990, Ser. No. 502,231
Int. Cl.[5] H01S 3/0975
U.S. Cl. 372—38 19 Claims



1. An RF excited gas laser system, comprising:
a plasma tube for producing laser energy upon ignition of a gas contained within, said plasma tube having an electrical input port, a discharge section, an optical resonator and means for outcoupling laser energy from said plasma tube, the input terminal having a real impedance at a predetermined operating frequency;
a voltage source of RF energy having a source impedance much lower than the plasma tube impedance at the operating frequency; and
a transmission line connected at an input end to the voltage source and at an output end to the plasma tube, the transmission line having an electrical length substantially equal to an odd number of quarter wavelengths at the operating frequency and having a characteristic impedance intermediate the impedance of said voltage source and the impedance of said plasma tube.

5,008,895
PACKAGING DEVICE FOR DIODE LASER PUMPED ASSEMBLY
Danny W. Martin, St. Charles, Mo., assignor to Laser Diode, Inc., Earth City, Mo.
Filed Feb. 5, 1990, Ser. No. 475,232
Int. Cl.[5] H01S 3/09
U.S. Cl. 372—69 17 Claims



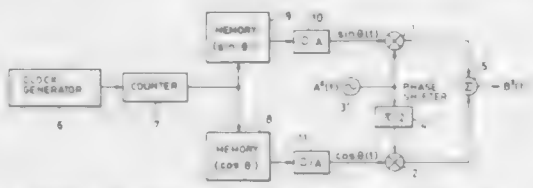
1. A package for a laser device, being arranged in a stack of similar packages and attached to a thermo-electric cooler comprising a base member of relatively planar heat conducting construction having an outer surface extending between spaced and opposed sides and end surfaces, an inner surface portion opposed to said outer surface and having a platform portion and a container extending therearound, said platform being formed thereon at a location intermediate the sides and end surfaces on which are positioned the elements of a laser including a laser medium and a laser pump source, laser mirrors including mountings therefor mounted on the base member and optically aligned with the laser medium, the laser medium including an elongated member mounted on said platform portion and having an optical axis intersecting the end surfaces at intermediate locations therealong, the pump source including an array of laser diodes positioned on the platform adjacent to one side of the laser medium, such that said diodes pump laser energy into the laser medium thereby causing said laser medium to lase, electrical connection means mounted in the base member including a strip line connector having a plurality of conductors for connection at corresponding ends to selected ones of said laser diodes in said array and to a source of energy for applying energy from said source to said laser diodes to cause them to lase, a closure member having a surface in abutting relation to said inner surface of the base member to enclose a space around the elements of the laser, and means for attaching said closure member to said base member thereby providing a compact, rugged heat conducting package.

5,008,896
GAS LASER HAVING A DISCHARGE TUBE THROUGH WHICH THE GAS FLOWS IN AN AXIAL DIRECTION
Hinrich Martinen, Quickborn; Karl-Heinz Knobbe, Ellerbek; Samuel S. Simonsson, Winsen-Bahlburg, and Peter Wirth, Winsen/Luhe, all of Fed. Rep. of Germany, assignors to Rofin-Sinar Laser GmbH, Hamburg, Fed. Rep. of Germany
Filed Apr. 10, 1987, Ser. No. 37,261
Claims priority, application Fed. Rep. of Germany, Apr. 18, 1986, 8610693[U]
Int. Cl.[5] H01S 3/097
U.S. Cl. 372—83 8 Claims

1. Gas laser having a discharge tube, through which the gas flows in an axial direction and to which highfrequency electrodes are fitted externally, and having a high-frequency generator, characterized in that the power output stage (12) of the high-frequency generator is disposed in the housing (1) of the laser resonator (2, 7, 8) and is directly connected to the electrodes (9, 10) via impedance adaptation elements (11, 14 to 18).

5,008,897
WATER COOLED CRUCIBLE
Gary B. Crumley, Oakland, Calif., assignor to The BOC Group, Inc., Murray Hill, N.J.
Filed Mar. 23, 1990, Ser. No. 498,869
Int. Cl.[5] H01J 37/305
U.S. Cl. 373—11 5 Claims

1. In a water cooled crucible for use in an electron beam



evaporation system to contain a material to be melted and evaporated, the water cooled crucible including: a base wall; a sidewall upstanding from the base wall; a rim formed at the top of the sidewall; and a pocket laterally defined by the sidewall and at the top and bottom by the rim and the base wall, respectively; the material contained within the pocket and having, a top surface spaced below the rim, a high thermal conductivity, and a capability of alloying with the sidewall when melted and evaporated; and the electron beam evaporation system including, means for generating an electron beam for melting and evaporating the material at the top surface of the material, the electron beam generating heat at the top surface of the material, conducted through the material to the sidewall, and a crucible support element to receive the crucible and having an inner surface surrounding the sidewall and outwardly spaced therefrom to form an annular passageway for receiving cooling water in a direction taken from the rim to the base wall for cooling the crucible by transferring the heat from the sidewall to the cooling water; the improvement comprising: the sidewall including a region extending from the rim to a location of the sidewall situated beneath the top surface of the material; the sidewall, within the region, having a thickness such that the sidewall contacts the inner surface of the crucible support element, and a plurality of circumferentially spaced grooves defined in the outer surface of the sidewall for allowing passage of the cooling water and configured to increase the heat transfer between the sidewall and the cooling water and thus, the cooling of the sidewall to prevent the material from alloying with the sidewall.

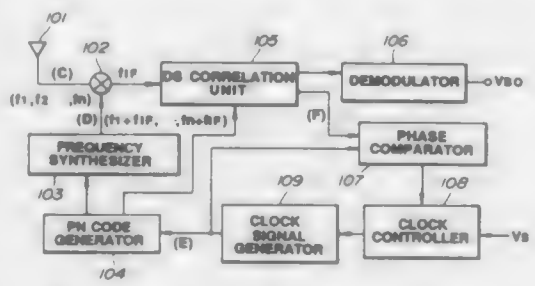
5,008,898

CARRIER MODULATING DEVICE FOR A SPREAD SPECTRUM COMMUNICATION DEVICE

Mashiro Hamatsu, and Mamoru Endo, both of Tokyo, Japan, assignors to Clarion Co., Ltd., Tokyo, Japan

Filed Mar. 20, 1990, Ser. No. 496,354
Claims priority, application Japan, Mar. 30, 1989, 1-76789
Int. Cl.[5] H04L *9/00*
U.S. Cl. 375—1 **7 Claims**

1. A spread spectrum modulating device comprising:
means for generating first and second carrier signals, which are orthogonal to each other;
first multiplying means for multiplying a first analog signal corresponding to a real component of a square phase sequence by said first carrier signal;
second multiplying means for multiplying a second analog signal corresponding to an imaginary component of the square phase sequence by said second carrier signal; and
means for adding the outputs of said first and said second multiplying means to each other.



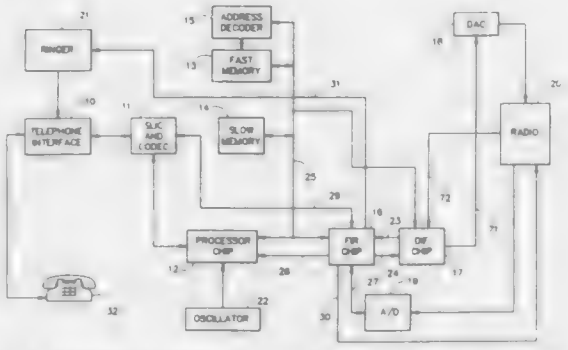
5,008,899

RECEIVER FOR SPECTRUM SPREAD COMMUNICATION

Michio Yamamoto, Mobara, Japan, assignor to Futaba Denshi Kogyo Kabushiki Kaisha, Mobara, Japan

Filed Jun. 29, 1990, Ser. No. 545,642
Int. Cl.[5] H04K *1/04*
U.S. Cl. 375—1 **2 Claims**

1. A receiver for spectrum spread communication comprising:
a PN code generating means for generating a PN code;
a frequency synthesizer means for changing over and outputting signals different in frequency in turn in response to said PN code;
a mixing means for carrying out multiplication between a signal received by the receiver and the signal form said frequency synthesizer means to generate its output signal;



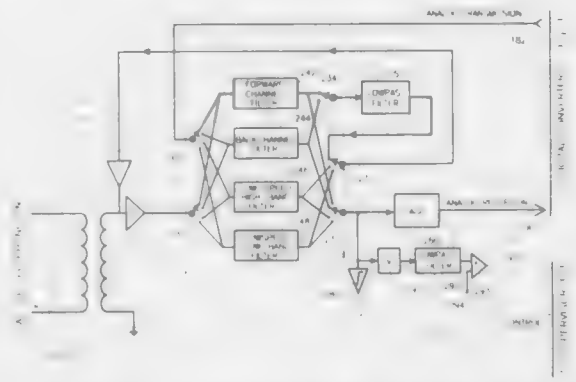
a correlation means for carrying out correlation between the output signal of said mixing means and said PN code to output a correlation signal; and
a control means for controlling the frequency of said PN code generating means in response to said correlation signal.

5,008,900

SUBSCRIBER UNIT FOR WIRELESS DIGITAL SUBSCRIBER COMMUNICATION SYSTEM

David N. Critchlow; Moshe Yehushua; Graham M. Avis, all of San Diego; Wade L. Heimbigner, Poway; Karle J. Johnson, Carlsbad, and George A. Wiley, San Diego, all of Calif., assignors to International Mobile Machines Corporation, King of Prussia, Pa.

Filed Aug. 14, 1989, Ser. No. 394,497
Int. Cl.[5] H04B *1/38*
U.S. Cl. 375—8 **8 Claims**



1. A subscriber unit for wireless communication with a base station in a wireless subscriber communication system, comprising:
means for transcoding a digital voice input signal to provide digital input symbols;
means for FIR filtering the digital input symbols;
means for modulating a digital intermediate frequency signal with the filtered input symbols to provide a modulated intermediate frequency input signal;
means for processing the modulated input signal for transmission to the base station;
means for demodulating an output signal received from the base station to provide digital output symbols; and
means for synthesizing a digital voice output signal from the digital output symbols;
wherein the subscriber unit includes
a FIR chip for performing said FIR filtering of the digital input symbols;
a DIF chip for digitally synthesizing said digital intermediate frequency signal and for performing said modulation of said digital intermediate frequency signal; and
a single processor chip for performing said transcoding of said digital voice input signal, for performing said demodulation of said output signal received from the base station, and for performing said synthesizing of the digital output symbols;
said DIF chip including means coupled to said processor chip for accumulating phase data provided by said processor chip to indicate a predetermined intermediate frequency and means for processing the accumulated phase data to generate said digital intermediate frequency signal at the predetermined intermediate frequency.

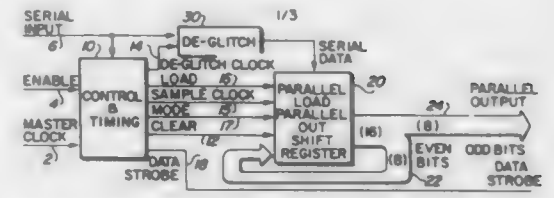
5,008,901

ASYMMETRICAL DUPLEX ERROR-CONTROLLED MODEM

Clifford H. Wallach, Lincolnshire; Robert C. Suffern, Chicago, and Dale M. Walsh, Burr Ridge, all of Ill., assignors to U.S. Robotics, Inc., Skokie, Ill.

Filed Oct. 29, 1987, Ser. No. 115,354
Int. Cl.[5] H04L *5/14*
U.S. Cl. 375—8 **5 Claims**

1. A modem for connecting digital data terminal equipment to an analog communication link comprising, in combination,
frequency division filtering means serially connected with said link for establishing a high speed channel having a bandwidth in a first range of frequencies and a low speed channel having a bandwidth in a second and more limited range of frequencies,
digital-to-analog conversion means connected between said equipment and said filtering means for translating digital signals from said equipment into analog signals for transmission over said link in a selected one of said high or low speed channels,
analog-to-digital conversion means connected between said equipment and said filtering means for producing digital signals supplied to said equipment from the analog signals received over the other one of said channels, and
means operative when said digital-to-analog conversion means is transmitting data over said low speed channel for sending a channel reversal command over said link whenever the amount of data awaiting transmission over said low speed channel exceeds a predetermined amount.



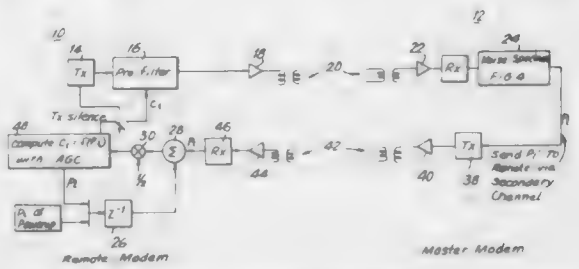
5,008,902

AUTOMATIC BAUD RATE DETECTION

Gary R. Key, Round Rock, and David C. Black, Austin, both of Tex., assignors to International Business Machines Corp., Armonk, N.Y.

Filed Jan. 25, 1989, Ser. No. 302,172
Int. Cl.[5] H04B *3/46*
U.S. Cl. 375—10 **6 Claims**

1. Method for automatically detecting transmission rate of a stream of data, comprising:
(a) sampling the data at a rate faster than the highest possible baud rate;
(b) storing the sampled data in a memory;
(c) comparing the sampled data to known data;
(d) determining if a match occurs;



(e) selecting the matched baud rate if a match occurs;
(f) recirculating a portion of the sampled data if a match does not occur; and
(g) repeating steps (a) to (f) until a match occurs.

5,008,903

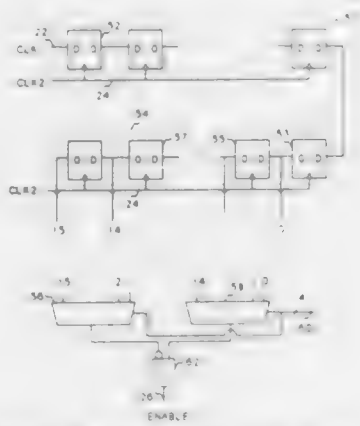
ADAPTIVE TRANSMIT PRE-EMPHASIS FOR DIGITAL MODEM COMPUTED FROM NOISE SPECTRUM

William L. Betts, St. Petersburg, and James J. DesRosiers, Tampa, both of Fla., assignors to A.T. & T. Paradyne, Largo, Fla.

Filed May 25, 1989, Ser. No. 357,056
Int. Cl.[5] H04L *7/00*
U.S. Cl. 375—60 **21 Claims**

1. An apparatus for calculating pre-emphasis coefficients for a transmitting modem in a communications system, including:
first transmitting means in the transmitting modem, including adjusting means responsive to the pre-emphasis coefficients for adjusting frequency-dependent characteristics of an output of said first transmitting means;
receiving means for receiving said output from said first transmitting means;
generating means for generating parameters responsive to a noise spectrum of said output including means for calculating said noise spectrum of said output;
second transmitting means for transmitting said parameters to the transmitting modem, and
computing means for computing the pre-emphasis coefficients from said parameters.

5,008,904



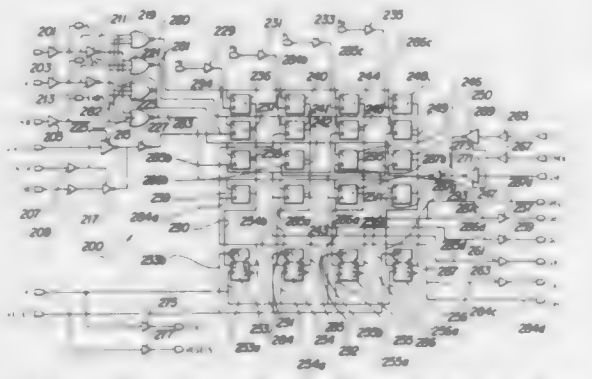
SYNCHRONIZER USING CLOCK PHASE EXTRAPOLATION

Steven T. Mangelsdorf, Fort Collins, Colo., and David V. James, Palo Alto, Calif., assignors to Hewlett-Packard Co., Palo Alto, Calif.

Filed Jul. 24, 1989, Ser. No. 384,588
Int. Cl.[5] H03M *9/00*
U.S. Cl. 375—107 **20 Claims**

19. A process for synchronizing data transfers between a first data bus having a first clock signal and a second data bus having a second clock signal comprising the steps of:
sampling said first clock signal with said second clock signal and providing a serial sampled output;

converting said serial sampled output to parallel signals, selecting at least two adjacent parallel signals; ANDing



said selected signals to produce an enable signal; and enabling a bus driver circuit connecting said first data bus to said second data bus with said enable signal.

5,008,905

UNIVERSAL SHIFT REGISTER EMPLOYING A MATRIX OF TRANSMISSION GATES

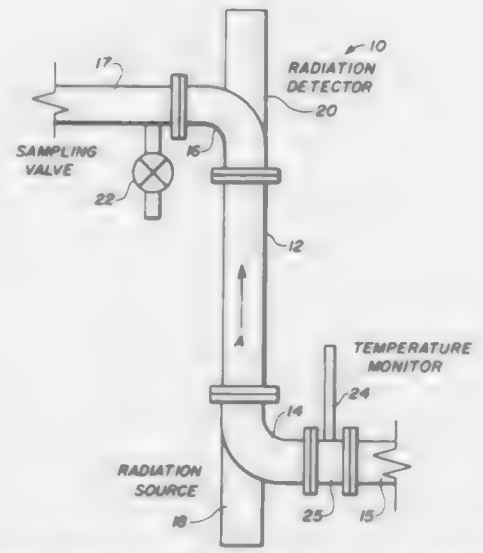
Alfred Lee, Torrance, and Daniel T. Kain, Hermosa Beach, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Jun. 20, 1988, Ser. No. 208,692
Int. Cl.[5] G11C *19/00;* **H03K** *21/02, 23/50*
U.S. Cl. 377—77 **9 Claims**

1. A universal shift register having a plurality M of selectable operating modes where M is an integer, the shift register comprising:

a plurality N of bistable storage devices where N is an integer, one for each stage of the shift register;

means for indicating any one of the M selectable operating modes for the shift register; and



an N column-by-M row matrix of information transmission gates coupled to the indicating means and to the N bistable storage devices, each of the M rows of the matrix arranged to perform one of the selectable register operating modes upon each of the N register stages, whereby register stage data pass through only a single information transmission gate of the matrix while being manipulated between a shift register input and a predetermined shift register stage.

5,008,906

CONSISTENCY MEASURING DEVICE FOR A SLURRY CONTAINING DEFOAMER

David P. Reichwein, Hersbey, Pa., assignor to Armstrong World Industries, Inc., Lancaster, Pa.

Continuation-in-part of Ser. No. 252,067, Oct. 3, 1988, abandoned. This application Sep. 8, 1989, Ser. No. 404,620
Int. Cl.[5] G01N *23/14*
U.S. Cl. 378—54 **3 Claims**

1. An apparatus for testing the consistency of slurry solutions comprising:

(a) a deaerating means which receives a slurry to be tested and removes entrapped gases from the slurry;

(b) a radiation test section interconnected with the deaerating means, receiving slurry from the deaerating means and providing a measurement of the consistency of the slurry by measuring the attenuation of radiation which occurs when radiation is passed through a prescribed path through a portion of the slurry;

(c) the radiation test section comprises:

(1) a straight section of pipe with the total amount of slurry flowing therethrough;

(2) a first pipe elbow attached to one end of the straight section of pipe;

(3) a radiation source attached to the first pipe elbow so that the radiation from the radiation source is essentially aligned with the axis of the straight section of pipe;

(4) a second pipe elbow attached to the second end of the straight section of pipe; and

(5) a radiation detector attached to the second pipe elbow so that the radiation detector is affected by the radiation from the radiation source, and the radiation received by the radiation detector is affected by the consistency of the slurry as measured in the total flow of the slurry and not a sample of the slurry;

(d) the deaerating means comprimises:

(1) a container into which the slurry is fed;

(2) supply means to furnish a controlled quantity of defoaming agent into the container; and

(3) mixing means which assures that the defoaming agent acts upon the slurry before the slurry is supplied to the radiation test section; and

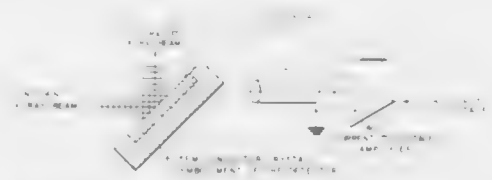
(e) including control means interconnected with the radiation test section and the supply means and acting to determine the rate of supply of defoaming agent to the deaerating means based upon the consistency reading derived from the radiation test section.

5,008,907

THERAPY X-RAY SCANNER

Amos Norman, Woodland Hills, and Keisuke S. Iwamoto, Monterey Park, both of Calif., assignors to The Regents of the University of California, Oakland, Calif.

Filed May 31, 1989, Ser. No. 359,159
Int. Cl.[5] A61N *5/10*
U.S. Cl. 378—65 **40 Claims**



1. Apparatus for delivering a therapy dose of x-rays to a subject comprising means to move an orthovoltage range x-ray source mounted on a computed tomographic scanning unit including a source, detector, and data processing means for displaying a cross-sectional image of a selected portion of the subject in an arc about the subject such that an x-ray beam from the source is isocentered on a selected target in the subject, and means for directing the beam as a pencil beam to the isocenter in the subject to deliver therapy x-rays.

5,008,908

DIFFRACTION DEVICE WHICH DETECTS THE BRAGG CONDITION

Terrence J. Jach, Washington, D.C.; Jon C. Geist, Olney, Md.; Gary P. Carver, Ijamsville, Md., and Donald B. Novotny, Bethesda, Md., assignors to The United States of America as represented by the Secretary of Commerce, Washington, D.C.

Filed Dec. 9, 1988, Ser. No. 282,243
Int. Cl.[5] G01N *23/20*
U.S. Cl. 378—70 **12 Claims**

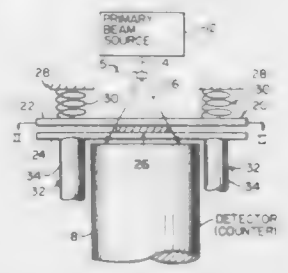
1. A diffraction device comprising,

(a) a semiconductor crystal having a plurality of crystal planes for diffracting incident radiation at the Bragg angle,

(b) a semiconductor detector region, integrated into said crystal and having a depletion region located at a depth below a surface of said semiconductor crystal such that current in a said semiconductor detector region due to said incident radiation incident on said surface of the crystal decreases significantly when said crystal is oriented at the Bragg angle with respect to the incident radiation,

(c) said semiconductor detector region producing said current by collecting electron-hole pairs in said depletion region, but not significantly collecting electron-hole pairs in a region closer to said surface than depletion region,

(d) said depletion region located deeper in said crystal than the extinction length of the incident radiation at the Bragg angle, but less than the extinction length of the incident radiation at angles other than the Bragg angle, and



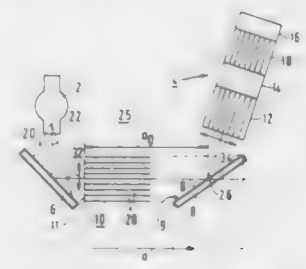
(e) electrodes connected to said semiconductor detector region, said electrodes providing an electrical signal indicative of diffraction at the Bragg angle.

5,008,909

DIFFRACTOMETER DATA COLLECTING METHOD AND APPARATUS

Peter A. Steinmeyer, Farmington, N. Mex., assignor to The United States of America as represented by the Department of Energy, Washington, D.C.

Filed Feb. 7, 1990, Ser. No. 476,184
Int. Cl.[5] G01N *23/20*
U.S. Cl. 378—71 **16 Claims**



1. In a diffractometer comprising means for producing a primary beam, a sample holder for suspending a sample in the path of the primary beam, and a detector means for detecting a diffracted beam produced when the primary beam strikes the sample, the improvement comprising scanning means disposed at a fixed location between said holder and said detector means for varying the total amount of the cross sectional area of the diffracted team that is received by the detector means in a manner such that the diffracted beam is detected in an integrated form.

5,008,910

X-RAY ANALYSIS APPARATUS COMPRISING A SAGGITALLY CURVED ANALYSIS CRYSTAL

Walterus A. L. A. Van Egeraat, Almelo, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

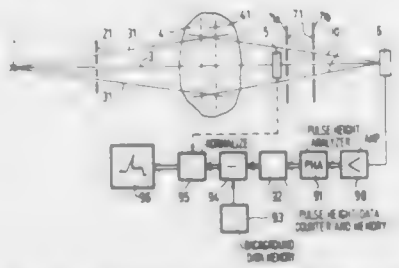
Continuation of Ser. No. 158,446, Feb. 22, 1988, abandoned. This application Jan. 29, 1990, Ser. No. 474,320
Claims priority, application Netherlands, Feb. 27, 1987, 8700488
Int. Cl.[5] G01T *1/36;* **G21K** *23/201. 1/06;* **G01N** *23/223*
U.S. Cl. 378—84 **3 Claims**

1. An x-ray analysis apparatus comprising in order an x-ray source passing an x-ray beam; a sample reflecting said x-ray beam; at least a primary soller slit collimator collimating said x-ray beam from said sample; a curved analysis crystal receiving said x-ray beam from said collimator, said analysis crystal being substantially circular-cylindrical in a saggital direction transverse to a plane extending through an incident x-ray beam to said analysis crystal and a normal to said analysis crystal, and said analysis crystal producing a diffracted x-ray beam, said circular-cylindrical analysis crystal having a radius of curvature R substantially equivalent to a distance between an entrance side of said primary soller slit collimator and a point of incidence of said incident x-ray beam on a surface of said

analysis crystal divided by sin θ, where θ is an angle of incidence of said incident x-ray beam on said analysis crystal; and an x-ray detector receiving said diffracted x-ray beam and having at least one further collimator.

5,008,911

X-RAY QUANTA MEASURING DEVICE INCLUDING DIAPHRAGM FOR PRODUCING CONICAL RADIATION BEAM ON OBJECT BEING MEASURED



Geoffrey Harding, Hamburg, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Sep. 22, 1989, Ser. No. 411,357

Claims priority, application Fed. Rep. of Germany, Sep. 22, 1988, 3842146; Mar. 21, 1989, 3909147

Int. Cl.[5] G01N *23/201*

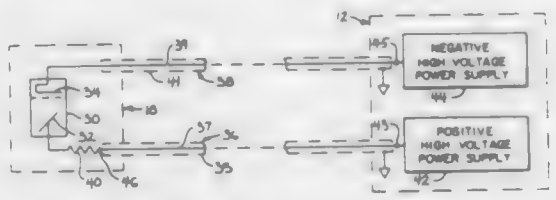
U.S. Cl. 378—86 **17 Claims**

1. A device for measuring the pulse transfer spectrum of X-ray quanta which are elastically scattered in an examination zone of an X-ray system comprising a polychromatic x-ray source on one side of the examination zone, said measuring device comprising:

a detector on the other side of the zone for measuring the energy of the X-ray quanta; and

two apertured diaphragms which have a common symmetry axis and which transmit scattered radiation to the detector only within a given scattering angle range, a first diaphragm being between the examination zone and the X-ray source and a second diaphragm between the examination zone and the detector, the first diaphragm being constructed so that the X-rays transmitted therethrough form a conical envelope of a primary radiation cone, the second diaphragm being constructed so that scattered radiation produced in the examination zone is incident on the detector in an annular symmetrical fashion with respect to said axis of symmetry.

5,008,912



X-RAY TUBE HIGH VOLTAGE CABLE TRANSIENT SUPPRESSION

George A. Farrall, Rexford, N.Y., and Steven D. Hansen, Port Washington, Wis., assignors to General Electric Company, Milwaukee, Wis.

Filed Oct. 5, 1989, Ser. No. 417,353

Int. Cl.[5] H05G *1/08*

U.S. Cl. 378—91 **14 Claims**

1. An X-ray imaging system comprising:

a vacuum tube for emitting an X-ray beam and having an anode and a cathode;

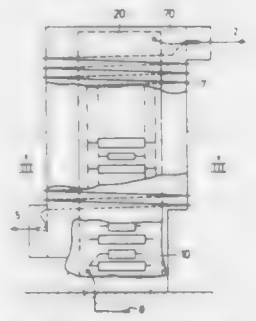
means, having first and second terminals, for producing a DC potential across the terminals;

a cable means for applying the DC potential from said means for producing to said vacuum tube, said cable means having a characteristic impedance and storing electrical energy as a result of applying the DC potential; and

a resistive means, coupling said cable means to said vacuum tube, for depressing transient currents flowing through said vacuum tube under a breakdown condition.

5,008,913

MEASURING AND DAMPING RESISTOR ARRANGEMENT FOR A HIGH-VOLTAGE APPARATUS



Hans Negle, Nahe, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Continuation of Ser. No. 37,122, Apr. 9, 1987, abandoned, which is a continuation of Ser. No. 880,335, Jun. 24, 1986, abandoned, which is a continuation of Ser. No. 578,250, Feb. 7, 1984, abandoned. This application Oct. 7, 1987, Ser. No. 107,872

Claims priority, application Fed. Rep. of Germany, Feb. 9, 1983, 3304316

Int. Cl.[5] H05G *1/10*

U.S. Cl. 378—105 **13 Claims**

1. A high-voltage apparatus, comprising

a voltage source having an output which is at a high voltage with respect to ground;

a terminal which is at a high voltage with respect to ground during normal operation of the apparatus;

a damping resistor connecting said source output to said terminal for conducting and limiting current to a load connected to said terminal; and

a measuring resistor arrangement connected to a point between the damping resistor and the terminal,

characterized in that the apparatus comprises an insulating body enclosing a part of the measuring resistor arrangement, said part having stray capacitance to ground,

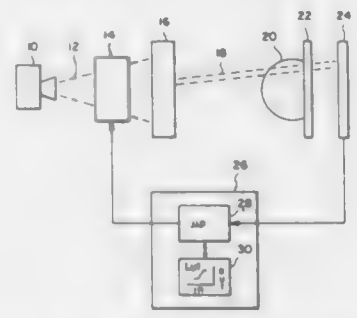
said apparatus includes a capacitance neutralization element surrounding said body and said part, and extending in a direction of elongation, said element being a solid element having a surface with a voltage gradient along said surface of said element; in response to high frequency voltages at said terminal, said voltage gradient having a high frequency component in said direction of elongation for neutralizing effects of said stray capacitance, and

the damping resistor comprises a resistance wire wound around said body, said resistance wire being said solid element, arranged so as to surround at least a portion of said arrangement adjacent said point, and to shield at least part of the measuring resistor arrangement so as to reduce the effect of stray capacitances from said arrangement to ground.

5,008,914

QUANTITATIVE IMAGING EMPLOYING SCANNING EQUALIZATION RADIOGRAPHY

William E. Moore, Macedon, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.



Filed May 30, 1989, Ser. No. 358,239

Int. Cl.[5] H05G *1/44*

U.S. Cl. 378—108 **10 Claims**

1. An improved scanning equalization radiography system of the type having a means for scanning a beam of radiation over an object to expose a sensor for forming an image of the object, the sensor having an exposure response function;

a detector for monitoring the intensity of the beam after passing through the object to produce a feedback signal; and

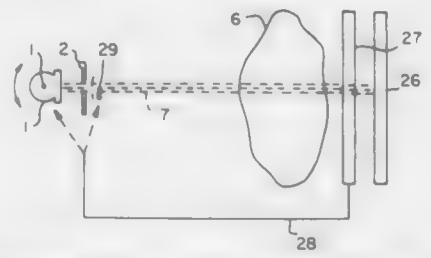
control means responsive to the feedback signal to control the exposure produced by the scanning beam according to a control function, wherein the improvement comprises;

the control function having the same general shapes and slopes as the exposure response function of the sensor.

5,008,915

METHODS FOR FORMING A RADIOGRAPH USING SLIT RADIOGRAPHY

Hugo Vlasbloem, Maasland, Netherlands, assignor to B.V. Optische Industrie "De Oude Delft", Delft, Netherlands



Continuation-in-part of Ser. No. 648,707, Sep. 7, 1984, Pat. No. 4,803,714. This application Feb. 3, 1989, Ser. No. 306,348

Claims priority, application Netherlands, Sep. 13, 1983, 8303156

The portion of the term of this patent subsequent to Dec. 22, 2004, has been disclaimed.

Int. Cl.[5] G01N *23/04*

U.S. Cl. 378—108 **4 Claims**

1. A method for forming a radiograph of an object, which comprises the steps of:

(a) energizing an X-ray source to a first level of radiation intensity, said X-ray source including a slit diaphragm;

(b) effecting a first scanning of said object by an X-ray beam from said X-ray source;

(c) generating output signals of radiation intensity from an elongated X-ray detector during said first scanning;

(d) measuring said output signals during at least a portion of said first scanning;

(e) energizing said X-ray beam to a higher level of radiation intensity as determined by step (d) for forming a radiograph of said object;

(f) effecting a second scanning of said object with an X-ray beam from said X-ray source at said higher level of radiation intensity;

(g) modulating said X-ray beam during said second scanning; and

(h) forming said radiograph during said second scanning.

5,008,916

SAFETY DEVICE FOR RADIOGENIC UNIT

Jacques Le Guen, Paris, France, assignor to General Electric CGR S.A., Issy Les Moulineaux, France

Filed May 10, 1990, Ser. No. 521,700

Claims priority, application France, May 10, 1989, 8906095

Int. Cl.[5] H05G *1/54*

U.S. Cl. 378—118 **6 Claims**

1. A safety device for a radiogenic unit of a radiology instrument comprising an X-ray tube enclosed in a casing filled with a cooling liquid, said tube having an anode and a cathode connected to a voltage generator, said cathode comprising at least one filament connected to an electrical power supply circuit, wherein it includes at least one temperature-sensitive or pressure-sensitive device which is placed within the casing and a switch, also placed within the casing, which is series connected in the power supply circuit of the cathode filament and controlled by said at least one temperature sensitive and pressure-sensitive device so that the supply of the electrical power to the filament is cut off when the temperature or the pressure goes beyond a pre-determined threshold.

5,008,917

X-RAY TUBE WITH AN ELECTRON SHIELDING RIDGE ON THE CATHODE

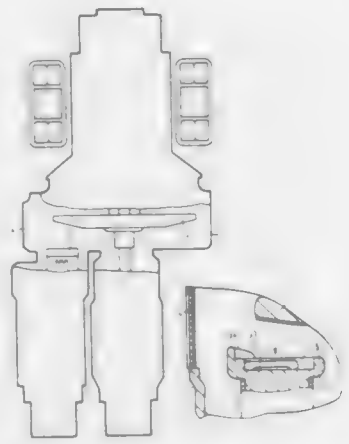
Rolf Behling, Norderstedt, and Wolfgang Köster, Hamburg, both of Fed. Rep. of Germany, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Nov. 6, 1989, Ser. No. 433,060

Claims priority, application Fed. Rep. of Germany, Nov. 14, 1988, 3838539

Int. Cl.[5] H01J *35/06, 5/18*

U.S. Cl. 378—140 **5 Claims**



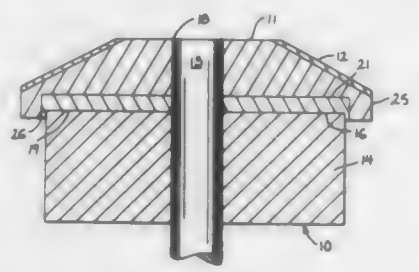
1. An X-ray tube construction comprising:

an evacuated metal envelope, said envelope including a radiation exit window; and

an anode and cathode in the envelope in spaced relation at respective positive and negative voltages for generating X-rays;

said cathode comprising a filament located in a recess in the cathode, said cathode having a rim defining the recess, said rim extending toward said anode in a given axial direction, said window being positioned transverse said axial direction adjacent to said cathode, said cathode emitting electrons toward said anode, said cathode including a ridge segment extending partially about said filament, said segment being on said rim at a region between

said filament and said window and extending in the axial direction an amount sufficient for shielding the window



from direct incidence of electrons emitted by said cathode.

5,008,918

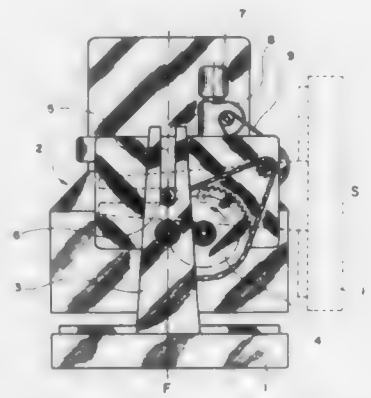
BONDING MATERIALS AND PROCESS FOR ANODE TARGET IN AN X-RAY TUBE

David S. Lee, Brookfield, and Thomas C. Tiearney, Jr., Waukesha, both of Wis., assignors to General Electric Company, Milwaukee, Wis.

Filed Nov. 13, 1989, Ser. No. 434,159
Int. Cl.[5] H01J *35/10*; B23K *31/02*
U.S. Cl. 378—144 10 Claims

1. In a composite structure wherein a refractory metal portion is bonded to a graphite portion with a bonding layer the improvement wherein:

the bonding layer comprises platinum and a bonding agent selected from the group consisting of tungsten, nickel, molybdenum, vanadium, and titanium.



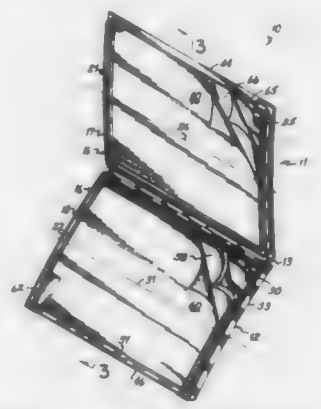
5,008,919

X-RAY FILM CHANGER POSITIONING DEVICE

Aldona A. Siczek, and Bernard W. Siczek, both of 1252 Chinook Way, Boulder, Colo. 80303

Continuation of Ser. No. 398,834, Aug. 25, 1989. This application May 29, 1990, Ser. No. 529,551
Int. Cl.[5] G03B *42/02*
U.S. Cl. 378—173 1 Claim

1. In an X-ray imaging apparatus which apparatus includes an image intensifier and a film changer, a film changer positioning device comprising at least one supporting member supporting said film changer and extending therefrom, said supporting member secured to said image intensifier by a rotary member in a pivoting relationship about an axis parallel to, and offset from, an axis of rotation of said rotary member and including a linear guide disposed at one extremity thereof opposite to said film changer, which linear guide is engaged by a stationary post, whereby rotation of said rotary member changes position of said film changer from one position offset from the axis of



rotation of the rotary member to another position offset from said axis of rotation.

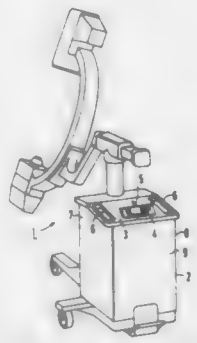
5,008,920

X-RAY FILM CASSETTE WITH FLEXIBLE GRID BONDED TO PRESTRESSED COVER

Ronald P. Gralak, Cincinnati, Ohio, assignor to Liebel-Flarsheim Company, Cincinnati, Ohio

Filed Nov. 27, 1989, Ser. No. 441,180
Int. Cl.[5] G03B *42/04*; G21K *1/00*
U.S. Cl. 378—185 22 Claims

1. A cassette for housing a sheet of x-ray film, said cassette comprising:



a front cover and a rear cover selectively matable with said front cover to close the cassette and separable therefrom to open the cassette, each of said covers including an exterior surface and an interior surface, the interior surfaces being mutually opposed one another when said cassette is closed, at least said front cover being prestressed to arch resiliently inwardly about a predetermined axis to a first limit of deflection when the cassette is open and to progressively resiliently flatten to a second limit of deflection when the cassette is fully closed; an anti-scatter grid bonded to said interior surface of said front cover to arch and flatten congruently therewith, said first and second limits of deflection of said cover lying in a range within which said grid can deflect without sustaining damage, the progressive flattening of said grid facilitating the purging of air pockets away from the surface of the film as the cassette is closed.

5,008,921

PORTABLE X-RAY DIAGNOSTICS APPARATUS WITH POSITION-ADJUSTABLE CONTROL PANEL

Karlheinz Kaul, and Hans-Christian Bock, both of Uttenreuth, Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

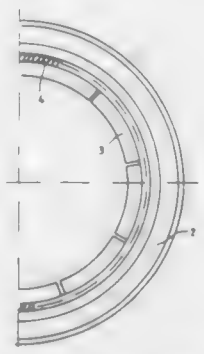
Filed Sep. 25, 1989, Ser. No. 411,737
Claims priority, application European Pat. Off., Oct. 11, 1988, 88116873.6
Int. Cl.[5] H05G *1/02*
U.S. Cl. 378—198 5 Claims

1. A mobile x-ray diagnostics apparatus comprising:

an x-ray source and an x-ray detector and means for supporting said x-ray source and x-ray detector;

a freely moveable base having a front portion to which said means for supporting is attached, and having a rear and left and right sides and a top surface;

a control panel for operating said apparatus; and



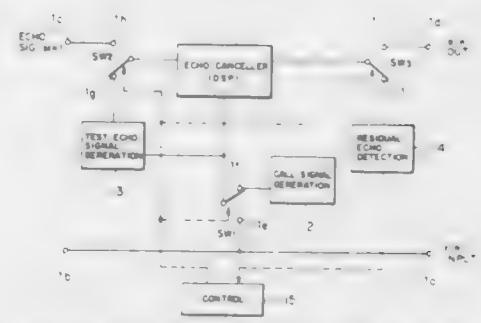
a plurality of mounting locations disposed on said upper surface of said base for releasably holding said control panel in place on said upper surface substantially parallel to a selected one of said right side, said left side or said rear of said base so that an operator can operate said apparatus via said control panel while standing adjacent said base.

5,008,922

SAMPLE CASSETTE

Herbert Beltrop, Hamm, Fed. Rep. of Germany, assignor to Krupp Polysius AG, Fed. Rep. of Germany

Filed Oct. 26, 1989, Ser. No. 427,295
Claims priority, application Fed. Rep. of Germany, Nov. 3, 1988, 8813765[U]
Int. Cl.[5] H05G *1/00, 1/02*; G03B *42/02*
U.S. Cl. 378—208 11 Claims



1. A cassette for a material sample, said cassette comprising a housing for supporting the sample; and retaining means fore retaining the sample in the cassette housing, said retaining means including a plurality of segments adapted to enclose the sample when the said sample is in said housing, said segments being movable relative to said housing toward clamping engagement with said sample, biasing means encircling said segments for biasing them in a direction toward engagment with the sample, and a cover supported by said cassette housing.

TESTABLE ECHO CANCELLING METHOD AND DEVICE

Youichi Kitamura, and Michiko Tajimi, both of Yokohama, Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Apr. 17, 1990, Ser. No. 509,797
Claims priority, application Japan, Apr. 19, 1989, 1-097597
Int. Cl.[5] H04M *1/24, 9/08*
U.S. Cl. 379—3 13 Claims

1. A testable echo canceller comprising an input and an output terminals for a far-end talker signal, an input and an output terminals for near-end talker signal a memory for storing said input far-end talker signal, a tap coefficient memory for storing a tap coefficient of an echo estimator, the echo estimating means for generating a pseudo echo signal based on the contents of said far-end talker signal memory and said tap coefficient memory, a subtracter means for subtracting said psuedo echo signal from an echo signal passed through an echo path for producing a residual echo signal, a tap coefficient updating means for serially updating said tap coefficient based on said far-end talker signal and said residual echo signal, a test far-end talker signal generating means for generating a far-end talker signal used for the test, a test echo signal generating means for generating a test echo signal with a simulated echo path, a residual echo detector having an output terminal connected to said subtracter means and for detecting a residual echo signal, and a control means for controlling formation of a path for an input and output signal passed to the echo canceller and formation of a testing circuit for making sure of the function with the echo canceller itself.

5,008,924

TELECOMMUNICATIONS TERMINAL WITH IMPROVED CONTROL FUNCTIONS

Jacques Guichard; Georges Buchner, both of Paris, and Jacques Labat, Chatillon, all of France, assignors to Etat Francais, Issy les Moulineaux, France

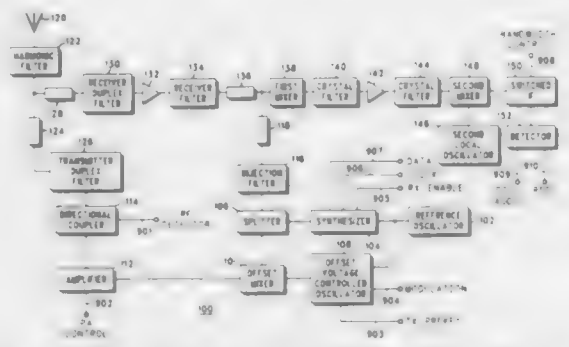
Filed Jul. 24, 1989, Ser. No. 384,495
Claims priority, application France, Jul. 25, 1988, 88 10003
Int. Cl.[5] H04N *7/12*; H04M *1/72*
U.S. Cl. 379—53 5 Claims

1. A telecommunications terminal of the video phone type comprising a central unit (100) and a handset (200) comprising a microphone (210) and a speaker (220) connected to said central unit via a cord (300) having a plurality of wires (301–304) for conveying output signals from said microphone and input signals to said speaker, said terminal further comprising a camera (110) and a display means (120), said terminal being characterized in that a switching means (1, 2, 230) housed in said handset (200) and in communication with said wires controls forward and reverse motion of a motor for driving a moving portion (150*b*) of said central unit, said mov-

ing portion carrying said camera, thereby enabling an image of the user to be framed, said switching means causing control

signals to be conveyed along said cord in the form of phantom D.C. voltages when said switching means are engaged.

5,008,925



CELLULAR TELEPHONE RESPONSIVE TO SERVICE AVAILABILITY FOR OPERATING ON DIFFERENT CELLULAR TELEPHONE SYSTEMS

Ali Pireh, Hoffman Estates, Ill., assignor to Motorola, Inc., Schaumburg, Ill.

Continuation-in-part of Ser. No. 453,553, Dec. 20, 1989, which is a continuation of Ser. No. 370,675, Jun. 23, 1989, abandoned. This application Apr. 20, 1990, Ser. No. 511,882

Int. Cl.[5] H04M *11/00*

U.S. Cl. 379—60 **18 Claims**

1. A cellular telephone communicating cellular telephone calls on at least first and second cellular telephone systems each having different cellular radio channels, operation in said first cellular telephone system being preferred over operation in said second cellular telephone system, said cellular telephone comprising:

antenna means for receiving and transmitting cellular telephone call signals on said cellular radio channels,

dialing means for dialing digits of telephone numbers;

cellular transmitting means coupled to the antenna means for transmitting cellular telephone call signals on the cellular radio channels of the first and second cellular telephone systems;

cellular receiving means coupled to the antenna means for receiving cellular telephone call signals on the cellular radio channels of the first and second cellular telephone systems, said cellular receiving means further including intermediate frequency means having first filtering means having a first predetermined bandwidth, second filtering means having a second predetermined bandwidth that has a magnitude less than that of the first predetermined bandwidth, and switching means responsive to a bandwidth control signal having first and second states for switching between the first and second filtering means, respectively; and

control means including memory means for storing first and second control programs, said control means being coupled to the dialing means, cellular transmitting means, and cellular receiving means for automatically transmitting and receiving cellular telephone calls on the first cellular telephone system using the first control program and on the second cellular telephone system using the second control program, said control means generating the first state of the bandwidth control signal for cellular telephone calls on said first cellular telephone system and generating the second state of the bandwidth control signal for cellular telephone calls on said second cellular telephone system, said control means monitoring the cellular radio channels to detect the absence of cellular service and switching from the first cellular telephone system to the second cellular telephone system when cellular service has been absent for at least two non-contiguous second predetermined time intevals in said first cellular telephone system, switching from the second cellular telephone system to the first cellular telephone system when cellular service has been absent for a first predetermined time interval in said second cellular telephone system or when a third predetermined time interval has elapsed since switching to said second cellular telephone system.

MESSAGE MANAGEMENT SYSTEM

Boaz Misholi, Ramat Hasharon, Israel, assignor to Efrat Future Technology Ltd., Israel

Filed Jul. 17, 1986, Ser. No. 887,793

Int. Cl.[5] H04M *3/50, 11/00;* **H04N** *1/32, 1/42*

U.S. Cl. 379—89 **13 Claims**

1. A message management system suitable for use with conventional telephones and conventional telefaxes comprising:

means for producing a combined multi-media message, including a facsimile portion and an aurally sensible portion;

single control means for transmitting the combined multi-media message to a selected subscriber;

apparatus for reading said facsimile portion; and

means for providing an aurally sensible output of said facsimile portion.

9. A message management system suitable for use with conventional telephones and conventional telefaxes comprising:

means for producing a combined multi-media message, including a facsimile portion and an aurally sensible portion;

single control means for transmitting the combined multi-media message to a selected subscriber;

apparatus for reading said facsimile portion; and

means for providing a visually sensible output of said facsimile portion on a computer display.

COMPUTER AND TELEPHONE APPARATUS WITH USER FRIENDLY COMPUTER INTERFACE INTEGRITY FEATURES

Lawrence D. Weiss, New York, N.Y.; Douglas W. Caruthers, Redondo Beach, Calif.; Charles T. Inatomi, Los Angeles, Calif.; Joseph C. Kawan, Hollywood, Calif.; Shan Lee, Rowland Heights, Calif.; Harvey Marks, Canoga Park, Calif.; Sarkis A. Meguerdijan, Glendale, Calif.; Dilip J. Parekh, Los Angeles, Calif.; Alfred S. Samulon, Malibu, Calif.; Melvin M. Takata, Hermosa Beach, Calif.; Morris L. Tucci, Van Nuys, Calif., and Jim R. Vollmer, Encino, Calif., assignors to Transaction Technology, Inc., Santa Monica, Calif.

Continuation-in-part of Ser. No. 190,440, May 5, 1988. This application Oct. 21, 1988, Ser. No. 260,832

Int. Cl.[5] H04M *11/00*

U.S. Cl. 379—98 **4 Claims**

1. A microcomputer with simplified user interface including a microprocessor computing unit and associated memory;

said microprocessor computing unit responsive to data inputs from an auxiliary processor and instructions maintained in said memory and received through a modem to perform computing and control functions, said microprocessor computing unit and said memory mounted in a housing configured as a conventional telephone unit,

said housing having a upper mounting structure and a base structure, a telephone handset mounted in a cradle on said upper mounting structure, a standard twelve-key telephone keypad mounted on said upper mounting structure and a keyboard input device mounted in concealed position within said base structure and movable to an open position for use by the operator of the microcomputer;

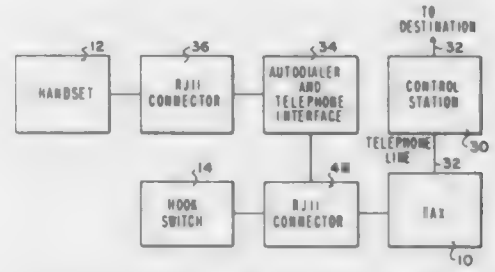
said housing also incorporating telephone electronics for standard telephone functioning, including a telephone dialer, speech network and a frequency and ring detectors, said telephone electronics capable of being powered from standard telephone line power;

switch means for providing telephone line power to said telephone electronics for standard telephone functioning in the absence of power to or input from the microprocessor computing unit and memory;

a lapse timer reset by output from said microprocessor computing unit, said lapse timer means providing an interrupt to said microprocessor computing unit unless reset by said microprocessor computing unit within a first predetermined time interval, said microprocessor computing unit being rebooted and removing power from said telephone electronics and said lapse timer means being disabled unless said lapse timer means is reset with a second predetermined time interval; and

off-hook detector means for detecting an off-hook condition of said telephone handset mounted on said upper mounting structure, off-hook timer means responsive to said off-hook detector means and said microprocessor computing unit to reboot said microprocessor computing unit and remove power from said telephone electronics unless said off-hook timer is not reset by said microprocessor computing unit within a third predetermined time interval.

5,008,928



PUBLIC ACCESS FACSIMILE SYSTEM

Monica R. Cleghorn, Plano, Tex., assignor to Easyfax, Inc., Plano, Tex.

Filed Jan. 22, 1990, Ser. No. 468,219

Int. Cl.[5] H04M *17/00;* **H04N** *1/00*

U.S. Cl. 379—100 **16 Claims**

1. Apparatus for transmitting data from a first location to a second location via telecommunications link, comprising:

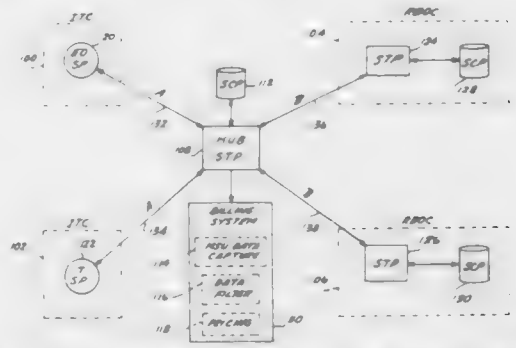
facsimile means for reading the data and for producing an electronic image thereof;

means for linking said facsimile means to an existing telecommunications system;

a control station linked to said facsimile means via said existing telecommunications system; and

means for automatically effecting a telephone connection between a user at said first location and a human operator at the control station, whereby the use can provide selected information, including the identity of the second location, to the control station, said control station for connecting said first and second locations via the existing telecommunications system to enable said image to be transmitted from said first location to said second location.

5,008,929



BILLING SYSTEM FOR TELEPHONE SIGNALING NETWORK

Steven A. Olsen, Tumwater; William J. Cronin; Ben L. Jarvis, both of Lacey, and Jeff G. McMillan, Olympia, all of Wash., assignors to U.S. Intelco Networks, Inc., Olympia, Wash.

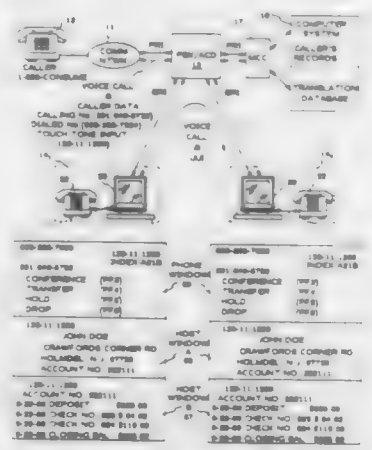
Filed Jan. 18, 1990, Ser. No. 467,054

Int. Cl.[5] H04M *1/66, 15/04*

U.S. Cl. 379—112 **19 Claims**

1. In a telephone network having a plurality of offices through which telephone calls can be routed, each office being owned by a telephone company, each office including a signaling point (SP) that includes means for formulating a message signaling unit (MSU), the network further including a plurality of signal transfer points (STPs) for receiving and routing the MSUs, a plurality of digital data links connecting the SPs and

STPs to one another, and a plurality of service control points (SCPs), each SCP being linked to one of the STPs and comprising a database that includes call data provided by one or more telephone companies, the improvement comprising:



a billing system including means for capturing at least a portion of the MSUs received by said one STP and for processing such MSUs to produce usage data indicating service recipients and service providers for the MSUs, the service recipient for an MSU being the telephone company that owns the SP that formulated the MSU, and the service provider for an MSU being the telephone company that provided the call data for the MSU or that transported the MSU.

5,008,930

CUSTOMER DEFINABLE INTEGRATED VOICE/DATA CALL TRANSFER TECHNIQUE

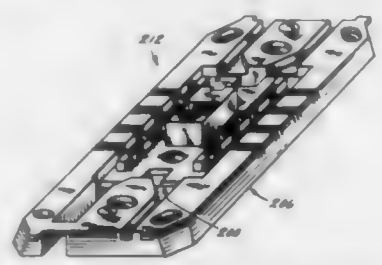
George W. Gawrys, Bridgewater, N.J.; Richard A. Oberman, Park Ridge, Ill., and William T. Willcock, Rumson, N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Oct. 24, 1989, Ser. No. 426,384
Int. Cl.[5] H04M *3/58*
U.S. Cl. 379—210 **11 Claims**

1. A method of transferring an integrated voice/data call signal including call-related data received from a communications system between a first and a second agent terminal, where each agent terminal is associated with at least one host application database computer system for storing information associated with each service or campaign that the first and second agent terminals is to handle, the method comprising the steps of:

(a) at the first agent terminal (i) directing the voice call from the communications system to an associated voice communication device, and (ii) displaying the call-related information received from the communications system in a first window of an associated multi-window visual display device, and (iii) accessing the at least one host application database computer system for retrieving and displaying predetermined host application database computer system information at the visual display device;

(b) transferring the voice call and associated predetermined data from the first agent terminal to the second agent terminal by transferring (1) the voice portion of the call to a voice communication device of the second agent terminal, and transmitting (2) predetermined data relating to a portion of the data currently displayed at the first agent terminal directly to the second agent terminal: and



(c) at the second agent terminal, (1) receiving the voice call and predetermined data from the first agent terminal, and transmitting a certain portion of the received predetermined data to the associated at least one host application database computer system for retrieving and displaying the data associated with the call at a visual display device of the second agent terminal.

5,008,931

MULTI-PURPOSE MODULAR JACK CONNECTION BLOCK

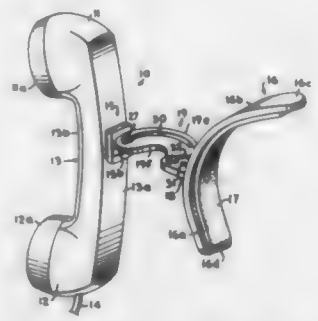
Carl Siemon, Watertown, and Stephen M. Thomas, Torrington, both of Conn., assignors to The Siemon Company, Watertown, Conn.

Continuation of Ser. No. 99,423, Sep. 17, 1987, abandoned, which is a continuation-in-part of Ser. No. 706,971, Mar. 1, 1985, Pat. No. 4,712,234. This application Jan. 2, 1990, Ser. No. 462,341
Int. Cl.[5] H02B *1/10*
U.S. Cl. 379—399 **13 Claims**

1. A modular jack connecting device, consisting essentially of:

modular communication jack means for terminating wire leads and electrically connecting terminated wire leads with corresponding terminals on a modular communications plug;

first mounting means for removably securing said jack means within an auxilliary frame means for flush mounting the device on a planar surface of a substrate, on a bracket or on an electrical box; and



second mounting means for flush mounting said jack means on the planar surface of the substrate independent of said auxilliary frame.

5,008,932

ADJUSTABLE PHONE HANDSET SHOULDER SUPPORT

Earl M. Sieggen, 2000 W. 120th Ter., Leawood, Kans. 66209

Filed Feb. 3, 1989, Ser. No. 305,743
Int. Cl.[5] H04M *1/00*
U.S. Cl. 379—449 **7 Claims**

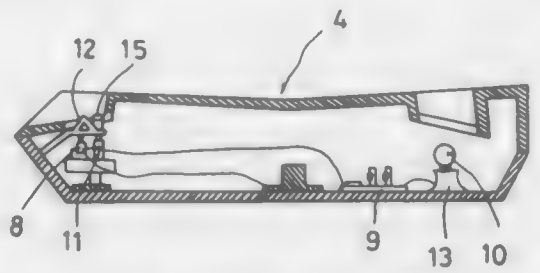
1. A device useable with a telephone handset of the type having an earpiece member and a mouthpiece member connected together by a handgrip member, said handgrip member having inner and outer sides with the inner side thereof corresponding to the speaking and listening portions of said earpiece and mouthpiece members, said device comprising:

(1) a first flange member removably mounted on the outer side of said telephone handset handgrip member intermediate the ear and mouthpiece members thereof and extending substantially normal thereto,

(2) an arcuate shoulder rest member of substantially rectangular form having an inner, concave, shoulder engagement side and an outer, convex side,

(3) a second flange member fixed to the outer convex side of said shoulder rest member intermediate the ends thereof and extending substantially normal thereto,

(4) said first and second flange members also extending, respectively, substantially at right angles to the longitudinal axis of said handset member and the longitudinal axis of said shoulder rest member and



(5) an elongate, arcuate, flat connecting member so adjustably and removably connected to each of said first and second flanges at opposite ends thereof through first and second slotted openings in opposed regions of said connecting member, as to permit length and angle adjustment of the shoulder rest member with respect to the telephone handset.

5,008,933

AUTOMATIC STERILIZING DEVICE OF THE TELEPHONE

Chun-Hsien Kao, 4F., No. 11, Lane 223, Cheng-Kung Rd., Sec. 4, Nei-Hu Chu, Taipei, and Fu-Te Chen, 2F., No. 9, Hsi-Chang Rd., Taipei, both of Taiwan

Filed Sep. 16, 1988, Ser. No. 245,315
Int. Cl.[5] H04R *1/12*
U.S. Cl. 379—452 **1 Claim**

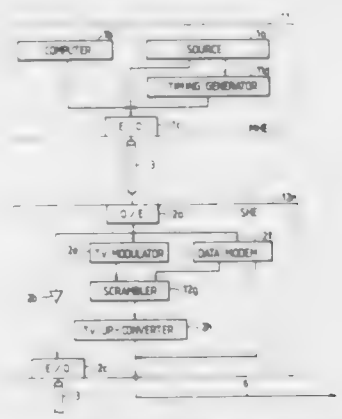
1. An automatic sterilizing device for a telephone having a mouthpiece and a receiver, said device comprising:

an ultraviolet bulb provided on a bulb seat under a mouthpiece seat for producing ultraviolet rays to pass through openings defined in the mouthpiece seat and radiate directly on the mouthpiece;

a microswitch disposed under a telephone cut-off press button which extends out from a receiver seat, said microswitch adapted to be contacted by a downward movement of the telephone cut-off press button to generate a signal when contacted by the press button;

an IC control circuit comprising a time delay circuit responsive to said signal for sending power to said ultraviolet bulb and for cutting off power to said ultraviolet bulb after a predetermined delay time from receipt of said signal by said delay circuit has occurred;

a contact button extending out from the receiver seat adapted to be depressed by insertion of the receiver into the receiver seat; and



a safety switch installed under the receiver seat adapted to be contacted by depression of said contact button to turn off said ultraviolet bulb when said contact button is not depressed.

5,008,934

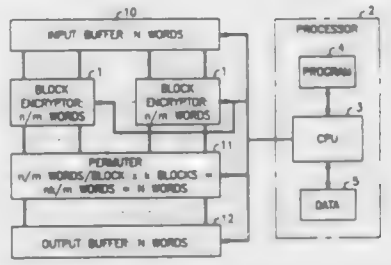
CATV TRANSMISSION SYSTEM USING SCRAMBLED SIGNALS

Fumio Endoh, Tokyo, Japan, assignor to Pioneer Electronic Corporation, Tokyo, Japan

Filed Jun. 8, 1989, Ser. No. 363,658
Claims priority, application Japan, Oct. 18, 1988, 63-260596
Int. Cl.[5] H04N *7/167*
U.S. Cl. 380—15 **7 Claims**

1. In a CATV system in which a main head end as a system center is connected to a plurality of subhead ends corresponding to respective terminal unit groups through optical fiber cables each having a narrow transmission band, and a baseband TV signal is transmitted through said optical fiber cables, the improvement comprising:

scrambling data generating means disposed in said main head end, for generating scrambling data and supplying said scrambling data to said optical fiber cables; and



scrambling means disposed in each of said plurality of subhead ends, for performing a scrambling operation such that synchronization portions of said baseband TV signal are compressed on the basis of said scrambling data transmitted through said optical fiber cables.

5,008,935

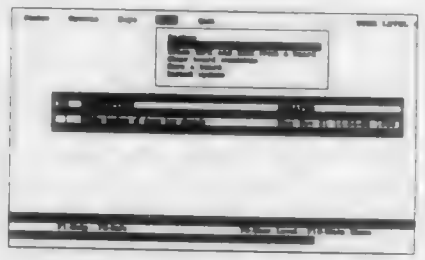
EFFICIENT METHOD FOR ENCRYPTING SUPERBLOCKS OF DATA

Thomas J. Roberts, Batavia, Ill., assignor to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Jan. 30, 1989, Ser. No. 374,314
Int. Cl.[5] H04L *9/06*
U.S. Cl. 380—29 **13 Claims**

5. Apparatus for encrypting superblocks of data comprising:

means for encrypting each of a plurality of blocks of said superblocks of data, using a first key to form intermediate data, wherein each encrypted block and each unencrypted block comprises a plurality of segments, and each segment comprises a plurality of bits; and



means for permuting segments of said intermediate data over the range of each of said superblocks using a second key to form encrypted superblocks of data.

5,008,936

BACKUP/RESTORE TECHNIQUE IN A MICROCOMPUTER-BASED ENCRYPTION SYSTEM

Scott B. Hamilton, Kirkland, and Michael J. Rosenow, Issaquah, both of Wash., assignors to The Exchange System Limited Partnership, Bellevue, Wash.

Filed Dec. 9, 1988, Ser. No. 282,791
Int. Cl.[5] H04L 9/08
U.S. Cl. 380—50 11 Claims

8. An improved method of updating key information in a multichannel data encryption device, said multichannel data encryption device including a plurality of data encryption devices coupled with a first data bus for communicating with a host control computer, said data encryption devices each including a discrete data bus interface for communicating with a device requiring encryption services, said method comprising the steps of:

sending encryption key tables to said data encryption devices from said host computer communicating through said first data bus;

encrypting said encryption key tables under a first predetermined encryption key;

storing said encrypted encryption key table in said data encryption devices;

outputting said encrypted key tables from said encryption devices through said first data bus to said host computer;

re-encrypting said encryption key tables under a second predetermined encryption key; and

storing said re-encrypted keys in a data storage device removable coupled to said host computer.

5,008,937

SCRAMBLED-COMMUNICATION SYSTEM USING ADAPTIVE TRANSVERSAL FILTERS FOR DESCRAMBLING RECEIVED SIGNALS

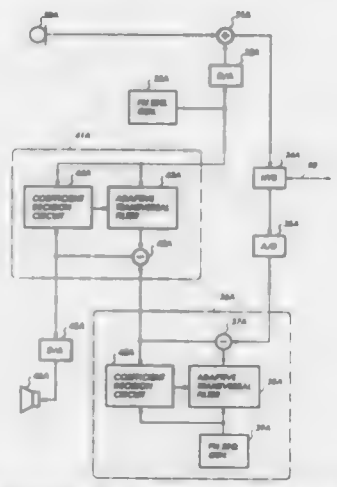
Yoshihiro Yamamura; Takashi Ogihara; Yoshinobu Nakanishi, and Tomohiro Nishizono, all of Tokyo, Japan, assignors to NEC Corporation

Filed Jun. 26, 1989, Ser. No. 371,209
Claims priority, application Japan, Jun. 25, 1988, 63-156012; Feb. 8, 1989, 1-30851
Int. Cl.[5] H04K 1/02
U.S. Cl. 380—50 10 Claims

1. A scrambled-communication system, comprising:

(a) a transmitting station including:

(i) source-noise generator means for generating a scrambling pseudorandom noise signal having a series of noise patterns; and



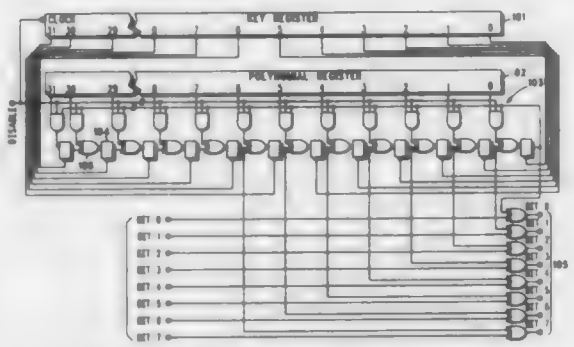
(ii) adder means for adding said scrambling noise signal to an information signal to produce a scrambled signal; and

(b) a receiving station including:

(i) subtractor means for receiving said scrambled signal and subtracting a noise-cancelling signal from the received signal to produce a subtractor output comprising a descrambled signal;

(ii) local-noise generator means for generating a descrambling pseudorandom noise signal having a series of noise patterns identical to that of said scrambling noise signal;

(iii) adaptive transversal filter means having a tapped-delay line connected to said local-noise generator means, a plurality of variable-tap weight multipliers connected respectively to taps of said tapped-delay line, and means for summing outputs of said tap weight multipliers and supplying summed outputs as said noise-cancelling signal to said subtractor means, said adaptive transversal filter having a tap length greater than an interval between successive series of said noise patterns of said descrambling noise signal; and



means for deriving tap coefficients from said descrambling noise signal and from the subtractor output and varying said tap weight multipliers of said adaptive transversal filter means with the derived tap coefficients so that said noise-cancelling signal substantially corresponds to said scrambling noise signal.

5,008,938

ENCRYPTION APPARATUS

Thomas A. Freeburg, Arlington Heights, and Richard E. White, Schaumburg, both of Ill., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Mar. 9, 1990, Ser. No. 490,900
Int. Cl.[5] H04L 9/00
U.S. Cl. 380—50 18 Claims

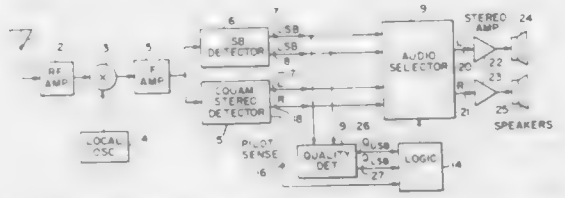
1. An apparatus for encrypting and decrypting an input signal from a signal source to produce an encrypted or decrypted output signal using a preselected key signal and a preselected polynomial signal, comprising:

(a) first storage means for storing the preselected key signal, the first storage means having at least one output;

(b) shift register means, having at least one stage, each stage having an output, and a load input, the load input of each stage coupled to one output of the first storage means;

(c) second storage means for storing the pre-selected polynomial signal, the second storage means having at least one output;

(d) first means for logically combining the at least one output of the second storage means and the at least one output of the shift register means, the first means for logically combining having at least one output coupled to the input of the at least one stage of the shift register means; and



(e) second means for logically combining the at least one output of the shift register means and the input signal, an output of the second means for combining being the encrypted or decrypted output signal.

5,008,939

AM NOISE REDUCING

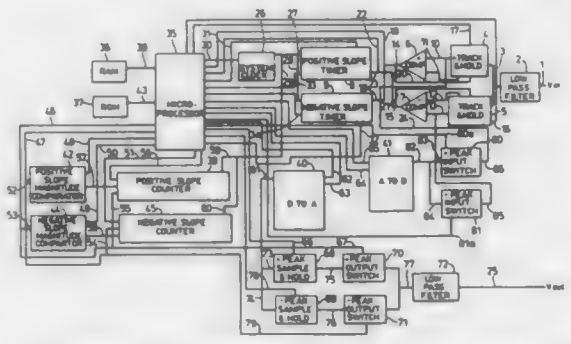
Amar G. Bose, Wayland, and William R. Short, Wellesley, both of Mass., assignors to Bose Corporation, Framingham, Mass.

Filed Jul. 28, 1989, Ser. No. 387,504
Int. Cl.[5] H04H 5/00
U.S. Cl. 381—15 31 Claims

1. A receiver for receiving an amplitude modulated signal with upper and lower sidebands carrying a modulating audio signal, said receiver comprising,

independent sideband circuitry for providing at least one of upper and lower sideband signals,

at least one quality detector for providing a quality signal representative of undesired noise in the upper sideband signal relative to that in the lower sideband signal,



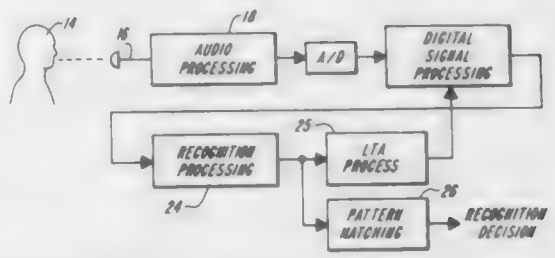
and at least one selector responsive to said quality signal for processing that one designated by said quality signal as preferred from the standpoint of faithful reproduction with low audible noise of only said upper sideband signal only said lower sideband signal and both said upper and lower sideband signals to provide an audio output signal with reduced noise that is a substantially faithful reproduction of said modulating audio signal.

5,008,940

METHOD AND APPARATUS FOR ANALYZING AND RECONSTRUCTING AN ANALOG SIGNAL

Dieter W. Blum, Vancouver, Canada, assignor to Integrated Circuit Technologies Ltd., Bridgetown, Barbados

Filed Feb. 15, 1989, Ser. No. 311,241
Claims priority, application Canada, Feb. 16, 1988, 558977
Int. Cl.[5] G10L 5/00
U.S. Cl. 381—31 34 Claims



1. A method of analyzing an original analog signal, the method comprising; detecting each maximum and minimum point of the signal; recording the time between each adjacent pair of maximum and minimum points; and sampling and recording the magnitude of the signal at each maximum and minimum point.

5,008,941

METHOD AND APPARATUS FOR AUTOMATICALLY UPDATING ESTIMATES OF UNDESIRABLE COMPONENTS OF THE SPEECH SIGNAL IN A SPEECH RECOGNITION SYSTEM

Vladimir Sejnoha, Cambridge, Mass., assignor to Kurzweil Applied Intelligence, Inc., Waltham, Mass.

Filed Mar. 31, 1989, Ser. No. 332,571
Int. Cl.[5] G10L 5/00
U.S. Cl. 381—43 24 Claims

1. In a speech recognition apparatus for recognizing elements of a speech input, apparatus for updating an error compensation signal representing a system transfer function between a speaker and the recognition apparatus, said updating apparatus comprising:

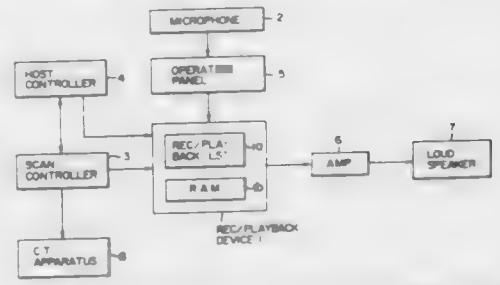
A. signal generating means for initially generating said compensation signal,

B. means for generating, from said speech input, a succession of input frames representing said speech input modified by a said compensation signal, each input frame including, as a distorting value, an error signal corresponding to the difference between a current compensation signal and the instantaneous value of a system transfer function,

C. means for associating each speech representing input frame with one of a plurality of speech representing standard frames,

D. means for accumulating the differences between successive speech representing input frames and the respective associated speech representing standard frames,

E. means for periodically determining an average update signal over a plurality of input words representative of a selected number of said accumulated differences, and



F. means for updating said compensation signal in accordance with said average update signal.

5,008,942

DIAGNOSTIC VOICE INSTRUCTING APPARATUS

Hiromi Kikuchi, Utsunomiya, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Nov. 30, 1988, Ser. No. 277,865
Claims priority, application Japan, Dec. 4, 1987, 62-307015
Int. Cl.[5] G10L 5/02; A61B 5/00; G11B 31/00; G09B 5/00
U.S. Cl. 381—51 10 Claims

1. A voice instruction-generating apparatus for use with a

medical diagnostic apparatus, the voice instruction-generating apparatus comprising:

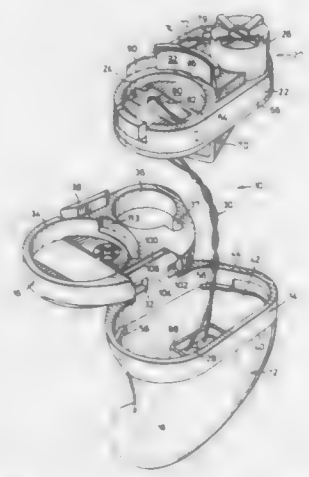
recording means for recording plural types of voice instructions to a patient to be diagnosed, the plural types of one voice instruction having a same meaning in different types of expressions;

designating means for specifying a series of said recorded voice instructions, each instruction of the series being one of the same types of expressions; and

playback means for reproducing the series of voice instructions in synchronism with an operation of said medical diagnostic apparatus.

5,008,943

MODULAR HEARING AID WITH LID HINGED TO FACEPLATE



Horst Arndt, and Edward S. Kroetsch, both of Kitchener, Canada, assignors to Unitron Industries Ltd., Kitchener, Canada

Division of Ser. No. 7,032, Jan. 27, 1987, abandoned. This application Nov. 15, 1989, Ser. No. 437,046

Claims priority, application Canada, Oct. 7, 1986, 520021

Int. Cl.[5] H04R *25/02*

U.S. Cl. 381—68.6 **3 Claims**

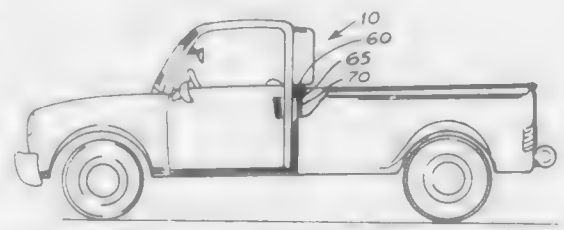
1. In combination, an in-the-ear hearing aid having a shell, a faceplate, and an electronic module; and a gauge for use in fitting said faceplate to said shell; said shell having an open end and being shaped to fit into a user's ear with said open end facing outwardly in said ear, said faceplate being shaped to be fitted on and attached to said open end of said shell and having an opening therein to receive said module, said module having a microphone, an amplifier and a battery compartment, said module having an upper portion shaped to be snugly received within said opening of said faceplate and a lower portion which projects below said opening of said faceplate into said shell, said gauge also having an upper portion shaped to fit snugly within said opening of said faceplate and having a lower portion shaped to simulate the shape of said lower portion of said module, whereby said gauge can be inserted into said opening of said faceplate before said faceplate is attached to said shell, in order to ensure the proper positioning of said faceplate on said shell.

5,008,944

LOUDSPEAKER SYSTEM FOR MOTOR VEHICLES

Michael O. Sels, 8524 N. 23nd Dr., Phoenix, 85051, and Bryan D. Combs, 1001 N. 32nd St., Apt. C-21, Phoenix, Ariz. 85008

Filed Feb. 6, 1990, Ser. No. 475,812



Int. Cl.[5] H04B *1/00*

U.S. Cl. 381—86 **10 Claims**

1. A motor vehicle loudspeaker system, comprising:

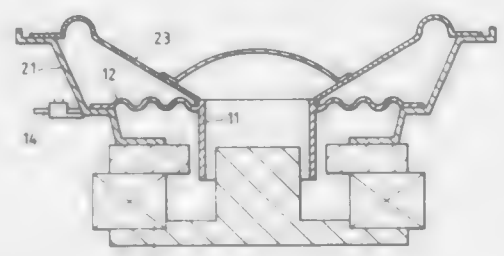
(a) a sound box of shape and size suitable for mechanical installation in the rear windshield space of, and mounted in, the rear window of said motor vehicle;

(b) loudspeakers contained in said sound box and facing an interior of said motor vehicle; and

(c) means for electrically connecting said loudspeakers to an audio amplifier in said motor vehicle.

5,008,945

WATER-PROOF SPEAKER UNIT



Fumio Murayama, and Tomiaki Ando, both of Yamagata, Japan, assignors to Pioneer Electronic Corp., Tokyo, Japan

Filed Dec. 6, 1988, Ser. No. 280,413

Claims priority, application Japan, May 23, 1988, 63-117388; May 24, 1988, 63-127662

Int. Cl.[5] H04R *25/00*

U.S. Cl. 381—194 **3 Claims**

1. A speaker unit, comprising:

a voice coil bobbin for carrying a voice coil; and

a damper extending radially outwardly from the periphery of said voice coil bobbin, said voice coil bobbin and damper being integrally molded of plastic, wherein said voice coil is molded into said voice coil bobbin, and further comprising at least one lead wire extending from said voice coil through said voice coil bobbin, said at least one lead wire being molded into said damper.

5,008,946

SYSTEM FOR RECOGNIZING IMAGE

Mitsuhiro Ando, Tokyo, Japan, assignor to Aisin Seiki K.K., Tokyo, Japan

Filed Sep. 9, 1988, Ser. No. 242,441

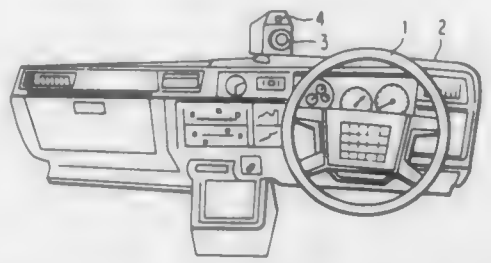
Claims priority, application Japan, Sep. 9, 1987, 62-225862

Int. Cl.[5] G06K *9/00*

U.S. Cl. 382—2 **1 Claim**

1. A system for recognizing an image of a vehicle driver's face, comprising:

camera means which converts optical information obtained from a first facial image into an electrical signal;



position-detecting means for detecting three or more elements of the first facial image and their positions according to the electrical signal;

distance-detecting means for detecting the distances between the detected elements;

normalizing means for normalizing data about the detected distances with the distance between given two of the detected elements;

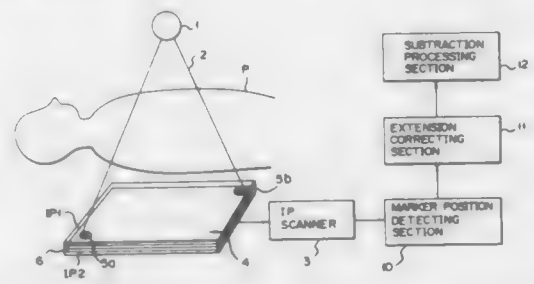
storage means which hold reference values previously assigned to the elements of the first facial image, said reference values being standard values previously determined from a plurality of facial images similar to said first facial image;

similarity degree-calculating means which compares the normalized data about the distances with the reference values of similarity to the elements and produces data about the degrees of a reference image by employing a weighting system; and

determining means which determines whether the facial image has been successfully detected, from the data about the degrees of similarity of the detected elements, wherein, after the determining means determines that the first facial image has been successfully detected, a second facial image is read, and changes in conditions of the second facial image are detected by comparison to the first facial image, and that electrical devices are controlled based on the detected changes in conditions.

5,008,947

METHOD AND APPARATUS FOR CORRECTING EXTENSION RATES OF IMAGES



Naoki Yamada, Nishinasunomachi, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Oct. 10, 1989, Ser. No. 419,114

Claims priority, application Japan, Oct. 13, 1988, 63-257692

Int. Cl.[5] G06K *9/00, 9/32;* **H05G** *1/28*

U.S. Cl. 382—6 **10 Claims**

1. A method for reducing and expanding images, the method comprising the steps of:

acquiring a plurality of images, each image including a plurality of marker images;

detecting positions of the marker images on each image;

calculating marker image intervals from the detected marker image positions;

selecting one of the plurality of images as a standard image;

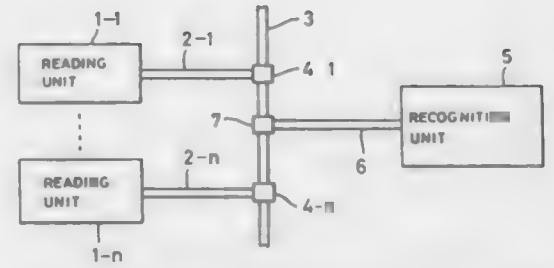
fitting a position of a remaining image to that of the standard image by a rotation and shift process, the remaining image being one of the plurality of images other than the standard image;

obtaining an extension rate from the calculated marker image intervals of the marker image positions of the selected standard image and the remaining image; and

reducing or expanding the remaining image in accordance with the obtained extension images in a predetermined interval.

5,008,948

SYSTEM FOR RECOGNIZING HANDWRITTEN LETTERS



Tomohiro Tsukawaki, Iwatsuki, Japan, assignor to Fuji Xerox Co., Ltd., Saitama, Japan

Filed Mar. 25, 1988, Ser. No. 173,617

Claims priority, application Japan, Jun. 15, 1987, 62-148651

Int. Cl.[5] G06K *9/00*

U.S. Cl. 382—13 **8 Claims**

1. A system for recognizing handwritten letters comprising:

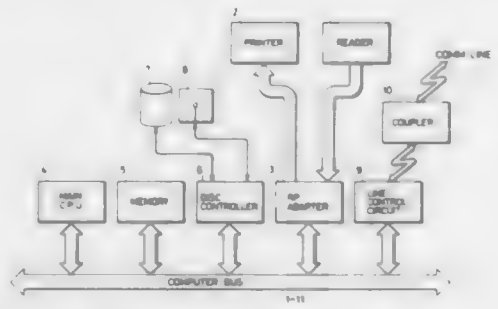
a central recognition means;

a plurality of terminal units, each including a transmission request section for making a transmission request for handwritten letter information, a first compressing/expanding means for expanding compressed information received and for compressing information for transmitting, and a first interface means for transmitting and receiving information; each of said terminal units being separate from said recognition means;

a plurality of reading means each including a reading section for reading the handwritten letter and converting said handwritten letter to computer readable data, a second compressing/expanding means for compressing the read-out handwritten letter data and for expanding the information when compressed information is received and a second interface means for transmitting information including the handwritten letter data; said reading means being separate from said recognition means and each of said terminal units;

said central recognition means including a third compressing/expanding means for expanding the compressed handwritten letter data when the compressed handwritten letter data is transmitted from said reading means and for compressing the data when the data is received, said recognition means recognizing information from the expanded handwritten letter data, and a third interface means for compressing and transmitting said recognized information in accordance with said transmission request from said terminal unit; and

a transmission path for connecting said terminal units, said reading means, and said recognition means;



whereby said computer readable handwritten letter data is compressed by said second compressing/expanding means and transmitted to said recognition unit where it is expanded by said third compressing/expanding means and then recognized by said recognition means and compressed by said third compressing/expanding means in response to a transmission request from a selected one of said terminal units; said compressed data being transmitted to said selected terminal unit where it is expanded by said first expanding/compressing means and viewed.

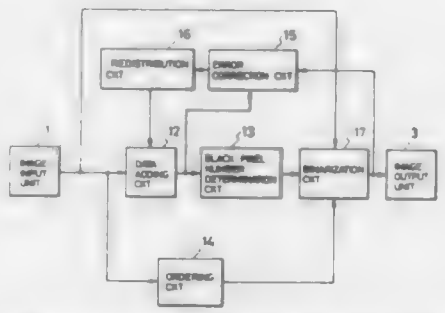
IMAGE PROCESSING SYSTEM

Shinobu Arimoto, Tokyo, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 14,077, Feb. 3, 1987, abandoned, which is a continuation of Ser. No. 645,166, Aug. 28, 1984, abandoned. This application May 21, 1990, Ser. No. 527,707
Claims priority, application Japan, Aug. 30, 1983, 58-158452; Aug. 30, 1983, 58-158454; Aug. 30, 1983, 58-158456
Int. Cl.[5] G06K 9/00
U.S. Cl. 382—41 11 Claims

1. An image processing system comprising:
a computer bus line;
supplying means, connected to said computer bus line, for supplying compressed image data to said computer bus line;
storing means, connected to said computer bus line, for storing the compressed image data transmitted through said computer bus line from said supplying means;
expanding means, connected to said storing means without using said computer bus line, for expanding the compressed image data read out from said storing means into image data;
reproducing means, connected to said expanding means without using said computer bus line, for reproducing an image in accordance with the image data from said expanding means; and
means for enabling transfer of the compressed image data through said computer bus line from said supplying means to said storing means whenever a predetermined amount of compressed image data stored in said storing means is expanded by said expanding means.



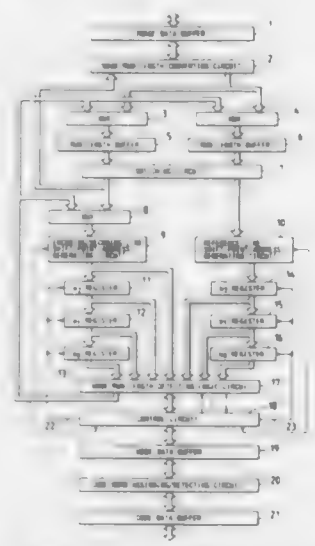
5,008,950

IMAGE PROCESSING METHOD AND APPARATUS FOR ERROR-DISPERSION DIGITIZATION WITHOUT MOIRE OR SPURIOUS STRIPE FORMATION

Akihiro Katayama, Kawasaki, and Hidefumi Ohsawa, Urawa, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 19, 1988, Ser. No. 145,593
Claims priority, application Japan, Jan. 22, 1987, 62-013688; May 21, 1987, 62-122613; May 21, 1987, 62-122614
Int. Cl.[5] G06K 9/40
U.S. Cl. 382—50 11 Claims

1. An image processing apparatus comprising:
first calculation means for calculating a sum of density data of plural pixels existing in a first area composed of plural pixels;
second calculation means for calculation, from the sum of density data, a number of black pixels to be arranged in the first area and a difference between the sum of density data and a sum of densities of the black pixels;
conversion means for converting density data of all pixels existing in the first area into binary data, based on the number of black pixels obtained by said second calculation means;
process means for dispersing data corresponding to said difference obtained by said second calculation means into a second area which is composed of plural pixels and adjacent to the first area; and



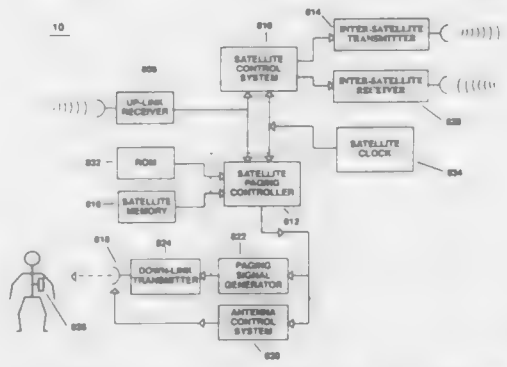
control means for controlling said first calculation means, said second calculation means and said conversion means such that the conversion of the density data into the binary data by said conversion means is executed for each area.

5,008,951

IMAGE INFORMATION ENCODING/DECODING DEVICE

Yutaka Koshi, Kanagawa, Japan, assignor to Fuji Xerox, Tokyo, Japan

Filed Aug. 29, 1989, Ser. No. 399,932
Claims priority, application Japan, Sep. 2, 1988, 63-221181
Int. Cl.[5] G06K 9/36
U.S. Cl. 382—56 5 Claims



1. An image information encoding/decoding device for carrying out two-dimensional encoding and decoding processings, comprising:
(a) an image data buffer memory for receiving an image data in an encoding operation and outputting an image data in a decoding operation;
(b) an image/run-length converting circuit for converting the image data received by said image data buffer to a run-length data in the encoding operation, and converting a run-length data to the image data in the decoding operation;
(c) two run-length buffers each for storing one line portion of the run-length data, arranged such that while a run-length data of an encoding line or a decoding line is stored in one of said run-length buffers, a run-length data of a reference line is stored in the other;
(d) an encoding/decoding line shift-point address generating circuit for generating encoding line shift-point addresses by sequentially adding the run-length data of the encoding line in the encoding operation, and generating decoding line shift-point addresses by sequentially adding decoded run-length data in the decoding operation;
(e) a reference line shift-point address generating circuit for generating reference line shift-point addresses by sequentially adding the run-length data of the reference line;
(f) pipeline-connected a_2, a_1 and a_0 registers for sequentially storing the encoding line shift-point addresses or the decoding line shift-point addresses that are generated in said encoding/decoding line shift-point address generating circuit;
(g) pipeline-connected b_2, b_1 and b_0 registers for sequentially storing the reference line shift-point addresses that are generated in said reference line shift-point address generating circuit;
(h) a mode/run-length detecting logic circuit for detecting a current operation mode based on the encoding line shift-point addresses and the reference line shift-point addresses and outputting a mode data in the encoding operation, and generating the run-length data based on an input mode data in the decoding operation;
(i) a control circuit for switching a control mode and data paths between the encoding and decoding operations, and controlling the encoding operation or the decoding operation; and
(j) a code word assigning/detecting circuit for assigning and outputting a code word that corresponds to the mode data in the encoding operation, and converting a received code word to the mode data in the decoding operation.

5,008,952

GLOBAL SATELLITE COMMUNICATION SYSTEM WITH GEOGRAPHIC PROTOCOL CONVERSION

Walter L. Davis, Coral Springs, and Philip P. Macnak, West Palm Beach, both of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Nov. 3, 1989, Ser. No. 431,105
Int. Cl.[5] H04B 7/185
U.S. Cl. 455—12 48 Claims

1. A satellite paging system providing geographic protocol conversion for data packet delivery to a plurality of geographic areas, said satellite based communication system comprising:
transmission means, for transmitting data packets to the communication satellite, the data packets being transmitted in a first predetermined data format;
a satellite having,
satellite receiving means, for receiving the transmitted data packets transmitted in the first predetermined data format;
programmable encoding means, coupled to said receiving means, for encoding the received data packets transmitted in the first predetermined data format into encoded data packets in a second predetermined data format corresponding to the signaling requirements of each geographic delivery area;
satellite transmitting means, coupled to said encoding means, for transmitting the encoded data packets in the second predetermined data format; and
a portable communication receiver, operable in the second predetermined data format in the geographic delivery area, for receiving the encoded data packets transmitted in the second predetermined data format,
whereby data packets transmitted to said satellite in the first predetermined data format are converted within said satellite to the second predetermined data format conforming to the signaling requirements for transmission to said portable communication receiver in the geographic delivery area.

5,008,953

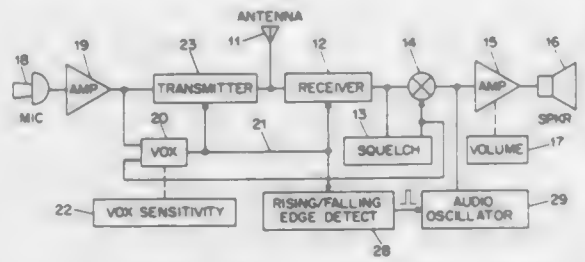
MOBILE STATION LINK SUPERVISION UTILIZING DIGITAL VOICE COLOR CODES

Steinar J. E. A. Dahlin, Sollentuna, and Walter Ghisler, Upplands Väsby, both of Sweden, assignors to Telefonaktiebolaget L M Ericsson, Stockholm, Sweden

Continuation-in-part of Ser. No. 371,126, Jun. 26, 1989. This application Jan. 10, 1990, Ser. No. 463,305
Int. Cl.[5] H04Q 7/04
U.S. Cl. 455—33 27 Claims

8. A mobile station for use in a mobile radio communication system of the type in which digitally encoded information is transmitted between a base station and the mobile station in bursts over a digital communication channel, with at least some of the bursts of information containing digital voice color codes, said mobile station comprising:
a memory for storing a digital voice color code;
means for initiating a timer for counting a predetermined period of time;
a receiver for receiving bursts of information transmitted from said base station to said mobile station during a connection between said stations on a designated digital communication channel;
a decoder for detecting any digital voice color codes contained in bursts of information received over said designated channel during a connection;
means for determining whether a first predetermined number of digital voice color codes which match the digital voice color code stored in said memory are received during the predetermined time counted by said timer; and
means for terminating said connection if said first predetermined number of codes are not received during said period of time.

5,008,954



VOICE-ACTIVATED RADIO TRANSCEIVER

Carl Oppendahl, 27 W. 44th St., #28, New York, N.Y. 10035-6645

Continuation of Ser. No. 334,190, Apr. 6, 1989. This application Sep. 24, 1990, Ser. No. 587,602

Int. Cl.[5] H04B *1/44*

U.S. Cl. 455—79 8 Claims

1. In a transceiver of the type having a transmit mode, a receive mode, and a squelched mode, and wherein the transceiver enters receive mode upon receipt of a signal having a strength greater than a predetermined squelch threshold, and wherein the transceiver enters transmit mode by voice activation of a voice activation means having a triggering time, and wherein the audio signal received by the receiver portion of the transceiver is conveyed to the user by speaker means, the improvement wherein is provided:

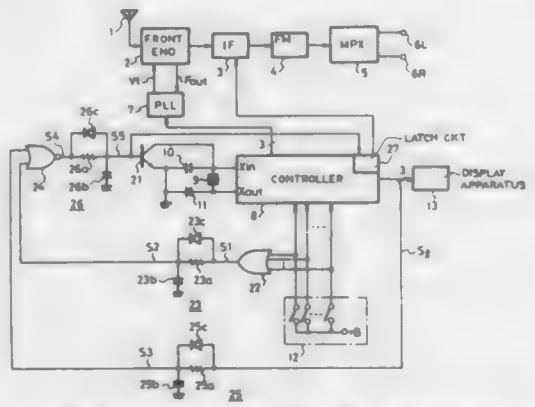
sound pulse generation means responsive to the voice activation for generating a momentary alerting sound audible to the user and conveyed to the user by the speaker means, said sound pulse generation means generating the momentary alerting sound at about the time when the transceiver enters transmit mode, the duration of said momentary alerting sound being less than the triggering time of the voice activation means,

whereby the user is alerted that the transceiver has entered transmit mode, and whereby the user will be made aware of loss of power or of spurious continuous transmission.

5,008,955

RECEIVERS WITH MICROCOMPUTER CONTROLLED TUNING

Kazuhiro Sato, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan



PCT No. PCT/JP88/00197, § 371 Date Oct. 25, 1988, § 102(e) Date Oct. 25, 1988, PCT Pub. No. WO88/06820, PCT Pub. Date Sep. 7, 1988

PCT Filed Feb. 25, 1988, Ser. No. 269,143

Claims priority, application Japan, Feb. 26, 1987, 62-43433

Int. Cl.[5] H04B *1/10*

U.S. Cl. 455—181 6 Claims

1. A receiver having an IF stage and characterized by a microcomputer for generating station selecting data and a clock signal, said microcomputer having a latch means for storing data supplied to said IF stage for controlling the bandwidth theses, tuning means supplied with said station selecting data in synchronism with said clock signal and which is tuned to a desired broadcasting frequency, said IF stage being connected to said tuning means to receive the output of said tuning means and connected to said latch means to receive data from said microcomputer, a detecting circuit for detecting whether said tuning means is selecting a station or not and a switching circuit which automatically stops the generation of said clock signal from said microcomputer based on the output from said detecting circuit when the station selecting operation of said tuning means is finished, and means responsive to operation of said detecting circuit and connected to said latch means to prevent the data in said latch means for changing during the period in which generation of said clock signal is stopped.

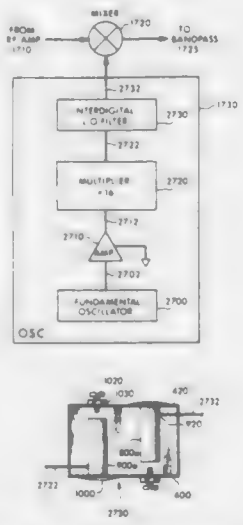
INTERDIGITAL LOCAL OSCILLATOR FILTER APPARATUS



Dale L. Hemmie, Burlington, Iowa, assignor to Conifer Corporation, Burlington, Iowa

Continuation-in-part of Ser. No. 261,557, Oct. 24, 1988, which is a continuation of Ser. No. 102,726, Sep. 30, 1987, Pat. No. 4,791,717. This application May 23, 1989, Ser. No. 355,992

The portion of the term of this patent subsequent to Dec. 20, 2005, has been disclaimed.

Int. Cl.[5] H04B *1/26;* H01P *1/205;* H05K *7/02*

U.S. Cl. 455—318 2 Claims

2. An integrated local oscillator apparatus receptive of a microwave signal for producing an electrical output signal in a predetermined band corresponding to said microwave signal, said apparatus comprising:

a printed circuit board,

a fundamental oscillator for generating a signal at a fixed frequency,

an amplifier connected to said fundamental oscillator for amplifying the signals from said fundamental oscillator;

means connected to said amplifier for producing multiples of said frequency,

an interdigital filter located on said printed circuit board having an input connected to said producing means and an output for said electrical output signal, said interdigital filter comprising:

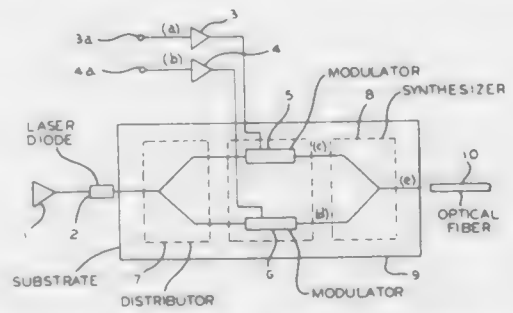
(a) a ground plane conductive surface formed on said printed circuit board,

(b) a conductive rectangular housing having an interior and an open bottom, said housing having said open bottom soldered to said conductive surface in order to fully enclose the interior of said housing in a conductive envelope, and

(c) a plurality of conductive elements spatially located in said housing for filtering a predetermined multiple of said frequency from said multiples of said frequency for delivery as said output signal, one of said elements connected to said producing means and another one of said elements connected to said output.

5,008,957

MULTILEVEL OPTICAL SIGNAL TRANSMITTER



Mikio Kiyono, Tokyo, Japan, assignor to NEC Corporation, Japan

Filed Mar. 3, 1989, Ser. No. 318,710

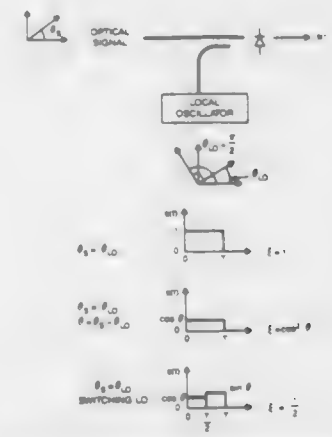
Claims priority, application Japan, Mar. 3, 1988, 63-48613

Int. Cl.[5] H04B *10/00*

U.S. Cl. 455—618 4 Claims

1. A multilevel optical signal transmitter comprising a substrate, a laser diode positioned to direct light into said substrate, distributor means on said substrate for directing said light into two separate paths, modulating means in each of said separate paths for controlling the intensity of light passing through the respective paths to be at either of two intensity levels, drive means associated with said modulating means for selectively switching said modulator to pass said light at a given one of said two intensity levels, and means for combining the switched light in said two paths for providing an optical output signal having instantaneous intensities which are sums of the instantaneous intensities of the light in said two paths, thereby providing a three level optical output signal.

5,008,958



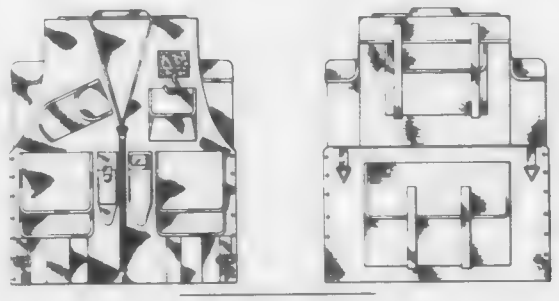
POLARIZATION-INSENSITIVE TECHNIQUE FOR COHERENT OPTICAL COMMUNICATION

Leonard J. Cimini, Jr., Howell, and Isam M. I. Habbab, Old Bridge, both of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Continuation-in-part of Ser. No. 145,446, Jan. 19, 1988, abandoned, and a continuation-in-part of Ser. No. 145,358, Jan. 19, 1988, abandoned. This application Feb. 8, 1989, Ser. No. 308,697

Int. Cl.[5] H04B *10/06*

U.S. Cl. 455—619 6 Claims



1. A method of polarization insensitive coherent detection of an optical signal comprising,

mixing two optical signals,

at least one of which comprises a bit stream representative of intelligence which is transmitted at a given bit rate, the polarization of at least one of the signals varying independently of the polarization of the other signal at a rate slower than the given bit rate,

the invention characterized in that the polarization of the other of the two signals is caused to vary at a rate greater than or equal to the bit rate.

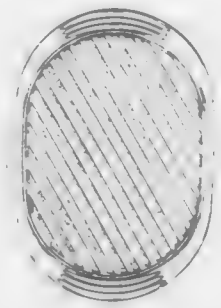
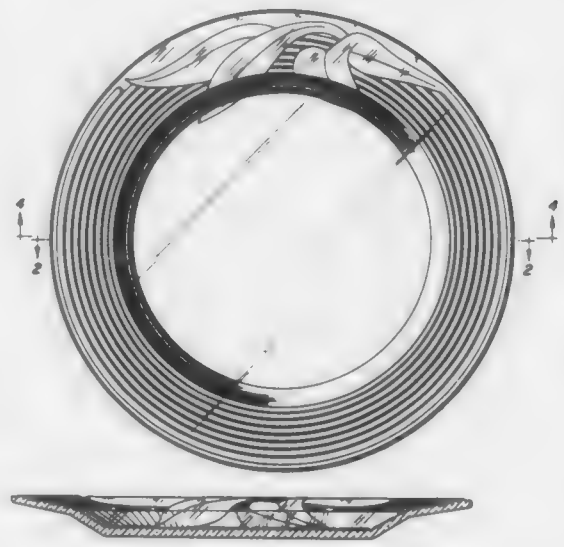
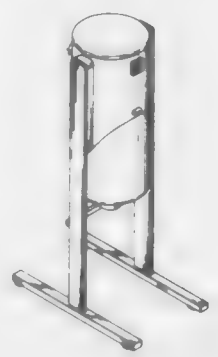
316,207
HAND-HOLDABLE FOOD PROCESSOR
Ira Gaber, West Norwalk, Conn., and Cooper C. Woodring, Plandome, N.Y., assignors to Better Mousetraps Inc., Plandome, N.Y.
Filed Apr. 29, 1988, Ser. No. 187,879
Term of patent 14 years
U.S. Cl. D7—384



316,208
LIQUID MEASURING-DISPENSER TAP FOR A BEVERAGE BOTTLE OR SIMILAR ARTICLE
Ronald S. Griffiths, Rochester, and John E. Searles, Aylesford, both of England, assignors to R. and A. Bailey & Co. Limited, Dublin, Northern Ireland
Filed Jul. 20, 1987, Ser. No. 75,076
Claims priority, application United Kingdom, Jan. 20, 1987, 1039342
Term of patent 14 years
U.S. Cl. D7—398

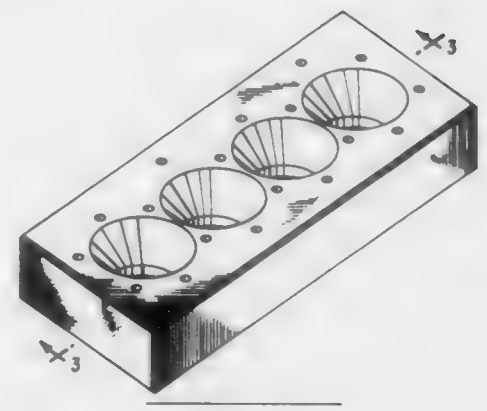


316,209
CUP
Milan S. Lackovic, Port Washington, Wis., assignor to K-Promotions, Inc., Milwaukee, Wis.
Filed Jan. 23, 1989, Ser. No. 299,251
Term of patent 14 years
U.S. Cl. D7—533

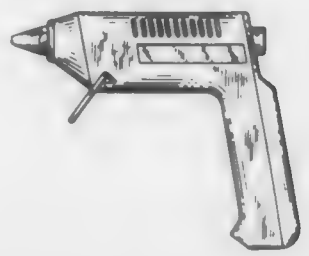


316,210
SERVING TRAY
Giorgetto Giugiaro, Turin, Italy, assignor to Fratelli Guzzini, S.p.A., Recanati, Italy
Filed Jan. 17, 1989, Ser. No. 297,747
Claims priority, application Italy, Aug. 18, 1988, 21751B/88
Term of patent 14 years
U.S. Cl. D7—545

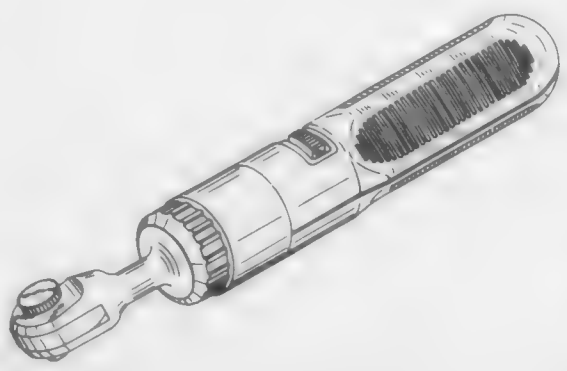
316,211
PLATTER OR SIMILAR ARTICLE
Jean-Jacques Durand, LaBute, 62510 Arques, France
Filed Sep. 25, 1986, Ser. No. 911,204
Term of patent 14 years
U.S. Cl. D7—588



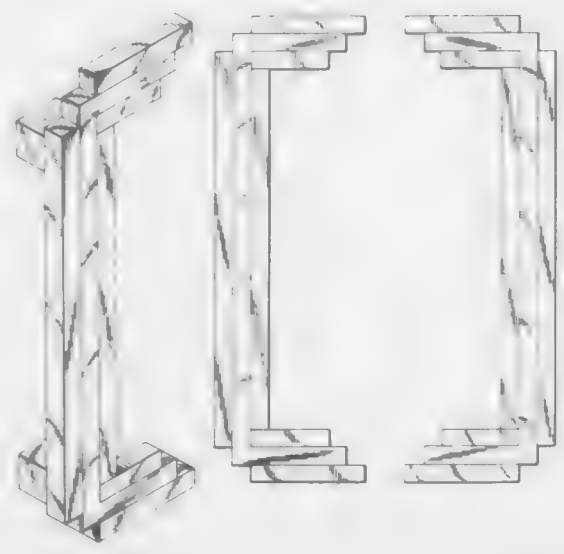
316,212
JUICE EXTRACTOR
John S. Seal, Jr., 208 Llanfair Rd., Ardmore, Pa. 18929
Filed Sep. 22, 1988, Ser. No. 247,579
Term of patent 14 years
U.S. Cl. D7—665



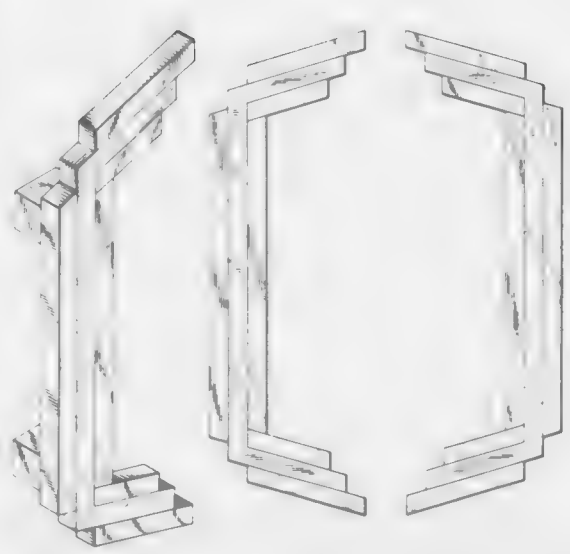
316,213
SPATULA
Robert Skerker, Buffalo, N.Y., and William Prindle, Santa Barbara, Calif., assignors to Robinson Knife Manufacturing Co., Inc., Springville, N.Y.
Filed Dec. 19, 1988, Ser. No. 286,498
Term of patent 14 years
U.S. Cl. D7—696



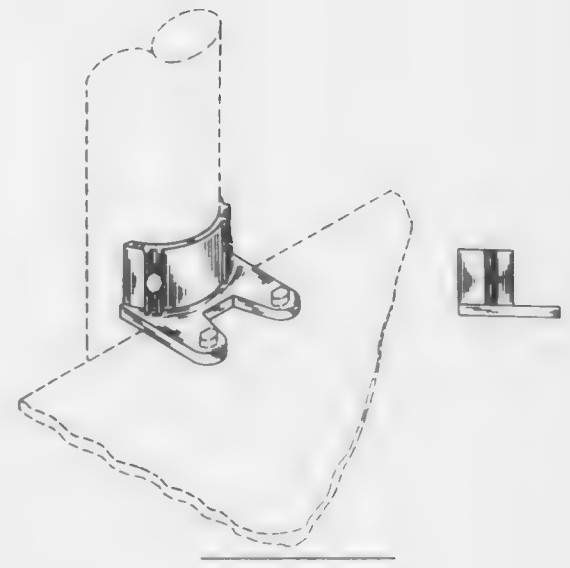
316,214
PISTON RING COMPRESSOR
Patrick J. O'Donnell, 3040 Connor St., Salt Lake City, Utah 84109
Filed May 13, 1987, Ser. No. 49,[illegible]1
Term of patent 14 years
U.S. Cl. D8—14



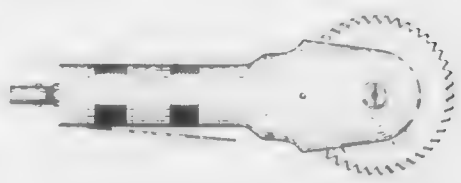
316,215
THUMB FEED GLUE GUN
Richard A. Belanger, Kensington, N.H., assignor to The Stanley Works, New Britain, Conn.
Filed Feb. 29, 1988, Ser. No. 162,365
Term of patent 14 years
U.S. Cl. D8—30



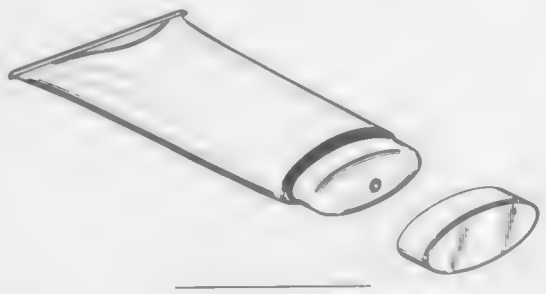
316,216
BATTERY-OPERATED RATCHET WRENCH
Martin P. Gierke, Baltimore, and Robert I. Somers, Reisterstown, both of Md., assignors to Black & Decker Inc., Newark, Del.
Continuation-in-part of Ser. No. 907,720, Sep. 12, 1986, Pat. No. D. 304,543. This application Feb. 17, 1988, Ser. No. 157,437
Term of patent 14 years
U.S. Cl. D8—61



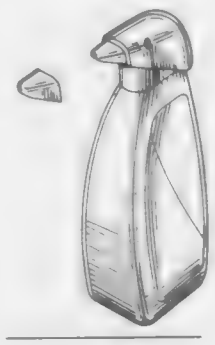
316,217
DOOR HARDWARE
Michael J. Tremonti, Hawthorne, N.J., assignor to Hardware Designs Inc., Fairfield, N.J.
Filed Nov. 22, 1988, Ser. No. 275,032
The portion of the term of this patent subsequent to Apr. 16, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D8—319



316,218
DOOR HARDWARE
Michael J. Tremonti, Hawthorne, N.J., assignor to Hardware Designs Inc., Fairfield, N.J.
Filed Nov. 22, 1988, Ser. No. 275,033
The portion of the term of this patent subsequent to Apr. 16, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D8—319

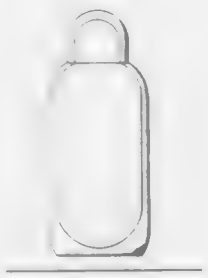


316,219
SUPPORT BRACKET FOR A VERTICAL ARTICLE
Ulrich K. Boehnke, Fort Myers, Fla., assignor to Diemold Machine Company, Inc., Fort Myers, Fla.
Filed Sep. 14, 1988, Ser. No. 245,014
Term of patent 14 years
U.S. Cl. D8—373

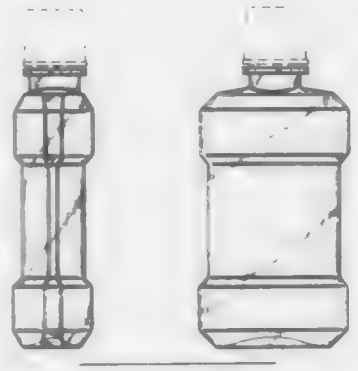


316,220
DEHIDING DEVICE
Harrison A. Alley, Jr., Knox County, Tenn.; Lester H. Sirois, Strafford County, N.H., and Lawrence D. Boody, Anderson County, Tenn., assignors to Acraloc Corporation, Oak Ridge, Tenn.
Continuation-in-part of Ser. No. 74,868, Jul. 17, 1987, abandoned. This application Apr. 22, 1988, Ser. No. 184,720
Term of patent 14 years
U.S. Cl. D8—66

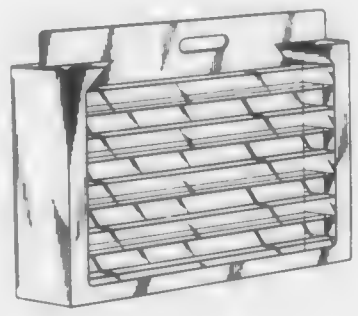
316,221
COMBINED COLLAPSIBLE TUBE AND CAP THEREFOR
Edward Dombroski, Sea Girt, N.J., assignor to Peerless Tube Company, Bloomfield, N.J.
Filed Jun. 3, 1986, Ser. No. 870,334
Term of patent 14 years
U.S. Cl. D9—302



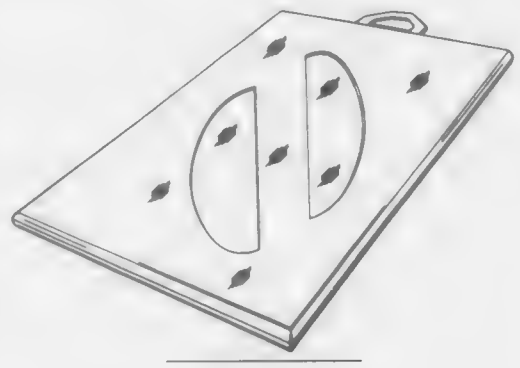
316,222
BOTTLE
Johannes van der Heijden, Hilversum, Netherlands, assignor to S. C. Johnson & Son, Inc., Racine, Wis.
Filed Sep. 22, 1988, Ser. No. 248,407
Claims priority, application United Kingdom, Mar. 24, 1988, 1049461
Term of patent 14 years
U.S. Cl. D9—317



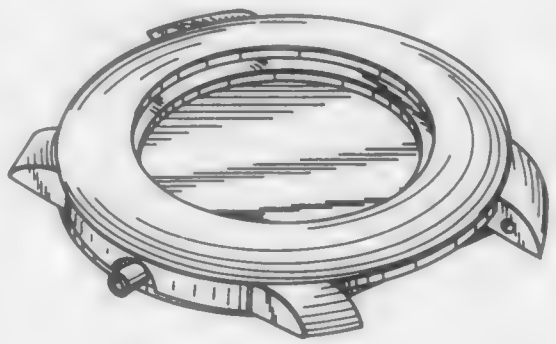
316,223
PERFUME BOTTLE
Pierre Dinand, Levallois-Perret, France, assignor to Lacambra y Espoy, S.A., Barcelona, Spain
Filed Jun. 29, 1987, Ser. No. 67,044
Claims priority, application France, Dec. 30, 1986, 86 6902; Spain, Feb. 9, 1987, 112261
Term of patent 14 years
U.S. Cl. D9—384



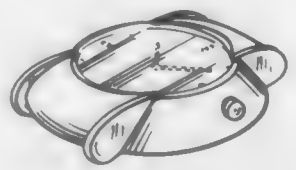
316,224
COMBINED BOTTLE AND CAP
Ian Gray, Northumberland; Russell T. Watts, London, and William R. Stewart, Bromley, all of England, assignors to The Procter & Gamble Company, Cincinnati, Ohio
Filed Mar. 7, 1988, Ser. No. 165,672
Claims priority, application United Kingdom, Sep. 7, 1987, 1044643
Term of patent 14 years
U.S. Cl. D9—403



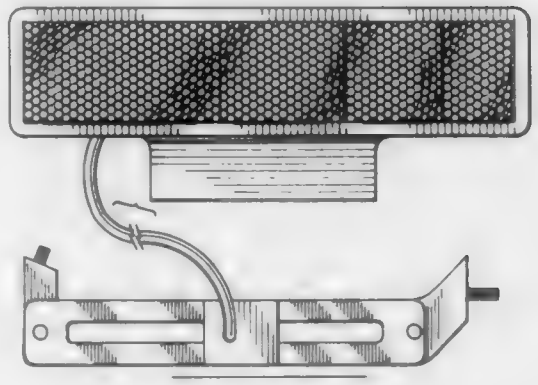
316,225
BOTTLE
Richard C. Edstrom, New York, N.Y.; Richard N. Hirst, Teaneck; Richard B. Gerstman, Tenafly, both of N.J., and David O. Pressler, Fairfield, Conn., assignors to Warner-Lambert Company, Morris Plains, N.J.
Filed Mar. 22, 1989, Ser. No. 326,959
Term of patent 14 years
U.S. Cl. D9—404



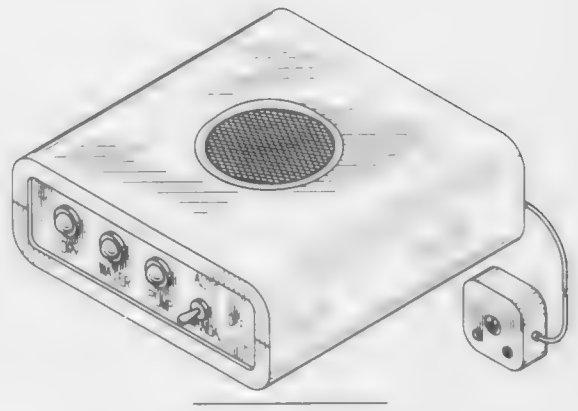
316,226
PACKAGE FOR TOYS
Ngan Y. Ching, Shatin, Hong Kong, assignor to May Chung Toy Products Fty. Ltd., Kowloon, Hong Kong
Filed Sep. 27, 1988, Ser. No. 250,122
Term of patent 14 years
U.S. Cl. D9—415



316,227
PACKAGE
James J. Gentes, Soquel, and Steven K. Sasaki, Santa Cruz, both of Calif., assignors to Giro Sport Design, Inc., Soquel, Calif.
Filed Oct. 14, 1988, Ser. No. 258,254
Term of patent 14 years
U.S. Cl. D9—415



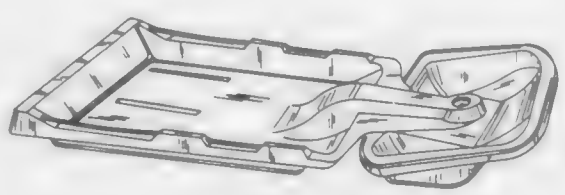
316,228
WATCH CASE
Christian Frommherz, Kowloon, Hong Kong, assignor to Eco Swiss China Time Ltd., Hong Kong, Hong Kong
Filed Mar. 24, 1987, Ser. No. 29,592
Term of patent 14 years
U.S. Cl. D10—30



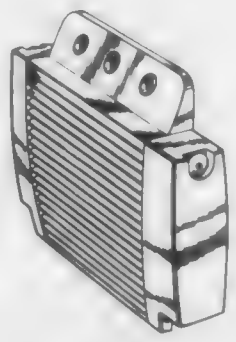
316,229
WRIST-WATCH
Pino Rabolini, Milan, Italy, assignor to Pomellato S.p.A., Milan, Italy
Filed Apr. 19, 1988, Ser. No. 185,770
Claims priority, application Italy, Oct. 23, 1987, 22603/87[U]
Term of patent 14 years
U.S. Cl. D10—30

316,230
AUXILIARY AUTOMOBILE BRAKE LIGHT
Antonio J. Munoz, 103 1st St. E, Unit 310, Tiera Verde, St. Petersburg, Fla. 33715
Filed Jul. 7, 1988, Ser. No. 216,261
Term of patent 14 years
U.S. Cl. D10—114

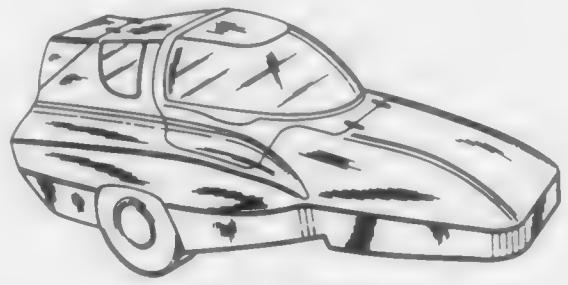
316,231
LIQUID LEVEL DETECTOR CONTROL UNIT
Salvatore M. Inglima, R.D. 1 Box 211A, Chester, N.Y. 10918
Filed Sep. 2, 1988, Ser. No. 240,106
Term of patent 14 years
U.S. Cl. D10—106



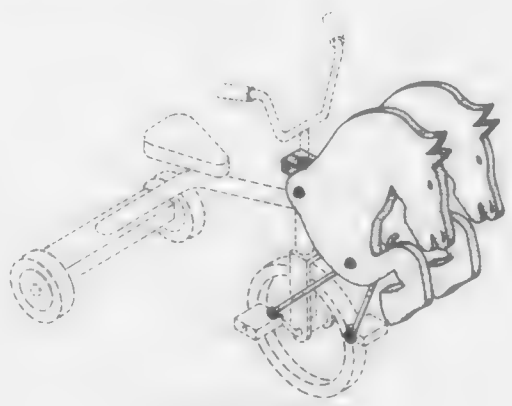
316,232
HOLIDAY STOCKING
Louis T. D'Agosta, 60 Fairfax St., Somerville, Mass. 02144
Filed Oct. 17, 1988, Ser. No. 258,434
Term of patent 14 years
U.S. Cl. D11—126



316,233
BELT BUCKLE
Bobby S. Dupree, and Helen K. Dupree, both of 720 Keppel Dr., Newport News, Va. 23602
Filed Apr. 25, 1988, Ser. No. 185,947
Term of patent 14 years
U.S. Cl. D11—241

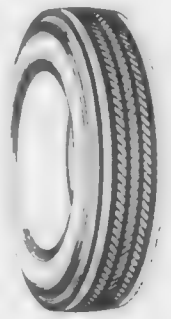


316,234
SLED
Kurt E. P. Mirisch, Sr., P.O. Box 278, Chesterland, Ohio 44026
Filed Dec. 2, 1987, Ser. No. 127,871
Term of patent 14 years
U.S. Cl. D12—11

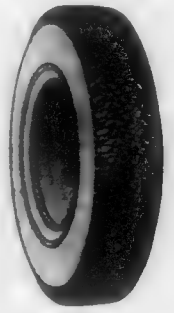


316,235
MOTORCYCLE OIL COOLER
James M. Preisler, 3128 Priest La., Mound, Minn. 55364, and Alwin J. Stahel, 1244 Imperial La., St. Paul, Minn. 55112
Filed Feb. 29, 1988, Ser. No. 162,363
Term of patent 14 years
U.S. Cl. D12—114

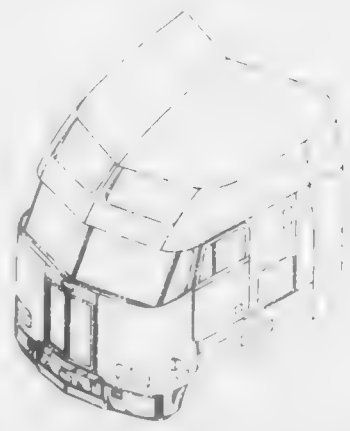
316,236
MOTORCYCLE SIDECAR
David E. Hannigan, 2329 Ontario Street, Oakville, Ontario, Canada L6L 1A5
Filed Sep. 30, 1987, Ser. No. 103,161
Claims priority, application Canada, Aug. 21, 1987, 21/08/ET
Term of patent 14 years
U.S. Cl. D12—116



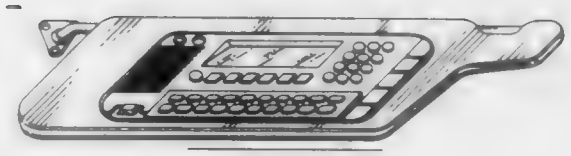
316,237
ANIMATED HORSE FIGURE FOR USE WITH CHILD'S TRICYCLE
James A. Snow, Rte. 3, Gadsden, Ala. 35901
Filed Oct. 5, 1988, Ser. No. 253,728
Term of patent 14 years
U.S. Cl. D12—117



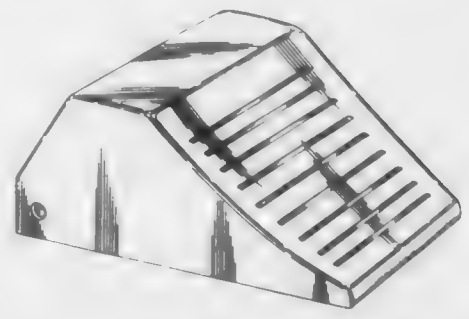
316,238
STROLLER TRAY
Harry J. Giambrone, Kettering, Ohio, assignor to Spalding & Evenflo Companies, Inc., Tampa, Fla.
Filed Oct. 20, 1988, Ser. No. 260,334
Term of patent 14 years
U.S. Cl. D12—133



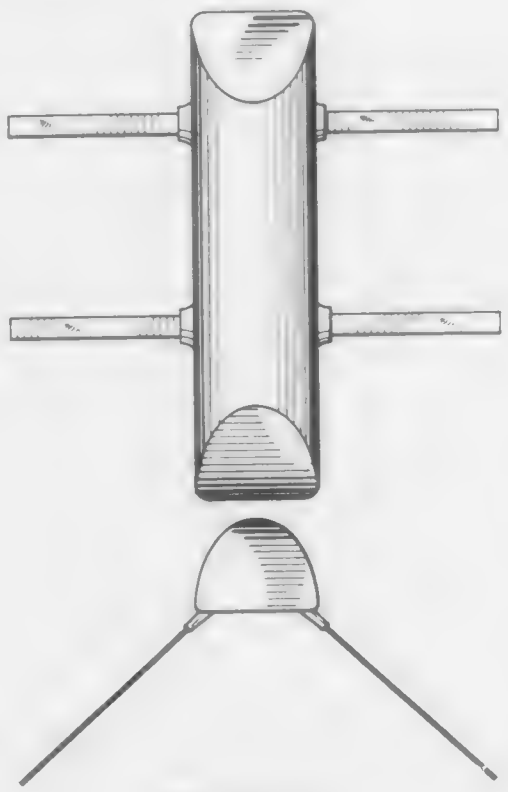
316,239
AUTOMOBILE TIRE
Toru Tsuda, and Hidenori Masuda, both of Tokyo, Japan, assignors to Bridgestone Corporation, Tokyo, Japan
Filed Dec. 27, 1988, Ser. No. 291,072
Claims priority, application Japan, Aug. 31, 1988, 63-34113
Term of patent 14 years
U.S. Cl. D12—145



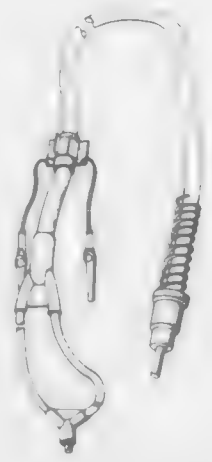
316,240
AUTOMOBILE TIRE
Toru Tsuda, and Yasufumi Ichiki, both of Tokyo, Japan, assignors to Bridgestone Corporation, Tokyo, Japan
Filed Jun. 27, 1989, Ser. No. 371,968
Claims priority, application Japan, Dec. 27, 1988, 63-50562
Term of patent 14 years
U.S. Cl. D12—146



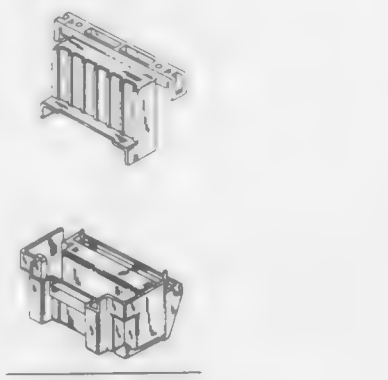
316,241
TRUCK CAB BUMPER UNIT EXTERIOR SURFACE
Bob Ray, Fremont, Calif., assignor to PACCAR Inc., Bellevue, Wash.
Filed Sep. 15, 1988, Ser. No. 245,[illegible]
Term of patent 14 years
U.S. Cl. D12—1[illegible]



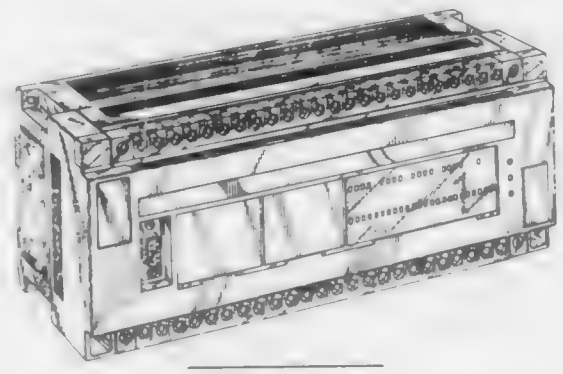
316,242
COMBINED VEHICLE SUN VISOR AND CELLULAR TELEPHONE UNIT
Joe Lewo, P.O. Box N8913, Nassau, The Bahamas
Filed Apr. 29, 1988, Ser. No. 188,009
Term of patent 14 years
U.S. Cl. D12—191



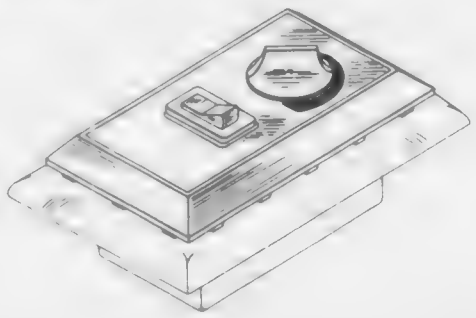
316,243
WHEEL CHOCK
Stephen K. Henry, 3815 Northbrook Dr., #C-21, Boulder, Colo. 80302
Filed Jul. 7[illegible], 1988, Ser. No. 224,135
Term of patent 14 years
U.S. Cl. D12—217



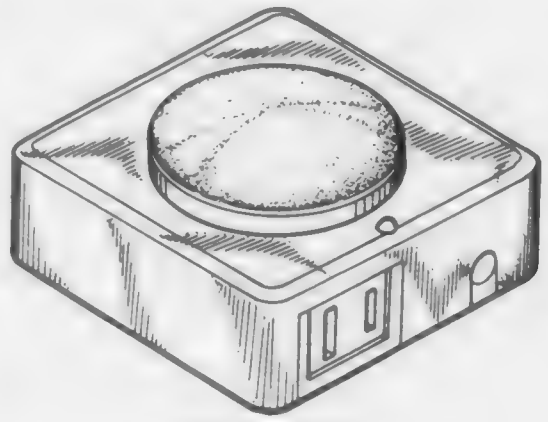
316,244
DOCK POST BUMPER
Kevin D. Kruckenberg, 28681 N. Harrison Ave., Wauconda, Ill. 60084
Filed Dec. 9, 1988, Ser. No. 282,295
Term of patent 14 years
U.S. Cl. D12—168



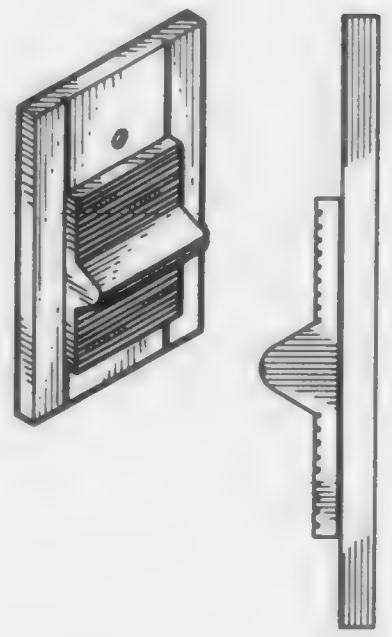
316,245
OPTICAL CABLE ASSEMBLY FOR ATTACHMENT TO A HEADLIGHT UNIT WORN BY A SURGEON
Richard E. Feinbloom, New York, N.Y., assignor to Designs for Vision, Inc., Ronkonkoma, N.Y.
Filed Nov. 21, 1988, Ser. No. 273,505
Term of patent 14 years
U.S. Cl. D13—133



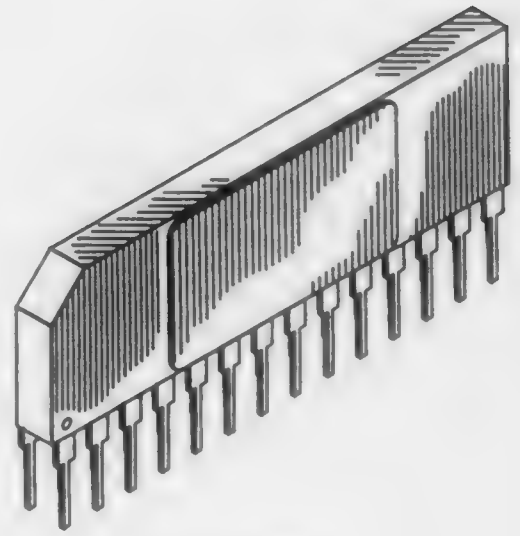
316,246
ELECTRICAL CONNECTOR ASSEMBLY
Yasuharu Moriai, and Osamu Ito, both of Suzuka, Japan, assignors to Sumitomo Wiring Systems, Ltd., Yokkaichi, Japan
Filed Dec. 21, 1988, Ser. No. 288,003
Claims priority, application Japan, Jun. 21, 1988, 63-24589
Term of patent 14 years
U.S. Cl. D13—133



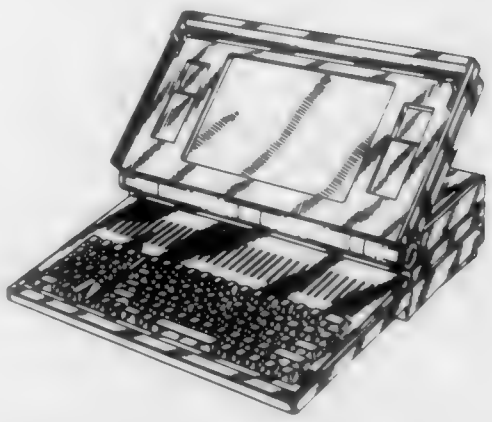
316,247
PROGRAMMABLE MICRO-CONTROLLER
Raymond Llabres, Saint Laurent du Var, and Guy Boucher, Paris, both of France, assignors to La Telemecanique Electrique, France
Filed Jun. 29, 1987, Ser. No. 67,174
Claims priority, application France, Dec. 30, 1986, 86 6896
Term of patent 14 years
U.S. Cl. D13—162



316,248
SINGLE SWITCH ELECTRIC FAN CONTROL
Allan M. Dob, Clifton, N.J., assignor to SSMC Inc., Edison, N.J.
Filed Mar. 24, 1989, Ser. No. 328,356
Term of patent 14 years
U.S. Cl. D13—162

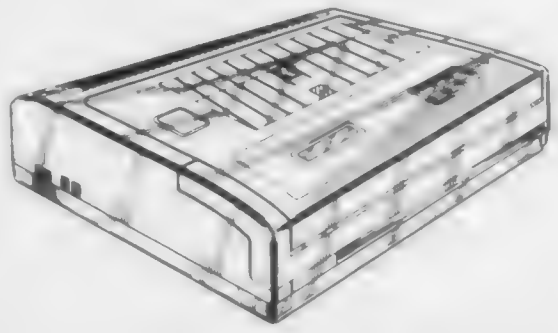


316,249
FOOT OPERATED DIMMER SWITCH
Lee King-Pei, No. 12, Shi Rd., Yow Sh Industy District, Pu Shin, Yang Mei, Teau Euan Shian, Taiwan
Filed Mar. 22, 1989, Ser. No. 327,154
Term of patent 14 years
U.S. Cl. D13—167

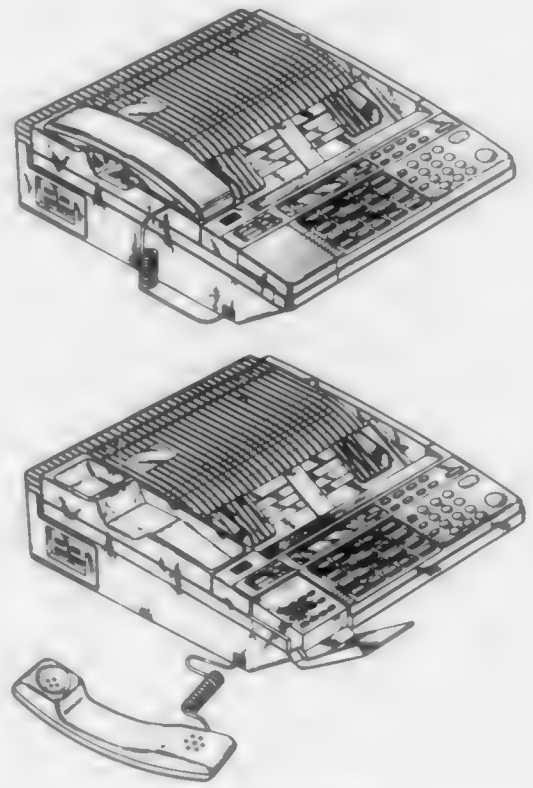


316,250
COMBINED WALL PLATE AND SWITCH
Francois Mongeau, Ile Bizard, Canada, assignor to Nicolet Plastique Ltd., Nicolet, Canada
Filed May 18, 1988, Ser. No. 195,575
Claims priority, application Canada, Mar. 28, 1988, 28-03-88-5
The portion of the term of this patent subsequent to Jan. 29, 2005, has been disclaimed.
Term of patent 14 years
U.S. Cl. D13—170

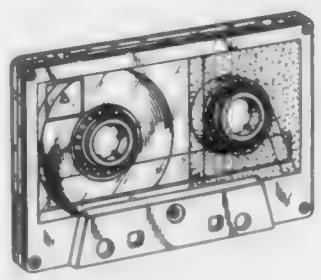
316,251
IN-LINE SEMICONDUCTOR PACKAGE
David Y. Armstrong, San Diego, Calif., assignor to Mosaic Semiconductor, Inc., San Diego, Calif.
Filed Dec. 19, 1988, Ser. No. 287,982
Term of patent 14 years
U.S. Cl. D13—182



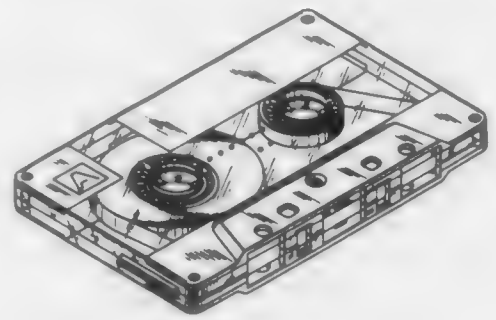
316,252
PORTABLE COMPUTER OR SIMILAR ARTICLE
Hartmut H. Esslinger, Los Gatos; Eric I. Gruenberg, Soquel, and James R. Stewart, San Jose, all of Calif., assignors to Apple Computer, Inc., Cupertino, Calif.
Filed Jan. 23, 1989, Ser. No. 299,717
Term of patent 14 years
U.S. Cl. D14—106



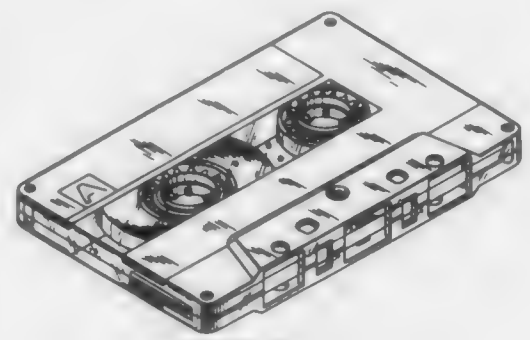
316,253
ELECTRONIC SENSOR PEN
Martin P. Riddiford, Stephen O. Frazer, Seamus A. Sharky, all of London, England, assignors to Price, Stern, Sloan, Inc., Los Angeles, Calif.
Filed Jun. 22, 1988, Ser. No. 210,107
Claims priority, application United Kingdom, Dec. 12, 1987, 1047293
Term of patent 14 years
U.S. Cl. D14—114



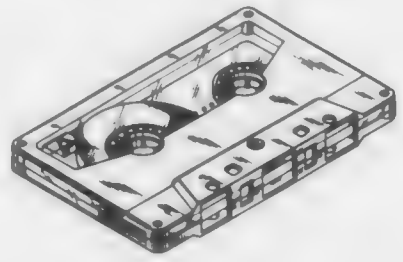
316,254
FACSIMILE
Kazuo Sato, Causeway Bay, Hong Kong, assignor to Ensilver International Trade Holding Corporation Ltd., Central, Hong Kong
Filed May 23, 1989, Ser. No. 355,382
Claims priority, application United Kingdom, Nov. 24, 1988, 1055194
Term of patent 14 years
U.S. Cl. D14—118



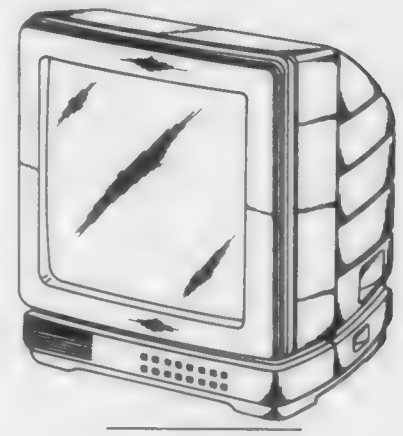
316,255
FACSIMILE TRANSCEIVER
Masaru Yokoyama, Kokubunji; Masahiro Saegusa, Mitaka; Yuuji Kawano, Yokohama; Taichirou Yamashita, Chigasaki, and Hiroshi Endo, Yokohama, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan
Filed Aug. 10, 1989, Ser. No. 392,149
Term of patent 14 years
U.S. Cl. D14—118



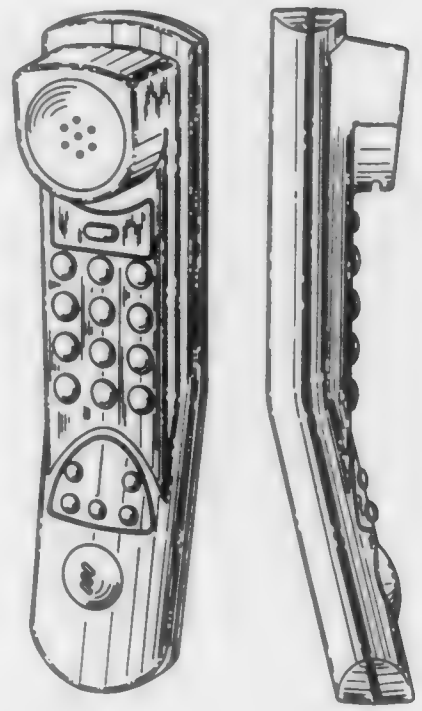
316,256
AUDIO CASSETTE
Fuyuki Yonehara, Tokyo, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan
Filed Dec. 29, 1988, Ser. No. 291,873
Claims priority, application Japan, Jul. 6, 1988, 63-26894
Term of patent 14 years
U.S. Cl. D14—121



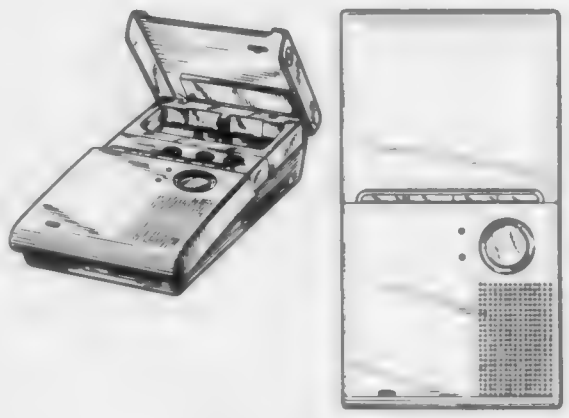
316,257
AUDIO CASSETTE
Fuyuki Yonehara, Tokyo, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan
Filed Dec. 29, 1988, Ser. No. 291,874
Claims priority, application Japan, Jun. 29, 1988, 63-25959
Term of patent 14 years
U.S. Cl. D14—121



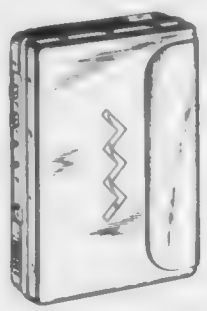
316,258
AUDIO CASSETTE
Fuyuki Yonehara, Tokyo, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan
Filed Dec. 29, 1988, Ser. No. 291,875
Claims priority, application Japan, Jun. 29, 1988, 63-25958
Term of patent 14 years
U.S. Cl. D14—121



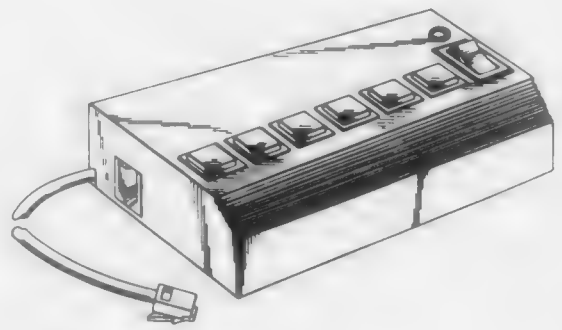
316,259
AUDIO CASSETTE
Fuyuki Yonehara, Tokyo, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan
Filed Dec. 29, 1988, Ser. No. 291,876
Claims priority, application Japan, Jun. 29, 1988, 63-25957
Term of patent 14 years
U.S. Cl. D14—121



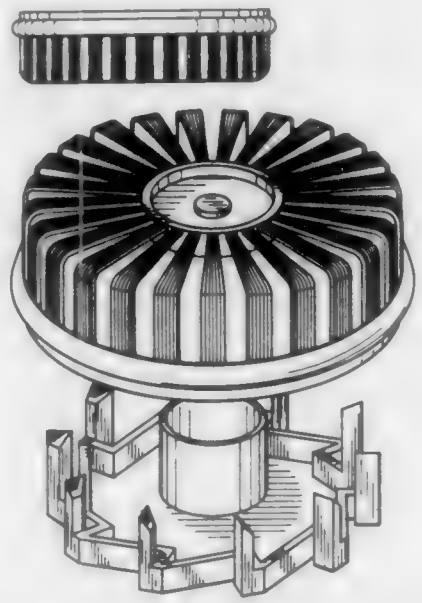
316,260
TELEVISION RECEIVER
Thomas E. Renk, Jr., Indianapolis, Ind., assignor to Thomson Consumer Electronics, Inc., Indianapolis, Ind.
Filed Aug. 14, 1989, Ser. No. 393,326
Term of patent 14 years
U.S. Cl. D14—126



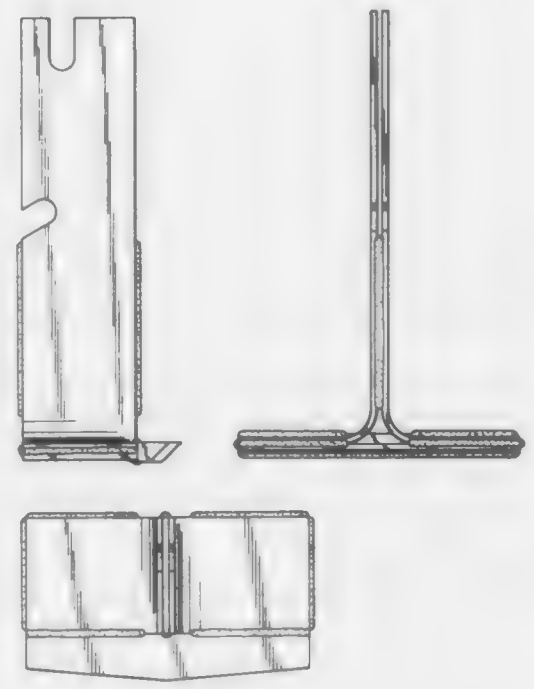
316,261
HANDSET TELEPHONE
Michael G. Langlois, Kanata, Canada, assignor to U.S. Philips Corporation, New York, N.Y.
Filed Nov. 27, 1989, Ser. No. 441,923
Claims priority, application United Kingdom, Jun. 16, 1989, 1060239
Term of patent 14 years
U.S. Cl. D14—138



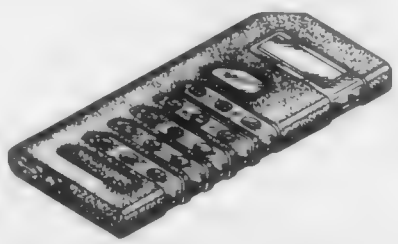
316,262
AUTOMATIC ANSWERING RECORDER FOR TELEPHONE
Fumitaka Kikutani, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Dec. 19, 1989, Ser. No. 452,319
Claims priority, application Japan, Jul. 6, 1989, 1-25111
Term of patent 14 years
U.S. Cl. D14—141



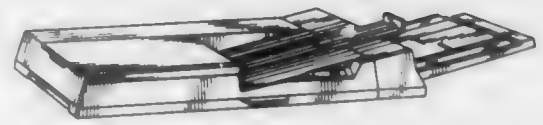
316,263
TAPE PLAYER
Takashi Sogabe, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan
Filed Nov. 21, 1988, Ser. No. 273,878
Claims priority, application Japan, May 23, 1988, 63-[illegible]205
Term of patent 14 years
U.S. Cl. D14—165



316,264
TELEPHONE SPECIAL EFFECTS UNIT OR SIMILAR ARTICLE
Richard C. Levy, P.O. Box 34828, Bethesda, Md. 20817
Filed Jul. 31, 1989, Ser. No. 387,642
Term of patent 14 years
U.S. Cl. D14—245

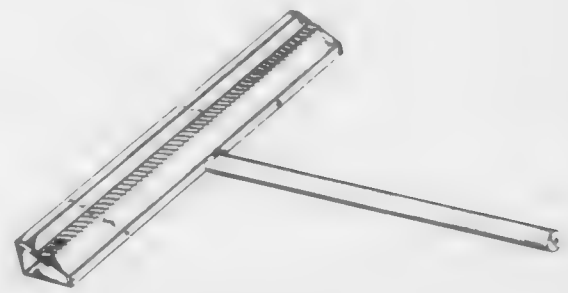


316,265
LAWN MOWER BLADE AND BLADE COVER
Ronald Mihatsch, Rte. 3 Box 330D, Temple, Tex. 76501
Filed Feb. 8, 1988, Ser. No. 153,801
Term of patent 14 years
U.S. Cl. D15—17

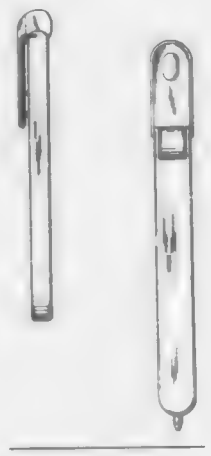


316,266
SOIL STABILIZER TINE
Delmar D. Edmisson, Guymon, Okla., assignor to Adams Hard-Facing Company, Inc., Guymon, Okla.
Filed Feb. 16, 1988, Ser. No. 156,096
Term of patent 14 years
U.S. Cl. D15—28

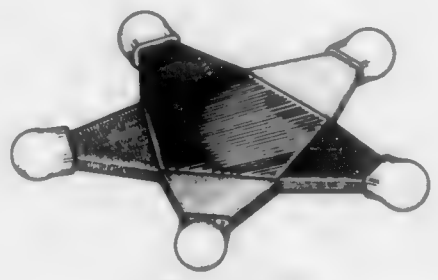
316,267
CALIBRATION CALCULATOR
Frederick A. Miller, Elburn, and Richard A. Valiga, Bartlett, both of Ill., assignors to Spraying Systems Co., Wheaton, Ill.
Filed Jun. 7, 1988, Ser. No. 203,273
Term of patent 14 years
U.S. Cl. D18—7



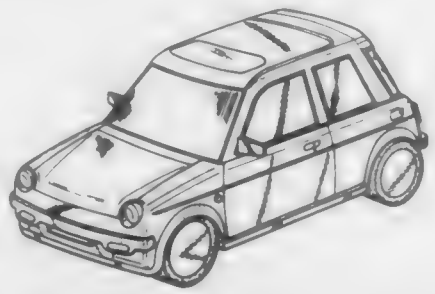
316,268
AUTOMATIC DOCUMENT FEEDER
Kyushichi Miyajima, deceased, late of Osaka, Japan by Kazu Miyajima, legal representative , and Kiyoshi Hayashi, Osaka, Japan, assignors to Mita Industrial Co., Ltd., Osaka, Japan
Filed Jun. 22, 1987, Ser. No. 67,903
Claims priority, application Japan, Dec. 26, 1986, 61-51884
Term of patent 14 years
U.S. Cl. D18—42



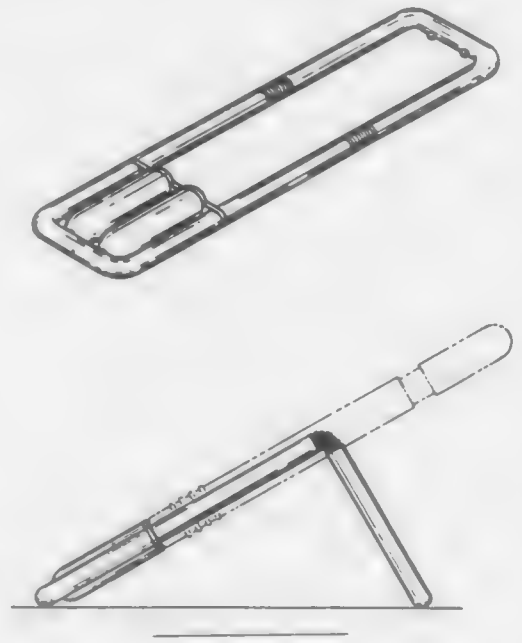
316,269
COMPUTERIZED CHECKBOOK REGISTER
Charles H. Woods, Jr., 2928 W. 135th Pl., Gardena, Calif. 90249
Filed Nov. 17, 1988, Ser. No. 272,297
Term of patent 14 years
U.S. Cl. D19—26



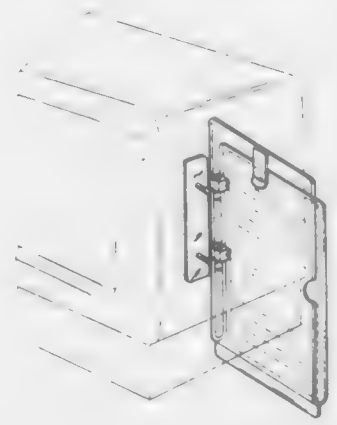
316,270
HAND-HELD FABRIC STRETCHER
William H. Mason, III, St. Paul, Minn., assignor to Uncommon Conglomerates, Inc., Minn.
Filed Feb. 29, 1988, Ser. No. 161,[illegible]
Term of patent 14 years
U.S. Cl. D19—35



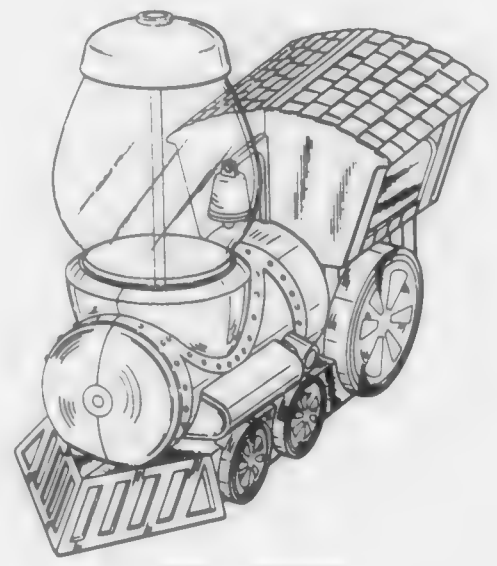
316,271
WRITING INSTRUMENT
Pietro Larizza, Limbiate, Italy, assignor to New Deal S.A.S. di Iliana Ciotti E C., Milan, Italy
Filed Dec. 23, 1987, Ser. No. 137,016
Claims priority, application Italy, Jun. 24, 1987, 21870/87[U]
Term of patent 14 years
U.S. Cl. D19—41



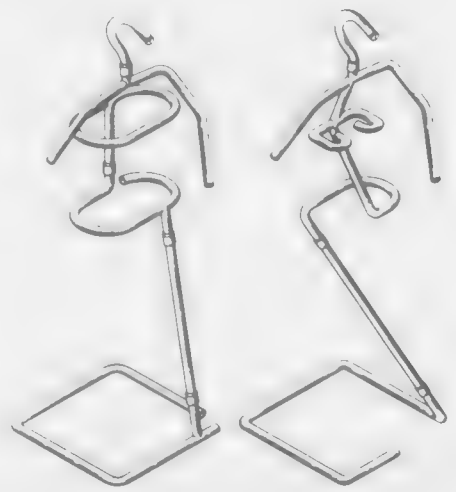
316,272
CRAYON
Genius Lee, No. 25, Lane 380, Sec. 2, Chung-Shan Road, Chung-Ho City, Taipei Hsien, Taiwan
Filed Apr. 14, 1988, Ser. No. 183,531
Term of patent 14 years
U.S. Cl. D19—42



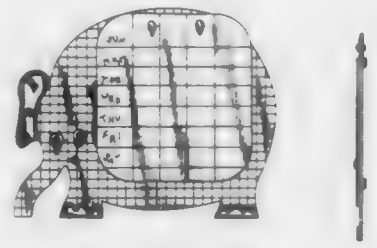
316,273
COMBINED DESK SET AND HOLDER THEREFOR
Shintaro Tsuji, Tokyo, Japan, assignor to Sanrio Company, Ltd., Tokyo, Japan
Filed Apr. 16, 1987, Ser. No. 39,597
Claims priority, application Japan, Oct. 18, 1986, 61-41132
Term of patent 14 years
U.S. Cl. D19—75



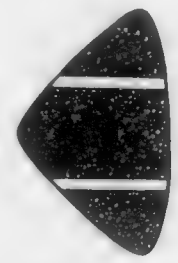
316,274
WRITING INSTRUMENT HOLDER
Kaoru Suzuki, Tokyo, Japan, assignor to Plus Corporation, Tokyo, Japan
Filed Apr. 25, 1988, Ser. No. 185,829
Claims priority, application Japan, Nov. 26, 1987, 62-48359
Term of patent 14 years
U.S. Cl. D19—85



316,275
DOCUMENT HOLDER FOR ATTACHMENT TO A COMPUTER MONITOR
Dale G. Davis, Warren, Mich., and Shane E. Davis, 8228 Paige, Warren, Mich. 48089, assignors to Shane E. Davis, Warren, Mich.
Filed Mar. 18, 1988, Ser. No. 169,775
Term of patent 14 years
U.S. Cl. D19—91

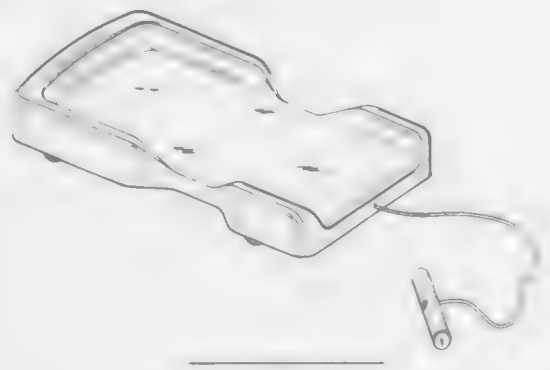


316,276
GUM BALL MACHINE
Bruce A. Weiner, Toronto, Canada, assignor to 493207 Ontario Ltd., Ontario, Canada
Filed Feb. 1, 1989, Ser. No. 305,357
Claims priority, application Canada, Aug. 3, 1988, 0308885
Term of patent 14 years
U.S. Cl. D20—3

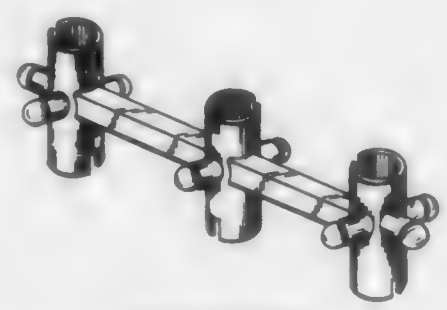


316,277
MANNEQUIN FOR DISPLAYING CLOTHES
Gary B. Pollard, 2826 N. Dayna, Santa Ana, Calif. 92701
Filed Jan. 10, 1989, Ser. No. 295,567
Term of patent 14 years
U.S. Cl. D20—31

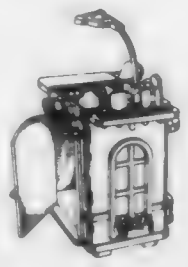
316,278
WALL MOUNTED DISPLAY BOARD FOR CHILDREN'S TOILET TRAINING
Judith A. Cohen, Pittsburgh, Pa., assignor to Michael Cohen, Monroeville, Pa.
Division of Ser. No. 49,415, May 14, 1987, Pat. No. Des. 308,989. This application Feb. 27, 1990, Ser. No. 485,741
Term of patent 14 years
U.S. Cl. D20—39



316,279
PROJECTILE GAME PIECE
Jerry A. Reynolds, 1074 N. Ohio St., Arlington, Va. 22205
Filed Jun. 27, 1988, Ser. No. 211,669
Term of patent 14 years
U.S. Cl. D21—2



316,280
POGO STICK
James D. White, Covina, Calif., assignor to Sport Fun, Inc., Los Angeles, Calif.
Filed Oct. 28, 1988, Ser. No. 264,167
Term of patent 14 years
U.S. Cl. D21—67

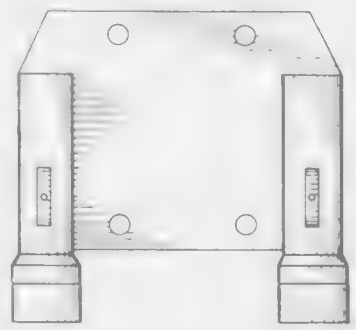


316,281
THERAPEUTIC FOOT EXERCISER
Kurt E. P. Mirisch, Sr., 11279 Caves Rd., Box 278, Chesterland, Ohio 44026
Filed Aug. 28, 1989, Ser. No. 399,284
Term of patent 14 years
U.S. Cl. D21—71

316,282
CONSTRUCTION TOY
Emanuel A. Winston, 1448 Old Skokie Rd., Highland Park, Ill. 60035
Filed Jul. 17, 1989, Ser. No. 380,277
Term of patent 14 years
U.S. Cl. D21—108

316,283
COMBINED TOY BABY CARE CART AND TOOLS THEREFOR
John V. Zaruba, Chicago, Ill.; Peter A. Broadbent, Stockport, Great Britain, and Howard J. Morrison, Riverwoods, Ill., assignors to Marvin Glass & Associates, Chicago, Ill.
Filed Jan. 29, 1988, Ser. No. 149,890
Term of patent 14 years
U.S. Cl. D21—121

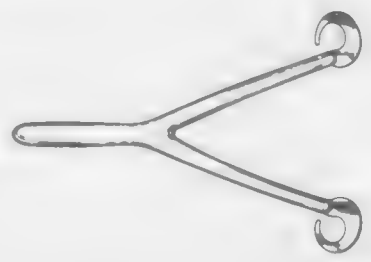
316,284
WHEEL FOR A TOY CAR
Jens N. Knudsen, Billund, Denmark, assignor to Interlego A.G., Switzerland
Filed Nov. 29, 1988, Ser. No. 278,145
Term of patent 14 years
U.S. Cl. D21—141

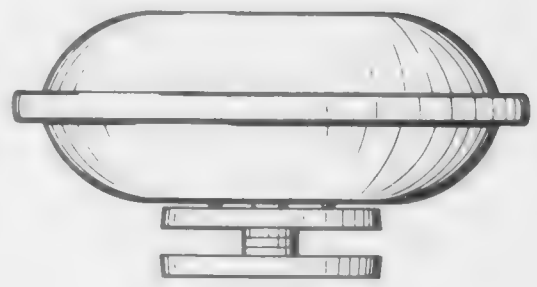


316,285
GRANDPARENT DOLL HEAD
Pauline Adkins, Box 146; Joe M. Brashear, R.R. 1, Box 72, both of Viper, Ky. 41774; John K. Gorley, P.O. Box 1; Ester R. Frazier, P.O. Box 236, both of Jeff, Ky. 41751, and Sondra L. Combs, HC 75, Box 145, Hindman, Ky. 41822
Filed Jan. 25, 1988, Ser. No. 148,226
Term of patent 14 years
U.S. Cl. D21—190

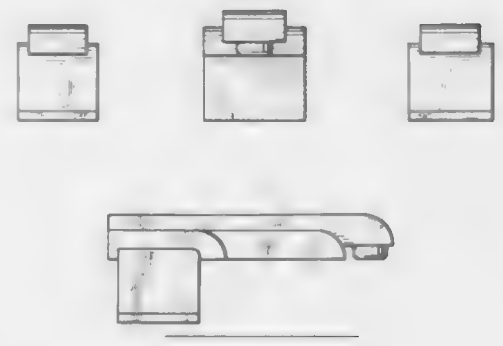
316,286
GOLF TEE
Larry K. Johnson, Rte. 1, Box 1300, Palestine, Tex. 75801
Filed Nov. 15, 1988, Ser. No. 271,764
Term of patent 14 years
U.S. Cl. D21—208

316,287
SKATEBOARD LIGHT
Zoltan D. Incze, 6075 Porter Rd., North Olmsted, Ohio 44070, and Kenneth G. Orwick, 14503 Bayes Ave., Lakewood, Ohio 44107
Filed Oct. 27, 1988, Ser. No. 263,330
Term of patent 14 years
U.S. Cl. D21—224

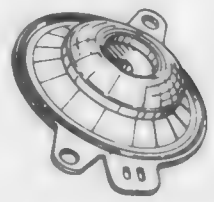




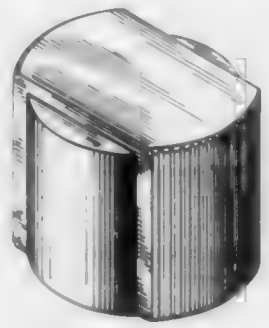
316,288
CANOPY COVER
James P. Lynch, 13 S. Field, Lakewood, Colo. 80226
Filed Oct. 11, 1988, Ser. No. 255,536
Term of patent 14 years
U.S. Cl. D21—253



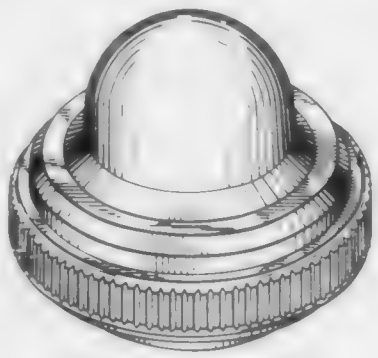
316,289
FISHING LURE
Jimmy E. Smith, R.R. 32, Box 614, Terre Haute, Ind. 47803
Filed Feb. 16, 1988, Ser. No. 156,225
Term of patent 14 years
U.S. Cl. D22—127



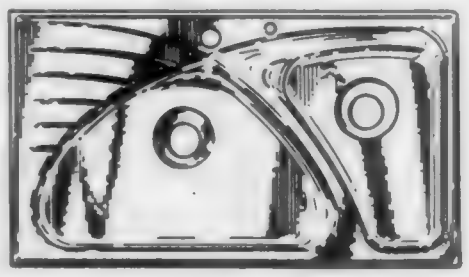
316,290
FLOATING WATER PURIFIER
Lawrence M. Judd, Jr., deceased, late of Honolulu, Hi.; by Martin E. Hsia, administrator. P.O. Box 939, Honolulu, Hi. 96808
Filed May 23, 1990, Ser. No. 528,692
Term of patent 14 years
U.S. Cl. D23—209



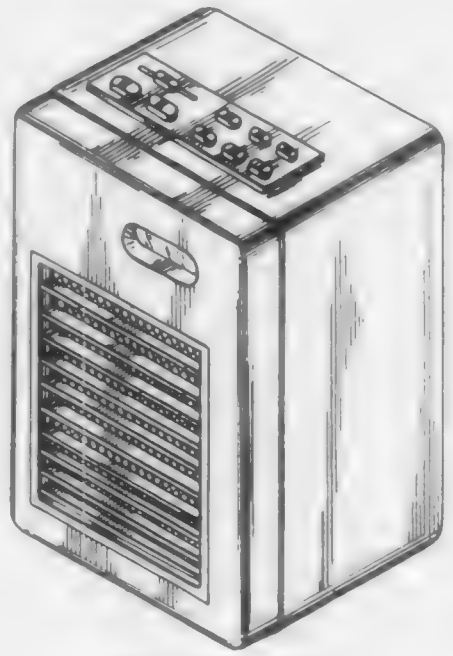
316,291
FAUCET SET
Regina Razumov, San Diego, Calif., assignor to Harden Industries, Inc., Los Angeles, Calif.
Filed Jan. 22, 1988, Ser. No. 145,805
Term of patent 14 years
U.S. Cl. D23—242



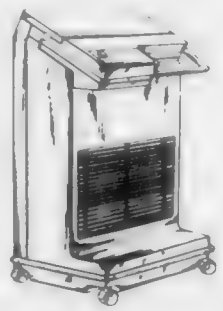
316,292
REPLACEMENT DIAPHRAGM FOR AN IRRIGATION SYSTEM VALVE
John M. Baker, 2918 Cape Dr., Corona, Calif. 91720
Filed Nov. 21, 1988, Ser. No. 273,498
Term of patent 14 years
U.S. Cl. D23—249



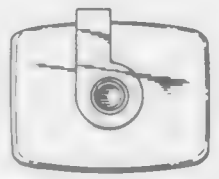
316,293
FAUCET HANDLE OR THE LIKE
Christian Ragonot, Paris, France, assignor to Jacob Delafon, Paris, France
Filed Nov. 30, 1988, Ser. No. 278,312
Claims priority, application France, Sep. 5, 1988, 885475
Term of patent 14 years
U.S. Cl. D23—250



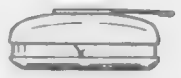
316,294
FAUCET HANDLE OR THE LIKE
Christian Ragonot, Paris, France, assignor to Jacob Delafon, Paris, France
Filed Nov. 30, 1988, Ser. No. 278,314
Claims priority, application France, Sep. 5, 1988, 885472
Term of patent 14 years
U.S. Cl. D23—250



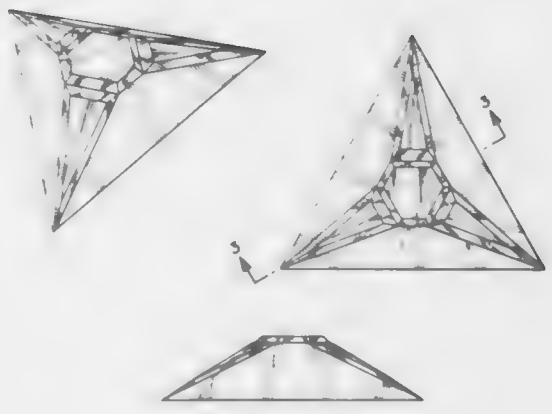
316,295
SINK
Luigi Colani, Fuechtor, Fed. Rep. of Germany, assignor to Niro-Plan AG, Zug, Switzerland
Filed Jun. 5, 1987, Ser. No. 59,673
Term of patent 14 years
U.S. Cl. D23—287



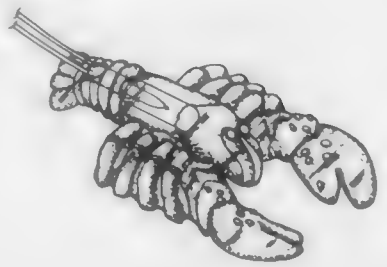
316,296
ELECTRIC HEATER
Wen T. Lee, Tainan, Taiwan, assignor to Chao-Yang Electric Mfg. Co., Ltd., Tainan, Taiwan
Filed Apr. 14, 1989, Ser. No. 337,542
Term of patent 14 years
U.S. Cl. D23—335

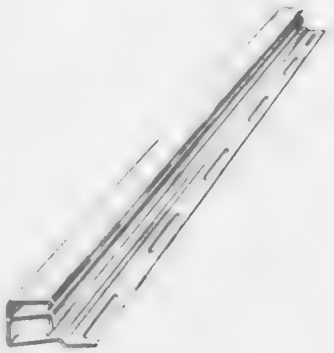


316,297
LASER THERAPY UNIT
Alexander Neumeister, Munich, Fed. Rep. of Germany, assignor to Messerschmitt-Bolkow-Blohm GmbH, Fed. Rep. of Germany
Division of Ser. No. 46,416, May 4, 1987. This application Feb. 2, 1990, Ser. No. 479,577
Claims priority, application Fed. Rep. of Germany, Nov. 5, 1986, MR 16978
Term of patent 14 years
U.S. Cl. D24—8



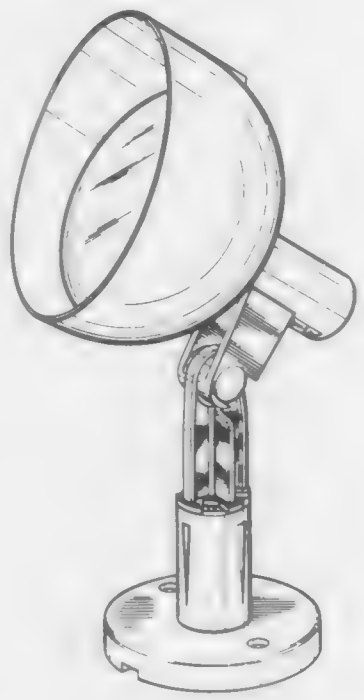
316,298
IMMUNOASSAY TEST KIT OR THE LIKE
James D. Morrow, Oak Park, Ill., assignor to Abbott Laboratories, Abbott Park, Ill.
Filed Nov. 24, 1986, Ser. No. 934,083
The portion of the term of this patent subsequent to Feb. 7, 2003, has been disclaimed.
Term of patent 14 years
U.S. Cl. D24—17



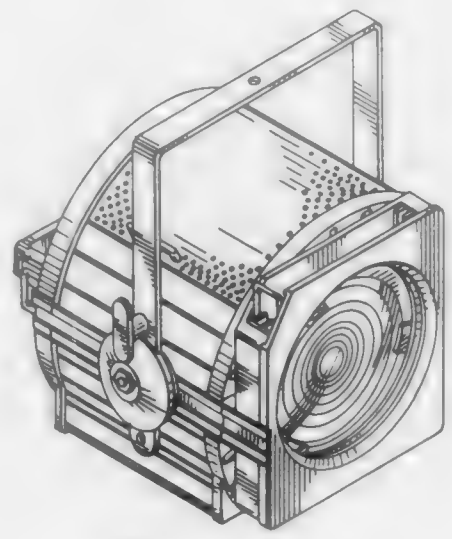


316,299
DESIGN FOR A TRIM EXTRUSION FOR SIDING UNDERSILL AND SOFFIT
George T. Hurlburt, McPherson, Kans., assignor to CertainTeed Corporation, Valley Forge, Pa.
Filed Jul. 17, 1989, Ser. No. 381,001
Term of patent 14 years
U.S. Cl. D25—119

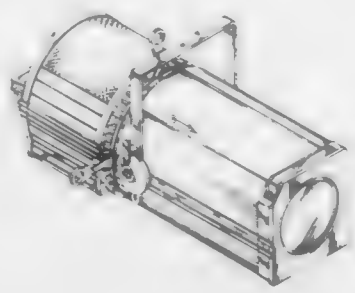
316,300
CHRISTMAS TREE LIGHT
Mary J. Hedges, 9947 E. Coronado, Baton Rouge, La. 70815
Filed Nov. 4, 1988, Ser. No. 267,005
Term of patent 14 years
U.S. Cl. D26—4



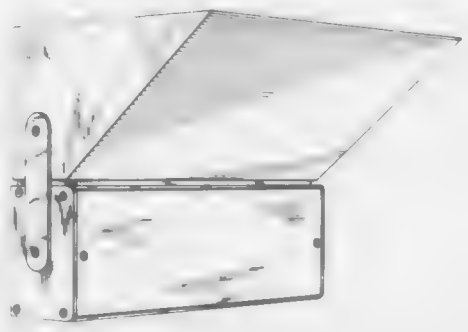
316,301
ELECTROLUMINESCENT LAMP OR SIMILAR ARTICLE
Anthony J. Michael, 812 Virginia Park, Centerline, Mich. 48015
Filed Nov. 25, 1988, Ser. No. 276,339
Term of patent 14 years
U.S. Cl. D26—24



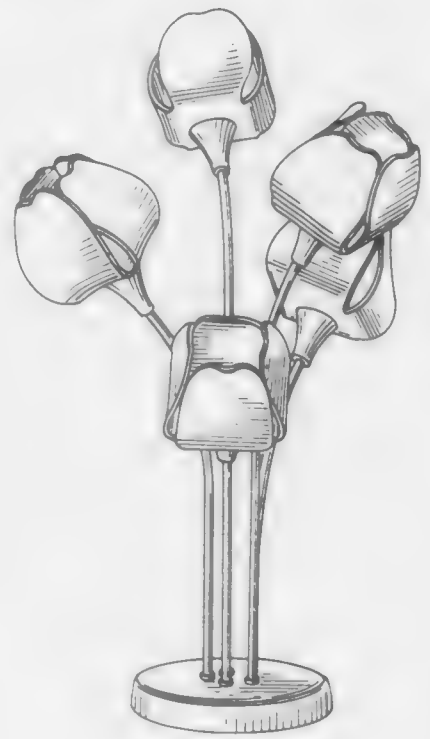
316,302
FISHING POLE LIGHT
George E. Douthitt, 2009 W. Main St., Louisville, Ky. 40203
Filed Aug. 13, 1987, Ser. No. 84,736
Term of patent 14 years
U.S. Cl. D26—46



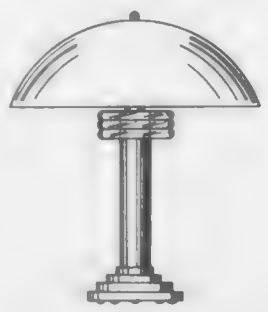
316,303
FLOODLAMP
Clifford J. Layne, Toronto, Canada, assignor to Noma Inc., Scarborough, Canada
Filed Aug. 23, 1988, Ser. No. 235,242
Term of patent 14 years
U.S. Cl. D26—63



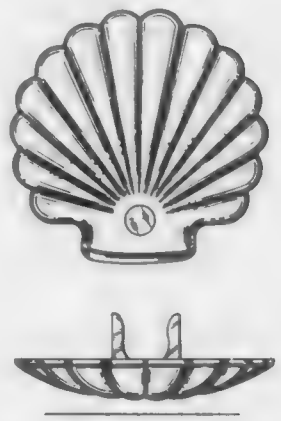
316,305
SPOTLIGHT
Tim Court, London, Great Britain, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed May 11, 1988, Ser. No. 192,823
Claims priority, application Fed. Rep. of Germany, Nov. 11, 1987, BD.10NR.17535
Term of patent 14 years
U.S. Cl. D26—63



316,304
SPOTLIGHT
Tim Court, London, Great Britain, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed May 11, 1988, Ser. No. 192,821
Claims priority, application Fed. Rep. of Germany, Nov. 11, 1987, BD.10NR.17535
Term of patent 14 years
U.S. Cl. D26—63

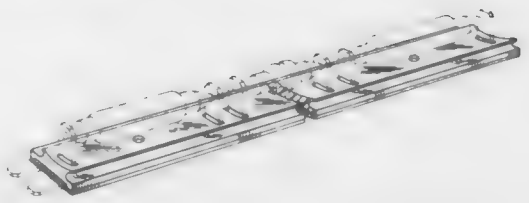


316,306
WALL MOUNTED INDIRECT LIGHTING FIXTURE
Sylvan R. Shemitz, Woodbridge, Conn., assignor to Sylvan R. Shemitz Associates, Inc., West Haven, Conn.
Filed Apr. 9, 1987, Ser. No. 36,844
The portion of the term of this patent subsequent to May 29, 2007, has been disclaimed.
Term of patent 14 years
U.S. Cl. D26—85

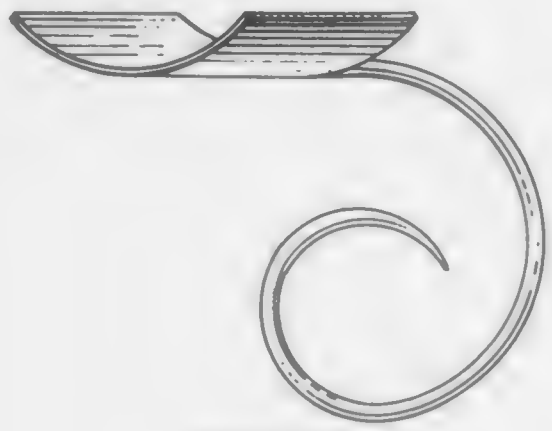


316,307
DECORATIVE TABLE LAMP
Ronald Harris, 2827 Woodmene, Northbrook, Ill. 60062, and William Albarran, 10945 S. Kenton, Oaklawn, Ill. 60453
Filed Dec. 31, 1987, Ser. No. 139,934
Term of patent 14 years
U.S. Cl. D26—101

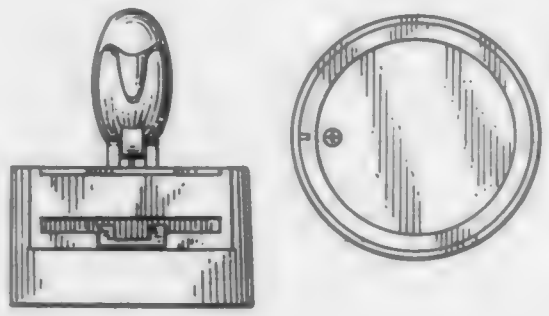
316,308
TABLE LAMP
Jean Clyde-Mason, Hollywood, Calif., assignor to Casablanca Fan Company, Inc., City of Industry, Calif.
Filed Feb. 17, 1987, Ser. No. 15,721
Term of patent 14 years
U.S. Cl. D26—110



316,309
NIGHT LIGHT COVER
Janet Plymale, New York, N.Y., assignor to Hygiene Industries, New York, N.Y.
Filed Oct. 21, 1988, Ser. No. 261,285
Term of patent 14 years
U.S. Cl. D26—118



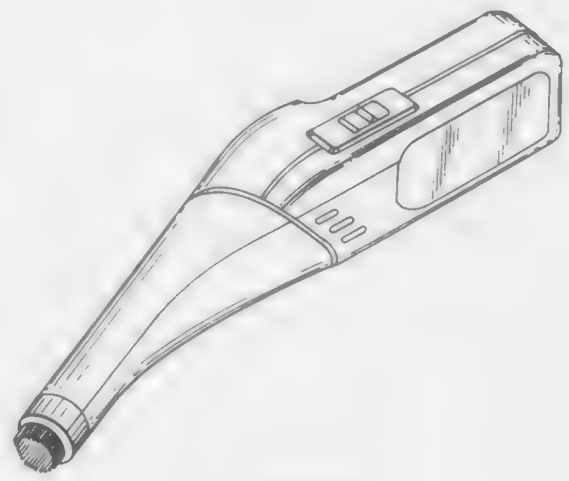
316,310
LAMP REFLECTOR
John Stromberg, Wilton, Conn., assignor to Ledu Corporation, Trumbull, Conn.
Filed Feb. 24, 1989, Ser. No. 316,105
Term of patent 14 years
U.S. Cl. D26—131



316,311
SUPPORT TRACK FOR A LIGHT STRIP
Herbert D. Freed, Miami Beach, Fla., assignor to Emmanel Corporation, San Antonio, Tex.
Filed Apr. 18, 1989, Ser. No. 340,575
Term of patent 14 years
U.S. Cl. D26—140

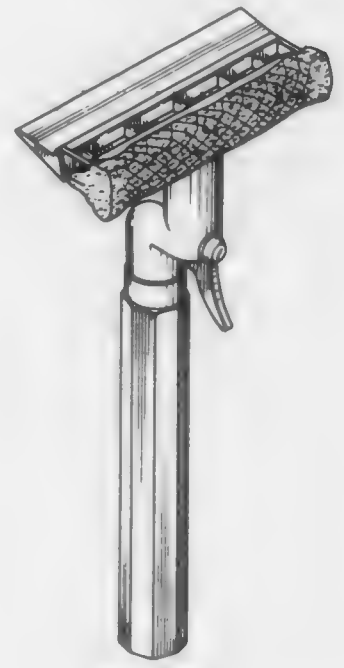
316,312
MASCARA SHIELD
Orlando Córdova, #69 Beadel St., Apt. 4, Brooklyn, N.Y. 11222
Filed Aug. 11, 1989, Ser. No. 392,387
Term of patent 14 years
U.S. Cl. D28—7

316,313
TOOTHPICK DISPENSER
Hsu C. Pan, 2 Lane 56 TA-Tung St., Tan-TZE 42717, Taiwan
Filed Jul. 5, 1989, Ser. No. 375,619
Term of patent 14 years
U.S. Cl. D28—64

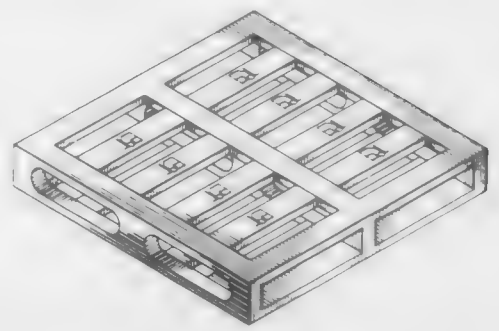


316,314
PET COLLAR OR SIMILAR ARTICLE
Marylee A. Skwirz, 3024 Dyer St., Dallas, Tex. 75205
Division of Ser. No. 161,606, Feb. 29, 1988, Pat. No. Des. 312,712. This application Aug. 22, 1990, Ser. No. 571,421
Term of patent 14 years
U.S. Cl. D30—152

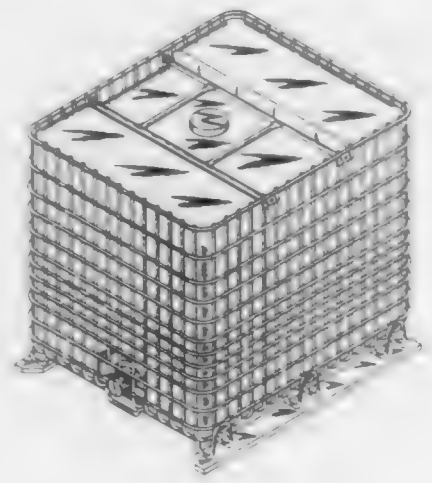
316,315
ANIMAL WASTE SCOOP
Elliott Elrod, 1461 Brandywyn, Buffalo Grove, Ill. 60089
Continuation-in-part of Ser. No. 872,413, Jun. 9, 1986, Pat. No. D. 304,248. This application Mar. 24, 1989, Ser. No. 328,556
Term of patent 14 years
U.S. Cl. D30—162



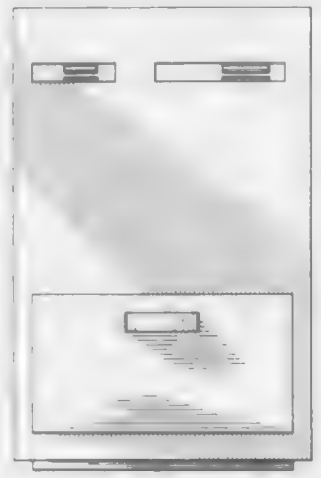
316,316
BATTERY OPERATED VACUUM CLEANER
John S. Yuen, Kowloon, Hong Kong, assignor to John Manufacturing Limited, Kowloon, Hong Kong
Filed Apr. 26, 1990, Ser. No. 514,567
Claims priority, application United Kingdom, Oct. 27, 1989, 2001992
Term of patent 14 years
U.S. Cl. D32—18



316,317
COMBINED LIQUID DISPENSING ATTACHMENT AND WAND FOR A CARPET CLEANER
Robert C. Berfield, Jersey Shore, Pa., assignor to Shop-Vac Corporation, Williamsport, N.J.
Continuation-in-part of Ser. No. 282,289, Dec. 9, 1988, abandoned. This application Dec. 14, 1988, Ser. No. 284,449
Term of patent 14 years
U.S. Cl. D32—32



316,318
COMBINED WINDOW WASHER AND FLUID DISPENSING CONTAINER THEREFOR
Chee Keat Cheang, Kowloon, Hong Kong, assignor to ACE Accessories Limited, Kwun Tong, Hong Kong
Filed Mar. 10, 1988, Ser. No. 166,163
Claims priority, application United Kingdom, Sep. 11, 1987, 1044762
Term of patent 14 years
U.S. Cl. D32—42



316,319
PALLET
Melvin W. Bathon, R.R. #2, Box 194, Pinckneyville, Ill. 62274
Filed Dec. 5, 1988, Ser. No. 280,286
Term of patent 14 years
U.S. Cl. D34—38

316,320
COMBINED CONTAINER AND PALLET
Georges Roser, Wingen s/Moder, France, assignor to Sotralents S.A., Drulingen, France
Filed Mar. 15, 1989, Ser. No. 324,371
Term of patent 14 years
U.S. Cl. D34—42

316,321
MAIL COLLECTION PROCESSOR
Michael J. Lutz, 6750 Willison Rd., Jackson, Mich. 49201, and Gloria Edmonson, 2345 Ala Wai Blvd. #2708, Honolulu, Hi. 96815.
Filed Sep. 14, 1987, Ser. No. 96,329
Term of patent 14 years
U.S. Cl. D99—33

LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 16TH DAY OF APRIL, 1991

NOTE.—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice).

A Nattermann & Cie. GmbH *See*—
Gunther, Bernd-Rainer, Losch, Rainer, and Steiner, Klaus, 5,008,394, Cl. 548-121.000

A R M I N E S *See*—
Thuez, Jean-Luc; and Dehausse, Robert, 5,007,251, Cl 62-476.000

A Rohe GmbH *See*—
Staudinger, Alfons, and Bux, Hermann, 5,008,826, Cl. 364-463.000

A Schwarz & Co *See*—
Schwarz, Anton, 5,007,583, Cl. 237-66.000

A T & T Paradyne *See*—
Betts, William L., and DesRosiers, James J., 5,008,903, Cl 375-60.000

Aalvik Thune, Halldis Supporting device for use in first aid to persons injured in accidents or the like, 5,007,413, Cl. 128-78.000

Aardvark Clear Mine Limited of Shevock Farm: *See*—
MacWatt, David M., 5,007,325, Cl 89-1.130.

ABB Atom AB *See*—
Fredell, Jan, 5,008,069, Cl 376-299.000

ABB CEAG Licht- und Stromversorgungstechnik GmbH *See*—
Liedtke, Heinz, Ploeger, Cornelius, and Gorner, Wilmut, 5,008,792, Cl. 362-374.000

ABB Power T & D Company, Inc *See*—
Petronio, Carlo F., 5,008,525, Cl 250-214.00C

Abbott Laboratories: *See*—
Brown, William E., III; Safford, Sarah E., and Clemens, John M., 5,008,080, Cl. 422-56.000
Caudill, Vance E., 5,007,232, Cl 53-426.000

Abe, Tadashi, Aoki, Masahiro, Takahashi, Tsunenori, and Awata, Takeshi, to Mitsubishi Yuka Badische Co., Ltd. Process for producing aqueous copolymer dispersion from a vinyl monomer mixture 5,008,329, Cl 524-798.000

Abe, Takafumi, Uchiyama, Seiji; Ojima, Takahiro, and Kida, Koichi, to Mitsubishi Gas Chemical Company, Inc. Process for production of 2,6-dimethylnaphthalene 5,008,479, Cl. 585-320.000

Abe, Takayuki, to Kabushiki Kaisha Toshiba. Electron beam lithography method and apparatus 5,008,553, Cl 250-492.200

Abekas Video Systems Ltd *See*—
Brain, Adrian R., 5,008,755, Cl. 358-183.000

Abendroth, Paul, Brandes, Harry, and Raab, Rudolf, to MAN Roland Druckmaschinen AG. Air cushion drum or sheet-fed printing presses 5,007,342, Cl 101-420.000

Abou-Issa, Hussein M *See*—
Minton, John P., Webb, Thomas E., and Abou-Issa, Hussein M., 5,008,291, Cl 514-578.000.

Abraham, Joseph; Hamonet, Michael, Gracie, Phillip, and Hood, Warwick J. Mast, 5,007,360, Cl 114-90.000

Abramczyk, William M., Hull, Edward I., and Feustel, James R., to Ford Motor Company. Air bag relief valve 5,007,662, Cl 280-739.000

Abrams, Michael J.: *See*—
Longman, Robert J., Helfet, Peter R., and Abrams, Michael J., 5,008,687, Cl 346-135.100.

Abu Garcia Produktion AB: *See*—
Carlsson, Karl L., 5,007,602, Cl 242-246.000

Accatino, Luciano; and Bertin, Giorgio, to CSELT - Centro Studi e Laboratori Telecomunicazioni S.p.A. Dielectric-loaded cavity resonator 5,008,640, Cl 333-219.100.

Accumulatorenwerke Hoppecke Carl Zoeliner & Sohn GmbH & Co. KG: *See*—
Schmode, Hans-Peter, 5,008,165, Cl. 429-94.000.

Accumulatorenwerke Hoppecke Carl Zoellner & Sohn GmbH & Co KG: *See*—
Nelles, Josef, 5,007,467, Cl. 141-1.100

Ach, William D., Anderson, Edmund J.; Behrends, Lynn B.; Desrude, Wayne P., and Klos, Gene J., to Honeywell Inc. Pallet having a sidewall comprising an arcuate surface 5,007,527, Cl. 198-803.010

Ackeret, Peter, to Licinvest AG. Sleeve for a photoprint cassette 5,007,537, Cl. 206-455.000

Actel Corporation *See*—
Eltoukhy, Abelshafy A., and Gluss, David H., 5,008,855, Cl 365-96.000

Acushnet Company: *See*—
Brown, Robert A., 5,007,594, Cl 242-3.000

Adair, Paul C. *See*—
Liang, Rong-Chang, Kintz, Karl A., O'Connor, Joseph G., and Adair, Paul C., 5,008,237, Cl 503-212.000

Adams, Bruce C.: *See*—
Orman, Charles R., Johnson, Paul E., and Adams, Bruce C., 5,007,335, Cl. 99-487.000.

Adams, John L., to British Telecommunications public company limited Communications systems 5,008,863, Cl 340-825.500

Adams, Mark B. Shock absorbing boot and cushioning material 5,007,111, Cl. 2-22.000

Adams, Sally E *See*—
Kingsman, Alan J.; Kingsman, Susan M., Adams, Sally E., Mellor, Elizabeth J. C., and Malim, Michael H., 5,008,373, Cl 530-350.000

Adcock, James L., to Hewlett-Packard Company Method and apparatus for generating a chirp signal, 5,008,845, Cl 364-576.000

Adcock, Marty E. *See*—
Daly, John K.; Kreinberg, Earl R., Puerner, Dean A., and Adcock, Marty E., 5,007,858, Cl. 439-498.000

Adelmann, John T. *See*—
Bernhardt, Douglas H., Matheu, Guillermo R., Crum, Spencer E., and Adelmann, John T., 5,007,336, Cl 99-487.000

Adkins, Kelvin P., to Imperial Chemical Industries PLC Electroconductive coating composition, 5,008,134, Cl 427-386.000

Advance Combustion Engineering Institute Co., Ltd *See*—
Kakegawa, Toshiaki, and Furuhama, Shoichi, 5,007,381, Cl 123-1.00A.

Advanced Cardiovascular Systems, Inc *See*—
Doyle, A. Thomas; Tremulis, William S., and McQueen, Colleen L., 5,007,434, Cl. 128-772.000

Advanced Commercial Products, Inc *See*—
Olinger, Harvey A., 5,007,448, Cl. 137-223.000.

Advanced Surgical Intervention, Inc.: *See*—
Rosenbluth, Robert F., Lenker, Jay A., and Greene, George R., 5,007,898, Cl. 604-54.000.

Advanced Systems Incorporated *See*—
Pender, Don P., 5,007,445, Cl 134-122.00R.

Aerospatiale Societe Nationale Industrielle *See*—
Schwarz, Jean-Claude, 5,007,175, Cl 33-286.000

Agency of Industrial Science and Technology *See*—
Nonaka, Katusnobu, and Sekine, Kazuyoshi, 5,008,620, Cl 324-213.000
Watanabe, Eiji; Horio, Nasakazu, and Suzuki, Kenzi, 5,008,224, Cl 502-63.000.

Agfa-Gevaert, N.V. *See*—
Van Thillo, Etienne A., and Van Gossum, Lucien J., 5,008,178, Cl 430-527.000.

Agha, Bushra J. *See*—
Digenis, George A., and Agha, Bushra J., 5,008,245, Cl. 514-18.000

Aghajanian, Michael K *See*—
Kennedy, Christopher R., and Aghajanian, Michael K., 5,007,475, Cl 164-97.000.
Langenstepen, Ralph A., Aghajanian, Michael K, and Wiener, Robert J., 5,007,474, Cl 164-97.000
Newkirk, Marc S., and Aghajanian, Michael K., 5,007,476, Cl. 164-97.000.

Agranat, Aharon J.; Neugebauer, Charles F.; and Yariv, Amnon, to California Institute of Technology. Parallel optoelectronic neural network processors, 5,008,833, Cl. 364-513.000.

Agroteam Consultants Ltd *See*—
Cohen, Amir, 5,007,586, Cl. 239-222.170

Ahern, Mark E. Necktie retainer 5,007,139, Cl 24-49.00R

Ahmadi, Hamid, Beha, Johannes G.; Denzel, Wolfgang E., Engbersen, Antonius P., Luijten, Ronald P.; Murphy, Charles A., and Port, Erich, to International Business Machines Corporation High-speed modular switching apparatus for circuit and packet switched traffic 5,008,878, Cl 370-60.000

Ahmed, Mohammed M. *See*—
Archer, David H.; and Ahmed, Mohammed M., 5,007,988, Cl 2[illegible]-153.180

Ahrens, Uwe: *See*—
Anapliotis, Emmanuel, Regener, Gernot, Ahrens, Uwe, and Jehle, Hermann, 5,007,910, Cl 606-65.000

Ahsbahs, Walter; and Leist, Helmut, to Hellige GmbH Polarographic-/amperometric measuring sensor 5,007,424, Cl 128-635.000

AIL Systems, Inc *See*—
Rudish, Ronald M., 5,008,571, Cl. 307-529.000

Air Products and Chemicals, Inc. *See*—
Mayotte, Leo G., and Eleazer, Prince B., 5,007,823, Cl. 432-14.000
Norman, John A. T., 5,008,415, Cl 556-32.000
Tien, Chao-Fong, and Surnamer, Andrew D., 5,007,945, Cl 55-16.000.

Aisin Seiki K.K. *See*—
Ando, Mitsuhiro, 5,008,946, Cl. 382-2.000

Aisin Seiki Kabushiki Kaisha *See*—
Seko, Hideo, 5,007,238, Cl 60-309.000.

Aiskin Seiki Kabushiki Kaisha: *See*—
Mori, Keiji; and Kogita, Hidekazu, 5,007,722, Cl. 350-382.000

Akasaki, Yutaka; Nukada, Katsumi, and Sato, Katsuhiro, to Fuji Xerox Co., Ltd. Benzophenone derivative 5,008,431, Cl. 558-402.000

Akasu, Masahira, to Mitsubishi Denki K K. Ignition timing control device. 5,007,397, Cl. 123-422.000

Akiwumi-Assani, Samuel O., to North American Philips Corporation. Circuit for performing S-transform. 5,008,848, Cl. 364-725.000

Akiyama, Minoru: *See*—
Koshinaka, Masao, Akiyama, Minoru; Tanaka, Hitoshi; and Tomoda, Toshimasa, 5,008,558, Cl. 250-563.000

Aktiebolaget Hassle: *See*—
Brandström, Arne E., Lindberg, Per I., and Sunden, Gunnel E., 5,008,278, Cl. 514-338.000

Akutagawa, Iehiro: *See*—
Ibe, Hiromitu; Akutagawa, Iehiro, and Matsuzaki, Kunimitsu, 5,008,309, Cl. 523-442.000

Akzo N.V.: *See*—
Diamantoglou, Michael, 5,008,385, Cl. 536-56.000
Greco, Carl C., and Triplett, Kelly B., 5,008,420, Cl. 556-182.000
Telschow, Jeffrey E., 5,008,458, Cl. 568-28.000

Albares, Donald J., to United States of America, Navy. Edge-emitting diode-to-optical fiber coupling technique. 5,007,700, Cl. 350-96.170

Albrektsson, Bjorn, and Wennberg, Stig. Arrangement for fixing a knee-joint in defined positions and for positional control of instruments for replacing the knee-joint with a prosthesis. 5,007,912, Cl. 606-87.000

Albright & Wilson Limited: *See*—
Davies, Paul M., and Smith, Raymond A., 5,008,015, Cl. 210-634.000.

Alcatel N.V.: *See*—
Reutter, Jorg; and Krause, Frank, 5,008,524, Cl. 250-214.00A

Alcon Laboratories, Inc.: *See*—
Edwards, John G.; Han, Wesley W.; and Ali, Yusuf, 5,008,255, Cl. 514-155.000

Alcon Surgical, Inc.: *See*—
Dulebohn, David H., and Lindberg, Winston R., 5,007,913, Cl. 606-107.000

Aldinger, Fritz: *See*—
Gerdau, Thomas, Kleiner, Hans-Jerg, Peuckert, Marcellus, Bruck, Martin; and Aldinger, Fritz, 5,008,423, Cl. 556-412.000

Arahara, Kozo: *See*—
Koizumi, Norihiko; Tanioka, Hiroshi; Toyama, Noboru; Arahara, Kozo; and Yuasa, Toshiya, 5,008,690, Cl. 346-140.00R

Arai, Kiyotaka, Sumoto, Hirofumi; and Ichinomiya, Keizi, to Nichia Kagaku Kogyo K.K. Fluorescent lamp having ultraviolet reflecting layer. 5,008,789, Cl. 362-255.000

Arai, Seiji, to Kabushiki Kaisha Toshiba. Laser generator for producing modulating data therefor. 5,008,685, Cl. 346-108.000

Arai, Shunji: *See*—
Hashimoto, Akira, and Arai, Shunji, 5,008,600, Cl. 315-370.000

Arai, Takaki: *See*—
Yaginuma, Nakatsugu; and Arai, Takaki, 5,008,078, Cl. 422-56.000

Arao, Kozo: *See*—
Nakagawa, Katsumi; Ishihara, Shunichi; Kanai, Masahiro, Murakami, Tsutomu, Arao, Kozo, Fujioka, Yasushi, and Sakai, Akira, 5,008,726, Cl. 357-30.000

Arao, Masachika. Four valve per cylinder engine head. 5,007,387, Cl. 123-90.022

Araujo, Richard K.: *See*—
Dahlen, John M.; Chhabra, Narender K.; Araujo, Richard K.; Scholten, James R.; Reid, Robert W., and Soikkeli, Matti, 5,007,285, Cl. 73-170.00A.

Araujo, Roger J., to Corning Incorporated. Essentially colorless silver-containing glasses through ion exchange. 5,007,948, Cl. 65-30.130

Arbie, John A., Sr.: *See*—
Jackson, Douglas M.; and Arbie, John A., Sr., 5,007,181, Cl. 34-57.00R

Archer, David H., and Ahmed, Mohammed M., to Westinghouse Electric Corp. Method for determining the concentration of a plurality of combustible gases in a stream. 5,007,988, Cl. 204-153.180

Archibald, Frank S., to United States of America, Navy. Low noise sonar support system. 5,008,863, Cl. 367-165.000

Arimoto, Shinobu, to Canon Kabushiki Kaisha. Image processing system. 5,008,949, Cl. 382-41.000

Aristech Chemical Corporation: *See*—
Brownell, George L.; Hays, Mary K., and Sivak, Andrew J., 5,008,421, Cl. 556-406.000

Armanini, Louis, to Mearl Corporation, The. Decorative objects with multi-color effects. 5,008,143, Cl. 428-207.000

Armbruster, Joseph M. Plastic wrap dispenser. 5,007,319, Cl. 83-488.000.

Armonier, Ulrich: *See*—
Steinel, Heinrich-Wolfgang; Armonier, Ulrich, and Schulze-Froehlich, D-F, 5,008,613, Cl. 324-133.000

Armstrong, Rosa: *See*—
Bentz, Hanne; Ellingsworth, Larry; and Armstrong, Rosa, 5,008,240, Cl. 514-2.000.

Armstrong World Industries, Inc.: *See*—
Reichwein, David P., 5,008,906, Cl. 378-54.000

Arndt, Horst, and Kroetsch, Edward S., to Unitron Industries Ltd. Modular hearing aid with lid hinged to faceplate. 5,008,943, Cl. 381-68.600.

Arndts, Dietrich: *See*—
Schnorrenberg, Gerd; Roos, Otto, Losel, Walter, Wiedemann, Ingrid; Gaida, Wolfram; Hoefke, Wolfgang, Arndts, Dietrich, and Streller, Ilse, 5,008,273, Cl. 514-301.000

Arney, Rodney L.: *See*—
McKenna, Frank J.; Horst, Richard K.; Horst, James F., and Arney, Rodney L., 5,007,772, Cl. 406-39.000

Arnulf, Paul: *See*—
Girault, Eric; and Arnulf, Paul, 5,007,656, Cl. 280-615.000

Artzt, Peter; and Mueller, Heinz, to Schubert & Salzer Maschinenfabrik Aktiengesellschaft. Process for the production of a yarn from fiber material. 5,007,136, Cl. 19-65.00A

Arzoian, John: *See*—
Lemon, Robert W., and Arzoian, John, 5,007,309, Cl. 74-869.000

Asada, Toshiyuki, to Toyota Jidosha Kabushiki Kaisha. Planetary gear transmission for motor vehicle. 5,007,887, Cl. 45-284.000

Asahi Chemical Co., Ltd.: *See*—
Utsunomiya, Masayuki; Fujita, Shigeo, Nozawa, Toshiyuki, and Kamiyama, Morihiro, 5,008,401, Cl. 548-455.000

Asahi Kogaku Kogyo Kabushiki Kaisha: *See*—
Nakagishi, Toshio, 5,008,876, Cl. 369-244.000
Takahashi, Nagashige, and Ouchi, Teruo, 5,007,406, Cl. 128-4.000

Asahi Medical Co., Ltd.: *See*—
Hagihara, Takeaki; and Aoki, Satoshi, 5,008,012, Cl. 210-321.800

Asahi, Nobuo: *See*—
Ozaki, Seishiro, Asahi, Nobuo, and Ebisawa, Tsuneo, 5,008,504, Cl. 200-401.000

Asai, Yasuo: *See*—
Takeuchi, Masamichi, and Asai, Yasuo, 5,007,747, Cl. 384-450.000

Asakawa, Toshifumi, and Nakayama, Haruo, to Ricoh Company, Ltd. Multi-plate optical signal processing apparatus with inter-plate optical communication. 5,008,554, Cl. 250-551.000

Asakura, Hiroyuki: *See*—
Iida, Masanori, Hagiwara, Kiyokazu, Asakura, Hiroyuki, Nishioka, Minoru; and Murase, Koichi, 5,007,709, Cl. 350-162.220.

Asami, Tadao: *See*—
Kume, Toyohiko; Goto, Toshio, Kamochi, Atsumi; Yanagi, Akihiko; Miyauchi, Hiroshi, and Asami, Tadao, 5,007,952, Cl. 71-73.000

Asano, Takanobu, Yamaga, Kenichi, and Ohkase, Wataru, to Tel Sagami Limited. Pitch changing device for changing pitches of plate-like objects and method of changing pitches. 5,007,788, Cl. 414-417.000

Asaoka, Masaharu, to Kayaba Industry Co. Ltd. Hydraulic control system. 5,007,459, Cl. 137-625.650

Asea Brown Boveri AB: *See*—
Gustafsson, Par, Sobel, Jarl, and Ornholmer, Lars, 5,007,295, Cl. 73-862.690

Asher, David J. Touch controller. 5,008,497, Cl. 178-18.000.

Ashida, Tetsuya, and Noda, Touru, to Mitsubishi Paper Mills Limited. Photographic support with an undercoating layer on a resin coated base sheet. 5,008,150, Cl. 428-340.000

Asmo Co., Ltd *See*—
Ibe, Hiromitu; Akutagawa, Ichiro, and Matsuzaki, Kunimitsu, 5,008,309, Cl. 523-442.000

Bentham, Martin F. *See*—
Maier, William H., and Bentham, Martin F., 5,008,004, Cl. 208-321.000.

Bentz, Hanne; Ellingsworth, Larry, and Armstrong, Rosa, to Collagen Corporation. Method of treating inflammation 5,008,240, Cl. 514-2.000.

Beppu, Osamu, Moribe, Toshihiro, Tezuka, Youjiro, and Chuma, Akira, to Hitachi, Ltd. Magnetic disk enclosure with detachable stator 5,008,573, Cl. 310-67.00R.

Berczes, Zsolt, to Diaber AG. Apparatus for exposing the reinforcing bars of reinforced concrete pillars 5,007,593, Cl. 241-264.000.

Berg, Dieter *See*—
Klausener, Alexander; Kleefeld, Gerd; Berg, Dieter, Dutzmann, Stefan, and Hanbler, Gerd, 5,008,275, Cl. 514-334.000.

Berg, Eric P., to American Medical Systems, Inc. Injectable polymeric bodies. 5,007,940, Cl. 623-66.000.

Berger, Frank M. Process for the treatment of the skin to alleviate skin diseases arising from contact sensitization or irritation utilizing p-substituted phenoxy alkanols. 5,008,293, Cl. 514-718.000.

Bergey, James L. *See*—
Grover, Gary J., and Bergey, James L., 5,008,284, Cl. 514-423.000.

Bergman, Norman J. *See*—
O'Dea, Kevin J., Bergman, Norman J., Digiulio, Peter C., Dolan, Donald T., and Vanderpool, James L., 5,007,371, Cl. 118-680.000.

Bergwerksverband GmbH. *See*—
Dahle, Olof, and Fischbach, Manfred, 5,007,487, Cl. 175-57.000.

Berkowitz, Yehuda, Hi, Gavriel M., and Mizrahi, Yehuda Fluid flow control device 5,007,453, Cl. 137-458.000.

Bernacchi, Donald B., Loewe, Robert J., and Immel, Donna L., to Griffith Laboratories Worldwide, Inc. Storage stable, readily reconstituted comestible 5,008,121, Cl. 426-89.000.

Bernadiner, Mikhail, and Zhizhin, Vladimir V. Method of combustion neutralization of liquid waste products 5,008,098, Cl. 423-659.000.

Bernard, Philippe, and Colattis, Marie-Jean, to Centre National d'Etudes des Telecommunications. High definition television signal processing including subsampling and motion compensation 5,008,746, Cl. 358-133.000.

Bernardet, Henri, and Pauwels, Jean-Claude, to U.S. Philips Corporation. Vacuum arc sources of ions 5,008,585, Cl. 313-231.310.

Bernath, Stanley *See*—
Dunagan, John E., and Bernath, Stanley, 5,007,199, Cl. 49-13.000.

Bernhardt, David A. Finger insert for a bowling ball 5,007,640, Cl. 273-63.00A.

Bernhardt, Douglas H., Matheu, Guillermo R., Crum, Spencer E., and Adelmann, John T., to Meat Processing Service Corporation. Apparatus for treating slaughtered animals 5,007,336, Cl. 99-487.000.

Bernier, Richard E. *See*—
Yee, Edgar, and Bernier, Richard E., 5,008,499, Cl. 200-50.00C.

Berning, Lloyd G. *See*—
Meier, Louis M., and Berning, Lloyd G., 5,007,681, Cl. 297-440.000.

Berninger, John F. *See*—
Marcus, Jerald J., and Berninger, John F., 5,007,458, Cl. 137-625.500.

Bernstein, Joel E., to GalenPharma, Inc. Composition for treating nasal disorders and headaches 5,008,289, Cl. 514-535.000.

Bertagni, Jose J. Integrated sound and video screen 5,007,707, Cl. 350-118.000.

Bertin, Giorgio *See*—
Accatino, Luciano, and Bertin, Giorgio, 5,008,640, Cl. 333-219.100.

Bertino, Anne M. *See*—
Denbow, Nancy A., and Bertino, Anne M., 5,007,115, Cl. 2-208.000.

Bertrand, Michel P., Bucher, Michel B., and Delclaux, Andre R., to SattSocriete Anonyme de Telecommunications. System for determining the position of at least one target by triangulation 5,008,543, Cl. 250-342.000.

Besancon, Andre *See*—
Pinard, Jean C., Jacquard, Bernard, and Besancon, Andre, 5,008,828, Cl. 364-474.280.

Beshay, Alphons D. Polymer composites based cellulose-V 5,008,310, Cl. 524-13.000.

Bessho, Yasunori *See*—
Aoyama, Motoo, Koyama, Junichi, Uchikawa, Sadao, Bessho, Yasunori, Ozawa, Michihiro, Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000.

Beta Instrument Company Limited *See*—
Kyriakis, John, 5,008,514, Cl. 219-155.000.

Beth, Matthias, Binz, Hansgeorg, and Toerner, Ludger, to Carl Schenck AG. Dosing or feeding apparatus for precisely feeding loose bulk material 5,007,564, Cl. 222-217.000.

Betts, William L. and DesRosiers, James J., to A I & T Paradyne. Adaptive transmit pre-emphasis for digital modem computed from noise spectrum 5,008,903, Cl. 375-60.000.

Betz Laboratories, Inc. *See*—
Conlan, John T. and Whitekettle, Wilson K., 5,008,023, Cl. 210-764.000.

Bewley, David R., Brimelow, Christopher J. B., and Wright, Kenneth W., to Nestec S.A. Food processing method 5,008,123, Cl. 426-509.000.

Bex, Philip A. *See*—
Najafi-Sani, Mohammad, and Bex, Philip A., 5,008,513, Cl. 219-121.690.

Beyersdorf, Hartwig Method for operating an optical smoke detector and optical smoke detector for the method 5,008,559, Cl. 250-575.000.

Beze, Norman L. *See*—
Anderson, A. Jerome; and Beze, Norman L., 5,008,062, Cl. 264-272.150.

Bezwada, Rao S., Newman, Hugh D., Jr., and Shalaby, Shalaby W., to Ethicon, Inc. Crystalline copolyesters of amorphous (lactide/glycolide) and p-dioxanone 5,007,923, Cl. 606-231.000.

Bhandarkar, Dileep P.; Cutler, Dave; Cardoza, Wayne; Witek, Rich, and Orbits, Dave, to Digital Equipment Corporation. Context switching method and apparatus for use in a vector processing system 5,008,812, Cl. 364-200.000.

Bhattacharjee, Debkumar *See*—
Tucker, Benjamin W.; and Bhattacharjee, Debkumar, 5,008,299, Cl. 521-159.000.

Bida, Sam Plaque 5,007,148, Cl. 27-1.000.

Biemer, Thomas A. *See*—
Wang, Dou-Mei, Sturdivant, Linda D., Biemer, Thomas A., and Mink, Ronald, 5,008,199, Cl. 435-240.270.

Bierbaum, Thomas, and Hain, Johann, to Siemens Aktiengesellschaft. Dental handpiece comprising a grip part 5,007,831, Cl. 433-114.000.

Bigatti, Ettore *See*—
Palladino, Gaetano, MacDonald, Peter, and Bigatti, Ettore, 5,008,380, Cl. 536-6.400.

Bihari, Ferenc *See*—
Bakos, Jozsef, Heil, Balint; Toth, Imre, Edes, Bela; Gebhardt, Tstvan, Bihari, Ferenc; Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno, Konok nee Horvath, Eva; Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000.

Bilynsky, John D. *See*—
Cole, Edward H., Jr., and Bilynsky, John D., 5,007,883, Cl. 474-242.000.

Binet, Mark S. *See*—
Madeley, David R., and Binet, Mark S., 5,008,561, Cl. 307-80.000.

Bingman, John W., to Sunbelt Automated Systems, Inc. Refuse collection system, refuse collection truck and loader assembly therefor 5,007,786, Cl. 414-409.000.

Binish, Patrick W., to Prince Corporation. Visor and method for making the same 5,007,532, Cl. 296-97.100.

Binz, Hansgeorg *See*—
Beth, Matthias, Binz, Hansgeorg; and Toerner, Ludger, 5,007,564, Cl. 222-217.000.

Bio-Cide International, Inc. *See*—
Ringo, James P., 5,008,096, Cl. 423-477.000.

Bio-Research Laboratories, Inc. *See*—
Osther, Kurt B., 5,008,183, Cl. 435-5.000.

BioCryst, Inc. *See*—
Secrist, John A., III, Montgomery, John A., Ealick, Steve E., Erion, Mark D., and Guida, Wayne C., 5,008,265, Cl. 514-258.000.
Secrist, John A., III, Montgomery, John A., Ealick, Steve E., Erion, Mark D., and Guida, Wayne C., 5,008,270, Cl. 514-258.000.

Bird, Forrest M. Ventilator having an oscillatory inspiratory phase and method 5,007,420, Cl. 128-200.140.

Bird, Thomas G. C., and Jung, Frederick H., to I C I-Pharma Cephalosporin derivatives 5,008,258, Cl. 514-201.000.

Bischof, Horst, and Skerbinjek, Wolfgang, to Koflach Sport Gesellschaft mbH & Co. KG. Device for improving the seal between the cuff of a ski boot and the leg 5,007,186, Cl. 36-121.000.

Bito, Shiro *See*—
Nishigaki, Shinichi, and Bito, Shiro, 5,007,907, Cl. 606-46.000.

Bjorkquist, David W., to Procter & Gamble Company, The Temporary wet strength resins and paper products containing same 5,008,344, Cl. 525-328.200.

Black, David C. *See*—
Key, Gary R., and Black, David C., 5,008,902, Cl. 375-10.000.

Blackburn, Warren D., Jr., and Loose, Leland D., to Pfizer Inc. Use of tenidap to inhibit activation of collagenase and to inhibit the activity of myeloperoxidase 5,008,283, Cl. 514-414.000.

Bladon, John J., to Shipley Company Inc. Electroplating process 5,007,990, Cl. 204-15.000.

Blaese, Herbert R. Portable antenna for mounting on inside of motor vehicle 5,008,682, Cl. 343-713.000.

Blaimschein, Gottfried Apparatus for picking up a flat work piece from an adhering substrate 5,007,626, Cl. 271-33.000.

Blair, Gordon P., to Queen's University of Belfast, The L-head two stroke engines 5,007,384, Cl. 123-48.00A.

Blankenship, Michael *See*—
Satterfield, Marshall G., Steinke, David M., and Blankenship, Michael, 5,007,976, Cl. 156-222.000.

Blau, David A., Meadows, John Sherlock, Thomas M., Stengel, Fred Studholme, Robert M., Wada, Kenneth R. and Kepner, Christopher J., to KD Group. Method and apparatus for automatic melt indexing 5,008,081, Cl. 422-64.000.

Bleehschmidt, James I. Johnson, Robert D. and Powell, Robert F., to Shimco, Inc. Shim and computerized chart for simultaneously adjusting camber and toe-in 5,007,658, Cl. 280-661.000.

Blendax GmbH. *See*—
Klein, Rolf M., Poprawe, Reinhart and Herziger, Gerd W., 5,007,686, Cl. 300-21.000.

Block Drug Company Inc. *See*—
Carmello, Robert; and Miller, Richard D., 5,008,029, Cl. 252-91.000.
Lover, Myron J., 5,007,556, Cl. 222-386.500.

Block, Michael J., Kelley, Arnold F., and Skripek, Milan, to Union Oil Company of California. Method for producing needle coke 5,007,987, Cl. 201-17.000.

Blouse, Jeffrey L., Fulton, Inge G., Lange, Russell C., Meyerson, Bernard S., Nummy, Karen A., Revitz, Martin, and Rosenberg, Robert, to International Business Machines Corporation. Method of fabricating a narrow base transistor. 5,008,207, Cl. 437-31.000.

Bluck, Raymond M., Bush, Harold G., and Johnson, Robert R., to United States of America, National Aeronautics and Space Administration. Process for the manufacture of seamless metal-clad fiber-reinforced organic matrix composite structures. 5,008,061, Cl. 264-257.000.

Blum, Dieter W., to Integrated Circuit Technologies Ltd. Method and apparatus for analyzing and reconstructing an analog signal 5,008,940, Cl. 381-31.000.

Blum, Yigal D.; and Laine, Richard M., to SRI International. Polysilazanes and related compositions, processes and uses 5,008,422, Cl. 556-412.000.

Blumberg, Murray B., to Press Engineering Pty. Ltd. File folder. 5,007,758, Cl. 402-75.000.

Bluthardt, Edward A., and Goins, Jeffrey L. Golf putting practice target 5,007,644, Cl. 273-178.00B.

Bly, Sara A.; Farrand, A. Brady, Hodges, Jeffery D., Kupfer, Michael D., Lewis, Brian T., Maybury, William J., Tallan, Michael L., and Tom, Stephen B., to Xerox Corporation. Representation of collaborative multi-user activities relative to shared structured data objects in a networked workstation environment 5,008,853, Cl. 364-900.000.

Board of Trustees operating Michigan State University: *See*—
Asmussen, Jes, and Fritz, Ronald E., 5,008,506, Cl. 219-10.55M.

Bobba, Mohan L., and Nojiri, Howard H., to Spectra-Physics, Inc. Method and apparatus for beam sweeping in a laser scanner 5,007,691, Cl. 350-6.700.

Bobek, Miroslav *See*—
Cheng, Yung-chi, and Bobek, Miroslav, 5,008,252, Cl. 514-50.000.

BOC Group, Inc., The *See*—
Crumley, Gary B., 5,008,897, Cl. 373-11.000.
Ramachandran, Ramakrishnan; MacLean, Donald L., and Satchell, Donald P., Jr., 5,008,412, Cl. 549-523.000.
Ramachandran, Ramakrishnan; MacLean, Donald L., Satchell, Donald P., Jr., and Malik, Virginia A., 5,008,414, Cl. 549-538.000.

Bocast, Alexander K., to Bocast, Alexander K. Method and apparatus for reconstructing a token from a token fragment. 5,008,818, Cl. 364-200.000.

Bock, Hans-Christian *See*—
Kaul, Karlheinz, and Bock, Hans-Christian, 5,008,921, Cl. 378-198.000.

Bodor, Nicholas, to Schering Corporation. Physiological means of enhancing transdermal delivery of drugs 5,008,111, Cl. 424-449.000.

Bodor, Nicholas S., to University of Florida. Brain-specific drug delivery 5,008,257, Cl. 514-192.000.

Boegli, Karl. Device and a method for embossing a metal foil. 5,007,271, Cl. 72-196.000.

Boehringer Ingelheim GmbH *See*—
Schnorrenberg, Gerd, Roos, Otto, Losel, Walter, Wiedemann, Ingrid; Gaida, Wolfram, Hoefke, Wolfgang, Arndts, Dietrich, and Streller, Ilse, 5,008,273, Cl. 514-301.000.

Boehringer Mannheim Corporation. *See*—
Smith, Todd S., 5,007,931, Cl. 623-23.000.

Boeing Company, The *See*—
Doscher, Patrisha A., 5,007,969, Cl. 134-38.000.
Pinson, George T., 5,007,348, Cl. 102-501.000.

Bogner, Martin, Harsanyi, Otto, and Peyre, Henri, to GEZE Sport International GmbH. Laterally releasable binding unit. 5,007,657, Cl. 280-626.000.

Boling, Norman L., Mayer, Thomas, and Rancourt, James D., to Unisys Corp. Methods of fabricating optical records with overcoating 5,008,129, Cl. 427-160.000.

Bonner, Kathy M. *See*—
Allen, Joyce, and Bonner, Kathy M., 5,007,558, Cl. 221-48.000.

Bono, Mark J. *See*—
Orndorff, Roy L., Jr. and Bono, Mark J., 5,007,660, Cl. 280-715.000.

Bordbar, Hosrow T. *See*—
Strauss, Richard F., Fiacco, Richard A., Bordbar, Hosrow T., Chen, Caesar C., and Quiroz, David, 5,008,490, Cl. 174-36.000.

Borg-Warner Automotive, Inc. *See*—
Cole, Edward H., Jr.; and Bilynsky, John D., 5,007,883, Cl. 474-242.000.
Petzold, Werner P., 5,007,512, Cl. 192-3.510.

Borgis, Livio, to U.S. Philips Corporation. Electric lamp with improved lamp cap assembly. 5,008,587, Cl. 313-318.000.

Bose, Ajit K., to Union Camp Corporation. Multiwall bag and method of packaging utilizing multiwall bags 5,007,233, Cl. 53-449.000.

Bose, Amar G., and Short, William R., to Bose Corporation. AM noise reducing 5,008,939, Cl. 381-15.000.

Bose Corporation *See*—
Bose, Amar G., and Short, William R., 5,008,939, Cl. 381-15.000.

Bottomley, Robin C., to Express Foods Group Limited. Process for obtaining concentrates having a high α-lactalbumin content from whey 5,008,376, Cl. 530-366.000.

Bouadjadja, Robert Clothing, especially of the pullover type 5,007,113, Cl. 2-115.000.

Boucher, Robert J. Fuel reactor 5,007,804, Cl. 417-209.000.

Boughton, T. Trafford, to T. T. Boughton & Sons Ltd. ISO container handling system 5,007,791, Cl. 414-494.000.

Boutin, Jean, to Rhone-Poulenc Chimie. Clear and colorless basic aluminum chlorosulfates 5,008,095, Cl. 423-467.000.

Bovisio, Cipriano, Foglieni, Carlo; Fumagalli, Fulgenzio; Morlotti, Norberto, and Palladini, Mario Coupling for well casings. 5,007,665, Cl. 285-334.000.

Bowman, Timothy S., to Butler Manufacturing Company. Floor box for access floors 5,008,491, Cl. 174-48.000.

Bowman, Wayne A. *See*—
Chari, Krishnan, Bowman, Wayne A., and Thomas, Brian, 5,008,179, Cl. 430-546.000.

Boyd, Jerry L. *See*—
McClusky, Stanley, and Boyd, Jerry L., 5,007,227, Cl. 53-243.000.

Boyd, Melissa D.: *See*—
Shreeve, Robert W., and Boyd, Melissa D., 5,008,614, Cl. 324-158.00F.

Boyd, William P., Sr. Direct current miniature lamp tester 5,008,626, Cl. 324-414.000.

Brahm, Barbara *See*—
Mormann, Werner, Brahm, Barbara, and Brahm, Martin, 5,008,447, Cl. 560-355.000.

Brahm, Martin *See*—
Mormann, Werner, Brahm, Barbara and Brahm, Martin, 5,008,447, Cl. 560-355.000.

Brain, Adrian R., to Abekas Video Systems Ltd. Digital video special effect system 5,008,755, Cl. 358-183.000.

Bralich, Andrew Sump protection system 5,007,451, Cl. 137-362.000.

Brand, Siegbert *See*—
Schuetz, Franz; Brand, Siegbert, Wenderoth, Bernd, Sauter, Hubert, Ammermann, Eberhard, and Lorenz, Cisela, 5,008,438, Cl. 560-55.000.

Brandes, Harry *See*—
Abendroth, Paul; Brandes, Harry, and Raab, Rudolf, 5,007,342, Cl. 101-420.000.

Brandon, Malcolm R., *See*—
Patroni, Joseph J., and Brandon, Malcolm R., 5,008,377, Cl. 530-416.000.

Brandstetter, Robert W., Pernick, Benjamin J., Fonneland, Nils J., and Caputi, Stephen J., to Grumman Aerospace Corporation. Optical heterodyning system and method for rapid optical phase and amplitude measurements. 5,008,851, Cl. 364-807.000.

Brandstrom, Arne E.; Lindberg, Per L.; and Sunden, Gunnel E., to Aktiebolaget Hassle. Therapeutically active compound and a process for its preparation. 5,008,278, Cl. 514-338.000.

Braner, Inc. *See*—
Matsunaga, Douglas S., Slabowski, Jan W., and Marecki, Tadeusz, 5,007,272, Cl. 72-226.000.

Branovich, Louis E., Eckart, Donald W., Smith, Bernard, and Freeman, Gerard, to United States of America, Army. Method of making a cathode from tungsten and iridium powders using a reaction product from reacting a group III A metal with barium peroxide as an impregnant. 5,007,874, Cl. 445-50.000.

Branstetter, Ronald L.; Jaeb, Jonathan P., and Gabelmann, Jeffrey M., to Nippon Colin Company Ltd. Oximeter sensor temperature control 5,007,423, Cl. 128-633.000.

Braun Aktiengesellschaft: *See*—
Messinger, Werner, Trolltsch, Karl, and Tewes, Bernd, 5,007,168, Cl. 30-43.000.

Brazdil, James F., Jr. Toft, Mark A., and Glaeser, Linda C., to Standard Oil Company, The. Ammoxidation of paraffins 5,008,427, Cl. 558-319.000.

Brazzoli, Giampietro, to Brazzoli S.p.A. Automatic loading and unloading system for dyeing machines using wound-up fabric and relative device for its accomplishment 5,007,255, Cl. 68-210.000.

Brazzoli S.p.A.: *See*—
Brazzoli, Giampietro, 5,007,255, Cl. 68-210.000.

Breckenfeld, Paul W. *See*—
Broughton, George L., Breckenfeld, Paul W., Mate, David W., Nettles, James A., and Rogers, Duane E., 5,007,393, Cl. 123-195.00R.

Bredovskis, Atis. Tire retainer for dock 5,007,609, Cl. 248-303.000.

Breitkopf, Norbert, Dambkes, Georg, and Bach, Hanswilhelm, to Ruhrchemie Aktiengeselischaft. Process for purifying propanediol-1,3. 5,008,473, Cl. 568-868.000.

Brekkestran, Kevin I., and Batcheller, Barry D., to Environwear, Inc. Electrically heated form-fitting fabric assembly 5,008,517, Cl. 219-211.000.

Bremus, Norbert, Gutsche, Bernhard, Jeromin, Lutz, Peukert, Eberhard, and Schleper, Bernard, to Henkel-Kommanditgesellschaft auf Aktien. Process for the continuous esterification of fatty acids 5,008,046, Cl. 260-410.600.

Brennan, Leanne M. Food metering dish. 5,007,743, Cl. 374-141.000.

Bridgestone Corporation *See*—
Maruyama, Akihiro, Kato, Munehiko, Ishiwaka, Takumi, Seki, Katsuto, and Ohashi, Takashi, 5,008,297, Cl. 521-136.000.

Briggs & Stratton Corporation *See*—
Seilenbinder, Richard W., 5,007,388, Cl. 123-90.550.
Uuskallio, Arvo F., 5,007,573, Cl. 227-139.000.

Bright, Jeffrey D. *See—*
Kuo, Shih-Yee; Cho, Hyun-Sam; and Bright, Jeffrey D., 5,008,132, Cl. 427-217.000

Casu, Benito; Torri, Giangiacomo; Naggi, Annamaria; Mantovani, Marisa; Pescador, Rodolfo; Porta, Roberto; and Prino, Giuseppe, to Crinos Industria Farmacobiologica S.p.A. Sulfoamino derivatives of chondroitin sulfates of dermatan sulfate and of hyaluronic acid and their pharmacological properties. 5,008,253, Cl. 514-54.000.
Catalytica, Inc.. *See*—
King, David L.; Cooper, Michael D.; and Faber, Michael A., 5,008,468, Cl. 568-697.000.
Caterpillar Inc.. *See*—
Goade, James C.; and Werner, Claude H., 5,007,805, Cl. 417-216.000.
Caudill, Vance E., to Abbott Laboratories. Apparatus and method of use of sterilizing containers using hydrogen peroxide vapor. 5,007,232, Cl. 53-426.000.
Cavallaro, Joseph A.. *See*—
Dickie, William; Cavallaro, Joseph A.; and Killmeyer, Richard P., 5,008,083, Cl. 422-101.000.
Cavallaro, Nunzio M.; Toth, John F.; and Alexander, Cleo J., to Raytheon Company. Microstrip antenna with parasitic elements. 5,008,681, Cl. 343-700.0MS.
Cell Analysis Systems, Inc. *See*—
Bacus, James W., 5,008,185, Cl. 435-7.230.
Cella, Robert. *See*—
Weeks, Herman D., Jr.; and Cella, Robert, 5,008,489, Cl. 174-36.000.
Cellini, Ferdinando. Screw with differentiated sections for corkscrews. 5,007,310, Cl. 81-3.450.
Cemax, Inc.. *See*—
Woolson, Steven T., 5,007,936, Cl. 623-23.000.
Centre National d'Etudes des Telecommunications. *See*—
Bernard, Philippe; and Colaitis, Marie-Jean, 5,008,746, Cl. 358-133.000.
Cetus Corporation. *See*—
Sninsky, John J.; Kwok, Shirley Y.; and Mack, David H., 5,008,182, Cl. 435-5.000.
Chackalamannil, Samuel, to Schering Corporation. Preparation of azetidinones via novel protected intermediates. 5,008,404, Cl. 549-215.000.
Chadha, Rajan, to British Petroleum Company, p.l.c., The. Fibre optic data coupler. 5,007,697, Cl. 350-96.150.
Chaiet, Louis; Zimmerman, Sheldon B.; Monaghan, Richard L.; and Garnity, George M., to Merck & Co., Inc. Antifungal fermentation product. 5,008,187, Cl. 435-72.000.
Chamberlain Group, The. *See*—
Kitahata, Roy S., 5,008,574, Cl. 310-68.00D.
Chamberlain, John R., to Rolls Royce plc. Temperature indicating paint and method of preparing a specimen with the same. 5,008,136, Cl. 427-388.100.
Chamberlin, David B.. *See*—
Jachmann, Emil F.; Saltzman, Jeremy; Chamberlin, David B.; D'Agosto, Nicholas A.; Harris, Mark; and Su, Jy-hong, 5,008,835, Cl. 364-513.500.
Chandhoke, Mohanjit S., to AM International Incorporated. Sheet material handling apparatus and method. 5,007,624, Cl. 270-52.000.
Chang, Chin L., to Honeywell Inc. Fiber optic phase modulator using electro-optic material in evanescent field. 5,007,695, Cl. 350-96.140.
Chang, Main, to Exxon Chemical Patents Inc. Method for preparing a silica gel supported metallocene-alumoxane catalyst. 5,008,228, Cl. 502-111.000.
Chang, Tao-Yuan. *See*—
Bar-Joseph, Israel; Chang, Tao-Yuan; and Chemla, Daniel S., 5,008,717, Cl. 357-16.000.
Chao, Y. S. *See*—
Loh, Kuo-Liang; Shieh, Puh; Chao, Y. S.; and Chuang, Tsu-Kung, 5,008,435, Cl. 560-24.000.
Chapellier, Jacques. *See*—
Koehler Bertrand; Manil, Emmanuel; and Chapellier, Jacques, 5,008,606, Cl. 318-649.000.
Chapman Corporation. *See*—
Swanson, Ralph W.; Gagnon, Daniel F.; and Parent, Donald G., 5,008,594, Cl. 315-111.810.
Chari, Krishnan; Bowman, Wayne A.; and Thomas, Brian, to Eastman Kodak Company. Increased activity precipitated photographic materials. 5,008,179, Cl. 430-546.000.
Charles Stark Draper Laboratory, The. *See*—
Dahlen, John M.; Chhabra, Narender K.; Araujo, Richard K.; Scholten, James R.; Reid, Robert W.; and Soikkeli, Matti, 5,007,285, Cl. 73-170.00A.
Charles Stark Draper Laboratory, Inc., The. *See*—
Kumar, Kaplesh; and Newborn, Herbert A., 5,007,972, Cl. 148-102.000.
Chaudhuri, Ratan K.; Tracy, David J.; and Login, Robert B., to GAF Chemicals Corporation. Quaternized nitrogen containing compounds. 5,008,104, Cl. 424-70.000.
Chekroun, Isaac. *See*—
Rossey, Guy; Ugolini, Antonio; Chekroun, Isaac; Vartanian, Ahkar; and Wick, Alexander, 5,008,434, Cl. 560-17.000.
Chemcut Corporation. *See*—
Coffman, Frederick E.; and Pelton, Charles H., 5,007,968, Cl. 134-25.400.
Chemex Pharmaceuticals, Inc. *See*—

Liu, Michael S.; and Chen, Huang-Joung, 5,008,208, Cl. 437-31.000.
Chen, Kin K. Head rest structure for baby strollers. 5,007,653, Cl. 280-87.051.
Chen, Min-Yi, to Schlumberger Technology Corporation. Method and apparatus for logging and displaying a two dimensional image of spontaneous potential. 5,008,625, Cl. 324-351.000.
Chen, Ming-Tang. Fan-shaped barbecue kettle. 5,007,403, Cl. 126-25.00R.
Chen, Teh-yi J. Selective asperity definition technique suitable for use in fabricating floating-gate transistor. 5,008,212, Cl. 437-43.000.
Chen, Tien C. Alignment apparatus for a stroke controlling mechanism of a machine tool. 5,007,302, Cl. 74-568.00R.
Cheng, Der-Shyang. *See*—
Chung, Yeong-Huei; and Cheng, Der-Shyang, 5,007,958, Cl. 75-330.000.
Cheng, Yen-Feng. Collapsible table and chair set. 5,007,673, Cl. 297-159.000.
Cheng, Yung-chi; and Bobek, Miroslav, to University of North Carolina at Chapel Hill, The, and Health Research, Inc. Process for inhibiting herpes simplex virus-specified thymidine kinase. 5,008,252, Cl. 514-50.000.
Chenff, Frank J.; Kirk, Joseph J.; Pulver, Arnold M.; and Cox, Walter N., to Raytheon Company. Flexible cable assembly. 5,008,656, Cl. 340-718.000.
Chern, Mao-Jin; Smith, Ronald T.; and Frogget, Brent C., to Hughes Aircraft Company. Holographic data storage and retrieval system. 5,007,690, Cl. 350-3.680.
Cheung, Kin P. *See*—
Case, Christopher J.; Cheung, Kin P.; Liu, Ruichen; Schutz, Ronald J.; and Wagner, Richard S., 5,008,217, Cl. 437-195.000.
Chevalier, Jean-Claude; and Raymond, Guy, to Valeo Systems d'Essuyage. Blade carrying assembly for a windshield wiper including a lock. 5,007,131, Cl. 15-250.190.
Chevron Research Company. *See*—
Lapporte, Seymour J.; and Toland, William G., 5,008,451, Cl. 562-891.000.
Zones, Stacy I.; Santilli, Donald S.; Ziemer, James; Holtermann, Dennis L.; Pecoraro, Theresa A.; and Innes, Robert A., 5,007,997, Cl. 208-46.000.
Chhabra, Narender K. *See*—
Dahlen, John M.; Chhabra, Narender K.; Araujo, Richard K.; Scholten, James R.; Reid, Robert W.; and Soikkeli, Matti, 5,007,285, Cl. 73-170.00A.
Chi, Guey F. *See*—
Chen, Duen J.; Chi, Guey F.; and Yeh, Ying C., 5,008,215, Cl. 437-83.000.
Chiang, Shang-yi; Huang, Wen-Ling M.; Drowley, Clifford I.; and Voorde, Paul V., to Hewlett-Packard Company. Process of making a bipolar transistor with a trench-isolated emitter. 5,008,210, Cl. 437-33.000.
Chiang, William G.; Jobbins, Richard M.; and Popule, Michael P., to Polypure, Inc. Process for the production of substituted acryloyloxyhydroxypropyltrialkylammonium chloride. 5,008,444, Cl. 560-222.000.
Chiba, Tohru. *See*—
Kokubo, Hiroyasu; Sekigawa, Fujio; Chiba, Tohru; and Onda, Yoshiro, 5,008,113, Cl. 424-480.000.
Chiesura, Michel. *See*—
Wiedeck, Hans; and Chiesura, Michel, 5,007,792, Cl. 414-500.000.
Chigasaki, Hiroyuki, to Sony Corporation. Tape cassette attachment device with closure plate actuated insertion sensor. 5,008,766, Cl. 360-96.500.
Childers, Winthrop D. *See*—
Pan, Alfred I-Tsung; Hanson, Eric G.; Schantz, Christopher A.; and Childers, Winthrop D., 5,008,689, Cl. 346-140.00R.

Chill Tech, Inc. *See*—
Kyfes, Vincent, 5,007,666, Cl. 285-373.000.
Chin, Arthur A., to Mobil Oil Corp. Method for reducing sulfur oxide emission during an FCC operation. 5,007,999, Cl. 208-113.000.
China Steel Corporation. *See*—
Chung, Yeong-Huei; and Cheng, Der-Shyang, 5,007,958, Cl. 75-330.000.
Chinnaswamy, Kumar; Gagliardo, Michael A.; Goodwin, Paul M.; Lynch, John J.; and Tessari, James E., to Digital Equipment Corporation. Read-modify-write operation. 5,008,886, Cl. 371-40.200.
Chinoin Gyogyszer es Vegyeszeti Termekek Gyara R.T.. *See*—
Ecsery, Zoltan; Knoll, Jozsef; Somfai, Eva; Torok, Zoltan; Szinyei, Eva; and Mozsolits, Karoly, 5,008,292, Cl. 514-654.000.
Szabo, Tibor, Institoris, Laszlo, Szejtli, Jozsef; Szente, Lajos; and Jodal, Ildiko, 5,008,386, Cl. 536-103.000.
Chinon Kabushiki Kaisha. *See*—
Ono, Shoichi; and Kobayashi, Atsuhito, 5,008,531, Cl. 250-222.100.
Ono, Shoichi; and Kobayashi, Atsuhito, 5,008,532, Cl. 250-222.100.
Chiron-Werke GmbH & Co. KG. *See*—
Winkler, Hans-Henning; and Rutschle, Eugen, 5,007,157, Cl. 29-568.000.
Chisso Corporation. *See*—
Murata, Shizuo, Nakayama, Minoru; Furukawa, Kenji; and Kobayashi, Ryuji, 5,008,456, Cl. 564-322.000.
Cho, Hyun-Sam. *See*—
Kuo, Shih-Yee; Cho, Hyun-Sam, and Bright, Jeffrey D., 5,008,132, Cl. 427-217.000.
Chollet, Charles C., to Snake River Chemicals, Inc. Seed treatment compositions. 5,007,953, Cl. 71-77.000.
Chono, Koji. *See*—
Okumura, Kin-ichi; Chono, Koji; Ozeki, Hiroshi; and Hamada, Tadao, 5,008,065, Cl. 264-328.600.
Chow, Edward. *See*—
Peterson, John C.; Chow, Edward; and Madan, Herb S., 5,008,882, Cl. 370-94.300.
Chow, Ho; and Testa, Joseph E., to Hunter-Melnor, Inc. Aspiration-type sprayer. 5,007,588, Cl. 239-318.000.
Christ, Michael; and Teichmann, Wolfgang, to Sueddeutsche Kuehlerfabrik Julius Fr. Behr GmbH & Co. KG. Method of and an apparatus for the separation of condensable harmful substances. 5,007,180, Cl. 34-32.000.
Christian, David E., to C. B. Labs, Inc. System for controlling the dynamic range of electric musical instruments. 5,008,634, Cl. 330-306.000.
Christiansen, Ned, and Kellogg, David, to Lear Seating Corporation. Armrest compartment with cupholder. 5,007,610, Cl. 248-311.200.
Christopher, Kenneth W., Jr.; Feigenbaum, Barry A.; Kim, Jin, and Love, Douglas C., to International Business Machines Corporation. Method of rapidly opening disk files identified by path names. 5,008,820, Cl. 364-200.000.
Chrome Technology Inc.. *See*—
Baturay, Omar; Shirk, James E.; and Sigerson, Adam L., 5,007,960, Cl. 75-743.000.
Chrysler Corporation. *See*—

Congleton, Helen; Slaton, Carol L.; Koudounaris, Angelo; Smith, Gerald B.; and Soto, Vicente, to Hughes Aircraft Company. Testable ribbon bonding method and wedge bonding tool for microcircuit device fabrication. 5,007,576, Cl. 228-103.000.

Conifer Corporation: *See—*
Hemmie, Dale L., 5,008,956, Cl. 455-318.000.

Conlan, John T., and Whitekettle, Wilson K., to Betz Laboratories, Inc. Biocidal compositions and use thereof containing a synergistic mixture of glutaraldehyde and 2-(decylthio) enthanamine. 5,008,023, Cl. 210-764.000.

Conley, Jerry J., and Mortensen, Gary B., to E. F. Johnson Co. Light emitting polymer electrical energy source. 5,008,579, Cl. 310-303.000

Conner, Jesse R., and Rieber, Roy S., to enviroGuard, Inc. In-situ formation of soluble silicates from biogenetic silica in chemical fixation/solidification treatment of wastes. 5,008,021, Cl. 210-751.000

Connolly, Daniel T., and Feder, Joseph, to Monsanto Company. Stimulation of endothelial cell growth. 5,008,196, Cl. 435-240.200

Coody, Archibald S., to Fred Arbogast Company, Inc. Artificial fishing lures. 5,007,194, Cl. 43-42.290

Cook, James C., II, to Progressive Dynamics, Inc. Fluorescent lighting control circuit. 5,008,598, Cl. 315-225.000

Cook, Robert J. Topographic measuring device. 5,007,174, Cl. 33-1.0SD.

Cook, William J.; Wisniewski, Karen L.; Dixit, Nagaraj S.; and Rao, Nandakumar S., to Colgate-Palmolive Co. Acidic disinfectant all-purpose liquid cleaning composition. 5,008,030, Cl. 252-106.000

Cooke, Mack A. Crane apparatus. 5,007,543, Cl. 212-160.000

Coolidge, Robert B.; and Nguyen, David M., to Dresser Industries, Inc. Drill bit having improved cutting element retention system. 5,007,493, Cl. 175-329.000

Coon, Warren. *See—*
Carlson, Carl J., Zarouri, Mourad, and Coon, Warren, 5,008,768, Cl. 360-104.000

Cooper, Kelvin, and Fray, Michael J., to Pfizer Inc. Diazepine antiallergy agents. 5,008,263, Cl. 514-220.000

Cooper, Michael D. *See—*
King, David L., Cooper, Michael D., and Faber, Michael A., 5,008,468, Cl. 568-697.000

Cooper, Robert C., to AT&T Bell Laboratories. Terminal assembly for linear magnetic component bobbin. 5,008,644, Cl. 336-192.000

Copeland, Stephan, to FI.OS S.p.A. Guidable arm, particularly for free-positioning lamps. 5,008,793, Cl. 362-413.000

Corain, Luciano; Maitan, Gianni; Perlini, Renato; and Bacchetti, Mario, to Nuovopignone-Industrie Meccaniche e Fonderia, S.p.A. Weft clamping system for inserter rapier. 5,007,463, Cl. 139-448.000

Corbett, Seguard. Multi-port container. 5,007,547, Cl. 220-476.000

Cordell, Ralph L. *See—*
Crowe, Christopher; Cordell, Ralph L.; and Kahng, Seun K., 5,007,292, Cl. 73-654.000

Corley, Larry S., to Shell Oil Company. Gas cylinder safety device. 5,007,548, Cl. 220-3.000

Cornell Research Foundation, Inc. *See—*
Wellner, Daniel, 5,008,372, Cl. 530-345.000

Cornerstone Products Inc. *See—*
Van Druff, Albert, Jr., 5,007,249, Cl. 62-255.000

Corning Incorporated. *See—*
Araujo, Roger J., 5,007,948, Cl. 65-30.130
Ketcham, Thomas D., 5,008,221, Cl. 501-103.000

Cosart, Lee D., III. *See—*
Nelson, Nancy W.; Cosart, Lee D., III; Peregrino, Luiz; and Ingman, Eric M., 5,008,610, Cl. 324-84.000

Counts, David E. *See—*
Wellenkotter, Carl A.; and Counts, David E., 5,007,396, Cl. 123-339.000

Counts, Richard C., to USI Lighting, Inc. Power factor correction circuit. 5,008,599, Cl. 315-247.000

Cox, Laurence C.; Dugan, Raymond; Evans, Daniel D.; Griffith, Robert; Handley, Terry L.; and Leeper, Jeffrey J., to National Steel Corporation. Metal strip edge trimming apparatus. 5,007,318, Cl. 83-425.200

Cox, Roger L.; DeLoye, Michael J.; and Myers, Robert L., to International Business Machines Corporation. Personal computer power supply. 5,008,829, Cl. 364-480.000

Cox, Walter N. *See—*
Cheriff, Frank J.; Kirk, Joseph J.; Pulver, Arnold M.; and Cox, Walter N., 5,008,656, Cl. 340-718.000

Cox, William M. *See—*
Fischer, Michael A.; Cox, William M.; and McDougall, Floyd H., 5,008,879, Cl. 370-85.200.

Craig, Franklin J. *See—*
Weder, Donald E.; Straeter, William F.; Straeter, Joseph G.; Craig, Franklin J.; Donnelly, Wilma M.; and Redditt, Jack W., 5,007,229, Cl. 53-397.000

Craig, Stuart; and Helland, Earl, to Inventive Ideas Incorporated. Compass. 5,007,320, Cl. 83-745.000

Crane, David P.; Cole, Terence M.; and Poskitt, Geoffrey, to International Computers Limited. Multi-cache data storage system. 5,008,813, Cl. 364-200.000

Crater, Arthur H. *See—*
Mullen, Charles E.; and Crater, Arthur H., 5,007,760, Cl. 403-13.000

Crawshay, Richard, to Inco Limited. Belt and chain flight conveyor. 5,007,525, Cl. 198-690.200

Creative Packaging Corp. *See—*
Beck, James M., 5,007,555, Cl. 220-339.000

Cree Research, Inc. *See—*
Edmond, John A.; Waltz, Douglas G.; Mitchell, Muni M.; Sedigh, Mohammad; and Hamerski, Roman, 5,008,735, Cl. 357-74.000

Crespiatico, Giampietro, and Mondori, Luciano. Locking device for connectors of printed circuit boards. 5,007,854, Cl. 439-367.000

Crestmoore Ltd. *See—*
Nussbaum, Avraham, 5,007,915, Cl. 606-133.000

Crewe, Albert V., to Orchid One Corporation. High performance, vacuum compatible electromagnetic lens coil. 5,008,549, Cl. 250-396.0ML

Crinos Industria Farmacobiologica S.p.A. *See—*
Casu, Benito; Torri, Giangiacomo; Naggi, Annamaria; Mantovani, Marisa; Pescador, Rodolfo; Porta, Roberto; and Prino, Giuseppe, 5,008,253, Cl. 514-54.000

Critchlow, David N.; Yehushua, Moshe; Avis, Graham M.; Heimbigner, Wade L.; Johnson, Karle J.; and Wiley, George A., to International Mobile Machines Corporation. Subscriber unit for wireless digital subscriber communication system. 5,008,900, Cl. 375-8.000

Crivello, Sam. *See—*
Crooks, Theodore J.; Zentz, Terry L.; and Morris, Matthew G., 5,007,518, Cl. 194-212.000

Crompton, Charles E.; Kazi, Abdulla M. Z.; and Soni, Inderjit S., to Laurel Industries, Inc. Colloidal sols of antimony pentoxide in an aqueous medium and their preparation. 5,008,036, Cl. 252-313.100

Cronin, William J. *See—*
Olsen, Steven A.; Cronin, William J.; Jarvis, Ben L.; and McMillan, Jeff G., 5,008,929, Cl. 379-112.000

Crooks, Theodore J.; Zentz, Terry L.; and Morris, Matthew G., to Crivello, Sam. Apparatus for renting articles. 5,007,518, Cl. 194-212.000

Crossman, Janet L. *See—*
Erickson, Phillip J.; Crossman, Janet L.; Heacock, Gregory L.; and Mainster, Martin A., 5,007,729, Cl. 351-219.000

Crowe, Christopher; Cordell, Ralph L.; and Kahng, Seun K., to Amoco Corporation. Multicomponent transducer. 5,007,292, Cl. 73-654.000

Crown Equipment Corporation. *See—*
Dammeyer, Ned E.; and Thobe, Nick D., 5,008,604, Cl. 318-587.000

Crum, Spencer E. *See—*
Bernhardt, Douglas H.; Matheu, Guillermo R.; Crum, Spencer E.; and Adelmann, John T., 5,007,336, Cl. 99-487.000

Crumley, Gary B., to BOC Group, Inc., The. Water cooled crucible. 5,008,897, Cl. 373-11.000

CSELT - Centro Studi e Laboratori Telecommunicazioni S.p.A. *See—*
Accatino, Luciano; and Bertin, Giorgio, 5,008,640, Cl. 333-219.100
Calvani, Riccardo; and Caponi, Renato, 5,007,735, Cl. 356-128.000

Csonka, James M. *See—*
Naro, Rodney L.; Csonka, James M.; and Merritt, Michael A., 5,008,074, Cl. 420-578.000

Cullis, Pieter R.; Hope, Michael J.; and Bally, Marcel B., to Liposome Company, Inc., The. Extrusion technique for producing unilamellar vesicles. 5,008,050, Cl. 264-4.300.

Cunningham, Timothy J. *See—*
Linsky, Cary B.; and Cunningham, Timothy J., 5,007,916, Cl. 606-151.000

Cunningham, William R.; Amareno, Carmelo S.; and Kayan, Helmut. Foolproof coupon redemption system. 5,008,519, Cl. 235-383.000

Cur, Omer N. *See—*
Kruck, Richard W.; Cur, Omer N.; Leclear, Douglas D.; Kuehl, Steven J.; and Burin, Ralph R., 5,007,246, Cl. 62-131.000

Noble, Stephen A., 5,008,697, Cl. 354-413.000
Robello, Douglas R., Ulman, Abraham, Urankar, Edward J., and Willand, Craig S., 5,008,043, Cl. 252-582.000
Robello, Douglas R., and Ulman, Abraham, 5,008,369, Cl. 528-391.000
Sangregory, Jude A., and DiRisio, Anthony, 5,007,859, Cl. 439-500.000
Shaw, James D., 5,008,082, Cl. 422-65.000
Surash, Robert G., and Kiehl, Gary G., 5,008,020, Cl. 210-751.000
Van Nostrand, Lance, 5,008,752, Cl. 358-160.000
Eastwell, Kenneth C. *See—*
Bassi, Pawan K., Eastwell, Kenneth C., Goudey, James S., and Spencer, Mary E., 5,008,091, Cl. 423-245.100
Easyfax, Inc. *See—*
Cleghorn, Monica R., 5,008,928, Cl. 379-100.000
Eaton Corporation. *See—*
Holmquist, Ralph E., and Janson, David A., 5,007,886, Cl. 475-231.000
Eaton Leonard Technologies, Inc. *See—*
Mundy, David J., 5,008,555, Cl. 250-560.000
Ebata, Yoshikazu. *See—*
Takenoya, Hideaki; and Ebata, Yoshikazu, 5,007,357, Cl. 112-103.000.
Ebbing, Charles E., and Neville, Donald G., to Carrier Corporation. Silencer for a centrifugal compressor. 5,007,499, Cl. 181-258.000
Ebel, Klaus. *See—*
Koehler, Hermann; Ebel, Klaus; Karn, Helmut, and Taubitz, Christof, 5,008,398, Cl. 548-342.000
Eberle, Jurg; and Stauber, Hans-Ulrich, to Ferag AG. Apparatus for conveying substantially flat products, especially printed products. 5,007,629, Cl. 271-277.000
Ebersole, Larry W. Head care station and kit and method for reclining the occupant of a wheelchair against a head support. 5,007,118, Cl. 4-515.000
Ebinuma, Ryuichi, Hatton, Yoshifumi, and Ichihashi, Hiroo, to Canon Kabushiki Kaisha. Ink jet recording apparatus capable of mounting an ink tank and ink tank for use in same. 5,008,688, Cl. 346-140.00R
Ebisawa, Tsuneo. *See—*
Ozaki, Seishiro, Asahi, Nobuo, and Ebisawa, Tsuneo, 5,008,504, Cl. 200-401.000
EC Erdolchemie GmbH. *See—*
Schleppinghoff, Bernhard, Kohler, Hans-Dieter, Gabel, Christian, and Scheef, Hans-Volker, 5,008,466, Cl. 568-697.000
ECC International Limited. *See—*
Brown, Alan J.; James, Roger, and Glasson, Nigel P., 5,008,220, Cl. 501-81.000.
Eckart, Donald W. *See—*
Branovich, Louis E., Eckart, Donald W., Smith, Bernard, and Freeman, Gerard, 5,007,874, Cl. 445-50.000
Ecsery, Zoltan, Knoll, Jozsef, Somfai, Eva, Torok, Zoltan, Szinnyei, Eva, and Mozsolits, Karoly, to Chinoin Gyogyszer es Vegyeszeti Termekek Gyara R.T. Pesticidal method. 5,008,292, Cl. 514-654.000
Edes, Bela. *See—*
Bakos, Jozsef; Heil, Balint, Toth, Imre, Edes, Bela, Gebhardt, Tstvan, Bihari, Ferenc, Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno, Konok nee Horvath, Eva; Lukacs, Laszlo; Meszaros nee Szekrenyesi, Agnes; Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000
Edmond, John A., Waltz, Douglas G., Mitchell, Muni M., Sedigh, Mohammad; and Hamerski, Roman, to General Instrument Corporation, and Cree Research, Inc. Packaged diode for high temperature operation. 5,008,735, Cl. 357-74.000
Edmondson, Sherburne M., and Luna, Carlos E., to Sequoia Turner Corporation. Blood diluent for red blood cell analysis. 5,008,202, Cl. 436-18.000
Edwards, John G., Han, Wesley W., and Ali, Yusuf, to Alcon Laboratories, Inc. Method for enhancing solubility of trimethoprim with sodium sulfacetamide, and synergistic pharmaceutical compositions derived therefrom. 5,008,255, Cl. 514-155.000.
Edwardson, David. *See—*
Shapiro, Alan F., 5,007,502, Cl. 182-155.000
Effland, John E., Gipson, John M., Shaffer, David B., and Webber, John C., to Interferometrics Incorporated. Method and system for locating an unknown transmitter. 5,008,679, Cl. 342-353.000
Efrat Future Technology Ltd. *See—*
Misholi, Boaz, 5,008,926, Cl. 379-89.000.
Egley, Bert, and Hanson, Richard A., to New SD, Inc. Method and apparatus for producing preload of an accelerometer assembly. 5,007,290, Cl. 73-517.00R
Eguchi, Hisao, Kubo, Masashige; Kunimoto, Koji, Shimizu, Sadami, Sato, Masakatsu, and Tamabayashi, Hanzo, to Tosoh Corporation. Process for producing tetrabromobisphenol A. 5,008,469, Cl. 568-722.000
Ehl, Klaus. *See—*
Uhrig, Heinz, Ehl, Klaus, and Deubel, Reinhold, 5,008,442, Cl. 560-149.000
Eichenauer, Ulrich, to BASF Aktiengesellschaft. Preparation of 4,4'-dihydroxyterphenyl. 5,008,472, Cl. 568-730.000
Eichhorn, Werner. *See—*
Hopfensperger, Reinhold, and Eichhorn, Werner, 5,007,801, Cl. 416-223.00R
Eifert, Gyula. *See—*
Bakos, Jozsef, Heil, Balint, Toth, Imre, Edes, Bela, Gebhardt, Tstvan, Bihari, Ferenc, Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno, Konok nee Horvath, Eva, Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000
Eisai Co., Ltd. *See—*
Yamauchi, Hiroshi, Sugiyama, Isao, Saito, Isao, Nomoto, Seiichiro, Kamiya, Takashi, Machida, Yoshimasa, and Negi, Shigeto, 5,008,260, Cl. 514-202.000
Eisele, Thomas A. *See—*
Kobes, Gerald W., and Eisele, Thomas A., 5,007,334, Cl. 99-483.000
Eisert, Wolfgang. *See—*
Heckel, Armin, Nickl, Josef, Muller, Erich, Narr, Berthold, Weisenberger, Johannes, Eisert, Wolfgang, and Muller, Thomas, 5,008,290, Cl. 514-544.000
Eizenhofer, Alfons, and Von Harten, Georg, to U.S. Philips Corporation. Communication system. 5,008,883, Cl. 370-95.100
Eki, Toshio. *See—*
Yoshida, Takao, Ikeda, Toshio, Douke, Takhiro, and Eki, Toshio, 5,008,773, Cl. 361-187.000
Elango, Varadaraj, and Davenport, Kenneth G., to Hoechst Celanese Corporation. Synthesis of 2-(4-hydroxyphenoxy) alkanoic acid esters. 5,008,439, Cl. 560-61.000
Eleazer, Prince B. *See—*
Mayotte, Leo G., and Eleazer, Prince B., 5,007,823, Cl. 432-14.000
Electro-Consultants, Inc. *See—*
Woloszyk, Leonard T., 5,008,652, Cl. 340-605.000
Electronic Research Associates, Inc. *See—*
Palinkas, John M., 5,008,788, Cl. 362-231.000.
Elf Aquitaine Norge A/S. *See—*
Legris, Bernard; Oppedal, Magne; and Traonmilin, Eric, 5,007,769, Cl. 405-195.000.
Elf France. *See—*
Laurent, Dominque; Fortunato, Gerard, Damin, Bernard, and Napoleon, Marcel, 5,007,733, Cl. 356-70.000

Elkem a/s. *See—*
Anderssen, Sverre, 5,007,480, Cl. 166-292.000
Ellard, Terence R., to Real World Design & Development Company. Syringe adapted to prevent needle sticks. 5,007,903, Cl. 604-195.000
Ellena. *See—*
Werly, Marc, 5,007,837, Cl. 433-226.000
Ellingsworth, Larry. *See—*
Bentz, Hanne, Ellingsworth, Larry, and Armstrong, Rosa, 5,008,240, Cl. 514-2.000
Ellrich, Klaus. *See—*
Gasser, Oswald, Guggenberger, Rainer, and Ellrich, Klaus, 5,008,303, Cl. 522-64.000
Elmstrom, Gary W. *See—*
Gray, Dennis J., and Elmstrom, Gary W., 5,007,198, Cl. 47-58.000
Eltec Instruments, Inc. *See—*
Keller, Hans J., and Kuster, Walter A., 5,007,432, Cl. 128-736.000

Eltoukhy, Abelshafy A., and Gluss, David H., to Actel Corporation. Method of programming anti-fuse element. 5,008,855, Cl. 365-96.000.
Emhart Industries, Inc. *See—*
Kidd, Roy E., Andrejasich, Raymond J.; Michel, Hilary, and Slocum, Laurence S., 5,008,653, Cl. 340-620.000.
Emig, Gerhard. *See—*
Beck, Horst-Philipp; Emig, Gerhard; Wiesgickl, Gunther; Burg, Karlheinz, and Muck, Karl-Friedrich, 5,008,463, Cl. 568-487.000.
Emmett, Robert C., Jr., and O'Connor, Lawrence T., to Envirotech Corporation. Apparatus for biological processing of metal-containing ores. 5,007,620, Cl. 266-168.000
Empresa Brasileira de Compressores S/A - Embraco. *See—*
Da Costa, Caio N. F. N., 5,007,813, Cl. 418-63.000.
Emulsion Technology, Inc. *See—*
Weete, John D., and Griffith, George L., 5,008,037, Cl. 252-314.000.
Emura, Masaharu; and Kobayashi, Takehiro, to Ryobi Ltd. Water depth measuring device for a fishing reel. 5,007,601, Cl. 242-223.000.
Endo, Atsushi. *See—*
Tsutsumi, Michinari, Endo, Atsushi; and Yada, Toshio, 5,007,984, Cl. 156-656.000.
Endo, Mamoru. *See—*
Hamatsu, Mashiro, and Endo, Mamoru, 5,008,898, Cl. 375-1.000.
Endo, Seiji. *See—*
Yamamura, Takeshi; Endo, Seiji; Kawauchi, Kazuyuki; and Korenaga, Hiroki, 5,008,728, Cl. 357-45.000.
Endoh, Fumio, to Pioneer Electronic Corporation. CATV transmission system using scrambled signals. 5,008,934, Cl. 380-15.000.
Energy Conversion Devices, Inc. *See—*
Czubatyj, Wolodymyr, and Himmler, Ronald, 5,008,617, Cl. 324-158.00R
Engbersen, Antonius P. *See—*
Ahmadi, Hamid; Beha, Johannes G., Denzel, Wolfgang E.; Engbersen, Antonius P., Luijten, Ronald P., Murphy, Charles A.; and Port, Erich, 5,008,878, Cl. 370-60.000
Engel, Dieter, Mondt, Josef; and Zimmerschied, Klaus, to Hoechst Aktiengesellschaft. Aqueous dispersions for the preparation of cross-linkable coatings. 5,008,155, Cl. 428-463.000.
Engelhard Corporation. *See—*
Taylor, Dennis R.; and Ungermann, Charles B., 5,008,226, Cl. 502-81.000
Taylor, Dennis R.; and Ungermann, Charles B., 5,008,227, Cl. 502-83.000
England, Raymond B., Jr. Window cleaning apparatus with rotatable head. 5,007,753, Cl. 401-139.000
Englert, Heiner; and Martin, Bernhard, to Michael Weinig Aktiengesellschaft. Pressing apparatus for a processing machine. 5,007,469, Cl. 144-252.00R
Englund, Richard L.; and Schwartz, Thomas W., to Minnesota Mining and Manufacturing Company. Compounding, glazing or polishing pad. 5,007,128, Cl. 15-230.160.
Engstrand, Per O.; Hammar, Lars-Ake; Htun, Myat T.; and Pettersson, Rune L., to STFI. Method of reducing the energy consumption at the refining of cellulose containing material. 5,007,985, Cl. 162-26.000.
Enhorning, Goran. Female incontinence device. 5,007,894, Cl. 600-29.000.
Enoguchi, Yuji; Natsuhara, Toshiya, and Yamamoto, Masashi, to Minolta Camera Kabushiki Kaisha. Monocomponent developing device. 5,008,708, Cl. 355-259.000
Enright, Dorothy P.; Dye, William M.; Smith, F. Martin, and Perricone, Alphonse C., to Baker Hughes Incorporated. Drilling fluid methods and composition. 5,007,489, Cl. 175-65.000.
enviroGuard, Inc.: *See—*
Conner, Jesse R.; and Rieber, Roy S., 5,008,021, Cl. 210-751.000.
Environwear, Inc.: *See—*
Brekkestran, Kevin L.; and Batcheller, Barry D., 5,008,517, Cl. 219-211.000.
Envirotech Corporation: *See—*
Emmett, Robert C., Jr.; and O'Connor, Lawrence T., 5,007,620, Cl. 266-168.000.
Erana, Agustin A. Air impact sand-box moulding machine. 5,007,477, Cl. 164-169.000.
Erb, Gary H. Method of decreasing air/fuel leakage in a carburetor. 5,007,166, Cl. 29-888.011.
Erickson, Phillip J.; Crossman, Janet L.; Heacock, Gregory L.; and Mainster, Martin A., to Ocular Instruments, Inc. Wide angle ophthalmic lens. 5,007,729, Cl. 351-219.000.
Erion, Mark D.: *See—*
Secrist, John A., III; Montgomery, John A.; Ealick, Steve E.; Erion, Mark D.; and Guida, Wayne C., 5,008,265, Cl. 514-258.000
Secrist, John A., III, Montgomery, John A., Ealick, Steve E.; Erion, Mark D.; and Guida, Wayne C., 5,008,270, Cl. 514-258.000.
Erkens, Leonardus J. H.; Algra, Gerben P.; Geurts, Herman J. J. M.; and Gielkens, Hubertus P. A., to Ciba-Geigy Corporation. Novel process for the preparation of lead molybdate pigments and novel lead molybdate pigments. 5,007,963, Cl. 106-433.000.
Ermanco Incorporated. *See—*
Fazzina, Francis P.; and Hollister, Guy G., 5,007,526, Cl. 198-787.000.

Eberle, Jurg; and Stauber, Hans-Ulrich, 5,007,629, Cl. 271-277.000.
Fernando, Gerard M. X.; and Giardina, Aldo, to U.S. Philips Corporation. Method and apparatus for picture motion measurement using picture correlation as a function of displacement. 5,008,744, Cl. 358-105.000.
Fersht, Samuel N.: *See—*
Stewart, Robert E.; and Fersht, Samuel N., 5,007,289, Cl. 73-510.000.
Feustel, James R.: *See—*
Abramczyk, William M.; Hull, Edward I.; and Feustel, James R., 5,007,662, Cl. 280-739.000.
Fiacco, Richard A.: *See—*
Strauss, Richard F.; Fiacco, Richard A.; Bordbar, Hosrow T.; Chen, Caesar C.; and Quiroz, David, 5,008,490, Cl. 174-36.000.
Fiat Auto S.p.A.: *See—*
Di Giusto, Nevio, 5,007,668, Cl. 292-216.000.
Margiaria, Giorgio; and Brizio, Giuseppe, 5,008,063, Cl. 264-297.200.
Nakayama, Kiyoshi; and Luigi, Darbesio, 5,008,603, Cl. 318-568.100.
Fick, Larry D., to New Visions Corporation. Water bottle insulator. 5,007,566, Cl. 224-32.00R.
Fiebig, Carolyn A. B.; Fuqua, Mike R.; Gursahaney, Suresh K.; Margosian, Gregg M.; and Weiss, Mark H., to International Business Machines Corporation. Real time, fail safe process control system and method. 5,008,805, Cl. 364-184.000.
Fields, John G.: *See—*
Saunders, Anne L.; and Fields, John G., 5,007,196, Cl. 43-112.000.
Figueroa, Luis A.: *See—*
Lombard, Jose O., 5,007,794, Cl. 414-542.000.
Filius, Larry, to East Short Chemical Company. Anisole bromination. 5,008,464, Cl. 568-656.000.
Finley, John W.: *See—*
Klemann, Lawrence P.; Finley, John W.; and Scimone, Anthony, 5,008,126, Cl. 426-611.000.
Fiorelli, Frank: *See—*
Zezza, Louis J.; and Fiorelli, Frank, 5,007,460, Cl. 138-89.000.
Fischbach, Manfred: *See—*
Dahle, Olof; and Fischbach, Manfred, 5,007,487, Cl. 175-57.000.
Fischer, Michael A.; Cox, William M.; and McDougall, Floyd H., to Datapoint Corporation. LAN with interoperative multiple operational capabilities. 5,008,879, Cl. 370-85.200.
Fischer, Rolf; Frank, Juergen; Merger, Franz; and Weyer, Hans-Juergen, to BASF Aktiengesellschaft. Preparation of 1,4-butanediol and tetrahydrofuran. 5,008,408, Cl. 549-429.000.
Fisher, Michael H.; Wyvratt, Matthew J.; and Mrozik, Helmut, to Merck & Co., Inc. Avermectins with a cleaved furan ring and an 8a hydroxy group. 5,008,250, Cl. 514-30.000.
Fishman, Sam; and Marchese, Michael J. Body dryer. 5,007,182, Cl. 34-90.000.
Fishman, Sidney; and Lembeck, William, to New York University Medical Center. Structure for enhanced retention of artificial limbs and method of fabrication. 5,007,937, Cl. 623-34.000.
Fittings for Industry S.r.l.: *See—*
Babini, Ezio, 5,007,946, Cl. 55-501.000.
Fletcher, Robert M.; Kuo, Chihping; Osentowski, Timothy D.; and Robbins, Virginia M. Light-emitting diode with an electrically conductive window. 5,008,718, Cl. 357-17.000.
Flexsteel Industries, Inc.: *See—*
Meier, Louis M.; and Berning, Lloyd G., 5,007,681, Cl. 297-440.000.
Flight Dynamics, Inc.: *See—*
Wood, Robert S.; and Thomas, Mark A., 5,007,711, Cl. 350-174.000.
FLOS S.p.A.: *See—*
Copeland, Stephan, 5,008,793, Cl. 362-413.000
Flotow, Richard A., to Dana Corporation. Adjustable hysteresis damper. 5,007,517, Cl. 192-106.100.
Flueli, Adolf: *See—*
Busenhart, Peter; Schneeberger, Ruedi; Holbein, Erwin; Wirz, Armin; Flueli, Adolf; and Maier, Hansueli, 5,007,595, Cl. 242-46.400.
Flynn, Edward R.: *See—*
Overton, William C., Jr.; van Hulsteyn, David B.; and Flynn, Edward R., 5,008,622, Cl. 324-248.000.
FMC Corporation: *See—*
Plummer, Ernest L., 5,008,277, Cl. 514-337.000.
Focke & Co., (GmbH & Co.): *See—*
Focke, Heinz, and Balmer, Oskar, 5,007,522, Cl. 198-468.800.
Focke, Heinz; and Balmer, Oskar, to Focke & Co., (GmbH & Co.). Apparatus for transporting packaging material to a packaging machine. 5,007,522, Cl. 198-468.800.
Foering, Herbert: *See—*
Unewisse, Heinz; and Foering, Herbert, 5,007,667, Cl. 285-382.200.
Fogg, Richard G., Jr.; and Irwin, John W., to International Business Machines Corporation. Data processing system with multi-access memory. 5,008,816, Cl. 364-200.000.
Foglieni, Carlo: *See—*
Bovisio, Cipriano; Foglieni, Carlo; Fumagalli, Fulgenzio; Morlotti, Norberto; and Palladini, Mario, 5,007,665, Cl. 285-334.000.
Foley, Charles F., to InnoLand, Inc. Selectively mountable basketball hoop structure. 5,007,637, Cl. 273-1.50R.
Fonneland, Nils J.: *See—*
Brandstetter, Robert W.; Pernick, Benjamin J.; Fonneland, Nils J.; and Caputi, Stephen J., 5,008,851, Cl. 364-807.000.
Ford Motor Company: *See—*
Abramczyk, William M.; Hull, Edward I.; and Feustel, James R., 5,007,662, Cl. 280-739.000.
Clark, Walter F.; and Chen, Bor-Dong, 5,008,824, Cl. 364-431.050
Goran, James L., 5,007,779, Cl. 411-48.000.
Wakeling, Robert, 5,007,395, Cl. 123-337.000.
Ford New Holland, Inc.: *See—*
Bulgrien, Garth H., 5,007,299, Cl. 74-335.000
Schnader, Llewellyn R., 5,007,787, Cl. 414-412.000.
Ford, William G. F.: *See—*
Gardner, Tommy R.; Dill, Walter R.; Ford, William G. F.; and King, Karen L., 5,008,026, Cl. 252-8.553.
Forrestal, Joseph M.: *See—*
Saunders, Raymond L.; and Forrestal, Joseph M., 5,007,814, Cl. 425-3.000.
Forsyth, Allen P., to Atlas Copco Construction and Mining Holding AB. Hydraulically-actuated controller for reel drive. 5,007,599, Cl. 242-86.510.
Forsyth, Donald G. W.; Marshall, Robert W.; and Thompson, Alan M., to British Petroleum Co. p.l.c. Offshore oil production system. 5,007,482, Cl. 166-345.000.
Fortunato, Gerard: *See—*
Laurent, Dominque; Fortunato, Gerard; Damin, Bernard; and Napoleon, Marcel, 5,007,733, Cl. 356-70.000
Fosbol, Peder; Ullum, Henrik; and Korremann, Birgitte, to Atlas Industries A/S. Method for a continuous hydrolyzing of keratinaceous materials. 5,008,375, Cl. 530-357.000.
Foster, Jeffrey P. Support rack for bicycles and the like. 5,007,567, Cl. 224-42.130.
Fowler, Ronald R.: *See—*
Spear, Kenneth J.; and Fowler, Ronald R., 5,007,598, Cl. 242-86.200.
Foxboro Company, The: *See—*
Jeannotte, Anthony C.; and Gilby, Anthony C., 5,007,740, Cl. 356-436.000.
Franc, John. Infant shade apparatus. 5,007,674, Cl. 297-184.000.
Franckowiak, Gerhard; Stoltefuss, Jurgen; Bechem, Martin; Gross, Rainer; Kayser, Michael; Hebisch, Siegbert; and Schramm, Matthias, to Bayer Aktiengesellschaft. Circulation-active fluoromethoxyphenyl dihydropyridine compounds. 5,008,279, Cl. 514-354.000.
Frank, Juergen: *See—*
Fischer, Rolf; Frank, Juergen; Merger, Franz; and Weyer, Hans-Juergen, 5,008,408, Cl. 549-429.000.
Franklin, James: *See—*
Wairaevens, Rene; Franklin, James; and Yernaux, Jean-Marie, 5,008,474, Cl. 570-168.000.
Franz Plasser Bahnbaumaschinen-Industriegesellschaft m.b.H.: *See—*
Theurer, Josef, 5,007,349, Cl. 104-12.000.
Theurer, Josef, 5,007,350, Cl. 104-12.000.
Fraser, Edward C.: *See—*
More, Henry S.; Fraser, Edward C.; and Bulduc, Lawrence R., 5,008,664, Cl. 340-854.000.
Fraser, Howard H., Jr.; and Weldon, Mark P., to Carrier Corporation. Slotted rotor lubrication system. 5,007,808, Cl. 417-368.000.
Fraser, Howard H., Jr.; and Barito, Thomas R., to Carrier Corporation. Scroll compressor with unitary crankshaft, upper bearing and counterweight. 5,007,810, Cl. 417-410.000.
Fray, Michael J.: *See—*
Cooper, Kelvin; and Fray, Michael J., 5,008,263, Cl. 514-220.000.

Fred Arbogast Company, Inc.: *See—*
Coody, Archibald S., 5,007,194, Cl. 43-42.290.
Fredell, Jan, to ABB Atom AB. Device for cooling a heat-generating member. 5,008,069, Cl. 376-299.000.
Freeburg, Thomas A.; and White, Richard E., to Motorola, Inc. Encryption apparatus. 5,008,938, Cl. 380-50.000.
Freed, W. Wayne; and Smith, Robert M., to Synthetic Industries, Inc. Shaped barrier for erosion control and sediment collection. 5,007,766, Cl. 405-24.000.
Freeman, Carol A. Purse with reminder device. 5,007,470, Cl. 150-114.000.
Freeman, Gerard: *See—*
Branovich, Louis E.; Eckart, Donald W.; Smith, Bernard; and Freeman, Gerard, 5,007,874, Cl. 445-50.000.
Fremuth, Dietmar R. A.; Rogers, Alan E.; and Zahner, John C., to Mobil Oil Corporation. Methanol-gas saturator for catalytic conversion system. 5,008,088, Cl. 422-234.000.
Frenzel, Robert A.: *See—*
Scobie, William B.; and Frenzel, Robert A., 5,007,330, Cl. 92-120.000.
Freudenberg, Enrique: *See—*
Hartmann, Heinrich; Denzinger, Walter; Kroener, Michael; Sendhoff, Norbert; and Freudenberg, Enrique, 5,008,321, Cl. 524-378.000.
Fries, William J.; Kleinschnitz, Donald; and Nelson, T. Craig, to Storage Technology Corporation. Consolidation of commands in a buffered input/output device. 5,008,808, Cl. 364-200.000.
Fritts, Monty; and Myers, Darren J. Inflatable shelter. 5,007,212, Cl. 52-2.180.
Fritz, Ronald E.: *See—*
Asmussen, Jes; and Fritz, Ronald E., 5,008,506, Cl. 219-10.55M.
Frogget, Brent C.: *See—*
Chern, Mao-Jin; Smith, Ronald T.; and Frogget, Brent C., 5,007,690, Cl. 350-3.680.
Fry, Trenton. Replaceable skeg for a marine propulsion device. 5,007,868, Cl. 440-071.000.
Fu, Jaw K.; Merritt, Arch J., deceased (by Merritt, Helene, executrix); and Smith, John R., to Keystone Environmental Resources, Inc. Method for treating contaminated soil by biological degradation on a sloped surface. 5,007,771, Cl. 405-258.000.
Fuchs, Hans-Bernd: *See—*
Hellermann, Walter; Herrmann, Christoph; Fuchs, Hans-Bernd; Nordsiek, Karl-Heinz; and Wolpers, Jurgen, 5,008,343, Cl. 525-316.000.

Lackner, John R., Grzywna, Stanley E., Weber, Ralph A., and Baird, Thomas E., 5,007,133, Cl. 15-351.000.

GTE Products Corporation. *See*—
Jackson, Douglas M., and Arbie, John A., Sr., 5,007,181, Cl. 34-57.00R.
Penkunas, Joseph J., and Smith, Theodore E., Jr., 5,007,957, Cl. 75-252.000.
Spencer, James R., and Mullendore, James A., 5,008,071, Cl. 419-28.000.

Gueremy, Claude; Jimonet, Patrick, and Mignani, Serge, to Rhone-Poulenc Sante. 2-iminobenzothiazoline derivatives, their preparation and pharmaceutical compositions containing them. 5,008,280, Cl. 514-367.000.

Guerra, Robert, and Soni, Pravin, to Raychem Corporation. Curable adhesives. 5,008,340, Cl. 525-193.000.

Gueth, Thomas F. *See*—
Georgiou, John, Gueth, Thomas F., and Ramsey, James S., 5,008,520, Cl. 235-462.000.

Guggenberger, Rainer. *See*—
Gasser, Oswald, Guggenberger, Rainer, and Ellrich, Klaus, 5,008,303, Cl. 522-64.000.

Guichard, Jacques, Buchner, Georges, and Labat, Jacques, to Etat Francais. Telecommunications terminal with improved control functions. 5,008,924, Cl. 379-53.000.

Guida, Wayne C. *See*—
Secrist, John A., III, Montgomery, John A., Ealick, Steve E., Enion, Mark D., and Guida, Wayne C., 5,008,265, Cl. 514-258.000.
Secrist, John A., III, Montgomery, John A., Ealick, Steve E., Enion, Mark D., and Guida, Wayne C., 5,008,270, Cl. 514-258.000.

Guillon, Henri, to Hutchinson. Sealing slideway for a moving sheet, and in particular for a motor vehicle window. 5,007,202, Cl. 49-441.000.

Gulick, James D., to Sports Glow, Inc. Golf ball and method of making same. 5,007,647, Cl. 273-213.000.

Gunn, Charles L., Davis, Harold, Spahni, Milton D., Jr., and Wanless, Ronald H., to Procter & Gamble Company, The. Carton for granular materials. 5,007,541, Cl. 206-611.000.

Gunther, Bernd-Rainer; Losch, Rainer, and Steiner, Klaus, to A. Nattermann & Cie, GmbH. Process for producing ebselen in highly pure form. 5,008,394, Cl. 548-121.000.

Gursahaney, Suresh K. *See*—
Fiebig, Carolyn A. B., Fuqua, Mike R., Gursahaney, Suresh K., Margosian, Gregg M., and Weiss, Mark H., 5,008,805, Cl. 364-184.000.

Gusching, Nagle V., to Monarch Machine Tool Company, The. Machine tool turret. 5,007,151, Cl. 29-33.00J.

Gustafsson, Par, Sobel, Jarl, and Ornholmer, Lars, to Asea Brown Boveri AB. Magnetoelastic force transducer. 5,007,295, Cl. 73-862.690.

Gustavsson, Tord G., Lyxell, Frans O. S., and Silja, Karl T. I., to Valmet Paper Machinery, Inc. Creping doctor with two suction chambers in the support beam. 5,007,986, Cl. 162-281.000.

Gutsche, Bernhard. *See*—
Bremus, Norbert, Gutsche, Bernhard, Jeromin, Lutz, Peukert, Eberhard, and Schleper, Bernard, 5,008,046, Cl. 260-410.600.

Guy, Yoram, to Monroe Auto Equipment Company. Internal damping force sensor. 5,007,659, Cl. 280-707.000.

H R Black Company. *See*—
Anderson, Raymond L., 5,008,007, Cl. 210-111.000.

Haab, William G. *See*—
Shaffer, Blaine P., and Haab, William G., 5,008,865, Cl. 368-10.000.

Haack, Johannes, to Feintool International Holding. Method and apparatus for the bending of workpieces. 5,007,264, Cl. 72-10.000.

Haag, Werner O., and Lago, Rudolph M., to Mobil Oil Corp. Direct production of styrenes by reaction of aromatics with aldehydes. 5,008,482, Cl. 585-437.000.

Habbab, Isam M. I. *See*—
Cimini, Leonard J., Jr., and Habbab, Isam M. I., 5,008,958, Cl. 455-619.000.

Haberstock, Rolf. Die device. 5,007,278, Cl. 72-383.000.

Hacault, Michel G. P., Heurtel, Bertrand J. J. M., and Serre, Jacques R., to Societe Nationale d'Etude et de Construction de Moteurs d'Aviation "S.N.E.C.M.A." Rotor blade fixing for turbomachine rotors. 5,007,800, Cl. 416-220.00R.

Hadewe B.V. *See*—
van der Werff, Adriaan, 5,007,507, Cl. 188-77.00W.

Hafla, Dietmar F., and Sommer, Guenther, to Index-Werke Komm.-Ges. Hahn & Tessky. Lathe. 5,007,314, Cl. 82-120.000.

Hagihara, Takeaki, and Aoki, Satoshi, to Asahi Medical Co., Ltd. Compact plasma separator and an apparatus containing the same. 5,008,012, Cl. 210-321.800.

Hagiwara, Kiyokazu. *See*—
Iida, Masanori, Hagiwara, Kiyokazu, Asakura, Hiroyuki, Nishioka, Minoru, and Murase, Koichi, 5,007,709, Cl. 350-162.220.

Hain, Johann. *See*—
Bierbaum, Thomas, and Hain, Johann, 5,007,831, Cl. 433-114.000.

Hainey, Melvin F. Golfer's cleaning tool. 5,007,129, Cl. 15-236.080.

Hajos, Gyorgy. *See*—
Schon, Istvan, Nyeki, Olga, Kisfaludy, Lajos, deceased, Denes, Laszlo, Hajos, Gyorgy, and Szporny, Laszlo, 5,008,246, Cl. 514-18.000.

Hale, Peter G., and Russell, John N., to STC plc. Method of making optical fibre cables. 5,007,703, Cl. 350-96.230.

Hall, Robert E., Spolek, Graig A., Wasser, John H., and Butts, Nelson L., to United States of America, U.S. Environmental Protection Agency. Woodstove for heated air forced into a secondary combustion chamber and method of operating same. 5,007,404, Cl. 126-77.000.

Hallbach, Raymond L., to Cincinnati Milacron Inc. Lubrication apparatus and method. 5,007,504, Cl. 184-8.000.

Halliburton Company. *See*—
Gardner, Tommy R., Dill, Walter R., Ford, William G. F., and King, Karen L., 5,008,026, Cl. 252-8.553.

Halloran, Daniel J., Kasprzak, Kenneth A., Savastano, Stefano G., and Swihart, Terence J., to Dow Corning Corporation. Water-sheeting zwitterionomeric aminofunctional siloxanes. 5,008,424, Cl. 556-419.000.

Haluska, Loren A., Michael, Keith W., and Tarhay, Leo, to Dow Corning Corporation. Platinum or rhodium catalyzed multilayer ceramic coatings from hydrogen silsesquioxane resin and metal oxides. 5,008,320, Cl. 524-361.000.

Hamada, Tadao. *See*—
Okumura, Kin-ichi, Chono, Koji; Ozeki, Hiroshi; and Hamada, Tadao, 5,008,065, Cl. 264-328.600.

Hamanishi, Yoshinari, to Nikon Corporation. Lens system enabling close distance photographing. 5,007,720, Cl. 350-463.000.

Hamatsu, Mashiro, and Endo, Mamoru, to Clarion Co., Ltd. Carrier modulating device for a spread spectrum communication device. 5,008,898, Cl. 375-1.000.

Hamerski, Roman. *See*—
Edmond, John A., Waltz, Douglas G.; Mitchell, Muni M., Sedigh, Mohammad, and Hamerski, Roman, 5,008,735, Cl. 357-74.000.

Hamilton, Scott B., and Rosenow, Michael J., to Exchange System Limited Partnership, The. Backup/restore technique in a microcomputer-based encryption system. 5,008,936, Cl. 380-50.000.

Hamilton Standard Controls, Inc. *See*—
Brown, Kenneth, and Riley, Richard E., 5,007,159, Cl. 29-622.000.

Hamilton, T. A., to Unisys Corporation. Document feeder window closed detection assembly. 5,008,500, Cl. 200-61.700.

Hammar, Lars-Ake. *See*—
Engstrand, Per O., Hammar, Lars-Ake, Htun, Myat T., and Pettersson, Rune L., 5,007,985, Cl. 162-26.000.

Hammerlit GmbH. *See*—
Meseke, Curt T., Winkler, Winfried, and Hilbig, Renate, 5,007,535, Cl. 206-366.000.

Hamonet, Michael. *See*—
Abraham, Joseph, Hamonet, Michael, Gracie, Phillip, and Hood, Warwick J., 5,007,360, Cl. 114-90.000.

Hamprecht, Gerhard. *See*—
Ditrich, Klaus, Hamprecht, Gerhard, Wuerzer, Bruno, Meyer, Norbert, Westphalen, Karl-Otto, and Laatsch, Hartmut, 5,007,954, Cl. 71-90.000.

Han, Wesley W. *See*—
Edwards, John G.; Han, Wesley W., and Ali, Yusuf, 5,008,255, Cl. 514-155.000.

Hanagan, Mary A., to Du Pont de Nemours, E. I., and Company. Herbicidal pyridine sulfonamides. 5,008,393, Cl. 546-261.000.

Hanaoka, Osamu. *See*—
Seki, Masaki, Samukawa, Koji, and Hanaoka, Osamu, 5,008,806, Cl. 364-191.000.

Hanbler, Gerd. *See*—
Klausener, Alexander, Kleefeld, Gerd, Berg, Dieter, Dutzmann, Stefan, and Hanbler, Gerd, 5,008,275, Cl. 514-334.000.

Handler, Rudolf, to Veitscher Magnesitwerke-Actien-Gesellschaft. Refractory gas permeable bubbling plug. 5,007,366, Cl. 116-208.000.

Handley, Terry L. *See*—
Cox, Laurence C.; Dugan, Raymond, Evans, Daniel D., Griffith, Robert, Handley, Terry L., and Leeper, Jeffrey J., 5,007,318, Cl. 83-425.200.

Hani, Rahim. *See*—
Day, Roger W., and Hani, Rahim, 5,008,443, Cl. 560-169.000.

Hanich, Juergen. *See*—
Speer, Dietrich; Kiss, Akos; Kleinschmit, Peter; and Hanich, Juergen, 5,008,223, Cl. 106-450.000.

Hanke, Carl C., Obregon, Carlos D., and Atriss, Ahmad H., to Motorola, Inc. Phase-lock-loop lock indicator circuit. 5,008,635, Cl. 331-1.00A.

Hanna, Mark. Variable speed lever propelled wheelchair. 5,007,655, Cl. 280-250.100.

Hannon, Charles, and Vallender, Leonard J., to Hannon, Charles. Container lift tab. 5,007,554, Cl. 220-269.000.

Hans, Lynn M. *See*—
Allen, Richard B., Gibbs, William E., and Hans, Lynn M., 5,008,298, Cl. 521-139.000.

Hansen, Gary L. *See*—
Trapp, Richard E., Hansen, Gary L., Clay, Robert B., Dubetsky, Lawrence J., and Olney, Robert S., 5,007,973, Cl. 149-109.600.

Hansen, Steven D. *See*—
Farrall, George A., and Hansen, Steven D., 5,008,912, Cl. 378-91.000.

Hanson, Charles M. and MacDonald, Virginia N., to Varo, Inc. Self adjusting matrix display. 5,008,657, Cl. 340-766.000.

Hanson, Eric G. *See*—
Pan, Alfred I-Tsung; Hanson, Eric G.; Schantz, Christopher A., and Childers, Winthrop D., 5,008,689, Cl. 346-140.00R.

Hanson, Richard A. *See*—
Egley, Bert, and Hanson, Richard A., 5,007,290, Cl. 73-517.00R.

Hanulik, Jozef, to Recytec SA. Process for decontaminating radioactively contaminated metal or cement-containing materials. 5,008,044, Cl. 252-628.000.

Hanyu, Yukio, and Uchimi, Toshiharu, to Canon Kabushiki Kaisha. Liquid crystal device. 5,007,716, Cl. 350-336.000.

Hara, Hitoshi; and Inoue, Katsutoshi, to Sumitomo Heavy Industries, Ltd. Injection molding machine. 5,007,822, Cl. 425-575.000.

Hara, Koichi A., to Hoya Corporation. Process for producing glass. 5,008,219, Cl. 501-12.000.

Harada, Susumu, to Toshiba Machine Co., Ltd. Mold clamping pressure control method for injection compression molding and injection compression molding machine. 5,008,052, Cl. 264-40.500.

Harding, Geoffrey, to U.S. Philips Corporation. X-ray quanta measuring device including diaphragm for producing conical radiation beam on object being measured. 5,008,911, Cl. 378-86.000.

Hardt, Norbert. *See*—
Schulte, Burkart; Sterner, Hakan, Wetzka, Gerhard, and Hardt, Norbert, 5,007,213, Cl. 52-29.000.

Harman, Phillip R. *See*—
Goodley, George R., Harman, Phillip R., and Prather, Charles W., 5,007,193, Cl. 43-42.280.

Harris Corporation. *See*—
Schrantz, Gregory A., 5,008,719, Cl. 357-22.000.

Harris, Dawn E., and Orr, William H., to AT&T Bell Laboratories. Microprocessor-controlled apparatus adaptable to environmental changes. 5,007,520, Cl. 194-317.000.

Harris, Mark. *See*—
Jachmann, Emil F., Saltzman, Jeremy, Chamberlin, David B., D'Agosto, Nicholas A., Harris, Mark; and Su, Jy-hong, 5,008,835, Cl. 364-513.500.

Harris, Paul J., and Wojcik, Ronald T., to BASF Corporation. Resins of epoxy/aromatic diol copolymer and block copolymer of epoxy/aromatic diol copolymer and a epoxy-capped polybutadiene (co)polymer. 5,008,334, Cl. 525-109.000.

Harsanyi, Otto. *See*—
Bogner, Martin, Harsanyi, Otto, and Peyre, Henri, 5,007,657, Cl. 280-626.000.

Hart, Ronald L. *See*—
Herbel, Albert J., Hart, Ronald L., and Work, Dale E., 5,008,133, Cl. 427-333.000.

Hartmann, Heinrich, Denzinger, Walter, Kroener, Michael, Sendhoff, Norbert, and Freudenberg, Enrique, to BASF Aktiengesellschaft. Preparation of stable water-in-oil emulsions of hydrolyzed polymers of N-vinylamides and their use. 5,008,321, Cl. 524-378.000.

Hartmann, Heinrich. *See*—
Diessel, Paul, Perner, Johannes; Denzinger, Walter, Hartmann, Heinrich, and Raubenheimer, Hans-Juergen, 5,008,032, Cl. 252-174.240.

Hartt, Joseph R. Hydraulic pump with pulsating high and low pressure outputs. 5,007,812, Cl. 417-534.000.

Hartwig, Hagen, to Siemens Aktiengesellschaft. Method and device for converting voltage to frequency. 5,008,564, Cl. 307-271.000.

Haruta, Masahiro: *See*—
Nishimura, Yukuo; Haruta, Masahiro, Munakata, Hirohide; Kuwae, Yoko; Miyazaki, Toshihiko, and Yuasa, Satoshi, 5,007,714, Cl. 350-353.000.

Harvey, Robin T., to Hughes Aircraft Company. Compact high voltage power supply. 5,008,798, Cl. 363-59.000.

Hasegawa, Akira, to Olympus Optical Co., Ltd. Varifocal imaging optical system having moire eliminating function. 5,007,719, Cl. 350-425.000.

Hashiba, Yukifumi. *See*—
Muramatsu, Sadao, Hashiba, Yukifumi, and Ikeda, Yuuichi, 5,008,698, Cl. 354-429.000.

Hashimoto, Akihiro. *See*—
Ryoke, Katsumi, Takahashi, Masatoshi, Hashimoto, Akihiro, and Hasumi, Kazuo, 5,008,147, Cl. 428-323.000.

Hashimoto, Akira, and Arai, Shunji, to Murata Mfg. Co., Ltd. Deflection yoke device. 5,008,600, Cl. 315-370.000.

Hashimoto, Kengiro. *See*—
Masuda, Takashi; Hashimoto, Kengiro, Takagi, Shinichi, and Tanaka, Masayuki, 5,007,884, Cl. 474-242.000.

Hashimoto, Kiyokazu, to NEC Corporation. Power supply voltage drop detection circuit for use in EEPROM memory. 5,008,566, Cl. 307-296.800.

Hashimoto, Ryusuke, Iwata, Mitsuru, Sugihara, Junichi, and Iwase, Minoru, to Fujimi Ceramic Co., Ltd. Process for producing a ceramic product using sludge ashes. 5,008,053, Cl. 264-60.000.

Hashimoto, Takahito. *See*—
Isakozawa, Shigeto, and Hashimoto, Takahito, 5,008,536, Cl. 250-307.000.

Hashimoto, Takeshi. *See*—
Tominaga, Shinji; and Hashimoto, Takeshi, 5,008,699, Cl. 354-457.000.

Hasumi, Kazuo. *See*—
Ryoke, Katsumi, Takahashi, Masatoshi, Hashimoto, Akihiro, and Hasumi, Kazuo, 5,008,147, Cl. 428-323.000.

Hata, Akio. *See*—
Nakachi, Takeshi; Hata, Akio, and Watanabe, Yoshihisa, 5,008,357, Cl. 526-292.200.

Hatakawa, Yoshio: *See*—
Matsumoto, Shusaku, Hatakawa, Yoshio, and Nakajima, Akihiko, 5,008,387, Cl. 536-119.000.

Hatanaka, Chitoshi, and Oi, Satoru, to Takeda Chemical Industries, Ltd. Selective etherification. 5,008,405, Cl. 549-315.000.

Hattori, Akio: *See*—
Mizuniwa, Seiji; Hattori, Akio; Kurihara, Tooru, Aoyama, Seigi, and Nakamura, Konichi, 5,007,979, Cl. 156-605.000.

Hattori, Isao, and Futamura, Shoji, to NGK Insulators, Ltd., and Institute of Technology Precision Electrical Discharge Works. Production method of honeycomb die-forming electrical discharge machining electrodes and production method of honeycomb dies. 5,008,509, Cl. 219-69.150.

Hattori, Shintarou, Takahagi, Takayuki, and Ishitani, Akira, to Research Development Corporation. Vacuum depositing apparatus. 5,007,372, Cl. 118-715.000.

Hattori, Tadashi: *See*—
Taga, Yasunori, Yamadera, Hideya, Aoki, Keiji, and Hattori, Tadashi, 5,008,149, Cl. 428-336.000.

Hattori, Tsuneichi, and Iga, Kazuo, to Koyo Seiko Co., Ltd. Retainer for one-way clutch. 5,007,514, Cl. 192-45.000.

Hattori, Yoshifumi. *See*—
Ebinuma, Ryuichi, Hattori, Yoshifumi, and Ichihashi, Hiroo, 5,008,688, Cl. 346-140.00R.

Hattori, Yoshio, to Seiko Instruments Inc. Semiconductor variable capacitance element. 5,008,738, Cl. 357-23.600.

Hawker, Michael J., to Clayton Dewandre Co., Ltd. Pilot-operated hydraulic antilock modulator. 5,007,455, Cl. 137-596.160.

Hay & Forage Industries. *See*—
Nickel, Dwight E., O'Halloran, Michael L., and Case, Cecil L., 5,007,235, Cl. 56-12.400.

Hayashi, Chihiro. *See*—
Nakasuji, Kazuyuki, Hayashi, Chihiro, and Suzushima, Yoshiyuki, 5,007,577, Cl. 228-265.000.

Hayashi, Norihiko. *See*—
Saotome, Yoshimi, Kuchiki, Kiyotsuna, and Hayashi, Norihiko, 5,007,544, Cl. 212-265.000.

Hayashi, Yoshimasa. *See*—
Tamazawa, Tsuyoshi, and Hayashi, Yoshimasa, 5,007,307, Cl. 74-606.00R.

Hayashida, Akira: *See*—
Takeda, Yoshifumi, Takamizawa, Minoru, and Hayashida, Akira, 5,008,348, Cl. 525-474.000.

Hayes, Deborah E., to PPG Industries, Inc. Corrosion inhibitive pretreatment for "copper-free" mirrors. 5,008,153, Cl. 428-429.000.

Hays, Mary K. *See*—
Brownell, George L., Hays, Mary K., and Sivak, Andrew J., 5,008,421, Cl. 556-406.000.

Hazebrook, Daniel W., to GKN Automotive, Inc. Multi-component, multi-segment, non-flexible boot for mechanical joint. 5,007,881, Cl. 464-171.000.

Heacock, Gregory L.: *See*—
Erickson, Phillip J., Crossman, Janet L., Heacock, Gregory L.; and Mainster, Martin A., 5,007,729, Cl. 351-219.000.

Health Research, Inc.: *See*—
Cheng, Yung-chi; and Bobek, Miroslav, 5,008,252, Cl. 514-50.000

Heaney, Stephen P.: *See*—
Clough, John M., Godfrey, Christopher R. A.; Heaney, Stephen P.; and Anderton, Kenneth, 5,008,276, Cl. 514-335.000.

Hebben & Fischbach GmbH *See*—
Dahle, Olof, and Fischbach, Manfred, 5,007,487, Cl. 175-57.000.

Hebisch, Siegbert *See*—
Franckowiak, Gerhard; Stoltefuss, Jurgen; Bechem, Martin, Gross, Rainer; Kayser, Michael, Hebisch, Siegbert; and Schramm, Matthias, 5,008,279, Cl. 514-354.000

Heckel, Armin, Nickl, Josef, Muller, Erich, Narr, Berthold; Weisenberger, Johannes; Eisert, Wolfgang; and Muller, Thomas, to Dr. Karl Thomae GmbH. Sulphonamidoethyl compounds and pharmaceutical compositions comprising these compounds. 5,008,290, Cl. 514-544.000.

Hecker, Eric *See*—
Bayerlein, Jorg; Hecker, Eric, Hoeck, Peter, and Milani, Francesco, 5,007,688, Cl. 312-7.200

Hedges, Allan; and Tenbarge, Frank, to American Maize-Products Company. Cyclodextrin complexing method. 5,007,966, Cl. 127-34.000.

Hehl, Karl. Injection molding machine having a displacement control for an injecting unit carrier. 5,007,816, Cl. 425-135.000.

Heil, Balint *See*—
Bakos, Jozsef; Heil, Balint, Toth, Imre; Edes, Bela, Gebhardt, Tstvan; Bihari, Ferenc; Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno, Konok nee Horvath, Eva, Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000.

Heimbigner, Wade L. *See*—
Critchlow, David N.; Yehushua, Moshe; Avis, Graham M.; Heimbigner, Wade L.; Johnson, Karle J.; and Wiley, George A., 5,008,900, Cl. 375-8.000.

Heinen, Hartwig *See*—
Schindler, Juergen; and Heinen, Hartwig, 5,008,775, Cl. 361-383.000.

Heinen, Jochen: *See*—
Amann, Markus-Christian, Baumann, Gerhard, Heinen, Jochen, and Thulke, Wolfgang, 5,008,893, Cl. 372-50.000

Heinz, Gerhard *See*—
Ittemann, Peter; Simon, Georg N., Heinz, Gerhard, Zeiner, Hartmut, Buchert, Hermann, and Seibring, Joachim, 5,008,364, Cl. 528-172.000.

Heiple, Holly C.: *See*—
Brunnett, Carl J.; Zachary, Allen B., and Heiple, Holly C., 5,008,822, Cl. 364-413.210.

Helfet, Peter R. *See*—
Longman, Robert J., Helfet, Peter R., and Abrams, Michael J., 5,008,687, Cl. 346-135.100

Helland, Earl *See*—
Craig, Stuart, and Helland, Earl, 5,007,320, Cl. 83-745.000

Hellermann, Walter; Herrmann, Christoph, Fuchs, Hans-Bernd, Nordsiek, Karl-Heinz; and Wolpers, Jurgen, to Huls Aktiengesellschaft. Process for the preparation of polymers based on conjugated dienes and optionally monovinylaromatic compounds. 5,008,343, Cl. 525-316.000.

Heilige GmbH: *See*—
Ahsbahs, Walter; and Leist, Helmut, 5,007,424, Cl. 128-635.000

Hemenway, Carl P.: *See*—
Killgoar, Paul C., Jr., Samus, Marsha A.; Koller, Robert D., Sr., and Hemenway, Carl P., 5,008,324, Cl. 524-504.000

Hemmie, Dale L., to Conifer Corporation. Interdigital local oscillator filter apparatus. 5,008,956, Cl. 455-318.000.

Hen, John, to Mobil Oil Corporation. Sulfonate-containing polymer/-polyanionic cellulose combination for high temperature/high pressure filtration control in water base drilling fluids. 5,008,025, Cl. 252-8.510

Hendy, Brian N., to Imperial Chemical Industries PLC. Substituted aromatic polymers. 5,008,352, Cl. 525-534.000

Henkel Kommanditgesellschaft auf Aktien. *See*—
Bremus, Norbert, Gutsche, Bernhard; Jeromin, Lutz; Peukert, Eberhard, and Schleper, Bernard, 5,008,046, Cl. 260-410.600.
Schulz, Paul; and Schwadtke, Karl, 5,008,031, Cl. 252-168.000

Henneberger, Hans; and Basel, Rainer, to Siemens Aktiengesellschaft. Method for manufacturing an otoplastic or an ear adaptor member. 5,008,058, Cl. 264-134.000.

Hennecke, Hauke: *See*—
Rolfe, Barry G., Shine, John; Scott, Kieran F., and Hennecke, Hauke, 5,008,194, Cl. 435-172.300

Henning, Rainer. *See*—
Urbach, Hansjorg; Henning, Rainer; Teetz, Volker; Geiger, Rolf; Becker, Reinhard, and Gaul, Holger, 5,008,400, Cl. 548-452.000

Hennings, Detlev, Hoffmann, Bernd F. W., and Nutto, Markus, to U.S. Philips Corporation. Non-linear voltage-dependent resistor. 5,008,646, Cl. 338-20.000.

Henry, Mark; and Saenz, Hillary. Comparator. 5,007,642, Cl. 273-148.00R.

Herbet, Albert J.; Hart, Ronald L.; and Work, Dale E. Method of coating a web with a coating mixture including microcapsules crushed by a back-up member. 5,008,133, Cl. 427-333.000.

Hercules Incorporated: *See*—
Antoon, Mitchell K., Jr., and Hill, David J., 5,008,296, Cl. 521-91.000.
Bard, John K.; and Burnier, Julia S., 5,008,360, Cl. 528-25.000.
Marks, John D., 5,007,343, Cl. 102-290.000.

Hergeth Hollingsworth GmbH: *See*—
Graute, Horst, 5,007,137, Cl. 19-296.000.

Hertier-Best, Pierre, to Valeo Electronique. Ignition coil having a divided high tension winding, in particular for internal combustion engines. 5,008,643, Cl. 336-96.000.

Herman, Martin L., to Hughes Aircraft Company. Electronically scanning vehicle radar sensor. 5,008,678, Cl. 342-158.000.

Herman, Thomas: *See*—
Lidow, Alexander; Herman, Thomas, and Rumennik, Vladimir, 5,008,725, Cl. 357-23.400.

Hermsdorffer, Joachim; Galfe, Gunther; Lautenbacher, Stefan; Korte, Reinhard; Krause, Hans-Joachim, Krull, Frans, May, Arno, Oberdorfer, Dietmar, and Pluquett, Ulrich, to Phywe Systeme GmbH. Stimulation device. 5,007,433, Cl. 128-742.000.

Herrington, Fox J., to Mobil Oil Corp. Method of assembling a snapped-together multipart plastic slider with a plastic reclosable fastener. 5,007,142, Cl. 24-400.000.

Herrington, Fox J., to Mobil Oil Corp. Rolling action zipper profile and slipper therefor. 5,007,143, Cl. 24-400.000.

Herrmann, Christoph *See*—
Hellermann, Walter, Herrmann, Christoph; Fuchs, Hans-Bernd; Nordsiek, Karl-Heinz; and Wolpers, Jurgen, 5,008,343, Cl. 525-316.000.

Herrmann, Hellmut A.; and Hubeler, Wolfgang, to Schmidt'sche Heissdampf GmbH. Process for the cleaning of steam generator heating surfaces. 5,007,970, Cl. 134-42.000

Herziger, Gerd W. *See*—
Klein, Rolf M., Poprawe, Reinhart; and Herziger, Gerd W., 5,007,686, Cl. 300-21.000

Herzog, Kenneth. Adjustable bottle gripper belt. 5,007,228, Cl. 53-282.000.

Hess, Douglas N.: *See*—
Doan, Phong D., Upton, James E., Hess, Douglas N.; Bass, Wayne R., and Ufford, Keith A., 5,007,435, Cl. 128-784.000.

Hestekin, Ralph A.: *See*—
Scarberry, Paul W., Kazemba, Rodney L.; and Hestekin, Ralph A., 5,007,744, Cl. 383-37.000

Heurtel, Bertrand J. J. M.: *See*—
Hacault, Michel G. P.; Heurtel, Bertrand J. J. M., and Serre, Jacques R., 5,007,800, Cl. 416-220.00R.

Hewlett-Packard Company: *See*—
Adcock, James L., 5,008,845, Cl. 364-576.000.
Chiang, Shang-yi; Huang, Wen-Ling M., Drowley, Clifford I.; and Voorde, Paul V., 5,008,210, Cl. 437-33.000.
Horn, Marcus J., 5,008,205, Cl. 436-89.000
Mangelsdorf, Steven T., and James, David V., 5,008,904, Cl. 375-107.000
Mason, Scott C.; and Slutz, Robert A., 5,007,844, Cl. 439-68.000
Nelson, Nancy W., Cosart, Lee D., III, Peregrino, Luiz; and Ingman, Eric M., 5,008,610, Cl. 324-84.000.
Pan, Alfred I-Tsung; Hanson, Eric G., Schantz, Christopher A., and Childers, Winthrop D., 5,008,689, Cl. 346-140.00R
Scherer, Dieter; and Strasser, William E., 5,008,631, Cl. 330-51.000.
Shreeve, Robert W.; and Boyd, Melissa D., 5,008,614, Cl. 324-158.00F

Heywang, Gerhard; and Jonas, Friedrich, to Bayer Aktiengesellschaft. Mercaptopyrenes, preparation thereof and use thereof for the preparation of charge transfer complexes. 5,008,430, Cl. 558-396.000.

HGZ Maschinenbau AG *See*—
Sager, Peter, 5,007,333, Cl. 99-286.000.

Hi, Gavriel M *See*—
Berkowitz, Yehuda; Hi, Gavriel M.; and Mizrahi, Yehuda, 5,007,453, Cl. 137-458.000.

Hi-Life Rubber Inc.: *See*—
Larson, Reed A., 5,007,378, Cl. 119-14.470.

Hibbard, Robert H.: *See*—
D'Luna, Lionel J., Hibbard, Robert H.; and Parulski, Kenneth A., 5,008,739, Cl. 358-21.00R.

Hickmann, Eckhard. *See*—
Naeumann, Fritz; and Hickmann, Eckhard, 5,008,461, Cl. 568-322.000.

Hideharu, Nagahama, to Yoko Co., Ltd. Belt conveyor supporting arrangement. 5,007,528, Cl. 198-823.000.

Higashio, Kimihiko; and Kawabuchi, Yoichi, to Minolta Camera Kabushiki Kaisha. Image forming apparatus having an automatic document feed device for automatically discharging a manually positioned document. 5,008,714, Cl. 355-313.000.

Higgins, Ian; and Baxendale, Andrew, to United Kingdom Atomic Energy Authority. Method of producing silicon carbide-based bodies. 5,008,159, Cl. 428-614.000.

Highland Supply Corporation: *See*—
Weder, Donald E.; Straeter, William F.; Straeter, Joseph G.; Craig, Franklin J.; Donnelly, Wilma M.; and Redditt, Jack W., 5,007,229, Cl. 53-397.000.

Highsmith, Ronald E.; and Larson, Eric H., to Polypure, Inc. Homogeneous mixtures of solid organic acids and solid cationic ester-based polymer flocculants. 5,008,319, Cl. 524-321.000.

Hilbig, Renate *See*—
Meseke, Curt T.; Winkler, Winfried, and Hilbig, Renate, 5,007,535, Cl. 206-366.000

Hill, David J.: *See*—
Antoon, Mitchell K., Jr., and Hill, David J., 5,008,296, Cl. 521-91.000

Hill, Jamie R. Blade modification tool and process. 5,007,167, Cl. 29-889.100

Hill, Kimuel L. *See*—
Schlesinger, Robert A., Hill, Kimuel L., Ali, Hamid S., and Watson, Mark F., 5,008,655, Cl. 340-691.000

Hilland, David H., to United States of America, Air Force. Filter pin integrated circuit socket kit. 5,008,770, Cl. 361-56.000

Hillestad, Mark W. *See*—
Hillestad, Tollief O., and Hillestad, Mark W., 5,007,778, Cl. 408-125.000.

Hillestad, Tollief O., and Hillestad, Mark W. Portable power tool for milling tube ends. 5,007,778, Cl. 408-125.000

Hillis, W. Daniel, to Thinking Machines Corporation. Parallel processor. 5,008,815, Cl. 364-200.000

Hilti Aktiengesellschaft: *See*—
Hoffmann, Armin; Ludwig, Wolfgang, and Leibhard, Erich, 5,007,780, Cl. 411-82.000

Himmel, Francis, to Chrysler Corporation. Luggage rack for a vehicle. 5,007,570, Cl. 224-321.000

Himmler, Ronald *See*—
Czubatyj, Wolodymyr, and Himmler, Ronald, 5,008,617, Cl. 324-158.00R.

Hiraga, Ryo *See*—
Siga, Masao, Fukui, Yutaka, Kuriyama, Mitsuo, Kurosawa, Soichi, Iijima, Katsumi, Iizuka, Nobuyuki, Maeno, Yosimi, Takahashi, Shintaro, Watanabe, Yasuo, and Hiraga, Ryo, 5,008,072, Cl. 420-69.000

Hirai, Yoshikatsu: *See*—
Nakai, Satoru, Kaneta, Mayumi; Kikumoto, Yoshikazu, Hong, Yeong-Man, Kawai, Kazuyoshi; Takegata, Setsuko; Ishii, Kiyoshi; Yanagihara, Yasuo; and Hirai, Yoshikatsu, 5,008,374, Cl. 530-351.000

Hirama, Yasuo *See*—
Ozawa, Makoto, Hirama, Yasuo, and Mizuno, Shyuzi, 5,007,677, Cl. 297-284.000

Hirano, Masaki: *See*—
Kobayashi, Hitoshi, Takano, Akira, Narusawa, Naoharu; Tsukada, Yukihiko, Sakamoto, Hiroshi, Hirano, Masaki, and Ando, Masao, 5,008,710, Cl. 355-202.000.

Hiratsuka, Katsuo; Odaka, Yoshiyuki, and Yoshida, Takeshi, to SSMC Inc. Cutter actuator of a button perforating sewing machine. 5,007,356, Cl. 112-68.000

Hirauchi, Yoshio *See*—
Kitaura, Hiromu; Isobe, Mitsuo, Kawahara, Isao, Hirauchi, Yoshio, Ninomiya, Yuichi, Ohtsuka, Yoshimichi; and Izumi, Yoshinori, 5,008,753, Cl. 358-171.000.

Hirleman, Edwin D., Jr., to United States of America, Air Force. Programmable detector configuration for Fraunhofer diffraction particle sizing instruments. 5,007,737, Cl. 356-336.000

Hiro, Masaaki: *See*—
Nakagawa, Masaru; Sumino, Fumio; Hiro, Masaaki; Kashimura, Noboru, and Nagahara, Shin, 5,008,168, Cl. 430-56.000

Hirohata, Michio, to Canon Kabushiki Kaisha Camera. 5,008,693, Cl. 354-214.000.

Hirota, Kunio *See*—
Aoshima, Syozo, Hirota, Kunio, Sakakibara, Hiroshi, Sawai, Naoyuki, and Sato, Takeaki, 5,007,281, Cl. 72-406.000.

Hirschberg, Ekkehard: *See*—
Huebner, Dietmar, Nagel, Peter, Hirschberg, Ekkehard; Schoettle, Klaus, and Pavelka, Bozidar, 5,007,536, Cl. 206-394.000

Hirumi, Yasushi, to Sony Corporation. Gray scale generating circuit for thermal printer. 5,008,837, Cl. 364-519.000.

Hirzel Suzy C. Double blocking members sealing a single opening means. 5,007,442, Cl. 132-218.000

Hitachi Cable Limited *See*—
Mizuniwa, Seiji, Hattori, Akio, Kurihara, Tooru, Aoyama, Seigi, and Nakamura, Koniehi, 5,007,979, Cl. 156-605.000

Hitachi Instrument Engineering Co., Ltd *See*—
Toita, Hiroshi; Tamura, Hifumi, Tobita, Issei; and Iwamoto, Hiroshi, 5,008,537, Cl. 250-309.000.

Hitachi Koki Co., Ltd.: *See*—
Kumasaka, Takao, and Simazaki, Yuzuru, 5,008,691, Cl. 346-157.000
Onose, Tsukasa, Kikuchi, Yasuo; Ogawa, Toshitaka, and Seino, Minoru, 5,008,716, Cl. 355-322.000

Hitachi, Ltd.: *See*—
Aoyama, Motoo, Koyama, Junichi, Uchikawa, Sadao; Bessho, Yasunori; Ozawa, Michihiro; Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000
Beppu, Osamu, Moribe, Toshihiro; Tezuka, Youjiro, and Chuma, Akira, 5,008,573, Cl. 310-67.00R.
Isakozawa, Shigeto; and Hashimoto, Takahito, 5,008,536, Cl. 250-307.000.
Kawachi, Genshiro; Mimura, Akio; Konishi, Nobutake; Ono, Kikuo; and Suzuki, Takashi, 5,008,218, Cl. 437-201.000.
Kawasaki, Yoshinao; Kawahara, Hironobu; Sato, Yoshiaki; Fukuyama, Ryooji; Nojiri, Kazuo; and Torii, Yoshimi, 5,007,981, Cl. 156-643.000.
Kitamura, Youichi; and Tajimi, Michiko, 5,008,923, Cl. 379-3.000.
Kudo, Takanori; and Ishihara, Heigo, 5,008,128, Cl. 427-130.000
Kumasaka, Takao, and Simazaki, Yuzuru, 5,008,691, Cl. 346-157.000
Miyazaki, Hideki, Kanouda, Akihiko, Onda, Kenichi, and Matsuda, Yasuo, 5,008,586, Cl. 323-315.000
Nishiyama, Nobumasa, Saito, Makoto, Ouchi, Yasuhide, Katoh, Yasuhiro, Kamo, Yoshihisa; Koizumi, Makoto, Aoi, Hajime, Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000
Ohki, Hiroshi, Kamohara, Hideaki, and Miyake, Ryo, 5,007,732, Cl. 356-73.000
Shibata, Masabumi; Ishiyama, Akira, and Takemoto, Takeshi, 5,008,817, Cl. 364-200.000.
Siga, Masao, Fukui, Yutaka; Kuriyama, Mitsuo, Kurosawa, Soichi, Iijima, Katsumi; Iizuka, Nobuyuki, Maeno, Yosimi, Takahashi, Shintaro, Watanabe, Yasuo, and Hiraga, Ryo, 5,008,072, Cl. 420-69.000
Takanobu, Hiroshi, 5,008,589, Cl. 313-456.000
Tanaka, Tsutomu; Oshida, Yoshitada, Shiba, Masataka, Nakashima, Naoto, and Funatsu, Ryuichi, 5,008,702, Cl. 355-52.000
Toita, Hiroshi, Tamura, Hifumi, Tobita, Issei, and Iwamoto, Hiroshi, 5,008,537, Cl. 250-309.000
Tsutsuta, Koji, and Seki, Kiwao, 5,008,627, Cl. 324-444.000

Hitachi Maxell, Ltd *See*—
Kumada, Akio, Iochi, Takahiko, and Okada, Minoru, 5,008,581, Cl. 310-323.000
Mikamo, Hisanobu; Odani, Noboru, and Shimizu, Akio, 5,008,152, Cl. 428-423.100.

Hitachi Metals, Ltd: *See*—
Iwata, Hitoshi, Noguchi, Kazumi, Nishiyama, Toshikazu, and Shinohara, Tadashi, 5,008,767, Cl. 360-103.000

Hoashimoto, Takeshi *See*—
Suzuki, Akio; Kishita, Hirofumi, Sonegawa, Shigehisa, Matumura, Masaaki; and Hoashimoto, Takeshi, 5,007,726, Cl. 351-41.000

Hochberg, Nelson. Lapboard. 5,007,192, Cl. 40-661.000

Hodges, Jeffery D.: *See*—
Bly, Sara A., Farrand, A. Brady, Hodges, Jeffery D., Kupfer, Michael D.; Lewis, Brian T., Maybury, William J., Tallan, Michael L., and Tom, Stephen B., 5,008,853, Cl. 364-900.000

Hoechst Aktiengesellschaft: *See*—
Beck, Horst-Philipp, Emig, Gerhard, Wiesgickl, Gunther, Burg, Karlheinz, and Muck, Karl-Friedrich, 5,008,463, Cl. 568-487.000
Engel, Dieter, Mondt, Josef; and Zimmerschied, Klaus, 5,008,155, Cl. 428-463.000
Gerdau, Thomas, Kleiner, Hans-Jerg, Peuckert, Marcellus, Bruck, Martin; and Aldinger, Fritz, 5,008,423, Cl. 556-412.000
Kleiner, Hans-Jerg, Gersdorf, Joachim, and Bastian, Udo, 5,008,426, Cl. 558-82.000
Uhrig, Heinz; Ehl, Klaus, and Deubel, Reinhold, 5,008,442, Cl. 560-149.000
Urbach, Hansjorg, Henning, Rainer, Teetz, Volker; Geiger, Rolf, Becker, Reinhard, and Gaul, Holger, 5,008,400, Cl. 548-452.000
Wilharm, Peter, Buhr, Gerhard, and Fuchs, Juergen, 5,008,362, Cl. 528-28.000

Hoechst Celanese Corporation *See*—
Elango, Varadaraj; and Davenport, Kenneth G., 5,008,439, Cl. 560-61.000.
Hsieh, Shane; and Stahlhofen, Paul, 5,008,175, Cl. 430-155.000
Nichols, Carl S., 5,008,230, Cl. 502-170.000.
Platzer, Stephan J. W., 5,008,174, Cl. 430-143.000
Wadhwa, Lachhman; and Steurer, Andrew M., 5,008,316, Cl. 524-230.000

Hoechst-Roussel Pharmaceuticals Inc: *See*—
Davis, Larry, 5,008,264, Cl. 514-253.000
Hrib, Nicholas J., 5,008,407, Cl. 549-383.000.
Martin, Lawrence L., and Setescak, Linda L., 5,008,285, Cl. 514-450.000.

Hoeck, Peter: *See*—
Bayerlein, Jorg; Hecker, Eric, Hoeck, Peter, and Milani, Francesco, 5,007,688, Cl. 312-7.200

Hoefke, Wolfgang: *See*—
Schnorrenberg, Gerd, Roos, Otto, Losel, Walter, Wiedemann, Ingrid, Gaida, Wolfram, Hoefke, Wolfgang, Arndts, Dietrich, and Streller, Ilse, 5,008,273, Cl. 514-301.000

Hoever, Franz-Peter: *See*—
Kruger, Bernd-Wieland; Sasse, Klaus, Hoever, Franz-Peter, Nentwig, Gunther, and Behrenz, Wolfgang, 5,008,261, Cl. 514-212.000.

Hoffman, Edward J.: *See*—
Mazziotta, John C.; Daghighian, Farhad, and Hoffman, Edward J., 5,008,546, Cl. 250-366.000

Hoffmann, Armin; Ludwig, Wolfgang; and Leibhard, Erich, to Hilti Aktiengesellschaft. Attachment member anchored by hardenable mass to panel-shaped structural component. 5,007,780, Cl. 411-82.000.

Hoffmann, Bernd F. W.: *See*—
Hennings, Detlev; Hoffmann, Bernd F. W.; and Nutto, Markus, 5,008,646, Cl. 338-20.000.

Hoffmann, Karlheinz: *See*—
Grohn, Michael; Murwald, Mario, Thoma, Frank, and Hoffmann, Karlheinz, 5,007,401, Cl. 123-509.000

Hoffmann-La Roche Inc.: *See*—
Coffen, David L., Madan, Pradeep B., and Schwartz, Alan, 5,008,411, Cl. 549-519.000

Hogan, Thomas: *See*—
Markinson, Scott; Schuster, Michael; and Hogan, Thomas, 5,008,636, Cl. 331-2.000.

Hohmann, Frank G. *See*—
Richter, Simon J., and Hohmann, Frank G., 5,007,565, Cl. 222-481.000

Holberg, Dane A. Leak damage prevention system. 5,008,650, Cl. 340-604.000

Höke, David. *See*—
Merkel, Paul B., and Höke, David, 5,008,180, Cl. 430-552.000

Holbein, Erwin. *See*—
Busenhart, Peter, Schneeberger, Ruedi, Holbein, Erwin, Wirz, Armin, Flueli, Adolf, and Maier, Hansueli, 5,007,595, Cl. 242-46.400

Holden, Homer N., and Loyer, Philip K., to Dayco Products, Inc. Vacuum cleaner hose construction, insert therefor and methods of making the same. 5,007,839, Cl. 439-191.000

Holland, Andrew P. Blind anchoring of wall fixtures. 5,007,223, Cl. 52-741.000

Holland, G. Neil. *See*—
Vanek, Denis W., and Holland, G. Neil, 5,007,425, Cl. 128-653.00A

Holley, Carl A. Process for pelletizing highly reactive powders. 5,008,055, Cl. 264-117.000

Holliger, Herbert, to Sandoz Ltd. Chromium complexes of sulfo group containing disazo compounds having a resorcinol biscoupling component radical. 5,008,379, Cl. 534-684.000

Holling, Ronald W., to Whirlpool Corporation. Relay control method and apparatus for a domestic appliance. 5,008,516, Cl. 219-519.000

Hollister, Guy G. *See*—
Fazzina, Francis P., and Hollister, Guy G., 5,007,526, Cl. 198-787.000

Holloway, Gary M. *See*—
Palmer, Larry R., Collins, Joseph M., and Holloway, Gary M., 5,008,667, Cl. 340-984.000

Holm, Reimer. *See*—
Thurm, Siegfried, Holm, Reimer, Leuschke, Christian, Rathmann, Dietrich, and Schrader, Lutz, 5,008,148, Cl. 428-336.000

Holmquist, Ralph E., and Jansen, David A., to Eaton Corporation. Limited slip differential. 5,007,886, Cl. 475-231.000

Holtermann, Dennis L. *See*—
Zones, Stacy I., Santilli, Donald S., Ziemer, James, Holtermann, Dennis L., Pecoraro, Theresa A., and Innes, Robert A., 5,007,997, Cl. 208-46.000

Hom, Harvey K. Y., to ITT Corporation. Cross-fed FET power-chip. 5,008,633, Cl. 330-277.000

Honda Giken Kogyo Kabushiki Kaisha. *See*—
Kamata, Yoshiharu, Nagatsuma, Nobuyoshi, Ozawa, Mituharu and Yoshioka, Hiroshi, 5,007,154, Cl. 29-430.000
Nuzato, Tomonori, Noguchi, Katsumi, and Tsukimura, Kiyoshi, 5,007,192, Cl. 123-193.00H
Nishiuchi, Shohachi, Ohta, Shigeo, Imai, Hitoshi, and Meguro, Haruo, 5,007,266, Cl. 72-44.000
Noji, Akio, Kamimura, Kenji, and Tsuzuki, Sadaehika, 5,008,557, Cl. 250-561.000

Honda, Makoto. *See*—
Tominaga, Takashi, Nishiyama, Souji, Sakuramoto, Takahumi, and Honda, Makoto, 5,008,151, Cl. 428-343.000

Honda, Norimasa, and Sano, Masahiro, to Daikin Industries Ltd. Fluororesin-containing coating composition and use thereof. 5,008,042, Cl. 252-518.000

Honeywell Inc. *See*—
Ach, William D., Anderson, Edmund J., Behrends, Lynn B., Desrude, Wayne P., and Klos, Gene J., 5,007,527, Cl. 198-803.010

Liu, Michael S., and Chen, Huang-Joung, 5,008,208, Cl. 437-31.000
Stout, James C., 5,007,699, Cl. 350-96.160

Honeywell Regelsysteme GmbH. *See*—
Schindler, Juergen, and Heinen, Hartwig, 5,008,775, Cl. 361-383.000

Hong, Gilbert H., to Exion Technology, Inc. Photochemically stable mid and deep ultraviolet pellicles. 5,008,156, Cl. 428-506.000

Hong, Yeong-Man. *See*—
Nakai, Satoru, Kaneta, Mayumi, Kikumoto, Yoshikazu, Hong, Yeong-Man, Kawai, Kazuyoshi, Takegata, Setsuko, Ishii, Kiyoshi, Yanagihara, Yasuo, and Hirai, Yoshikatsu, 5,008,374, Cl. 530-351.000

Honma, Isao. *See*—
Komai, Takeshi, Matsuyama, Kazuo, and Honma, Isao, 5,008,353, Cl. 526-230.500

Hood, Warwick J. *See*—
Abraham, Joseph, Hamonet, Michael, Gracie, Phillip, and Hood, Warwick J., 5,007,360, Cl. 114-90.000

Hope, Michael J. *See*—
Cullis, Pieter R., Hope, Michael J., and Bally, Marcel B., 5,008,050, Cl. 264-4.300

Hopfensperger, Reinhold, and Eichhorn, Werner, to Standard Elektrik Lorenz Aktiengesellschaft. Impeller made from a sheet-metal disk and method of manufacturing same. 5,007,801, Cl. 416-223.00R

Hopkins, Michael H. Electric fan for patio umbrella. 5,007,811, Cl. 135-16.000

Hopper, Hans P. *See*—
Dean, Alan J., and Hopper, Hans P., 5,007,852, Cl. 439-201.000

Horaguchi, Tatsuo. *See*—
Takahashi, Toshihiro, Horaguchi, Tatsuo, Nakamaru, Koichi, and Suzuki, Yoshikuni, 5,008,266, Cl. 514-259.000

Horino, Mamoru, to Yamaha Corporation. Rotation control device for a rotary head in a magnetic recording and reproducing device. 5,008,763, Cl. 360-70.000

Horio, Nasakazu. *See*—
Watanabe, Eiji, Horio, Nasakazu, and Suzuki, Kenzi, 5,008,224, Cl. 502-63.000.

Horn, Marcus J., to Hewlett Packard Company. Method of facilitating detection of amino acid derivatives with enhanced sensitivity. 5,008,205, Cl. 436-89.000.

Horning, John H., Jr. Bag opener apparatus. 5,007,171, Cl. 30-294.000

Horst, James F. *See*—
McKenna, Frank J.; Horst, Richard K., Horst, James F., and Arney, Rodney L., 5,007,772, Cl. 406-39.000

Horst, Richard K. *See*—

Horton, Roger L. *See*—
Williams, Dennis A.; Horton, Roger L., Newlove, John C., and Chumley, Robert F., 5,007,481, Cl. 166-300.000

Horvath, Daniel P., to Hosehandlers International In. Hose and cable support. 5,007,605, Cl. 248-62.000

Hosehandlers International Inc. *See*—
Horvath, Daniel P., 5,007,605, Cl. 248-62.000

Hoshi, Masayuki. *See*—
Rubinstein, Sergio, and Hoshi, Masayuki, 5,007,534, Cl. 433-173.000.

Hosiden Corporation. *See*—
Matsumoto, Koji, 5,007,851, Cl. 439-188.000

Hosiden Electronics Co., Ltd. *See*—
Inaba, Hirofumi, and Nishikawa, Yasunori, 5,007,850, Cl. 439-182.000.

Hosoda, Takuya, Morishita, Mitsuhiro, and Tamura, Takashi, to Ando Electric Co., Ltd. Apparatus for generating pulse-like constant current having variable pulse width. 5,008,562, Cl. 307-265.000

Hou, Mei-Wen H. Auxiliary mirror angle changing device for a main and auxiliary rearview mirror. 5,007,724, Cl. 350-604.000.

Houng, Vichai. Frame assembly for case or similar article. 5,007,540, Cl. 190-122.000

House, Wilford. *See*—
Goodwin, John D., Goodwin, Samuel D., House, Wilford, and Farrar, James, 5,008,839, Cl. 364-550.000

Hovens, Paulus J. M., to U.S. Philips Corporation. Picture display device including a waveform generator and a compensation circuit and integrated circuit incorporating the same. 5,008,659, Cl. 340-812.000

Howells, Joseph A. Jachmann, Emil F., and Rubenstein, Robert I. Dictate/transcribe control for digital dictation system. 5,008,871, Cl. 369-28.000

Hoy, Kenneth L. *See*—
Richey, Forrest A., Jr., and Hoy, Kenneth L., 5,008,336, Cl. 525-124.000

Hoya Corporation. *See*—
Hara, Koichi A., 5,008,219, Cl. 501-12.000
Nakajima, Yuji, and Mochizuki, Masashi, 5,007,710, Cl. 350-166.000.
Sawamoto, Takeyuki, Nomura, Masashi, and Tarumi, Nire, 5,008,354, Cl. 526-246.000
Uno, Ken, Fujino, Takuo, and Nakamori, Hideki, 5,008,002, Cl. 204-192.310

Hrib, Nicholas J., to Hoechst-Roussel Pharmaceuticals Inc. Method of synthesizing forskolin from 9-deoxyforskolin. 5,008,407, Cl. 549-383.000

Hsieh, Shane, and Stahlhofen, Paul, to Hoechst Celanese Corporation. Copying materials. 5,008,175, Cl. 430-155.000

Hsu, David. Soldering tool. 5,007,405, Cl. 126-414.000

Htun, Myat T. *See*—
Engstrand, Per O., Hammar, Lars-Ake; Htun, Myat T., and Pettersson, Rune L., 5,007,985, Cl. 162-26.000.

Huang, Hung-Chang W., and Totta, Paul A., to International Business Machines Corporation. Process for improved contact stud structure for semiconductor devices. 5,008,216, Cl. 437-192.000

Huang, Hung-Chang W., and Totta, Paul A., to International Business Machines Corporation. Contact stud structure for semiconductor devices. 5,008,730, Cl. 357-68.000.

Huang, Kevin C.; Kutz, Karl H., McNamara, Timothy J., Seals, Victoria E., and Still, Gregory S., to International Business Machines Corporation. Event-controlled error injection system. 5,008,885, Cl. 371-3.000

Huang, Ming-Chuan. Simply-constructed instrument for measuring horizontal line, vertical line and angles. 5,007,176, Cl. 33-377.000

Huang, Wen-Ling M. *See*—
Chiang, Shang-yi, Huang, Wen-Ling M.; Drowley, Clifford I., and Voorde, Paul V., 5,008,210, Cl. 437-33.000.

Hubeler, Wolfgang. *See*—
Herrmann, Hellmut A., and Hubeler, Wolfgang, 5,007,970, Cl. 134-42.000

Huber, Helmut X. *See*—
Ozin, Geoffrey A., Huber, Helmut X., Prokopowicz, Richard A., and Godber, John, 5,008,234, Cl. 502-326.000

Hudson, Alice P. *See*—
Woodward, Fred E., and Hudson, Alice P., 5,008,039, Cl. 252-392.000

Huebner, Dietmar, Nagel, Peter; Hirschberg, Ekkehard; Schoettle, Klaus, and Pavelka, Bozidar, to BASF Aktiengesellschaft. Packaging container for a plurality of recording media in the form of a circle. 5,007,536, Cl. 206-394.000

Huels Aktiengesellschaft. *See*—
Kaufhold, Manfred, and Metz, Josef, 5,008,429, Cl. 558-374.000

Hughes Aircraft Company. *See*—
Brown, Raymond L., and Shock, Clifford L., Jr., 5,008,492, Cl. 174-52.400
Chern, Mao-Jin; Smith, Ronald T., and Frogget, Brent C., 5,007,690, Cl. 350-3.680
Congleton, Helen, Slaton, Carol L., Koudounaris, Angelo, Smith, Gerald B., and Soto, Vicente, 5,007,576, Cl. 228-103.000
Greene, Sidney R., 5,007,347, Cl. 102-473.000
Harvey, Robin T., 5,008,798, Cl. 363-59.000
Herman, Martin I., 5,008,678, Cl. 342-158.000
Lee, Alfred; and Kain, Daniel T., 5,008,905, Cl. 377-77.000
McFarlane, Ross A., 5,008,890, Cl. 372-41.000.
Stevens, Eugene H., and Utlaut, Mark W., 5,008,602, Cl. 318-561.000

Huhtamaki Oy. *See*—
Ingberg, Grels D., Penttila, Ritva I. A., Tokola, Reino O., and Tenhunen, Raimo, 5,008,388, Cl. 540-145.000

Huisman, Frederikus R. J.; Oversluizen, Gerrit, and Martens, Jan W. D., to U.S. Philips Corp. Display arrangement having pin diode switching elements. 5,008,590, Cl. 313-500.000

Hukuhara, Takahito, to 501 Toa Medical Electronics Co., Ltd. Apparatus for measuring a liquid specimen. 5,007,296, Cl. 73-864.870

Hull, Edward I. *See*—
Abramczyk, William M., Hull, Edward I., and Feustel, James R., 5,007,662, Cl. 280-739.000

Hull, Harry F.; and Da Silva, Ivan P. Electrolytic processing apparatus and method with time multiplexed power supply. 5,007,993, Cl. 204-228.000

Huls Aktiengesellschaft. *See*—
Hellermann, Walter, Herrmann, Christoph, Fuchs, Hans-Bernd, Nordsiek, Karl-Heinz, and Wolpers, Jurgen, 5,008,343, Cl. 525-316.000

Hunter, Frank R., to Weyerhaeuser Company. Isocyanate modified cellulose products and method for their manufacture. 5,008,359, Cl. 527-103.000

Hunter-Melnor, Inc. *See*—
Chow, Ho, and Testa, Joseph E., 5,007,588, Cl. 239-318.000

Hurtgen, Jerome P., to General Electric Company. Method of selectively connecting a set of winding means for a dynamoelectric machine into at least two different electrical configurations. 5,007,156, Cl. 29-596.000

Husler, Rinaldo, Klingert, Bernd, Rembold, Manfred; and Steiner, Eginhard, to Ciba-Geigy Corporation. Titanocenes, the use thereof, and N-substituted pyrroles. 5,008,302, Cl. 522-14.000

Hussain, Saadat, to Ethyl Corporation. Decabromodiphenyl alkane process. 5,008,477, Cl. 570-208.000

Hussain, Zahid. *See*—
Kelleher, Brian M., and Hussain, Zahid, 5,008,838, Cl. 364-522.000

Hutchinson. *See*—
Guillon, Henri, 5,007,202, Cl. 49-441.000

Hwang, Feng-Lin. Air-leak indicator for vehicle tire. 5,007,365, Cl. 116-34.00R

Hyche, Kenneth W., and Gose, William C., to Eastman Kodak Company. Aqueous additive systems, methods and polymeric particles. 5,007,961, Cl. 106-18.000.

Hydromatik GmbH. *See*—
Wagenseil, Ludwig, 5,007,332, Cl. 92-181.00R

Hyodo, Touru. *See*—

Nakagawa, Masaru; Sumino, Fumio, Hiro, Masaaki, Kashimura, Noboru; and Nagahara, Shin, 5,008,168, Cl. 430-56.000.

Kashiwa, Norio: *See—*
Ishimaru, Naoshi; Tsutsui, Toshiyuki; Toyota, Akinori; and Kashiwa, Norio, 5,008,356, Cl. 526-281.000.

Kashiwabara, Masuo, to Japan Electronic Control Systems Co., Ltd. Alcohol sensor failure detection system for internal combustion engine. 5,007,398, Cl. 123-479.000.

Kashiwadate, Ken; Satake, Yoshikatsu; Kaneko, Takashi; Tada, Masahiro; and Katto, Takayuki, to Kureha Kagaku Kogyo K K. Poly(arylene thioether-ketones) improved in melt stability and preparation process thereof. 5,008,370, Cl. 528-481.000.

Kashiwara, Hideaki: *See—*
Kashiwara, Ryohei; Kashiwara, Hideaki; Noguchi, Hidehiko; and Kashiwara, Takeaki, 5,007,389, Cl. 123-169.0MG.

Kashiwara, Ryohei; Kashiwara, Hideaki; Noguchi, Hidehiko, and Kashiwara, Takeaki. Ignition plug for internal combustion engines and a process for igniting gas mixture by the use thereof. 5,007,389, Cl. 123-169.0MG.

Kashiwara, Takeaki: *See—*
Kashiwara, Ryohei, Kashiwara, Hideaki, Noguchi, Hidehiko, and Kashiwara, Takeaki, 5,007,389, Cl. 123-169.0MG.

Kasprzak, Kenneth A.: *See—*
Halloran, Daniel J., Kasprzak, Kenneth A.; Savastano, Stefano G., and Swihart, Terence J., 5,008,424, Cl. 556-419.000.

Kastl, Roland; and Roll, Ulrich, to Patent Treuhand Gesellschaft fur elektrische Gluhlampen m.b.H. Fluorescent lamp high frequency operating circuit. 5,008,596, Cl. 315-205.000.

Katakami, Tsutomu; Yokoyama, Tatsuro; Miyamoto, Michihiko, Mori, Haruki; Kawauchi, Nobuya; Nobori, Tadahito, Sannohe, Kunio; Kamiya, Joji; Ishii, Masaaki; and Yoshihara, Kanji, to Mitsui Toatsu Chemicals, Incorporated. Pyrimidinedione compounds, method of producing the same and antiarrythmic agents containing the same. 5,008,267, Cl. 514-269.000.

Kataoka, Hironori: *See—*
Taniuchi, Akira; Kataoka, Hironori, and Ito, Etsuo, 5,007,955, Cl. 71-103.000.

Kataoka, Ichiro: *See—*
Sasaki, Kazuyuki; and Kataoka, Ichiro, 5,007,288, Cl. 73-295.000.

Katayama, Akihiro; and Ohsawa, Hidefumi, to Canon Kabushiki Kaisha. Image processing method and apparatus for error-dispersion digitization without moire or spurious stripe formation. 5,008,950, Cl. 382-50.000.

Kato, Hisaki: *See—*
Minoura, Jun; Takahahi, Shigeyuki; Kato, Hisaki; Ito, Toshiyasu, Mori, Takaaki; Kato, Mamoru, Shimada, Junichi, and Okabayashi, Katsuaki, 5,007,718, Cl. 350-357.000.

Kato, Mamoru: *See—*
Minoura, Jun; Takahahi, Shigeyuki; Kato, Hisaki, Ito, Toshiyasu; Mori, Takaaki; Kato, Mamoru; Shimada, Junichi, and Okabayashi, Katsuaki, 5,007,718, Cl. 350-357.000.

Kato, Munehiko: *See—*
Maruyama, Akihiro; Kato, Munehiko, Ishiwaka, Takumi, Seki, Katsuto; and Ohashi, Takashi, 5,008,297, Cl. 521-136.000.

Kato, Sanae, to Yazaki Corporation. Method and apparatus for producing linear body with waterproof plug. 5,007,164, Cl. 29-854.000.

Kato, Shigeki, and Inoue, Katsuhiro, to NGK Insulators, Ltd. Ceramic injection molded body and method of injection molding the same. 5,008,054, Cl. 264-63.000.

Katoh, Yasuhiro: *See—*
Nishiyama, Nobumasa; Saito, Makoto; Ouchi, Yasuhide; Katoh, Yasuhiro; Kamo, Yoshihisa, Koizumi, Makoto; Aoi, Hajime; Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000.

Katori, Tatsuhiko: *See—*
Yokoi, Koichi; Irinoda, Kazuhiko; Kohya, Hidehiko, Sato, Susumu; and Katori, Tatsuhiko, 5,008,419, Cl. 556-137.000.

Katrynuik, Matthew M. Replaceable weather seal. 5,007,203, Cl. 49-493.000.

Katsura, Joji; Takagi, Yoshiyuki; and Watari, Shigeru, to Matsushita Electric Industrial Co., Ltd. Standard cell having test pad for probing and semiconductor integrated circuit device containing the standard cells. 5,008,727, Cl. 357-40.000.

Katto, Takayuki: *See—*
Kashiwadate, Ken; Satake, Yoshikatsu, Kaneko, Takashi; Tada, Masahiro; and Katto, Takayuki, 5,008,370, Cl. 528-481.000.

Katz, Saul N.: *See—*
Cale, Kenneth W.; Imura, Naoto; Jasovsky, George A., and Katz, Saul N., 5,008,125, Cl. 426-594.000.

Katzir, Yigal; and Kochba, Joseph, to Orbot Systems Ltd. Telecentric imaging system optical inspection machine using the same and method for correcting optical distortion produced thereby. 5,008,743, Cl. 358-101.000.

Kaufhold, Manfred; and Metz, Josef, to Huels Aktiengesellschaft. Process for industrial application of Knoevenagel synthesis. 5,008,429, Cl. 558-374.000.

Kaufmann, Rick J.: *See—*
Groswith, Charles T., III; Phipps, Richard D., Lathrop, Robert L., Jr.; Stewart, John F., and Kaufmann, Rick J., 5,007,782, Cl. 412-40.000.

Kaul, Karlheinz; and Bock, Hans-Christian, to Siemens Aktiengesellschaft. Portable x-ray diagnostics apparatus with position-adjustable control panel. 5,008,921, Cl. 378-198.000.

Kawabuchi, Yoichi: *See—*
Higashio, Kimihiko; and Kawabuchi, Yoich., 5,008,714, Cl. 355-313.000.

Kawachi, Genshiro; Mimura, Akio; Konishi, Nobutake; Ono, Kikuo, and Suzuki, Takashi, to Hitachi, Ltd. Method for fabricating a thin film transistor using a silicide as an etch mask. 5,008,218, Cl. 437-201.000.

Kawagoe, Kazuo: *See—*
Masuda, Takeshi, Yagi, Susumu; Okabe, Sakiichi, Kamishima, Yoichi; and Kawagoe, Kazuo, 5,008,580, Cl. 310-321.000.

Kawahara, Hironobu: *See—*
Kawasaki, Yoshinao; Kawahara, Hironobu; Sato, Yoshiaki, Fukuyama, Ryooji; Nojiri, Kazuo; and Torii, Yoshimi, 5,007,981, Cl. 156-643.000.

Kawahara, Isao: *See—*
Kitaura, Hiromu; Isobe, Mitsuo; Kawahara, Isao; Hirauchi, Yoshio, Ninomiya, Yuichi; Ohtsuka, Yoshimichi, and Izumi, Yoshinori, 5,008,753, Cl. 358-171.000.

Kawai, Kazuyoshi: *See—*
Nakai, Satoru; Kaneta, Mayumi; Kikumoto, Yoshikazu; Hong, Yeong-Man, Kawai, Kazuyoshi, Takegata, Setsuko, Ishii, Kiyoshi, Yanagihara, Yasuo; and Hirai, Yoshikatsu, 5,008,374, Cl. 530-351.000.

Kawai, Michio: *See—*
Nagaoka, Shinji, Sato, Koji; and Kawai, Michio, 5,008,695, Cl. 354-403.000.

Kawai, Noboru: *See—*
Kondo, Tetsuya, and Kawai, Noboru, 5,008,176, Cl. 430-272.000.

Kawai, Satoshi: *See—*
Fujita, Yoshiaki; Kawai, Satoshi, and Takeguchi, Shunsuke, 5,007,956, Cl. 75-238.000.

Kawai, Tomoyuki: *See—*
Tomiyama, Tsuyoshi; Tomiyama, Akira, Shirai, Tadashi, Wakabayashi, Shuuichi; Kawai, Tomoyuki, Ueyama, Naoto, and Sonegawa, Motoharu, 5,008,282, Cl. 514-393.000.

Kawakami, Eigo, Ozawa, Kunitaka, Uda, Koji, Shimoda, Isamu, and Uzawa, Shunichi, to Canon Kabushiki Kaisha. Exposure apparatus and control of the same. 5,008,703, Cl. 355-53.000.

Kawakami, Soichiro: *See—*
Kanai, Masahiro; Aoike, Tatsuyuki; Matsuda, Koichi, and Kawakami, Soichiro, 5,007,971, Cl. 136-258.000.

Kawakubo, Kiyoshi, and Sato, Shuichi, to SSMC Inc. Cloth presser provided with a thread end holder. 5,007,358, Cl. 112-235.000.

Kawamura, Hideo, to Isuzu Motors Limited. Cycle changeable engine. 5,007,382, Cl. 123-21.000.

Kawamura, Ken: *See—*
Shirai, Koji, and Kawamura, Ken, 5,008,724, Cl. 357-23.130.

Kawan, Joseph C.: *See—*
Weiss, Lawrence D.; Caruthers, Douglas W.; Inatomi, Charles T., Kawan, Joseph C., Lee, Shan, Marks, Harvey; Meguerdijan, Sarkis A.; Parekh, Dilip J.; Samulon, Alfred S., Takata, Melvin M., Tucci, Morris L., and Vollmer, Jim R., 5,008,927, Cl. 379-98.000.

Kawano, Atsushi: *See—*
Shimamoto, Hiroshi; Suzaki, Hideyuki; Yamaguchi, Yukio, and Kawano, Atsushi, 5,008,862, Cl. 367-105.000.
Yamazaki, Shunpei; Imatou, Shinji; Tsuchiya, Mitsunori; Itoh, Kenji; Inushima, Takashi; and Kawano, Atsushi, 5,007,374, Cl. 118-723.000.

Kawano, Shigeyoshi: *See—*
Ishida, Tetsuyoshi, Kawano, Shigeyoshi, Kohtaka, Ikuo; Yamada, Kojiro, Kaku, Hiroyuki; and Narita, Tsuneo, 5,007,240, Cl. 60-673.000.

Kawasaki Jukogyo Kabushiki Kaisha: *See—*
Yoshida, Ryuichi, Yamamura, Tetsushi; and Kadota, Koji, 5,007,495, Cl. 180-117.000.

Kawasaki Steel Corp.: *See—*
Takahashi, Teruyuki; and Kohno, Mitsuru, 5,008,308, Cl. 523-406.000.

Kawasaki, Yoshinao; Kawahara, Hironobu, Sato, Yoshiaki, Fukuyama, Ryooji, Nojiri, Kazuo; and Torii, Yoshimi, to Hitachi, Ltd. Method of removing residual corrosive compounds by plasma etching followed by washing. 5,007,981, Cl. 156-643.000.

Kawashima, Kouzo; Morikawa, Takao, Aoyama, Teruo; and Kamiya, Akira, to Japan Synthetic Rubber Co., Ltd. Thermoplastic resin composition. 5,008,331, Cl. 525-84.000.

Kawata, Kyozo: *See—*
Narisada, Masayuki; Ohtani, Mitsuaki; Watanabe, Fumihiko; and Kawata, Kyozo, 5,008,409, Cl. 549-463.000.

Kawauchi, Kazuyuki: *See—*
Yamamura, Takeshi; Endo, Seiji; Kawauchi, Kazuyuki; and Korenaga, Hiroki, 5,008,728, Cl. 357-45.000.

Kawauchi, Nobuya: *See—*
Katakami, Tsutomu, Yokoyama, Tatsuro; Miyamoto, Michihiko, Mori, Haruki; Kawauchi, Nobuya, Nobori, Tadahito, Sannohe, Kunio; Kamiya, Joji, Ishii, Masaaki; and Yoshihara, Kanji, 5,008,267, Cl. 514-269.000.

Kawneer Company, Inc.: *See—*
Matthews, Thomas E.; and Touton, Charles P., 5,007,221, Cl. 52-464.000.

Kayaba Industry Co. Ltd.: *See—*
Asaoka, Masaharu, 5,007,459, Cl. 137-625.650.

Kayan, Helmut: *See—*
Cunningham, William R.; Amareno, Carmelo S., and Kayan, Helmut, 5,008,519, Cl. 235-383.000.

Kayser, Michael: *See—*
Franckowiak, Gerhard; Stoltefuss, Jurgen; Bechem, Martin; Gross, Rainer, Kayser, Michael; Hebisch, Siegbert, and Schramm, Matthias, 5,008,279, Cl. 514-354.000.

Kazar, Dennis M., to Laser Link, Inc., and Wells, William K., Jr. Ornamental light display apparatus. 5,008,595, Cl. 315-178.000.

Kazemba, Rodney L.: *See—*
Scarberry, Paul W., Kazemba, Rodney L., and Hestekin, Ralph A., 5,007,744, Cl. 383-37.000.

Kazi, Abdulla M. Z.: *See—*
Crompton, Charles F., Kazi, Abdulla M. Z., and Soni, Inderjit S., 5,008,036, Cl. 252-313.100.

KD Group: *See—*
Blau, David A., Meadows, John, Sherlock, Thomas M., Stengel, Fred, Studholme, Robert M., Wada, Kenneth R., and Kepner, Christopher J., 5,008,081, Cl. 422-64.000.

Keane, Brian, to Vaqua Limited. Centrifugal pump. 5,007,798, Cl. 415-88.000.

Keating, Raymond: *See—*
Sansone, Ronald P., Schumacher, Karl H.; Keating, Raymond, Wall, Joseph W., and Joshi, Uday W., 5,008,827, Cl. 364-464.020.

Keijsper, Johannes J.; Mackay, Munro, and Post, Martin F. M., to Shell Oil Company. Crystalline (metallo)silicates and process for preparing such (metallo)silicates. 5,008,094, Cl. 423-328.000.

Kelleher, Brian M., and Hussain, Zahid, to Digital Corporation. Method for simultaneous initialization of a double buffer and a frame buffer. 5,008,838, Cl. 364-522.000.

Keller, Hans J.; and Kuster, Walter A., to Eltec Instruments, Inc. Radiation detection method and apparatus. 5,007,432, Cl. 128-736.000.

Kelley, Arnold F.: *See—*
Block, Michael J., Kelley, Arnold E., and Skripek, Milan, 5,007,987, Cl. 201-17.000.

Kelley, Louis E., to Instruments for Research and Industry I^2R, Inc. Insulated container for biological samples. 5,008,084, Cl. 422-102.000.

Kelley, Michael P., to Zebco Corporation. Weed ring for trolling motor. 5,007,867, Cl. 440-71.000.

Kellogg, David: *See—*
Christiansen, Ned, and Kellogg, David, 5,007,610, Cl. 248-311.200.

Kelly, Christopher J., and Lewis, Keith L., to Barr & Stroud; and United Kingdom of Great Britain and Northern Ireland, The Secretary of State for Defence in Her Britannic Majesty's Government of the. Infra-red transmitting optical components and optical coatings therefor. 5,007,689, Cl. 350-1.600.

Kelly, Nigel B., to Kelly, Nigel Brian; and Originations Limited. Method and device for edge-finishing. 5,007,268, Cl. 72-76.000.

Kelly, Nigel Brian: *See—*
Kelly, Nigel B., 5,007,268, Cl. 72-76.000.

Kelly, Robert G., Loughlin, Bernard T., and McCutcheon, William F., to Norton Company. Sol-gel process alumina abrasive grain blends in coated abrasive material. 5,007,943, Cl. 51-295.000.

Kendall Company, The: *See—*
Dye, John F., 5,007,411, Cl. 128-64.000.

Kenmoti, Kazuei, and Miyazaki, Masamitu, to Matsushita Electric Industrial Co. Ltd. Method for the manufacture camera mirror-drum. 5,007,947, Cl. 65-3.430.

Kennametal Inc.: *See—*
Beach, Wayne H., and Shirk, Steven D., 5,007,685, Cl. 299-91.000.
Greenfield, Mark S., 5,008,073, Cl. 420-121.000.

Kennan, Linda D.; Knapp, Theodore L.; Monroe, Carl M.; and Skoglins, Olgerts, to Dow Corning Corporation. Treated silica for reinforcing silicone elastomer. 5,008,305, Cl. 523-212.000.

Kennedy, Christopher R., and Aghajanian, Michael K., to Lanxide Technology Company, LP. Method for forming metal matrix composite bodies containing three-dimensionally interconnected comatrices and produets produced thereby. 5,007,475, Cl. 164-97.000.

Kenney, Timothy J., and D'Luna, Lionel J., to Eastman Kodak Company. Adjustable clock generator circuit. 5,008,563, Cl. 307-269.000.

Kennis, Ludo E. J.: *See—*
Janssens, Frans E., Kennis, Ludo E. J., Sommen, Francois M., and Dierckx, Ann C. J., 5,008,268, Cl. 514-272.000.

Keogh, Raymond J., Morino, Ronald, and Burr, R. Page, to MP-AKZO Corporation. Multilevel circuit board precision positioning. 5,008,619, Cl. 324-207.160.

Keohan, Francis L., to Cape Cod Research, Inc. Zinc-carbon antifouling coating. 5,008,146, Cl. 428-328.000.

Kepner, Christopher J.: *See—*
Blau, David A., Meadows, John, Sherlock, Thomas M., Stengel, Fred, Studholme, Robert M., Wada, Kenneth R., and Kepner, Christopher J., 5,008,081, Cl. 422-64.000.

Kernforschungsanlage Juelich GmbH: *See—*
Neidermeyer, Uwe, Kragl, Udo; Kula, Maria R., Wandrey, Christian; Makrylaleas, Kyriakos; and Drauz, Karlheinz, 5,008,192, Cl. 435-128.000.

Kernion, Mark C., and Davies, Ben, deceased (by Davies, Evelyn, executrix), to Dresser Industries, Inc. Refractory slide gate assembly and method. 5,007,615, Cl. 251-368.000.

Kesner, Leo: *See—*
Stracher, Alfred; and Kesner, Leo, 5,008,288, Cl. 514-535.000.

Kessel, William C., Laclaire, John L.; Lui, Andrew L., Locke, Michael H., and Britt, Herbert I., to Process Modeling Investment Corp. System for displaying different subsets of screen views, entering different amount of information, and determining correctness of input dependent upon current user input. 5,008,810, Cl. 364-200.000.

Kesterman, James E.: *See—*
Wilder, Paul R.; and Kesterman, James E., 5,007,468, Cl. 141-209.000.

Ketcham, Stephen O.; Ortiz, Paul W., Jarvis, Jamie S., and McCray, Clyde S., to General Electric Company. Apparatus for cutting sheet materials. 5,007,316, Cl. 83-167.000.

Ketcham, Thomas D., to Corning Incorporated. High toughness ceramic alloys. 5,008,221, Cl. 501-103.000.

Keutgen, Peter: *See—*
Rothfuss, Hans, Bruckner, Raimund, Keutgen, Peter, Seeger, Josef, Winkelmann, Manfred, and Metzger, Herbert, 5,007,621, Cl. 266-220.000.

Key, Gary R.; and Black, David C., to International Business Machines Corp. Automatic baud rate detection. 5,008,902, Cl. 375-10.000.

Keystone Environmental Resources, Inc.: *See—*
Fu, Jaw K.; Merritt, Arch J., deceased, and Smith, John R., 5,007,771, Cl. 405-258.000.

Keystone International Holdings Corp.: *See—*
Scobie, William B., and Frenzel, Robert A., 5,007,330, Cl. 92-120.000.

Kezuka, Hiroaki: *See—*
Shimizu, Nobuaki, and Kezuka, Hiroaki, 5,008,445, Cl. 560-243.000.

Kheiri, Mohammad A., to Miles Inc. Easy handling reagent strip. 5,008,077, Cl. 422-56.000.

Kida, Koichi: *See—*
Abe, Takafumi, Uchiyama, Seiji, Ojima, Takahiro, and Kida, Koichi, 5,008,479, Cl. 585-320.000.

Kidd, Roy E., Andrejasich, Raymond J., Michel, Hilary, and Slocum, Laurence S., to Emhart Industries, Inc. Fluid detector with overfill probe. 5,008,653, Cl. 340-620.000.

Kiehl, Gary G.; and Surash, Robert G., to Eastman Kodak Company. Method for recovering metals from waste liquors. 5,008,017, Cl. 210-710.000.

Kiehl, Gary G.: *See—*
Surash, Robert G., and Kiehl, Gary G., 5,008,020, Cl. 210-751.000.

Kieren, Roger; Jamison, David A., and Thomas, John J., to Detroit Edison Company, The. Load totalizing blocked throwover control. 5,008,560, Cl. 307-19.000.

Kikuchi, Hiromi, to Kabushiki Kaisha Toshiba. Diagnostic voice instructing apparatus. 5,008,942, Cl. 381-51.000.

Kikuchi, Ikuya, and Sato, Ryo, to Pioneer Electronic Corporation. Optical pick-up unit. 5,007,712, Cl. 350-255.000.

Kikuchi, Katsuya, to Kabushiki Kaisha Toshiba. Endoscope having picture image freeze device. 5,007,407, Cl. 128-6.000.

Kikuchi, Yasuo: *See—*
Onose, Tsukasa; Kikuchi, Yasuo; Ogawa, Toshitaka, and Seino, Minoru, 5,008,716, Cl. 355-322.000.

Kikumoto, Yoshikazu: *See—*
Nakai, Satoru, Kaneta, Mayumi, Kikumoto, Yoshikazu; Hong, Yeong-Man, Kawai, Kazuyoshi, Takegata, Setsuko, Ishii, Kiyoshi, Yanagihara, Yasuo, and Hirai, Yoshikatsu, 5,008,374, Cl. 530-351.000.

Kikuno, Mitsutoyo: *See—*
Shinada, Masayuki; Ikesue, Masumi, Kikuno, Mitsutoyo; and Murai, Tatsuya, 5,008,709, Cl. 355-309.000.

Killgoar, Paul C., Jr.; Samus, Marsha A.; Koller, Robert D., Sr., and Hemenway, Carl P., to Rohm and Haas Company. Novel damping compositions. 5,008,324, Cl. 524-504.000.

Killmeyer, Richard P.: *See—*
Dickie, William, Cavallaro, Joseph A., and Killmeyer, Richard P., 5,008,083, Cl. 422-101.000.

Kim, Jin: *See—*
Christopher, Kenneth W., Jr., Feigenbaum, Barry A., Kim, Jin, and Love, Douglas C., 5,008,820, Cl. 364-200.000.

Kim Manufacturing Company: *See—*
Carroll, Joseph W., Jr., 5,007,608, Cl. 248-297.200.

Kim, Sam H. End-locking device for slide fasteners. 5,007,145, Cl. 24-433.000.

Kim, Tae Y., to SamSung Electronics Co., Ltd. Support unit for home appliances. 5,007,607, Cl. 248-188.900.

Kim, Woo-Jin: *See—*
Lee, Jong-Seob, 5,008,576, Cl. 310-166.000.

Kimura, Keita; and Yamamoto, Tetsuya, to Nikon Corporation. Electronic still camera. 5,008,757, Cl. 358-213.130.

Kimura, Tadashi; Matsugi, Tetsuzo, and Suzuki, Yasuyuki, to Mitsubishi Denki Kabushiki Kaisha. Scroll compressor with dividing chamber for suction fluid. 5,007,809, Cl. 417-371.000.

Kimura, Yuji: *See—*
Kondo, Hitoshi, Ohta, Eiichi, and Kimura, Yuji, 5,008,732, Cl. 357-71.000.

King, Bruce A.: *See—*
Thill, Bruce P.; and King, Bruce A., 5,008,347, Cl. 525-433.000.

King, David L., Cooper, Michael D., and Faber, Michael A., to Catalytica, Inc. Acid catalyzed process. 5,008,468, Cl. 568-697.000.

King Imports, Inc.: *See—*
Zierhut, Clarence D., 5,007,754, Cl. 401-174.000.

King, Karen L.: *See—*
Gardner, Tommy R.; Dill, Walter R., Ford, William G. F., and King, Karen L., 5,008,026, Cl. 252-8.553.

Kingsman, Alan J.; Kingsman, Susan M., Adams, Sally E., Mellor, Elizabeth J. C., and Malim, Michael H., to Oxford Gene Systems Limited. Fusion proteins and particles. 5,008,373, Cl. 530-350.000.

Kingsman, Susan M.: *See—*
Kingsman, Alan J., Kingsman, Susan M., Adams, Sally E., Mellor, Elizabeth J. C.; and Malim, Michael H., 5,008,373, Cl. 530-350.000.

Kinne, Daniel J.: *See—*
Benecke, Arnold G., Kinne, Daniel J.; and Wnuk, Andrew J., 5,008,110, Cl. 424-448.000.

Kinsen, Kazuhisa: *See—*
Ochi, Katsura; Oonishi, Yasuaki, and Kinsen, Kazuhisa, 5,008,139, Cl. 428-40.000.

Kinson, Philip L., and Faber, Edward M., to B. F. Goodrich Company, The. Glass-fiber-reinforced poly(vinyl chloride) blend with improved heat distortion and tensile strength. 5,008,145, Cl. 428-288.000

Kintz, Karl A. *See*—
Liang, Rong-Chang, Kintz, Karl A., O'Connor, Joseph G. and Adair, Paul C., 5,008,237, Cl. 503-212.000

Kipfelsberger, Christian *See*—
Kaeufer, Helmut, Kipfelsberger, Christian, and Leyrer, Karl-Heinz, 5,008,059, Cl. 264-230.000

Kiraly, Jeno *See*—
Bakos, Jozsef, Heil, Balint, Toth, Imre, Edes, Bela, Gebhardt, Tstvan, Bihari, Ferenc, Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno, Konok nee Horvath, Eva, Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000

Kirby, John A., to United States of America, Energy, Process and apparatus for detecting presence of plant substances. 5,008,539, Cl. 250-336.100

Kircher, Dieter, and Schwarzer, Paul, to Alfred Teves GmbH. Anti-skid-controlled hydraulic brake system. 5,007,687, Cl. 303-113.000

Kirk, Joseph J. *See*—
Cheriff, Frank J., Kirk, Joseph J., Pulver, Arnold M. and Cox, Walter N., 5,008,656, Cl. 340-718.000

Kirkland, James L., to United States of America, Navy. Device for detecting and/or sweeping electrically controlled mines. 5,007,346, Cl. 102-402.000

Kirschner, Craig A., to Automated Fire Control, Incorporated. Adjustable load bolt adapter bracket assembly. 5,007,603, Cl. 248-59.000

Kisfaludy, Lajos, deceased *See*—
Schon, Istvan, Nyeki, Olga, Kisfaludy, Lajos, deceased, Denes, Laszlo, Hajos, Gyorgy, and Szporny, Laszlo, 5,008,246, Cl. 514-18.000

Kisfaludy, Maria, Marta Kisfaludy, Andras Kisfaludy, legal heirs *See*—
Schon, Istvan, Nyeki, Olga, Kisfaludy, Lajos, deceased, Denes, Laszlo, Hajos, Gyorgy, and Szporny, Laszlo, 5,008,246, Cl. 514-18.000

Kishida, Kazuo, Kitai, Kiyokazu, and Mohri, Masaaki, to Mitsubishi Rayon Company, Ltd. Impact modifier for thermoplastic resin having good heat discoloration resistance and heat deterioration resistance, and thermoplastic resin composition comprising this impact modifier. 5,008,313, Cl. 524-120.000

Kishita, Hirofumi *See*—
Suzuki, Akio, Kishita, Hirofumi, Sonegawa, Shigehisa, Matumura, Masaaki, and Hoashimoto, Takeshi, 5,007,726, Cl. 351-41.000

Kiss, Akos *See*—
Speer, Dietrich, Kiss, Akos, Kleinschmit, Peter, and Hanich, Juergen, 5,008,223, Cl. 106-450.000

Kitagawa, Hiroji, to Kitagawa Industries Co., Ltd. Conductive seal. 5,008,485, Cl. 174-35.0GC

Kitagawa Industries Co., Ltd *See*—
Kitagawa, Hiroji, 5,008,485, Cl. 174-35.0GC
Nakagawa, Asaharu, 5,008,488, Cl. 174-36.000

Kitaguchi, Hiromasa. Crankless engine. 5,007,385, Cl. 123-48.00B

Kitahata, Roy S., to Chamberlain Group, The. Direct current motor assembly with rectifier module. 5,008,574, Cl. 310-68.00D

Kitai, Kiyokazu *See*—
Kishida, Kazuo, Kitai, Kiyokazu, and Mohri, Masaaki, 5,008,313, Cl. 524-120.000

Kitamura, Toru, Ohashi, Yoshio, Sekino, Masami, and Murakawa, Kenichi, to Research Association for Petroleum Alternatives Development. Process for hydrogenation of heavy oil. 5,008,001, Cl. 208-143.000

Kitamura, Youichi, and Tajimi, Michiko, to Hitachi, Ltd. Testable echo cancelling methed and device. 5,008,923, Cl. 379-3.000

Kitasato Kenkyusho *See*—
Omura, Satoshi, and Itoh, Zen, 5,008,249, Cl. 514-29.000

Kitaura, Hiromu, Isobe, Mitsuo, Kawahara, Isao, Hirauchi, Yoshio, Ninomiya, Yuichi, Ohtsuka, Yoshimichi, and Izumi, Yoshinori, to Matsushita Electric Industrial Co., and Nippon Hoso Kyokai. Clamp system used for television signal. 5,008,753, Cl. 358-171.000

Kiyono, Mikio, to NEC Corporation. Multilevel optical signal transmitter. 5,008,957, Cl. 455-618.000

Klaerner, Peter *See*—
Bueschl, Rainer, and Klaerner, Peter, 5,008,341, Cl. 525-216.000

Klanne, Harald, to ISB Generalunternehmen fur Industriespezialbau. Device for the maintenance of large-capacity containers. 5,007,500, Cl. 182-38.000

Klausener, Alexander, Kleefeld, Gerd, Berg, Dieter, Dutzmann, Stefan, and Hanbler, Gerd, to Bayer Aktiengesellschaft. Pesticidal pyridyl-substituted acrylic ester compounds. 5,008,275, Cl. 514-334.000

Kleefeld, Gerd *See*—
Klausener, Alexander, Kleefeld, Gerd, Berg, Dieter, Dutzmann, Stefan, and Hanbler, Gerd, 5,008,275, Cl. 514-334.000

Klein, Erhard, to Karl Harms Handels-GmbH & Co. KG. Magnetic security system against theft and burglary and metallic sensor element suitable therefor. 5,008,649, Cl. 340-572.000

Klein, Gerald B. Business card and card stock with lift-out panel and bonded edges. 5,007,191, Cl. 40-638.000

Klein, Rolf M., Poprawe, Reinhart, and Herziger, Gerd W., to Blendax GmbH. Process for rounding bristle tips on brushes. 5,007,686, Cl. 300-21.000

Kleinberg, Larry K., to Storz Instrument Company. Documentation illumination module for a microscope system. 5,007,723, Cl. 350-508.000

Kleiner, Hans-Jerg, Gersdorf, Joachim, and Bastian, Udo, to Hoechst Aktiengesellschaft. Novel 6-acyl-(6H)-dibenz[c,e][1,2]oxaphosphorin-6-oxides, their preparation and their use as photoinitiators. 5,008,426, Cl. 558-82.000

Kleiner, Hans-Jerg *See*—
Gerdau, Thomas, Kleiner, Hans-Jerg, Peuckert, Marcellus, Bruck, Martin, and Aldinger, Fritz, 5,008,423, Cl. 556-412.000

Kleinschmit, Peter *See*—
Speer, Dietrich, Kiss, Akos, Kleinschmit, Peter, and Hanich, Juergen, 5,008,223, Cl. 106-450.000

Kleinschnitz, Donald *See*—
Fries, William J., Kleinschnitz, Donald, and Nelson, I. Craig, 5,008,808, Cl. 364-200.000

Klemann, Lawrence P., Finley, John W., and Scimone, Anthony, to Nabisco Brands, Inc. Long chain diol diesters as low calorie fat mimetics. 5,008,126, Cl. 426-611.000

Klimisch, Helen M., and Malezewski, Regina M., to Dow Corning Corporation. Sunscreen formulation containing a phenyl functional organosilicon compound. 5,008,101, Cl. 424-59.000

Klingert, Bernd *See*—
Husler, Rinaldo, Klingert, Bernd, Rembold, Manfred, and Steiner, Eginhard, 5,008,302, Cl. 522-14.000

Klingman, Ken A. *See*—
Nyberg, Eric D., Klingman, Ken A., Curtis, Jeff, and Stewart, Ray F., 5,007,989, Cl. 204-1.110

Klinkowstein, Robert W., to Science Research Laboratory, Inc. High voltage power supply. 5,008,800, Cl. 363-61.000

Klitsner, Daniel B., to Discovery Toys, Inc. Banked hairpin marble race toy. 5,007,876, Cl. 446-168.000

Klopping, Peter A. Process for calibration of standardization of natural intestines. 5,007,878, Cl. 452-198.000

Klos, Gene J. *See*—
Ach, William D., Anderson, Edmund J., Behrends, Lynn B., Desrude, Wayne P., and Klos, Gene J., 5,007,527, Cl. 198-803.010

Kmenti, Bradley A. Orthodontic appliance adhesive. 5,008,304, Cl. 523-118.000

Knapp, Gordon G. *See*—
Nalepa, Christopher J., Presswood, J. Kenneth, and Knapp, Gordon G., 5,008,453, Cl. 564-271.000

Knapp, Theodore L. *See*—
Kennan, Linda D., Knapp, Theodore L., Monroe, Carl M., and Skostins, Olgerts, 5,008,305, Cl. 523-212.000

Knierim, David L., and Brown, Gary L., to Tektronix, Inc. Method and apparatus for processing component signals to preserve high frequency intensity information. 5,008,741, Cl. 358-32.000

Knobbe, Karl-Heinz *See*—
Martinen, Hinrich, Knobbe, Karl-Heinz, Simonsson, Samuel S., and Wirth, Peter, 5,008,896, Cl. 372-83.000

Knoll, Jozsef *See*—
Ecsery, Zoltan, Knoll, Jozsef, Somfai, Eva, Torok, Zoltan, Szinyei, Eva, and Mozsolits, Karoly, 5,008,292, Cl. 514-654.000

Ko, Wei C. Ornamental clock with decorative time indicating device. 5,008,867, Cl. 368-23.000

Kobayashi, Atsuhito *See*—
Ono, Shoichi, and Kobayashi, Atsuhito, 5,008,531, Cl. 250-222.100
Ono, Shoichi, and Kobayashi, Atsuhito, 5,008,532, Cl. 250-222.100

Kobayashi, Eiji *See*—
Kanda, Yutaka, Yasuzawa, Tohru, Saito, Hiromitsu, Sano, Hiroshi, Kobayashi, Eiji, and Morimoto, Makoto, 5,008,271, Cl. 514-292.000

Kobayashi, Hitoshi, Takano, Akira, Narusawa, Naoharu, Tsukada, Yukihiko, Sakamoto, Hiroshi, Hirano, Masaki, and Ando, Masao, to Nisshinbo Industries, Inc., and Nagano Japan Radio Co., Ltd. Paper feeder of a label printer. 5,008,710, Cl. 355-202.000

Kobayashi, Nobutoshi, and Murakami, Tetsuo, to Nippon Scientific Co., Ltd., and Kusumoto Chemicals Co., Ltd. Vacuum drier apparatus. 5,007,183, Cl. 34-92.000

Kobayashi, Ryuji *See*—
Murata, Shizuo, Nakayama, Minoru, Furukawa, Kenji, and Kobayashi, Ryuji, 5,008,456, Cl. 564-322.000

Kobayashi, Shoei *See*—
Ohki, Hiroshi, Kobayashi, Shoei, and Wada, Takuya, 5,008,521, Cl. 235-454.000

Kobayashi, Takehiro *See*—
Emura, Masaharu, and Kobayashi, Takehiro, 5,007,601, Cl. 242-223.000

Kobes, Gerald W., and Eisele, Thomas A., to Tree Top, Inc. Apparatus for making enzyme inactivated viscous fruit pulp and products therefrom. 5,007,334, Cl. 99-483.000

Koch, Ralph E., to Ralph E. Koch Trucking, Inc. Cover system for flat bed vehicles. 5,007,672, Cl. 296-100.000

Kochba, Joseph *See*—
Katzir, Yigal, and Kochba, Joseph, 5,008,743, Cl. 358-101.000

Koehler Bertrand, Manil, Emmanuel, and Chapellier, Jacques, to Societe Nationale Industrielle et Aerospatiale. Device for controlling vibration-free movement of an optical element in a stellar inteferometer and stellar interferometer comprising same. 5,008,606, Cl. 318-649.000

Koehler, Hermann, Ebel, Klaus, Karn, Helmut, and Taubitz, Christof, to BASF Aktiengesellschaft. Preparation of p-nitrophenylimidazoles. 5,008,398, Cl. 548-342.000

Koflach Sport Gesellschaft mbH & Co. KG *See*—
Bischof, Horst, and Skerbinjek, Wolfgang, 5,007,186, Cl. 36-121.000

Koga, Yasuo *See*—
Nishi, Takao, Uno, Tetsuyuki, Koga, Yasuo, and Chu, Gil-Namg, 5,008,274, Cl. 514-312.000

Kogita, Hidekazu *See*—
Mori, Keiji, and Kogita, Hidekazu, 5,007,722, Cl. 350-382.000

Kohler, Hans-Dieter *See*—
Schleppinghoff, Bernhard, Kohler, Hans-Dieter, Gabel, Christian, and Scheef, Hans-Volker, 5,008,466, Cl. 568-697.000

Kohno, Mitsuru *See*—
Takahashi, Teruyuki, and Kohno, Mitsuru, 5,008,308, Cl. 523-406.000

Kohtaka, Ikuo *See*—
Ishida, Tetsuyoshi, Kawano, Shigeyoshi, Kohtaka, Ikuo, Yamada, Kojiro, Kaku, Hiroyuki, and Narita, Tsuneo, 5,007,240, Cl. 60-673.000

Kohya, Hidehiko *See*—
Yokoi, Kouichi, Irinoda, Kazuhiko, Kohya, Hidehiko, Sato, Susumu; and Katori, Tatsuhiko, 5,008,419, Cl. 556-137.000

Koito Manufacturing Co., Ltd.: *See*—
Nino, Naoki, 5,008,781, Cl. 362-61.000

Koizumi, Makoto *See*—
Nishiyama, Nobumasa, Saito, Makoto, Ouchi, Yasuhide, Katoh, Yasuhiro, Kamo, Yoshihisa, Koizumi, Makoto, Aoi, Hajime, Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000

Koizumi, Norihiko; Taniока, Hiroshi, Toyama, Noboru, Arahara, Kozo, and Yuasa, Toshiya, to Canon Kabushiki Kaisha. Image recording apparatus for transferring ink patterns formed by selective application of energy through electrodes of a recording head controllably biased against ink transported on a roller. 5,008,690, Cl. 346-140.00R

Koizumi, Satoru, to Sharp Kabushiki Kaisha. Two stage reel mechanism for tape recorder. 5,007,600, Cl. 242-194.000

Koizumi, Yoshihisa, to Isuzu Motors Limited. Brake system. 5,007,509, Cl. 188-271.000

Kojima, Kunio *See*—
Numata, Tomiyuki, Iwaki, Takashi; Kojima, Kunio, and DeGuchi, Toshihisa, 5,008,888, Cl. 372-29.000

Kojima, Narihito *See*—
Rokutanzono, Takashi, Ide, Yukio; Nagame, Hiroshi, Ohshima, Kohichi, Kojima, Narihito, and Nousho, Shinji, 5,008,172, Cl. 430-67.000

Kokubo, Hiroyasu; Sekigawa, Fujio, Chiba, Tohru, and Onda, Yoshiro, to Shin-Etsu Chemical Co., Ltd. Method for preparing film coated pharmaceutical preparations and method for improving properties thereof. 5,008,113, Cl. 424-480.000.

Kolesar, Edward S., Jr., to United States of America, Air Force. Hybrid wafer scale microcircuit integration. 5,008,213, Cl. 437-51.000

Koller, Robert D., Sr.: *See*—
Killgoar, Paul C., Jr., Samus, Marsha A., Koller, Robert D., Sr., and Hemenway, Carl P., 5,008,324, Cl. 524-504.000

Komada, Kenya *See*—
Sakamoto, Koji; Tanzawa, Misao, Iwata, Nobuo, Murayama, Hisao, Takahashi, Susumu, and Komada, Kenya, 5,008,711, Cl. 355-206.000

Komai, Takeshi, Matsuyama, Kazuo, and Honma, Isao, to Nippon Oil and Fats Co., Ltd. Organic peroxide having a polymerization-regulating ability. 5,008,353, Cl. 526-230.500

Komase, Hiroshi *See*—
Saito, Kazuharu, Matsukura, Hiroyasu, Komase, Hiroshi, Tsuneda, Haruhiro, Watanabe, Junji; Saito, Tadao, Doy, Toshiroh, and Matsunaga, Kazuo, 5,007,209, Cl. 51-283.00R

Komatsu Zenoah Company *See*—
Nomoto, Shigeki, 5,007,391, Cl. 123-182.000

Komori, Yumiko *See*—
Karakida, Kenichi, Yagi, Shigeru; Fukuda, Yuzuru, Nishikawa, Masayuki, Roh, Te N; Takahashi, Noriyoshi, Ono, Masato, Yokoi, Masaki, and Komori, Yumiko, 5,008,170, Cl. 430-65.000

Komuro, Toshio *See*—
Shibata, Kazuo, and Komuro, Toshio, 5,008,567, Cl. 307-443.000

Kondo, Hirosato, Taguchi, Masahiro, Inoue, Yoshimasa; and Sakamoto, Fumio, to Kanebo, Ltd. Quinolinecarboxylic acid derivatives. 5,008,389, Cl. 544-343.000

Kondo, Hitoshi, Ohta, Eiichi, and Kimura, Yuji, to Ricoh Company, Ltd. Thin film two terminal element. 5,008,732, Cl. 357-71.000

Kondo, Kazuo: *See*—
Bekki, Katsutoshi, Kondo, Kazuo, Shibata, Yoshimasa; and Niwa, Shigeo, 5,007,932, Cl. 623-18.000

Kondo, Satoshi *See*—
Tsukisaka, Ryogo, Kondo, Satoshi, Kaneguchi, Toshio, and Deguchi, Takashi, 5,007,964, Cl. 106-464.000

Kondo, Tetsuya, and Kawai, Noboru, to Victor Company of Japan, Ltd. Information recording medium having a glass substrate. 5,008,176, Cl. 430-272.000

Kondo, Yasuaki *See*—
Kurono, Masayasu, Kondo, Yasuaki, Mitani, Takahiko, Baba, Yutaka, and Sawai, Kiichi, 5,008,416, Cl. 556-89.000

Kondo, Yuu: *See*—
Tanuma, Chiaki; Itsumi, Kazuhiro, Iwase, Nobuo; Ono, Tomio, Kondo, Yuu; and Saito, Kazutaka, 5,008,582, Cl. 310-332.000

Konishi, Nobutake *See*—
Kawachi, Genshiro; Mimura, Akio, Konishi, Nobutake; Ono, Kikuo, and Suzuki, Takashi, 5,008,218, Cl. 437-201.000.

Konok nee Horvath, Eva *See*—
Bakos, Jozsef; Heil, Balint; Toth, Imre; Edes, Bela; Gebhardt, Tstvan; Bihari, Ferenc, Durko nee Ponacz, Anna, Eifert, Gyula; Kiraly, Jeno; Konok nee Horvath, Eva, Lukacs, Laszlo; Meszaros nee Szekrenyesi, Agnes; Radvany, Bela; and Sarosi, Lajos, 5,008,440, Cl. 560-65.000

Koos, Gregory L: *See*—
Carver, Gary E.; Koos, Gregory L., and Michalski, John D., 5,007,741, Cl. 356-448.000

Kopin Corporation: *See*—
van der Have, Leonard A., 5,008,723, Cl. 357-23.700

Korenaga, Hiroki *See*—
Yamamura, Takeshi, Endo, Seiji; Kawauchi, Kazuyuki, and Korenaga, Hiroki, 5,008,728, Cl. 357-45.000

Korremann, Birgitte: *See*—
Fosbol, Peder; Ullum, Henrik, and Korremann, Birgitte, 5,008,375, Cl. 530-357.000.

Korte, Reinhard *See*—
Hermsdorffer, Joachim, Galfe, Gunther, Lautenbacher, Stefan, Korte, Reinhard; Krause, Hans-Joachim, Krull, Frans; May, Arno; Oberdorfer, Dietmar, and Pluquett, Ulrich, 5,007,433, Cl. 128-742.000

Koval, Jeffrey A., and Swihart, Terence J., to Dow Corning Corporation. Silicone primer compositions. 5,008,349, Cl. 525-477.000.

Koseki, Ryoji, to Amada Company, Limited. Laser punch press, and beam detection device for adjusting the laser beam path. 5,008,510, Cl. 219-121.700

Koshi, Yutaka, to Fuji Xerox. Image information encoding/decoding device. 5,008,951, Cl. 382-56.000

Koshinaka, Masao; Akiyama, Minoru, Tanaka, Hitoshi; and Tomoda, Toshimasa, to Mitsubishi Denki Kabushiki Kaisha. System for detecting minute particles on or above a substrate. 5,008,558, Cl. 250-563.000.

Koster, Wolfgang *See*—
Behling, Rolf, and Koster, Wolfgang, 5,008,917, Cl. 378-140.000

Kotobuki Seiyaku Co. Ltd. *See*—
Tomiyama, Tsuyoshi, Tomiyama, Akira, Shirai, Tadashi, Wakabayashi, Shuuichi, Kawai, Tomoyuki, Ueyama, Naoto, and Sonegawa, Motoharu, 5,008,282, Cl. 514-393.000.

Koudounaris, Angelo *See*—
Congleton, Helen, Slaton, Carol L., Koudounaris, Angelo, Smith, Gerald B., and Soto, Vicente, 5,007,576, Cl. 228-103.000

Kousaka, Kunimitsu *See*—
Miida, Takashi, Ozaki, Nozomu, Baba, Shigenori, and Kousaka, Kunimitsu, 5,008,696, Cl. 354-408.000

Kovesh, Yair *See*—
Maier, Eliahu, Kovesh, Yair, and Zorea, Abraham, 5,007,248, Cl. 62-244.000

Kowalczyk, Michael S *See*—
DeCecca, Michael L., Kowalczyk, Michael S., Gray, Thomas W., and Partridge, Paul W., 5,008,538, Cl. 250-324.000.

Koyama, Junichi *See*—
Aoyama, Motoo, Koyama, Junichi, Uchikawa, Sadao, Besshо, Yasunori, Ozawa, Michihiro; Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000

Koyo Seiko Co., Ltd *See*—
Hattori, Tsuneichi, and Iga, Kazuo, 5,007,514, Cl. 192-45.000
Takeuchi, Masamichi, and Asai, Yasuo, 5,007,747, Cl. 384-450.000

Kozlowski, Walter A. *See*—
Dewire, Robert J., and Kozlowski, Walter A., 5,007,178, Cl. 33-767.000

Kraft General Foods, Inc *See*—
Cale, Kenneth W., Imura, Naoto, Jasovsky, George A., and Katz, Saul N., 5,008,125, Cl. 426-594.000

Krageloh, Konrad *See*—
Meier, Josef, Deinhammer, Wolfgang, and Krageloh, Konrad, 5,008,392, Cl. 546-250.000

Kragl, Udo *See*—
Neidermeyer, Uwe; Kragl, Udo, Kula, Maria R., Wandrey, Christian, Makrylaleas, Kyriakos; and Drauz, Karlheinz, 5,008,192, Cl. 435-128.000

Kratky, Zdenek; and Tandy, John S., to Nestec S.A. Selective cleavage of naringin. 5,008,381, Cl. 536-8.000

Krause, Frank *See*—
Reutter, Jorg, and Krause, Frank, 5,008,524, Cl. 250-214.00A

Krause, Hans-Joachim *See*—
Hermsdorffer, Joachim; Galfe, Gunther; Lautenbacher, Stefan, Korte, Reinhard, Krause, Hans-Joachim, Krull, Frans, May, Arno, Oberdorfer, Dietmar, and Pluquett, Ulrich, 5,007,433, Cl. 128-742.000

Krauss, Richard C., to DowElanco. Process for the preparation of 5-amino-3-chlorosulfonyl-1,2,4-triazole. 5,008,396, Cl. 548-263.800

Krawiecki, Madonna M.: *See*—
Pesheck, Peter S.; Atwell, William A.; Krawiecki, Madonna M., and Anderson, George R., 5,008,507, Cl. 219-10.55E

Kreinberg, Earl R *See*—
Daly, John K., Kreinberg, Earl R., Puerner, Dean A., and Adcock, Marty E., 5,007,858, Cl. 439-498.000

Kremers, Henry T., and Rabb, Khalid M., to Xerox Corporation. Selectable sheet offsetting. 5,007,625, Cl. 270-53.000.

Kresge, Charles T. *See*—
Johnson, Ivy D., Chu, Pochen, and Kresge, Charles T., 5,008,481, Cl. 585-418.000.

Krigmont, Henry V.; and Coe, Everett L., Jr., to Wahleo, Inc. Measurement of electrical resistivity of particulate entrained in a gas stream. 5,008,628, Cl. 324-693.000

Krishnaswamy, Natrajan: *See*—
Zecchino, Julius R., Krishnaswamy, Natrajan, Clement, Pamela A., and Vargas, Anthony, 5,008,100, Cl. 424-59.000

Krock, Friedrich W *See*—
Claussen, Uwe; and Krock, Friedrich W., 5,007,942, Cl. 8-506.000

Kroener, Michael: *See—*
Hartmann, Heinrich; Denzinger, Walter; Kroener, Michael; Sendhoff, Norbert; and Freudenberg, Enrique, 5,008,321, Cl 524-378.000

Kroetsch, Edward S.: *See—*
Arndt, Horst; and Kroetsch, Edward S., 5,008,943, Cl 381-68.600

Kromer, Roland, to Maag Gear-Wheel & Machine Company Limited Cutting or drawing tool. 5,007,774, Cl 407-94.000

Kruck, Richard W., Cur, Omer N., Leclear, Douglas D., Kuehl, Steven J., and Burin, Ralph R., to Whirlpool Corporation Modular mechanical refrigeration unit. 5,007,246, Cl 62-131.000.

Krueger, Steven D., and Amundsen, Michael J., to Texas Instruments Incorporated. Data processing apparatus with abbreviated jump field 5,008,807, Cl 364-200.000

Kruger, Bernd-Wieland, Sasse, Klaus; Hoever, Franz-Peter; Nentwig, Gunther; and Behrenz, Wolfgang, to Bayer Aktiengesellschaft Agents for repelling insects and mites 5,008,261, Cl 514-212.000

Krull, Frans: *See—*
Hermsdorffer, Joachim; Galfe, Gunther; Lautenbacher, Stefan; Korte, Reinhard; Krause, Hans-Joachim; Krull, Frans; May, Arno; Oberdorfer, Dietmar; and Pluquett, Ulrich, 5,007,433, Cl 128-742.000

Krupp Polysius AG: *See—*
Beltrop, Herbert, 5,008,922, Cl 378-208.000

Krushinski, Bert K., Lawhon, Robert A., Radecki, Francis A., and Schwenninger, Ronald L., to PPG Industries, Inc Compressed, wedged float glass bottom structure 5,007,950, Cl 65-182.500

Kubacak, Johnny L., and Byrd, Gary D Roadside spray apparatus 5,007,585, Cl 239-176.000.

Kubo, Masashige: *See—*
Eguchi, Hisao; Kubo, Masashige; Kunimoto, Koji; Shimizu, Sadami; Sato, Masakatsu; and Tamabayashi, Hanzo, 5,008,469, Cl 568-722.000

Eguchi, Hisao; Kubo, Masashige; Kunimoto, Koji; Shimizu, Sadami; Sato, Masakatsu; and Tamabayashi, Hanzo, 5,008,469, Cl 568-722.000

Kuo, Chihping: *See—*
Fletcher, Robert M.; Kuo, Chihping; Osentowski, Timothy D.; and Robbins, Virginia M., 5,008,718, Cl 357-17.000

Kuo, Cho-chou: *See—*
Grayston, J Thomas; Kuo, Cho-chou; and Wang, San-pin, 5,008,186, Cl 435-7.360

Kuo, Shih-Yee; Cho, Hyun-Sam; and Bright, Jeffrey D., to Norton Company Process for preparing titanium nitride coated silicon carbide materials 5,008,132, Cl 427-217.000

Kupfer, Michael D: *See—*
Bly, Sara A.; Farrand, A Brady; Hodges, Jeffery D.; Kupfer, Michael D.; Lewis, Brian T.; Maybury, William J.; Tallan, Michael L.; and Tom, Stephen B., 5,008,853, Cl 364-900.000

Kurafuji, Hiroshi, to Citizen Watch Co., Ltd Head driving apparatus for thermal printer 5,008,684, Cl 346-76.0PH

Kuramochi, Wataru; Tsuruoka, Yoshiaki; Saitou, Norikazu; Shibuya, Akira; and Yamashita, Shuichi, to Dai Nippon Insatsu Kabushiki Kaisha, Data recording and reproducing apparatus for an optical card 5,008,552, Cl 235-483.000.

Kureha Chemical Industry Co., Ltd: *See—*
Ishizuka, Makoto; and Wakasugi, Takashi, 5,008,462, Cl 568-466.000

Kureha Kagaku Kogyo K.K.: *See—*
Kashiwadate, Ken; Satake, Yoshikatsu; Kaneko, Takashi; Tada, Masahiro; and Katto, Takayuki, 5,008,370, Cl 528-481.000

Kureha Kagaku Kogyo Kabushiki Kaisha: *See—*
Ikuzawa, Masanori; Oguchi, Yoshiharu; Matsunaga, Kenichi; Toyoda, Noriyuki; Furusho, Takao; Fujii, Takayoshi; and Yoshikumi, Chikao, 5,008,243, Cl. 514-8.000

Kurihara, Tooru: *See—*
Mizuniwa, Seiji; Hattori, Akio; Kurihara, Tooru; Aoyama, Seigi; and Nakamura, Konichi, 5,007,979, Cl 156-605.000

Kurita, Teiji: *See—*
Souketani, Koichi; Ito, Yukio; Sasaki, Yoshio; Kurita, Teiji; and Tamiya, Jun, 5,007,773, Cl 407-27.000.

Kuriyama, Mitsuo: *See—*
Siga, Masao; Fukui, Yutaka; Kuriyama, Mitsuo; Kurosawa, Soichi; Iijima, Katsumi; Iizuka, Nobuyuki; Maeno, Yosimi; Takahashi, Shintaro; Watanabe, Yasuo; and Hiraga, Ryo, 5,008,072, Cl 420-69.000

Kuriyama, Yuji: *See—*
Maeda, Junichi; Yanai, Tsuguo; Yamamoto, Kazuto; Kuriyama, Yuji; and Yamamoto, Haruo, 5,008,854, Cl 364-900.000

Kuroda, Mitsunobu: *See—*
Tokizane, Toshiaki; Ito, Yoshiharu; Yamada, Osamu; Masuda, Toshiyuki; and Kuroda, Mitsunobu, 5,008,662, Cl 340-825.060

Kurono, Masayasu; Kondo, Yasuaki; Mitani, Takahiko; Baba, Yutaka; and Sawai, Kiichi, to Sanwa Kagaku Kenkyusho Co., Ltd Organogermanium compound, process for the preparation of same as well as use thereof 5,008,416, Cl. 556-89.000

Kurosawa, Soichi: *See—*
Siga, Masao; Fukui, Yutaka; Kuriyama, Mitsuo; Kurosawa, Soichi; Iijima, Katsumi; Iizuka, Nobuyuki; Maeno, Yosimi; Takahashi, Shintaro; Watanabe, Yasuo; and Hiraga, Ryo, 5,008,072, Cl 420-69.000

Kurtz, Stuart J., and Szaniszlo, Steve R., to Union Carbide Chemicals and Plastics Technology Corporation Reduction in die drool in filled resins and product improvement 5,008,056, Cl 264-130.000

Kurzweil Applied Intelligence, Inc: *See—*
Sejnoha, Vladimir, 5,008,941, Cl 381-43.000

Kusakabe, Wataru: *See—*
Terakawa, Takashige; and Kusakabe, Wataru, 5,008,486, Cl 174-35.0MS

Kusakata, Shigeru: *See—*
Gotoh, Hiroshi; Kusakata, Shigeru; and Shiojima, Isao, 5,008,238, Cl 503-217.000

Kushima, Hiroshi: *See—*
Tajima, Kenji; Kushima, Hiroshi; and Yamada, Sadami, 5,008,694, Cl 354-277.000

Kuster, Walter A: *See—*
Keller, Hans J.; and Kuster, Walter A., 5,007,432, Cl 128-736.000

Kusumoto Chemicals Co., Ltd: *See—*
Kobayashi, Nobutoshi; and Murakami, Tetsuo, 5,007,183, Cl 34-92.000

Kutz, Karl H: *See—*
Huang, Kevin C.; Kutz, Karl H.; McNamara, Timothy J.; Seals, Victoria E.; and Still, Gregory S., 5,008,885, Cl 371-3.000

Kuwabara, Isao; Watanabe, Yoshio; Yoshimura, Susumu; and Maruyama, Hidekazu, to Ikeda Bussan Co., Ltd Vehicular seat assembly 5,007,682, Cl 297-452.000

Kuwae, Yoko: *See—*
Nishimura, Yukuo; Haruta, Masahiro; Munakata, Hirohide; Kuwae, Yoko; Miyazaki, Toshihiko; and Yuasa, Satoshi, 5,007,714, Cl 350-353.000.

Kuwajima, Teruaki: *See—*
Ishii, Keizou; Kuwajima, Teruaki; Miwa, Hiroshi; Kashihara, Akio; and Ishikura, Shinichi, 5,008,318, Cl 524-284.000

Kuze, Tetsuya; Yamashita, Takashi; and Suzuki, Toshihiko, to Yokohama Rubber Co., Ltd., The Pneumatic radial tire with improved bead structure 5,007,472, Cl 152-546.000

Kwak, Key S: *See—*
Simmons, Robert J., and Kwak, Key S., 5,007,770, Cl 405-240.000

Kwasniewski, Andrew: *See—*
Whitten, Brian T.; Veraart, Pierre; Kwasniewski, Andrew; and Vollenwyder, Kurt, 5,007,496, Cl. 180-131.000

Kwok, Shirley Y: *See—*
Sminsky, John J.; Kwok, Shirley Y.; and Mack, David H., 5,008,182, Cl 435-5.000

Kyfes, Vincent, to C & L Development Inc., and Chill Tech, Inc., part interest to each Tongue and groove snap-fit pipe coupling 5,007,666, Cl 285-373.000

Kyocera Corporation: *See—*
Muramatsu, Sadao; Hashiba, Yukifumi; and Ikeda, Yuuichi, 5,008,698, Cl 354-429.000

Kyowa Hakko Kogyo Co., Ltd: *See—*
Kanda, Yutaka; Yasuzawa, Tohru; Saito, Hiromitsu; Sano, Hiroshi; Kobayashi, Eiji; and Morimoto, Makoto, 5,008,271, Cl 514-292.000

Kyriakis, John, to Beta Instrument Company Limited Method and apparatus for heating a metallic elongated product 5,008,514, Cl 219-155.000

Kyriakos, Constantinos S., and Baran, Henri, to Allied-Signal Inc. Collision avoidance transmit system with autocalibration. 5,008,844, Cl 364-571.050

L.K. Goodwin Co., Inc.: *See—*
Ouellet, Wilfred P., 5,007,211, Cl 52-2.120

Laakmann, Peter, to Synrad, Incorporated Drive system for RF-excited gas lasers 5,008,894, Cl 372-38.000.

Laatsch, Hartmut: *See—*
Ditrich, Klaus; Hamprecht, Gerhard; Wuerzer, Bruno; Meyer, Norbert; Westphalen, Karl-Otto; and Laatsch, Hartmut, 5,007,954, Cl. 71-90.000.

Labat, Jacques: *See—*
Guichard, Jacques; Buchner, Georges; and Labat, Jacques, 5,008,924, Cl 379-53.000

Laberge, Raymond; and Beauregard, Robert, to Sport Maska Inc. Chest protector 5,007,108, Cl. 2-2.000

Lackner, John R., Grzywna, Stanley E., Weber, Ralph A., and Baird, Thomas E., to Scott Fetzer Company, The Convertible vacuum cleaner 5,007,133, Cl 15-351.000

Lackner, Karl H., to Salmet Gesellschaft mit beschrankter Haftung & Co., Kommanditgesellschaft Air circulating system for poultry housing 5,007,379, Cl 119-17.000

Laclaire, John L: *See—*
Kessel, William C.; Laclaire, John L.; Lui, Andrew L.; Locke, Michael H.; and Britt, Herbert I., 5,008,810, Cl 364-200.000

Lacombe, Alain, to Societe Europeenne de Propulsion Friction system using refractory composite materials. 5,007,508, Cl. 188-251.00A.

Lago, Rudolph M: *See—*
Haag, Werner O.; and Lago, Rudolph M., 5,008,482, Cl 585-437.000.

Laine, Richard M.: *See—*
Blum, Yigal D.; and Laine, Richard M., 5,008,422, Cl 556-412.000

Laitram Corporation, The: *See—*
Lapeyre, James M., 5,008,847, Cl 364-709.160

Lalvani, Haresh Non-periodic and periodic layered space frames having prismatic nodes 5,007,220, Cl 52-311.000

Lambert, Patrick M.: *See—*
Bryan, Philip S.; Lambert, Patrick M.; Towers, Christine M.; and Jarrold, Gregory S., 5,008,034, Cl 252-301.40F

Lambert, Susan L., to UOP Novel crystalline silicon enhanced aluminas 5,008,233, Cl. 502-231.000

Lammers, Uve H. W.: *See—*
Morris, John B.; Lammers, Uve H. W.; and Marr, Richard A., 5,007,721, Cl 350-486.000

Landesman, Barbara T., to Talandic Research Corporation. Semiconductor laser diodes 5,008,892, Cl 372-45.000

Lange, Russell C: *See—*
Blouse, Jeffrey L.; Fulton, Inge G.; Lange, Russell C.; Meyerson, Bernard S.; Nummy, Karen A.; Revitz, Martin; and Rosenberg, Robert, 5,008,207, Cl 437-31.000

Langensiepen, Ralph A., Aghajanian, Michael K., and Wiener, Robert J., to Lanxide Technology Company, LP Method of providing a gating means, and products produced thereby 5,007,474, Cl 164-97.000

Langkjaer, Liselotte: *See—*
Markussen, Jan; Norris, Kjeld; and Langkjaer, Liselotte, 5,008,241, Cl 514-3.000

Langner, Herbert G J Rotating cylindrical screen with fine mesh modular panels 5,008,010, Cl 210-232.000

Lantos, Ivan: *See—*
Bender, Paul E.; Lantos, Ivan; McGuire, Michael A.; Pridgen, Lendon N.; and Winicov, Herbert B., 5,008,390, Cl 546-199.000.

Lanxide Technology Company, LP: *See—*
Kennedy, Christopher R.; and Aghajanian, Michael K., 5,007,475, Cl 164-97.000.
Langensiepen, Ralph A.; Aghajanian, Michael K.; and Wiener, Robert J., 5,007,474, Cl 164-97.000
Newkirk, Marc S.; and Aghajanian, Michael K., 5,007,476, Cl 164-97.000

Lapeyre, James M., to Laitram Corporation, The Cursor selected keyboard keys displayed on the computer screen for entering alphanumeric characters and instructions, particularly for creating computer-aided design and drafting patterns 5,008,847, Cl. 364-709.160.

Lapporte, Seymour J., and Toland, William G., to Chevron Research Company Methylene and oxymethylene bis-ester production 5,008,451, Cl 562-891.000

Larmco Security, Inc: *See—*
Dunagan, John E., and Bernath, Stanley, 5,007,199, Cl 49-13.000.

Larson, Eric H: *See—*
Highsmith, Ronald E.; and Larson, Eric H., 5,008,319, Cl 524-321.000

Larson, John R: *See—*
Bain, Richard L.; and Larson, John R., 5,008,085, Cl 422-109.000

Larson, Reed A., to Hi-Life Rubber Inc. Milking machine teat cup assembly 5,007,378, Cl 119-14.470

Larsson, Karl O. A. H., to ISG/AG. Drive unit adapted for use with manual piston pump. 5,007,899, Cl 604-74.000

Laser Diode, Inc: *See—*
Martin, Danny W., 5,008,895, Cl. 372-69.000.

Laser Link, Inc: *See—*
Kazar, Dennis M., 5,008,595, Cl 315-178.000

Lathrop, Robert L., Jr.: *See—*
Groswith, Charles T., III; Phipps, Richard D.; Lathrop, Robert L., Jr.; Stewart, John F.; and Kaufmann, Rick J., 5,007,782, Cl 412-40.000

Laughner, Michael K., to Dow Chemical Company, The Molding compositions with acrylonitrile-EPDM-styrene copolymers. 5,008,330, Cl. 525-67.000.

Lauks, Imants R.; Wieck, Henry J.; and Bandru, Gregory M., to I-Stat Corporation. Fluidics head for testing chemical and ionic sensors. 5,008,616, Cl. 324-158.00F.

Laurel Industries, Inc.: *See—*
Crompton, Charles E.; Kazi, Abdulla M Z; and Soni, Inderjit S., 5,008,036, Cl. 252-313.100.

Lauren Manufacturing Company: *See—*
Glover, Michael; and Reichert, Gerhard, 5,007,217, Cl. 52-172.000

Laurent, Dominque; Fortunato, Gerard; Damin, Bernard; and Napoleon, Marcel, to Elf France Process and device for determining the cloud point of a diesel oil. 5,007,733, Cl 356-70.000.

Lautenbacher, Stefan: *See—*
Hermsdorffer, Joachim; Galfe, Gunther; Lautenbacher, Stefan; Korte, Reinhard; Krause, Hans-Joachim; Krull, Frans; May, Arno; Oberdorfer, Dietmar; and Pluquett, Ulrich, 5,007,433, Cl 128-742.000.

Lawhon, Robert A: *See—*
Krushinski, Bert K.; Lawhon, Robert A.; Radecki, Francis A.; and Schwenninger, Ronald L., 5,007,950, Cl 65-182.500

Lawson, Richard L Dog chew processing method 5,007,879, Cl. 452-198.000

Lazarski, Margaret A Cleat cover for bicycle shoe 5,007,185, Cl 36-135.000

Le, Quang N.: *See—*
Garwood, William E.; Le, Quang N.; Shim, Joosup; and Wong, Stephen S., 5,008,460, Cl. 585-11.000

Leaning, Anthony B: *See—*
Carr, Michael D.; Perini, Maurice G.; O'Donnell, John; Leaning, Anthony B.; and Leaning, Anthony R., 5,008,748, Cl 358-136.000.

Leaning, Anthony R.: *See—*
Carr, Michael D., and Leaning, Anthony R., 5,008,747, Cl 358-136.000
Carr, Michael D.; Perini, Maurice G.; O'Donnell, John; Leaning, Anthony B.; and Leaning, Anthony R., 5,008,748, Cl 358-136.000.

Lear Seating Corporation: *See—*
Christiansen, Ned; and Kellogg, David, 5,007,610, Cl. 248-311.200

Leclear, Douglas D: *See—*
Kruck, Richard W.; Cur, Omer N.; Leclear, Douglas D.; Kuehl, Steven J.; and Burin, Ralph R., 5,007,246, Cl 62-131.000

Leder, Jonathan, to Union Carbide Chemicals and Plastics Technology Corporation. Process for scavenging sulfides. 5,008,022, Cl 210-755.000

Lee, Alfred; and Kam, Daniel T., to Hughes Aircraft Company Universal shift register employing a matrix of transmission gates 5,008,905, Cl 377-77.000

Lee, Chi-Long; and Gornowicz, Gerald A., to Dow Corning Corporation. Matrix for release of active ingredients. 5,008,115, Cl 424-486.000.

Lee, Chien A. Safety shoe. 5,007,184, Cl 36-77.00R

Lee, Chiu-Shan. Multipurpose safety receptacle. 5,007,848, Cl 439-101.000.

Lee, Chung J., to Occidental Chemical Corporation Crystalline polyimidesiloxanes 5,008,361, Cl 528-26.000

Lee, Clark J Slidable driving stud for using in socket wrench and its manufacturing process. 5,007,311, Cl 81-61.000

Lee Company, The: *See—*
Lee, Leighton, II, 5,007,454, Cl 137-508.000

Lee, David S.; and Tiearney, Thomas C., Jr., to General Electric Company Bonding materials and process for anode target in an x-ray tube 5,008,918, Cl 378-144.000.

Lee, Gim F., Jr., to General Electric Co. Polyphenylene ether compositions resistant to environmental stress cracking. 5,008,314, Cl 524-143.000.

Lee, Gim F., Jr.: *See—*
Yates, John B., III; and Lee, Gim F., Jr., 5,008,333, Cl 525-92.000

Lee, Harry W., Jr., to Reynolds Metals Company High speed fiber optic container inspection apparatus and method. 5,008,533, Cl 250-223.00B.

Lee, Ho C.; O'Toole, John R.; Shalkey, Alex T.; and Zable, Jack L., to International Business Machines Corp. Printer for bar code using thin and thick bar code fonts. 5,007,748, Cl 400-103.000.

Lee, Jong-Seob, to Lee, Jong-Sub; and Kim, Woo-Jin. Magnetizing type induction motor. 5,008,576, Cl 310-166.000.

Lee, Jong-Sub: *See—*
Lee, Jong-Seob, 5,008,576, Cl. 310-166.000.

Lee, Leighton, II, to Lee Company, The Fluid control valve with tubular poppet. 5,007,454, Cl 137-508.000

Lee, Sae Bae; Won, Chan H.; Park, Chung; and Lim, Bun S., to Miwon Co., Ltd. Method for production of L-phenylalanine by recombinant *E. coli*. 5,008,190, Cl. 435-108.000.

Lee, Shan: *See—*
Weiss, Lawrence D.; Caruthers, Douglas W.; Inatomi, Charles T.; Kawan, Joseph C.; Lee, Shan; Marks, Harvey; Meguerdijan, Sarkis A.; Parekh, Dilip J.; Samulon, Alfred S.; Takata, Melvin M.; Tucci, Morris L.; and Vollmer, Jim R., 5,008,927, Cl 379-98.000.

Leedy, Harold G., to AT&T Bell Laboratories. Signal conversion apparatus which reduces quantization errors for telecommunications applications. 5,008,672, Cl. 341-138.000

Leeper, Jeffrey J *See*—
Cox, Laurence C., Dugan, Raymond, Evans, Daniel D., Griffith, Robert, Handley, Terry L., and Leeper, Jeffrey J., 5,007,318, Cl. 83-425.200.

Legg, Keith O., and Tzeng, Yonhua, to Ionic Atlanta, Inc., Spiral hollow cathode, 5,007,373, Cl. 118-723.000.

Legris, Bernard, Oppedal, Magne, and Traonmilin, Eric, to Elf Aquitaine Norge A/S, Method and device for attaching a removable guide post, 5,007,769, Cl. 405-195.000.

Le Guen, Jacques, to General Electric CGR S.A., Safety device for radiogenic unit, 5,008,916, Cl. 378-118.000.

Lehmkuhl, Herbert, and Mehler, Klaus-Dieter, to Studiengesellschaft Kohle mbH, Organoaluminum electrolytes for the electrolytic deposition of high-purity aluminum, 5,007,991, Cl. 204-58.500.

Leibhard, Erich *See*—
Hoffmann, Armin, Ludwig, Wolfgang, and Leibhard, Erich, 5,007,780, Cl. 411-82.000.

Leimbach, Wendell B. *See*—
Marshall, James W., Gotchy, David, Uffelman, Bradley L., Leimbach, Wendell B., and Wilhelmi, Albert A., 5,008,572, Cl. 310-45.000.

Leist, Helmut *See*—
Ahsbahs, Walter, and Leist, Helmut, 5,007,424, Cl. 128-635.000.

Leman, Brooks R., to Power Integrations, Inc., Regulated flyback converter with spike suppressing coupled inductors, 5,008,794, Cl. 363-21.000.

Lemanis, Eduard *See*—
Donenfeld, Henry, and Lemanis, Eduard, 5,008,239, Cl. 503-227.000.

Lembeck, William *See*—
Fishman, Sidney, and Lembeck, William, 5,007,937, Cl. 623-34.000.

Leme, Carlos M. D. A. D. A. *See*—
Da Franca, Jose D. A. E., Vital, Joao P. C. C., and Leme, Carlos M. D. A. D. A., 5,008,674, Cl. 341-150.000.

Lemire, Brett J., Spinal column support attachments for a weight lifter's bench, 5,007,633, Cl. 272-123.000.

Lemon, Robert W., and Arzoian, John, to Rockwell International Corporation, Automatic transmission control system and method of operation, 5,007,309, Cl. 74-869.000.

Lenards, Gerhard F., to Uniroyal Textilcord, S.A., Method of producing a patterned flocked web of material, 5,008,130, Cl. 427-206.000.

Leniger-Follert, Elfriede, Method for treating circulatory vessel occlusion, 5,008,269, Cl. 514-277.000.

Lenker, Jay A. *See*—
Rosenbluth, Robert F., Lenker, Jay A., and Greene, George R., 5,007,898, Cl. 604-54.000.

Lenzen, Reiner, to TRW Vehicle Safety Systems Inc., Safety apparatus, 5,007,661, Cl. 280-735.000.

Leonard, Henrietta L. *See*—
Swedo, Susan E., Rapoport, Judith L., and Leonard, Henrietta L., 5,008,262, Cl. 514-217.000.

Leonberger, Fred J. *See*—
Morey, William W., Leonberger, Fred J., Glenn, William H., and Meltz, Gerald, 5,007,705, Cl. 350-96.290.

Lerner, Narcinda R., and Wydeven, Theodore J., Jr., to United States of America, National Aeronautics and Space Administration, Etching method for photoresists or polymers, 5,007,983, Cl. 156-643.000.

Le Roux, Patrick, to General Electric CGR S.A., Method for depiction of moving parts in a body by nuclear magnetic resonance experiment, 5,007,426, Cl. 128-653.0AF.

Lester, George R. *See*—
Joy, George C., III; Lester, George R., and Marinangeli, Richard E., 5,008,090, Cl. 423-212.000.

Lestox, Inc. *See*—
Mudgett, Donald, 5,008,495, Cl. 174-121.00R.

Letellier, Jules P. *See*—
Willey, Jefferson M., Alter, James J., and Letellier, Jules P., 5,008,680, Cl. 342-372.000.

Leung, Wingyu, and Lien, Chuen-Der, to Integrated Device Technology, Inc., CMOS output driver, 5,008,568, Cl. 307-451.000.

Leuschke, Christian *See*—
Thurm, Siegfried, Holm, Reimer; Leuschke, Christian, Rathmann, Dietrich, and Schrader, Lutz, 5,008,148, Cl. 428-336.000.

Level One Communications, Inc. *See*—
Ray, Daniel L., 5,008,637, Cl. 331-8.000.

Levinson, Frank H., to Raychem Corp., Optical signal recovery for distribution communication system, 5,008,877, Cl. 370-4.000.

Leviton Manufacturing Co., Inc. *See*—
Robinson, Scott T., Denning, William K., Redfield, John M., and Garthwaite, John H., 5,007,860, Cl. 439-540.000.

Lewis, Armis L. *See*—
Maglica, Anthony, Johnson, Ralph E., and Lewis, Armis L., 5,008,785, Cl. 362-183.000.

Lewis, Brian T. *See*—
Bly, Sara A., Farrand, A. Brady, Hodges, Jeffery D., Kupfer, Michael D., Lewis, Brian T., Maybury, William J., Tallan, Michael L., and Tom, Stephen B., 5,008,853, Cl. 364-900.000.

Lewis, Charles E. *See*—
Mushinski, Roger J., Lewis, Charles E., and Casey, Lawrence J., 5,007,538, Cl. 206-523.000.

Lewis, Fielding H., Jr. *See*—
Tucker, Richard B. C., Davis, Jackie L., and Lewis, Fielding H., Jr., 5,007,652, Cl. 273-326.000.

Lewis, Keith L. *See*—
Kelly, Christopher J., and Lewis, Keith L., 5,007,689, Cl. 350-1.600.

Lewis, Milton A., Jr., Mason, Jeffrey S., Swinford, Carson B., and Wiseman, Timothy R., Sr., to Du Pont de Nemours, E. I., and Company, Protective coveralls with improved ventilation, 5,007,112, Cl. 2-79.000.

Leyrer, Karl-Heinz *See*—
Kaeufer, Helmut; Kipfelsberger, Christian, and Leyrer, Karl-Heinz, 5,008,059, Cl. 264-230.000.

Lezdey, John, and Wachter, Allan, Treatment of inflammation using lantichymotrypsin, 5,008,242, Cl. 514-8.000.

Liang, Rong-Chang, Kintz, Karl A., O'Connor, Joseph G.; and Adair, Paul C., to Mead Corporation, The, Vinyl developer resins, 5,008,237, Cl. 503-212.000.

Libby, Fred G., Standing and walk starting apparatus, 5,007,618, Cl. 256-1.000.

Liberty Technology Center, Inc.: *See*—
McElroy, John W., 5,008,841, Cl. 364-551.010.

Licentia Patent Verwaltungs-GmbH *See*—
Zimmer, Manfred, 5,008,670, Cl. 341-113.000.

Leinvest AG *See*—
Ackeret, Peter, 5,007,537, Cl. 206-455.000.

Liddell, Keith S. *See*—
Evans, Dennis F., and Liddell, Keith S., 5,007,589, Cl. 241-21.000.

Lidow, Alexander, Herman, Thomas, and Rumennik, Vladimir, to International Rectifier Corporation, Plural polygon source pattern for MOSFET, 5,008,725, Cl. 357-23.400.

Liebel-Flarsheim Company: *See*—
Gralak, Ronald P., 5,008,920, Cl. 378-185.000.

Lieberman, Herbert A. *See*—
Merianos, John J., Lieberman, Herbert A., and Login, Robert B., 5,008,106, Cl. 424-80.000.

Liedtke, Heinz; Ploeger, Cornelius, and Gorner, Wilmut, to ABB CEAG Licht- und Stromversorgungstechnik GmbH, Device for locking an optically transparent trough to a housing of an extended-field light, 5,008,792, Cl. 362-374.000.

Lien, Chuen-Der *See*—
Leung, Wingyu, and Lien, Chuen-Der, 5,008,568, Cl. 307-451.000.

Lien, Jack, Quick detachable vehicle seat cover, 5,007,676, Cl. 297-218.000.

Light, David R. *See*—
Anderson, Stephen; Light, David R., Marks, Cara, and Rastetter, William H., 5,008,193, Cl. 435-138.000.

Lighten, Jim, Shower kit, 5,007,531, Cl. 206-77.100.

Ligon, Robert *See*—
Patel, Sunil, Ligon, Robert; and Dhyanchand, P. John, 5,008,797, Cl. 363-43.000.

Ligtenberg, Martinus A. C. *See*—
van der Velden, Johnny, van Bergen, Theodorus F., Simons, August L. H.; Colditz, Johannes K. F., Ligtenberg, Martinus A. C. and Dreesen, Franciscus M., 5,008,591, Cl. 313-524.000.

Lim, Bun S. *See*—
Lee, Sae Bae; Won, Chan H., Park, Chung, and Lim, Bun S., 5,008,190, Cl. 435-108.000.

Lin, Sung-Wei *See*—
Gill, Manzur, Lin, Sung-Wei, Cleavelin, C. Rinn, and McElroy, David J., 5,008,721, Cl. 357-23.500.

Lindberg, Per L. *See*—
Brandstrom, Arne E.; Lindberg, Per L., and Sunden, Gunnel F., 5,008,278, Cl. 514-338.000.

Lindberg, Winston R. *See*—
Dulebohn, David H., and Lindberg, Winston R., 5,007,913, Cl. 606-107.000.

Lindegger, Robert, to Northern Elevator Limited, Elevator traction sheave brake, 5,007,505, Cl. 187-89.000.

Linder, Rene, to Schmitt Industries, Inc., Ring balancer, 5,007,305, Cl. 74-573.00R.

Lindner, Thomas A. *See*—
Densmore, Larry L., and Lindner, Thomas A., 5,007,904, Cl. 604-228.000.

Linnane, Anthony W., to Mucan Diagnostics Pty. Ltd., Kit or system for detecting SIMA and/or LIMA antigens in physiological fluid, 5,008,184, Cl. 435-7.230.

Linsky, Cary B.; and Cunningham, Timothy J., to Johnson & Johnson Medical, Inc., Method and material for prevention of surgical adhesions, 5,007,916, Cl. 606-151.000.

Linssen, Andre J.: *See*—
Van De Grift, Robert E. J., Van Der Veen, Martien, and Linssen, Andre J., 5,008,731, Cl. 357-71.000.

Lion Corporation: *See*—
Nishino, Hoyoku; Iwasaki, Ryozo; Okabe, Akio, and Yogo, Yuki, 5,008,295, Cl. 514-766.000.

Liposome Company, Inc., The *See*—
Cullis, Pieter R., Hope, Michael J.; and Bally, Marcel B., 5,008,050, Cl. 264-4.300.

Lipscomb, George F.: *See*—
Thackara, John I.; Lipscomb, George F., Yoon, Hyun-Nam, and De Martino, Ronald N., 5,007,696, Cl. 350-96.140.

Littlebury, Hugh W., to Motorola, Inc., Means and method for testing integrated circuits attached to a leadframe, 5,008,615, Cl. 324-158.00F.

Litton Systems, Inc. *See*—
Stewart, Robert E., and Fersht, Samuel N., 5,007,289, Cl. 73-510.000.

Liu, Kintoken H., to Scientific Design Company, Inc., Catalyst for oxidation of ethylene to ethylene oxide, 5,008,413, Cl. 549-534.000.

Liu, Michael S.; and Chen, Huang-Joung, to Honeywell Inc., Method of making planarized, self-aligned bipolar integrated circuits, 5,008,208, Cl. 437-31.000.

Liu, Ruichen *See*—
Case, Christopher J., Cheung, Kin P., Liu, Ruichen, Schutz, Ronald J., and Wagner, Richard S., 5,008,217, Cl. 437-195.000.

Lloyd, David D., and Michaluk, Peter G., to Serck Baker Limited, Separator, 5,008,014, Cl. 210-512.100.

Lloyd, Mervin R. J., Snow-plow arrangement for moisture retention in a field, 5,007,187, Cl. 37-220.000.

Locke, Michael H.: *See*—
Kessel, William C.; Laclaire, John L., Liu, Andrew L., Locke, Michael H., and Britt, Herbert I., 5,008,810, Cl. 364-200.000.

Lockheed Corporation *See*—
Cameron, Randy F., and Clement, Sandra K., 5,008,041, Cl. 252-500.000.

Lockheed Missiles & Space Company, Inc. *See*—
Thackara, John I.; Lipscomb, George F., Yoon, Hyun-Nam, and De Martino, Ronald N., 5,007,696, Cl. 350-96.140.

Lockshaw, James, Universally adaptable pool water filter structure, 5,008,008, Cl. 210-169.000.

Lockwood, Hanford N. *See*—
Lockwood, Hanford N., Jr., 5,007,614, Cl. 251-83.000.

Loewe, Robert J.: *See*—
Bernacchi, Donald B., Loewe, Robert J., and Immel, Donna L., 5,008,121, Cl. 426-89.000.

Login, Robert B. *See*—
Chaudhuri, Ratan K., Tracy, David J., and Login, Robert B., 5,008,104, Cl. 424-70.000.
Dandreaux, Gary, Login, Robert B., Merianos, John J., Garelick, Paul, Plochocka, Krystyna, Negrin, Max, and Shih, Jenn S., 5,008,367, Cl. 528-326.000.
Merianos, John J.; and Login, Robert B., 5,008,038, Cl. 252-363.500.
Merianos, John J., Lieberman, Herbert A., and Login, Robert B., 5,008,106, Cl. 424-80.000.

Logitech S.A.: *See*—
Duchon, Douglas, 5,008,528, Cl. 250-221.000.

Loh, Kuo-Liang; Shieh, Puh Chao, Y. S., and Chuang, Tsu-Kung, to Industrial Technology Research Institute, Preparation of urethanes, 5,008,435, Cl. 560-24.000.

Lombard, Jose O., to Figueroa, Luis A., Load-carrying attachment for motor vehicles, 5,007,794, Cl. 414-542.000.

Lombardo, Alan M. *See*—
Sidebotham, Christopher G., McNulty, Donald F., and Lombardo, Alan M., 5,007,933, Cl. 623-20.000.

Londono, Gustavo, Window security system, 5,007,200, Cl. 49-141.000.

Longman, Robert J., Helfet, Peter R., and Abrams, Michael J., to Plasmon Limited, Data storage medium, 5,008,687, Cl. 346-135.100.

Lonza Ltd *See*—
Meul, Thomas, 5,008,402, Cl. 548-544.000.

Loodwood, Hanford N., Jr., to Lockwood, Hanford N., Pressure responsive two-way shut-off valve, 5,007,614, Cl. 251-83.000.

Look, David C.; Sewell, James S., Mier, Millard G., Sizelove, John R., Walters, Dennis C., and Dudley, Scott C., to United States of America, Air Force, Method and system for automated measurement of whole-wafer etch pit density in GaAs, 5,008,542, Cl. 250-341.000.

Loose, Leland D. *See*—
Blackburn, Warren D., Jr., and Loose, Leland D., 5,008,283, Cl. 514-414.000.

LoPiccolo, Donald V. *See*—
Bengtson, Fred G., and LoPiccolo, Donald V., 5,007,218, Cl. 52-204.000.

Lord Corporation *See*—
Carlson, J. David, 5,007,513, Cl. 192-21.500.

Lordan & Co. *See*—
Maier, Eliahu, Kovesh, Yair, and Zorea, Abraham, 5,007,248, Cl. 62-244.000.

L'Oreal *See*—
de Laforcade, Vincent, 5,007,563, Cl. 222-145.000.
Grollier, Jean F.; and Dubief, Claude, 5,008,105, Cl. 424-70.000.
Vanlerberghe, Guy, Zysman, Alexandre, and Sebag, Henri, 5,008,406, Cl. 549-378.000.

Lorenz, Cisela: *See*—
Schuetz, Franz, Brand, Siegbert, Wenderoth, Bernd, Sauter, Hubert, Ammermann, Eberhard, and Lorenz, Cisela, 5,008,438, Cl. 560-55.000.

Losch, Rainer: *See*—
Gunther, Bernd-Rainer, Losch, Rainer, and Steiner, Klaus, 5,008,394, Cl. 548-121.000.

Losel, Walter *See*—
Schnorrenberg, Gerd; Roos, Otto, Losel, Walter; Wiedemann, Ingrid; Gaida, Wolfram, Hoefke, Wolfgang, Arndts, Dietrich, and Streller, Ilse, 5,008,273, Cl. 514-301.000.

Loughlin, Bernard T.: *See*—
Kelly, Robert G.; Loughlin, Bernard T., and McCutcheon, William F., 5,007,943, Cl. 51-295.000.

Love, Douglas C.: *See*—
Christopher, Kenneth W., Jr., Feigenbaum, Barry A., Kim, Jin, and Love, Douglas C., 5,008,820, Cl. 364-200.000.

Lover, Myron J., to Block Drug Company, Inc., Metering dispenser, 5,007,556, Cl. 222-386.500.

Loverich, Gary F., and Griffin, Barry A., to Nor'Eastern Trawl Systems, Inc., Spar bouy pen system, 5,007,376, Cl. 119-3.000.

Lovrecich, Mara L., to Vectorpharma International S.p.A., Pharmaceutical compositions with controlled release, and a method for their preparation, 5,008,114, Cl. 424-484.000.

Lowe, Thomas E., Cartridge operated entertainment system with removal deterrent device for preventing unauthorized use, 5,007,256, Cl. 70-14.000.

Loyer, Philip K. *See*—
Holden, Homer N., and Loyer, Philip K., 5,007,839, Cl. 439-191.000.

Lubrizol Corporation, The *See*—
Jolley, Scott T., and Grava, Arturs, 5,008,028, Cl. 252-68.000.

Lubrizol Genetics, Inc. *See*—
Rolfe, Barry G., Shine, John, Scott, Kieran F., and Hennecke, Hauke, 5,008,194, Cl. 435-172.300.

Lucas Industries *See*—
Madeley, David R., and Binet, Mark S., 5,008,561, Cl. 307-80.000.

Ludwig, Wolfgang *See*—
Hoffmann, Armin, Ludwig, Wolfgang, and Leibhard, Erich, 5,007,780, Cl. 411-82.000.

Lui, Andrew L. *See*—
Kessel, William C.; Laclaire, John L., Lui, Andrew L., Locke, Michael H., and Britt, Herbert I., 5,008,810, Cl. 364-200.000.

Luigi, Darbesio *See*—
Nakayama, Kiyoshi, and Luigi, Darbesio, 5,008,603, Cl. 318-568.100.

Luijten, Ronald P. *See*—
Ahmadi, Hamid, Beha, Johannes G., Denzel, Wolfgang E., Engbersen, Antonius P., Luijten, Ronald P., Murphy, Charles A., and Port, Erich, 5,008,878, Cl. 370-60.000.

Luitpold-Werk Chemisch-pharmazeutische Fabrik GmbH & Co. *See*—
Meinetsberger, Eike, 5,008,247, Cl. 514-23.000.

Lukacs, Laszlo *See*—
Bakos, Jozsef, Heil, Balint, Toth, Imre, Edes, Bela, Gebhardt, Tstvan, Bihari, Ferenc, Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno; Konok nee Horvath, Eva; Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela; and Sarosi, Lajos, 5,008,440, Cl. 560-65.000.

Luna, Carlos E. *See*—
Edmondson, Sherburne M., and Luna, Carlos E., 5,008,202, Cl. 436-18.000.

Lundin, Jan-Erik, to Saab Missiles Aktiebolag, Device for the selective detection of objects, 5,008,522, Cl. 250-203.600.

Lutisan, Eduard *See*—
Brychta, Jaroslav, Lutisan, Eduard, and Jirkovsky, Vladimir, 5,007,394, Cl. 123-279.000.

Lynch, John J. *See*—
Chinnaswamy, Kumar, Gagliardo, Michael A., Goodwin, Paul M., Lynch, John J., and Tessari, James E., 5,008,886, Cl. 371-40.200.

Lyxell, Frans O. S. *See*—
Gustavsson, Tord G., Lyxell, Frans O. S.; and Silja, Karl T. I., 5,007,986, Cl. 162-281.000.

Maag Gear-Wheel & Machine Company Limited *See*—
Kromer, Roland, 5,007,774, Cl. 407-94.000.

Maas, Henricus G. R. *See*—
Appels, Johannes A., and Maas, Henricus G. R., 5,008,209, Cl. 437-31.000.

Maathuis, Antonnis G., Spielmann, Jurgen, Beer, Klaus, and Oare, Thomas R., to Goodyear Tire & Rubber Company, The, Method of making a belt overlay for pneumatic tires, 5,007,974, Cl. 156-117.000.

MacDonald, Peter *See*—
Palladino, Gaetano; MacDonald, Peter, and Bigatti, Ettore, 5,008,380, Cl. 536-6.400.

MacDonald, Virginia N. *See*—
Hanson, Charles M; and MacDonald, Virginia N., 5,008,657, Cl. 340-766.000.

Machida, Hisashi, to Nippon Seiko Kabushiki Kaisha, Toroidal-type infinitely variable transmission, 5,007,298, Cl. 74-200.000.

Machida, Yoshimasa *See*—
Yamauchi, Hiroshi, Sugiyama, Isao, Saito, Isao, Nomoto, Seiichiro, Kamiya, Takashi, Machida, Yoshimasa, and Negi, Shigeto, 5,008,260, Cl. 514-202.000.

Mack, David H. *See*—
Sninsky, John J., Kwok, Shirley Y., and Mack, David H., 5,008,182, Cl. 435-5.000.

MacKay, Colin A. *See*—
Spletter, Phillip J.; and MacKay, Colin A., 5,008,512, Cl. 219-121.640.

Mackay, Munro: *See*—
Keijsper, Johannes J., Mackay, Munro, and Post, Martin F. M., 5,008,094, Cl. 423-328.000.

MacLean, Donald L. *See*—
Ramachandran, Ramakrishnan; MacLean, Donald L., and Satchell, Donald P., Jr., 5,008,412, Cl. 549-523.000.
Ramachandran, Ramakrishnan, MacLean, Donald L., Satchell, Donald P., Jr., and Malik, Virginia A., 5,008,414, Cl. 549-538.000.

Macnak, Philip P.: *See*—
Davis, Walter L., and Macnak, Philip P., 5,008,952, Cl. 455-12.000.

MacWatt, David M., to Aardvark Clear Mine Limited of Shevock Farm, Apparatus for clearing mines, 5,007,325, Cl. 89-1.130.

Madan, Herb S.: *See*—
Peterson, John C.; Chow, Edward, and Madan, Herb S., 5,008,882, Cl. 370-94.300.

Madan, Pradeep B.: *See*—
Coffen, David L., Madan, Pradeep B., and Schwartz, Alan, 5,008,411, Cl. 549-519.000.

Madeley, David R., and Binet, Mark S., to Lucas Industries, Device depowering apparatus, 5,008,561, Cl. 307-80.000.

Madey, John M. J. *See*—
Cutolo, Antonello; Solimeno, Salvatore; and Madey, John M. J., 5,007,717, Cl. 350-353.000.

Maeda, Junichi, Yanai, Tsuguo, Yamamoto, Kazuto; Kuriyama, Yuji; and Yamamoto, Haruo, to Casio Computer Co., Ltd., Pocket size data

storage apparatus with tablet device for inputting image data 5,008,854, Cl 364-900.000
Maeno, Yosimi. *See*—
Siga, Masao, Fukui, Yutaka, Kuriyama, Mitsuo, Kurosawa, Soichi, Iijima, Katsumi, Iizuka, Nobuyuki, Maeno, Yosimi, Takahashi, Shintaro, Watanabe, Yasuo, and Hiraga, Ryo, 5,008,072, Cl 420-69.000
Maeshima, Katsuyoshi *See*—
Inuzuka, Tsuneki, Maeshima, Katsuyoshi, and Tomosada, Masahiro, 5,008,712, Cl 355-206.000
Mag Instrument, Inc. *See*—
Maglica, Anthony Johnson, Ralph E., and Lewis, Armis I., 5,008,785, Cl. 362-183.000
Magistro, Angelo J., to B. F. Goodrich Company, The Catalytic dehydrohalogenation catalyst 5,008,225, Cl. 502-73.000
Maglica, Anthony; Johnson, Ralph E. and Lewis, Armis I. to Mag Instrument, Inc. Rechargeable miniature flashlight 5,008,785, Cl 362-183.000
Magonen, Robert M. Detachable two-piece temple 5,007,728, Cl 351-118.000
Mahaney, John C., to Olson Manufacturing Co. Box lock assembly 5,007,258, Cl. 70-159.000.
Maher, Ambrose P. *See*—
Matteucci, Lawrence A., Rager, Shirley J., and Maher, Ambrose P., 5,007,367, Cl. 116-210.000.
Mahoney, Murray W., and Ghosh, Amit K., to Rockwell International. Optical monitor for superplastic forming 5,007,265, Cl. 72-37.000
Maier, Eliahu, Kovesh, Yair; and Zorea, Abraham, to Lordan & Co. Beverage cooling system 5,007,248, Cl. 62-244.000
Maier, Hansueli *See*—
Busenhart, Peter, Schneeberger, Ruedi, Holbein, Erwin, Wirz, Armin, Flueli, Adolf; and Maier, Hansueli, 5,007,595, Cl 242-46.400
Maier, William H., and Bentham, Martin F., to UOP. Aromatics extraction process having improved water stripper 5,008,004, Cl 208-321.000
Mainster, Martin A. *See*—
Erickson, Phillip J., Crossman, Janet L., Heacock, Gregory L., and Mainster, Martin A., 5,007,729, Cl. 351-219.000
Maiocchi, Luigi, to Pirelli Coordinamento Pneumatici S.p.A. Beads of pneumatic tires for vehicle wheels 5,007,471, Cl. 152-540.000
Maitan, Gianni *See*—
Corain, Luciano, Maitan, Gianni, Perlini, Renato, and Bacchetti, Mario, 5,007,463, Cl. 139-448.000
Makimoto, Mitsuo *See*—
Ohba, Motoi, Yabuki, Hiroyuki, and Makimoto, Mitsuo, 5,008,629, Cl. 328-14.000
Makino, Takayuki, Mukai, Nobuhiro, and Ige, Hitoshi, to Mitsubishi Rayon Company Ltd. Visible light ray-curable monomeric composition for fastening loose teeth 5,008,300, Cl. 522-8.000
Makrylaleas, Kyriakos *See*—
Neidermeyer, Uwe, Kragl, Udo, Kula, Maria R., Wandrey, Christian, Makrylaleas, Kyriakos, and Drauz, Karlheinz, 5,008,192, Cl 435-128.000.
Malcolm, Robert G., and Richardson, Thomas W. Solid-state transducer based dynamic fluid flow sensing system 5,007,286, Cl 73-181.000
Malczewski, Regina M. *See*—
Klimisch, Helen M., and Malczewski, Regina M., 5,008,101, Cl 424-59.000
Malik, Virginia A. *See*—
Ramachandran, Ramakrishnan, MacLean, Donald L., Satchell, Donald P., Jr., and Malik, Virginia A., 5,008,414, Cl 549-538.000
Malim, Michael H. *See*—
Kingsman, Alan J., Kingsman, Susan M.; Adams, Sally E., Mellor, Elizabeth J. C.; and Malim, Michael H., 5,008,373, Cl 530-350.000
Mallon, Charles B., and Chu, Howard, to Union Carbide Chemicals and Plastics Technology Corporation. Low temperature active aliphatic aromatic polycarbodiimides 5,008,363, Cl 528-49.000
Mallory, Inc. *See*—
Bellis, Peter D., and Nesselrode, Frederick, 5,007,806, Cl 417-360.000
Man Design Co. Ltd. *See*—
Wakatsuki, Yoshio, Okuyama, Toshiharu; Takeuchi, Hajime, Shimizu, Misao; and Shimizu, Giichiro, 5,008,665, Cl. 340-870.260
MAN Roland Druckmaschinen AG: *See*—
Abendroth, Paul; Brandes, Harry, and Raab, Rudolf, 5,007,342, Cl 101-420.000.
Manchak, Frank, Jr.; Manchak, Frank E., II; Manchak, Michael E., and Manchak, Peter J., to Alternative Technologies for Waste, Inc. Method and apparatus for centrifugally casting hazardous waste 5,008,045, Cl. 252-633.000
Manchak, Frank E., II *See*—
Manchak, Frank, Jr.; Manchak, Frank E., II; Manchak, Michael E., and Manchak, Peter J., 5,008,045, Cl. 252-633.000
Manchak, Michael E. *See*—
Manchak, Frank, Jr., Manchak, Frank E., II; Manchak, Michael E., and Manchak, Peter J., 5,008,045, Cl. 252-633.000
Manchak, Peter J. *See*—
Manchak, Frank, Jr., Manchak, Frank E., II; Manchak, Michael E., and Manchak, Peter J., 5,008,045, Cl. 252-633.000
Manfre, Robert A. Rail mate 5,007,612, Cl. 248-558.000
Mangelsdorf, Steven T., and James, David V., to Hewlett-Packard Co. Synchronizer using clock phase extrapolation 5,008,904, Cl 375-107.000.
Manil, Emmanuel *See*—
Koehler, Bertrand, Manil, Emmanuel, and Chapellier, Jacques 5,008,606, Cl. 318-649.000
Mann, Robert N., to Mig Vac Inc. Joint in fume-extracting welding gun 5,007,664, Cl 285-330.000
Mann, Samuel J., to Inverness Corporation. Ear piercing cartridge assembly, 5,007,918, Cl. 606-188.000
Mannesmann AG *See*—
Unewisse, Heinz and Foering, Herbert, 5,007,667, Cl. 285-382.200
Mantovani, Marisa: *See*—
Casu, Benito; Torri, Giangiacomo, Naggi, Annamaria, Mantovani, Marisa, Pescador, Rodolfo, Porta, Roberto, and Prino, Giuseppe 5,008,253, Cl. 514-54.000
Manzer, Leo E. and Rao, V. N. Mallikarjuna, to Du Pont de Nemours, E. I., and Company. Gas-phase fluorination process 5,008,475, Cl 570-168.000
Manzer, Leo E., and Rao, V. N. Mallikarjuna, to Du Pont de Nemours E. I., and Company. Process for the preparation of 1,1,1,2-tetrafluoroethane 5,008,476, Cl. 570-176.000
Manzoni, Stephane, to Societe Manzoni Bouchot. Mechanism with torque-limiting device for controlling a rearview mirror 5,007,725 Cl 350-633.000
Marable, Alger C. *See*—

Iida, Masanori, Hagiwara, Kiyokazu, Asakura, Hiroyuki, Nishioka, Minoru, and Murase, Koichi, 5,007,709, Cl. 350-162.220

Murata, Jun, to Canon Kabushiki Kaisha. Platen roller. 5,008,138, Cl. 428-36.400

Murata Mfg. Co., Ltd. *See*—
Hashimoto, Akira, and Arai, Shunji, 5,008,600, Cl. 315-370.000
Tamaki, Kuniaki, Sakai, Norio, and Minowa, Kenji, 5,007,534, Cl. 206-329.000.

Murata, Shizuo; Nakayama, Minoru; Furukawa, Kenji, and Kobayashi, Ryuji, to Chisso Corporation. Diamino compounds, dinitro compounds, diol compounds and a process for preparing the diamino compounds. 5,008,456, Cl. 564-322.000

Murayama, Fumio, and Ando, Tomiaki, to Pioneer Electronic Corp. Water-proof speaker unit. 5,008,945, Cl. 381-194.000

Murayama, Hisao *See*—
Sakamoto, Koji, Tanzawa, Misao, Iwata, Nobuo, Murayama, Hisao, Takahashi, Susumu, and Komada, Kenya, 5,008,711, Cl. 355-206.000

Murphy, Charles A. *See*—
Ahmadi, Hamid, Beha, Johannes G., Denzel, Wolfgang E., Enghersen, Antonius P., Luijten, Ronald P., Murphy, Charles A. and Port, Erich, 5,008,878, Cl. 370-60.000

Murray, William D. Lighted handlebar for bicycles. 5,008,782, Cl. 362-72.000

Murtiashaw, Charles W., to Pfizer Inc. Process for the production of O2,2'-anhydro-1-(β-D-arabinofuranosyl)thymine. 5,008,384, Cl. 536-23.000

Murwald, Mario *See*—
Grohn, Michael, Murwald, Mario, Thoma, Frank, and Hoffmann, Karlheinz, 5,007,401, Cl. 123-509.000

Mushinski, Roger J., Lewis, Charles E. and Casey, Lawrence J., to Appleton Papers Inc. Interleaved spiral wrapping of foam product and stretch film for packaging carbonless paper rolls. 5,007,538, Cl. 206-523.000

Musielak, Ronald L., to R V R Enterprises, Ltd. Insulated cooling container for canned liquids. 5,007,250, Cl. 62-372.000

Musto, Mario S., and Davis, Scott W. Fore-and-aft adjuster for bicycle seat. 5,007,675, Cl. 297-195.000

Muth, James C., to Spacesaver Corporation. Mobile carriage with center drive. 5,007,351, Cl. 105-101.000

Myers, Darren J. *See*—
Fritts, Monty, and Myers, Darren J., 5,007,212, Cl. 52-2.180

Myers, Earl C., Jr. *See*—
Defibaugh, George R., Myers, Earl C., Jr., and Smith, Steven G., 5,007,862, Cl. 439-607.000

Myers, Robert I., Brubaker, Bryce D. and Overall, Robert E., to Morton Thiokol, Inc. Removable rocket motor igniter. 5,007,236, Cl. 60-256.000

Myers, Robert L. *See*—
Cox, Roger L., DeLoye, Michael J., and Myers, Robert L., 5,008,829, Cl. 364-480.000

Nabisco Brands, Inc. *See*—
Klemann, Lawrence P., Finley, John W., and Scimone, Anthony, 5,008,126, Cl. 426-611.000
Rosnack, Ellen M., Pray, Larry A., Marable, Alger C., and Zekert, Gerry C., 5,008,122, Cl. 426-417.000
Wilson, Mildred N., 5,008,124, Cl. 426-589.000.

Nachi-Fujikoshi Corporation *See*—
Souketani, Koichi, Ito, Yukio, Sasaki, Yoshio, Kurita, Teiji, and Tamiya, Jun, 5,007,773, Cl. 407-27.000

Nada, Minoru. *See*—
Ozawa, Takashi; and Nada, Minoru, 5,008,713, Cl. 355-319.000

Nadkarni, Arun A., and Sankrithi, Mithra M. K. V. Apparatus and methods for automatically maintaining aircraft track angle. 5,008,825, Cl. 364-434.000

Naeumann, Fritz, and Hickmann, Eckhard, to BASF Aktiengesellschaft. Preparation of benzyl ketones. 5,008,461, Cl. 568-322.000

Naf, Werner, to interTechno AG. Method for the cleaning of the interior of installed conduits. 5,007,461, Cl. 138-97.000

Nagahara, Shin *See*—
Nakagawa, Masaru, Sumino, Fumio, Hiro, Masaaki, Kashimura, Noboru, and Nagahara, Shin, 5,008,168, Cl. 430-56.000

Nagai, Kazuhiko, to Jidosha Denki Kogyo K.K. Filler cap of jar for washer. 5,007,287, Cl. 73-290.00B

Nagai, Tetsuji, Torii, Katura, and Ohno, Yoshio, to Fuji Photo Film Co., Ltd. Method of sequential monitoring and apparatus for practicing the same. 5,008,842, Cl. 364-551.010

Nagamatsu, Tsutomu *See*—
Washizu, Takehiro, and Nagamatsu, Tsutomu, 5,007,386, Cl. 123-52.0MC

Nagame, Hiroshi *See*—
Rokutanzono, Takashi, Ide, Yukio; Nagame, Hiroshi, Ohshima, Kohichi, Kojima, Narihito, and Nousho, Shinji, 5,008,172, Cl. 430-67.000

Nagano Japan Radio Co., Ltd. *See*—
Kobayashi, Hitoshi, Takano, Akira; Narusawa, Naoharu, Tsukada, Yukihiko, Sakamoto, Hiroshi; Hirano, Masaki, and Ando, Masao, 5,008,710, Cl. 355-202.000

Nagaoka, Shinji, Sato, Koji, and Kawai, Michio, to Seikosha Co., Ltd. Rangefinder for camera. 5,008,695, Cl. 354-403.000

Nagashima, Nao *See*—
Shimizu, Katsuichi; Shibata, Takehiko, Yokomizo, Yoshikazu, Suzuki, Akira, Murakami, Koichi, Yoshida, Tadashi, Tsukada, Masaharu, Nagashima, Nao, and Miyagi, Ken, 5,008,760, Cl. 358-451.000

Nagatsuma, Nobuyoshi *See*—
Kamata, Yoshiharu, Nagatsuma, Nobuyoshi, Ozawa, Mituharu and Yoshioka, Hiroshi, 5,007,154, Cl. 29-430.000

Nagel, Peter *See*—
Huebner, Dietmar; Nagel, Peter; Hirschberg, Ekkehard; Schoettle, Klaus; and Pavelka, Bozidar, 5,007,536, Cl. 206-394.000

Naggi, Annamaria *See*—
Casu, Benito, Torri, Giangiacomo, Naggi, Annamaria, Mantovani, Marisa, Pescador, Rodolfo, Porta, Roberto, and Prino, Giuseppe, 5,008,253, Cl. 514-54.000

Najafi-Sani, Mohammad, and Bex, Philip A. Shaping of bonded abrasive products. 5,008,513, Cl. 219-121.690

Nakachi, Takeshi, Hata, Akio, and Watanabe, Yoshihisa, to Sekisui Kagaku Kogyo Kabushiki Kaisha. Resin for magnetic recording media from vinyl chloride polymer with quaternary groups. 5,008,357, Cl. 526-292.200

Nakagawa, Asaharu, to Kitagawa Industries Co., Ltd. Strip cable. 5,008,488, Cl. 174-36.000

Nakagawa, Katsumi, Ishihara, Shunichi, Kanai, Masahiro; Murakami, Tsutomu, Arao, Kozo, Fujioka, Yasushi and Sakai, Akira, to Canon Kabushiki Kaisha. PIN junction photovoltaic element containing Zn, Se, Te, H in an amount of 1 to 4 atomic %. 5,008,726, Cl. 357-30.000

Nakagawa, Masaru, Sumino, Fumio, Hiro, Masaaki, Kashimura, Noboru, and Nagahara, Shin, to Canon Kabushiki Kaisha. Photosensitive member for electrophotography. 5,008,168, Cl. 430-56.000

Nakagishi, Toshio, to Asahi Kogaku Kogyo Kabushiki Kaisha. Carriage lock apparatus. 5,008,876, Cl. 369-244.000

Nakahara, Toshiro, to Ichikoh Industries, Ltd. Wedge-type lamp bulb assembly. 5,008,588, Cl. 313-318.000

Nakai, Hatsuo, to Clover Co., Ltd. Dial lock. 5,007,262, Cl. 70-312.000

Nakai, Noboru, and Isozaki, Osamu, to Kansai Paint Co., Ltd. Aqueous organosilicon resin coating compositions. 5,008,328, Cl. 524-759.000

Nakai, Satoru, Kaneta, Mayumi, Kikumoto, Yoshikazu, Hong, Yeong-Man, Kawai, Kazuyoshi, Takegata, Setsuko Ishii, Kiyoshi Yanagihara, Yasuo and Hirai, Yoshikatsu, to Otsuka Pharmaceutical Co., Ltd. IL-1α derivatives and drugs. 5,008,374, Cl. 530-351.000

Nakajima, Akihiko *See*—
Matsumoto, Shusaku, Hatakawa, Yoshio, and Nakajima, Akihiko, 5,008,387, Cl. 536-119.000

Nakajima, Akinobu *See*—
Aoyama, Motoo, Koyama, Junichi; Uchikawa, Sadao, Bessho, Yasunori, Ozawa, Michihiro, Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000

Nakajima, Ikuo *See*—
Okamura, Moriyuki, Nakajima, Ikuo, and Nishiguchi, Toshiji, 5,007,928, Cl. 623-6.000

Nakajima, Masashi, Tomita, Nobuo, Suzaki, Kenji, Kaneko, Akira, and Sawaki, Mikio, to Nippon Soda Co., Ltd. Method for the production of hydroxylamine derivatives. 5,008,455, Cl. 564-300.000

Nakajima, Yuji, and Mochizuki, Masashi, to Hoya Corporation. Multilayered surface reflecting mirror. 5,007,710, Cl. 350-166.000

Nakamaru, Koichi *See*—
Takahashi, Toshihiro, Horaguchi, Tatsuo, Nakamaru, Koichi, and Suzuki, Yoshikuni, 5,008,266, Cl. 514-259.000

Nakamori, Hideki *See*—
Uno, Ken; Fujino, Takuo, and Nakamori, Hideki, 5,008,002, Cl. 204-192.310

Nakamura, Arata, to Omron Tateisi Electronics Co. Photoelectric switching apparatus of reflection type projecting red and infrared light. 5,008,529, Cl. 250-221.000

Nakamura, Konichi *See*—
Mizuniwa, Seiji, Hattori, Akio, Kurihara, Tooru, Aoyama, Seigi and Nakamura, Konichi, 5,007,979, Cl. 156-605.000

Nakamura, Makio, to Sharp Kabushiki Kaisha. Installation structure of a microwave oscillation circuit unit. 5,008,638, Cl. 331-68.000

Nakamura, Mitsunari *See*—
Aoyama, Motoo, Koyama, Junichi; Uchikawa, Sadao; Bessho, Yasunori, Ozawa, Michihiro, Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000

Nakamura, Takashi, Tanaka, Haruhiko, Hyodo, Touru, and Osanai, Yasuhiro, to Janome Sewing Machine Company Limited. Multifunction switching control system. 5,008,601, Cl. 318-268.000

Nakamura, Takashi, Yasukochi, Yoshimi, Munakata, Tamotsu and Nakashima, Masaharu. Video camera system with audio switching circuit. 5,008,756, Cl. 358-210.000

Nakamura, TetsuHisa *See*—
Rha, ChoKyun, Pradipasena, Pasawadee; Nakamura, TetsuHisa, Easson, Donald D., Jr., and Sinskey, Anthony J., 5,008,108, Cl. 424-401.000

Nakanishi, Koji, Oltz, Eugene M., and Grunberger, Dezider, to Trustee of Columbia University in the City of New York. The Caffeic acid esters and methods of producing and using same. 5,008,441, Cl. 560-75.000

Nakanishi, Yoshinobu *See*—
Yamamura, Yoshihiro; Ogihara, Takashi; Nakanishi, Yoshinobu, and Nishizono, Tomohiro, 5,008,937, Cl. 380-50.000

Nakaniwa, Shinpei, to Japan Electronic Control Systems Co., Ltd. Method and apparatus for self-diagnosis of air leakage in control system of internal combustion engine. 5,007,399, Cl. 123-489.000

Nakano, Takafumi, Seo, Akikazu, Soeda, Hiromitsu, and Sueoka, Kazufumi, to Mitsubishi Jukogyo Kabushiki Kaisha, and Ryomei Engineering Co., Ltd. Keyless printing press. 5,007,341, Cl. 101-349.000

Nakashima, Masaharu *See*—
Nakamura, Takashi, Yasukochi, Yoshimi, Munakata, Tamotsu, and Nakashima, Masaharu, 5,008,756, Cl. 358-210.000

Nakashima, Naoto *See*—
Tanaka, Tsutomu, Oshida, Yoshitada, Shiba, Masataka, Nakashima, Naoto, and Funatsu, Ryuichi, 5,008,702, Cl. 355-52.000

Nakasuji, Kazuyuki, Hayashi, Chihiro, and Suzushima, Yoshiyuki, to Sumitomo Metal Industries Ltd., and Sumitomo Special Metals Co., Ltd. Multiple-coke complex material and method of manufacturing the same. 5,007,577, Cl. 228-265.000

Nakayama, Haruo *See*—
Asakawa, Toshifumi and Nakayama, Haruo, 5,008,554, Cl. 250-551.000

Nakayama, Hitoshi, to Snow Brand Milk Products Co., Ltd. Thermo-electric humidifier and display case provided with such humidifier. 5,007,242, Cl. 62-3.200

Nakayama, Kiyoshi; and Luigi, Darbesio, to Murakami Kaimeido Co., Ltd.; and Fiat Auto S.p.A. Electrically foldable rearview mirrors interlocked with door locks. 5,008,603, Cl. 318-568.100

Nakayama, Mikio *See*—
Yazawa, Shigehiko, Ogawa, Toru, Moritomo, Haruo Suya, Yoshiaki; and Nakayama, Mikio, 5,008,884, Cl. 370-110.100

Nakayama, Minoru: *See*—
Murata, Shizuo, Nakayama, Minoru, Furukawa, Kenji, and Kobayashi, Ryuji, 5,008,456, Cl. 564-322.000

Nakazawa, Hideo *See*—
Yamaguchi, Toru, Inazuki, Yukio and Nakazawa, Hideo, 5,007,243, Cl. 62-51.100.

Nalco Chemical Company. *See*—
Broom, Henry T., 5,008,035, Cl. 252-312.000

Nalepa, Christopher J.; Presswood, J. Kenneth; and Knapp, Gordon G., to Ethyl Corporation. Aromatic dimines. 5,008,453, Cl. 564-271.000

Napco Security Systems, Inc.: *See*—
DePierro, Alfred V., 5,008,840, Cl. 364-550.000

Napoleon, Marcel *See*—
Laurent, Dominque, Fortunato, Gerard, Damin, Bernard, and Napoleon, Marcel, 5,007,733, Cl. 356-70.000

Narisada, Masayuki, Ohtani, Mitsuaki, Watanabe, Fumihiko, and Kawata, Kyozo, to Shionogi & Co., Ltd. Process for preparing 1,4-bridged cyclohexane carboxylic acid derivatives. 5,008,409, Cl. 549-463.000

Narita, Seiichi *See*—
Kumita, Norio; Yamamoto, Takaaki, Narita, Seiichi, and Ori, Takaaki, 5,008,501, Cl. 200-61.45R.

Narita, Tsuneo *See*—
Ishida, Tetsuyoshi, Kawano, Shigeyoshi; Kohtaka, Ikuo Yamada, Kojiro, Kaku, Hiroyuki, and Narita, Tsuneo, 5,007,240, Cl. 60-673.000.

Narita, Yasushi, to Nissan Motor Co., Ltd. Line pressure control for automatic transmission. 5,007,308, Cl. 74-866.000

Naro, Rodney L., Csonka, James M., and Merritt, Michael A., to American Alloys, Inc. Inoculant for gray cast iron. 5,008,074, Cl. 420-578.000

Narr, Berthold: *See*—
Heckel, Armin, Nickl, Josef, Muller, Erich, Narr, Berthold; Weisenberger, Johannes; Eisert, Wolfgang; and Muller, Thomas, 5,008,290, Cl. 514-544.000

Narusawa, Naoharu: *See*—
Kobayashi, Hitoshi, Takano, Akira, Narusawa, Naoharu, Tsukada, Yukihiko; Sakamoto, Hiroshi, Hirano, Masaki; and Ando, Masao, 5,008,710, Cl. 355-202.000

Nasby, James S., and Rood, Michael J., to Perf-Mate Company. Sprocket feed strip remover. 5,007,571, Cl. 225-106.000

Nash, Richard M. *See*—
Smegal, John A., Ryan, Robert C., and Nash, Richard M., 5,008,003, Cl. 208-254.00H.

Nathan, Anthony *See*—
Pless, Benjamin, Sweeney, Michael; Winkle, Roger, and Nathan, Anthony, 5,007,422, Cl. 28-419.0PG.

National Semiconductor Corporation *See*—
Dutta, Vivek B., Demmin, Jeffrey C., DiOrio, Mark L., and Ewanich, Jon T., 5,008,734, Cl. 357-74.000.

National Steel Corporation *See*—
Cox, Laurence C., Dugan, Raymond; Evans, Daniel D., Griffith, Robert, Handley, Terry L., and Leeper, Jeffrey J., 5,007,318, Cl. 83-425.200.

Natori, Shunji, to Sanwa Kagaku Kenkyusho Co., Ltd. Biologically active polypeptide and use thereof. 5,008,371, Cl. 530-324.000

Natsuhara, Toshiya *See*—
Enoguchi, Yuji; Natsuhara, Toshiya, and Yamamoto, Masashi, 5,008,708, Cl. 355-259.000

NEC Corporation *See*—
Hashimoto, Kiyokazu, 5,008,566, Cl. 307-296.800
Ikeda, Setsuko, 5,008,858, Cl. 365-233.500

Ishii, Eiichi, 5,008,673, Cl. 341-144.000
Kiyono, Mikio, 5,008,957, Cl. 455-618.000
Mimura, Yoshikazu, Takano, Keiichi, deceased, and Gotou, Tomohisa, 5,008,173, Cl. 430-78.000
Mizoguchi, Akane, 5,008,857, Cl. 365-200.000
Shibata, Kazuo; and Komuro, Toshio, 5,008,567, Cl. 307-443.000.
Yamamura, Yoshihiro, Ogihara, Takashi, Nakanishi, Yoshinobu and Nishizono, Tomohiro, 5,008,937, Cl. 380-50.000
Yamazaki, Shuntaro, Ono, Takashi, and Shimizu, Haruhito, 5,007,693, Cl. 350-96.130

Negi, Shigeto *See*—
Yamauchi, Hiroshi, Sugiyama, Isao; Saito, Isao, Nomoto, Seiichiro, Kamiya, Takashi, Machida, Yoshimasa, and Negi, Shigeto, 5,008,260, Cl. 514-202.000

Negishi, Hiroyuki *See*—
Shirai, Shinji, Negishi, Hiroyuki, Tomihashi, Nobuyuki and Yamane, Masayuki, 5,008,327, Cl. 524-544.000

Negle, Hans, to U.S. Philips Corporation. Measuring and damping resistor arrangement for a high-voltage apparatus. 5,008,913, Cl. 378-105.000

Negrin, Max *See*—
Dandreaux, Gary; Login, Robert B., Merianos, John J., Garehek, Paul, Plochocka, Krystyna, Negrin, Max, and Shih, Jenn S., 5,008,367, Cl. 528-326.000

Neidermeyer, Uwe, Kragl, Udo, Kula, Maria R., Wandrey, Christian, Makrylaleas, Kyriakos, and Drauz, Karlheinz, to Kernforschungsanlage Juelich GmbH; and Degussa Aktiengesellschaft. Enzymatic process for the preparation of optically active cyanohydrins. 5,008,192, Cl. 435-128.000

Neiss, Edward S.; and Allen, Larry M., to Chemex Pharmaceuticals, Inc. Methods of treating tumors with compositions of catecholic butanes. 5,008,294, Cl. 514-731.000

Nelles, Josef, to Accumulatorenwerke Hoppecke Carl Zoellner & Sohn GmbH & Co. KG. Method and apparatus for producing cathodes for dry-cell batteries, especially lithium batteries. 5,007,467, Cl. 141-1.100

Nelson, Linda H., to General Electric Company. Composition. 5,008,315, Cl. 524-180.000

Nelson, Nancy W., Cosart, Lee D., III, Peregrino, Luiz, and Ingman, Eric M., to Hewlett-Packard Company. Method for harmonic number determination in a microwave frequency counter. 5,008,610, Cl. 324-84.000.

Nelson, T. Craig *See*—
Fries, William J., Kleinschnitz, Donald, and Nelson, T. Craig, 5,008,808, Cl. 364-200.000

Nelson, Thomas E., to Soltech, Inc. Insulated refrigerator door construction. 5,007,226, Cl. 52-809.000

Nentwig, Gunther: *See*—
Kruger, Bernd-Wieland, Sasse, Klaus, Hoever, Franz-Peter, Nentwig, Gunther; and Behrenz, Wolfgang, 5,008,261, Cl. 514-212.000

Nesheiwat, Afif M., to Phillips Petroleum Company. Preparation of poly(arylene sulfide/sulfone) polymer with addition of water after polymerization is initiated. 5,008,368, Cl. 528-388.000

Nesselrode, Frederick *See*—
Bellis, Peter D., and Nesselrode, Frederick, 5,007,806, Cl. 417-360.000

Nestaas, Eirik *See*—
Wergeland, Ivar, Senstad, Ingeborg C., and Nestaas, Eirik, 5,008,197, Cl. 435-240.240

Nestec S.A.: *See*—
Bewley, David R., Brimelow, Christopher J. B. and Wright, Kenneth W., 5,008,123, Cl. 426-509.000.
Favre, Eric, Masek, Petr; and Truchement, Bernard, 5,008,013, Cl. 210-482.000.
Kratky, Zdenek; and Tandy, John S., 5,008,381, Cl. 536-8.000

Nettles, James A. *See*—
Broughton, George L., Breckenfeld, Paul W., Mate, David W. Nettles, James A., and Rogers, Duane E., 5,007,393, Cl. 123-195.00R

Network Equipment Technologies, Inc.: *See*—
Mathur, Ashish, 5,008,814, Cl. 364-200.000

Neugebauer, Charles F.. *See*—
Agranat, Aharon J.; Neugebauer, Charles F., and Yaniv, Amnon, 5,008,833, Cl. 364-513.000

Neumann, Peter: *See*—
Aumueller, Alexander, Neumann, Peter, and Trauth, Hubert, 5,008,312, Cl. 524-92.000
Spang, Peter; Neumann, Peter; Wagenblast, Gerhard, and Trauth, Hubert, 5,008,397, Cl. 548-331.000

Neuwirth, Helmuth, Meyerhoefer, Carl, Carney, William V., and Visconti, Peter, to Porta Systems Corp. Telephone circuit protector module having plural circuit grounding means. 5,008,772, Cl. 361-119.000

Neville, Donald G. *See*—
Ebbing, Charles E., and Neville, Donald G., 5,007,499, Cl. 181-258.000

New SD, Inc. *See*—
Egley, Bert, and Hanson, Richard A., 5,007,290, Cl. 73-517.00R

New Visions Corporation. *See*—
Fick, Larry D., 5,007,566, Cl. 224-32.00R

New York University Medical Center. *See*—
Fishman, Sidney, and Lembeck, William, 5,007,937, Cl. 623-34.000

Newborn, Herbert A. *See*—
Kumar, Kaplesh, and Newborn, Herbert A., 5,007,972, Cl. 148-102.000

Newkirk, Marc S., and Aghajanian, Michael K., to Lanxide Technology Company, LP Method of forming metal matrix composite bodies by utilizing a crushed polycrystalline oxidation reaction product as a filler, and products produced thereby 5,007,476, Cl 164-97.000

Newlove, John C *See—*
Williams, Dennis A., Horton, Roger L., Newlove, John C., and Chumley, Robert E., 5,007,481, Cl 166-300.000

Newman, Hugh D., Jr *See—*
Bezwada, Rao S., Newman, Hugh D., Jr., and Shalaby, Shalaby W., 5,007,923, Cl. 606-231.000

Newsom, Horace R., to Mosley Machinery Co., Inc Oversize bale release mechanism for waste material baler 5,007,337, Cl 100-188.00R

Newton Instrument Company *See—*
Salmon, Garland R., 5,008,779, Cl 361-415.000

NGK Insulators, Ltd *See—*
Hattori, Isao, and Futamura, Shoji, 5,008,509, Cl. 219-69.150
Kato, Shigeki, and Inoue, Katsuhiro, 5,008,054, Cl 264-63.000

NGK Spark Plug Co., Ltd *See—*
Bekki, Katsutoshi, Kondo, Kazuo, Shibata, Yoshimasa, and Niwa, Shigeo, 5,007,932, Cl 623-18.000

Nguyen, David M *See—*
Coolidge, Robert B., and Nguyen, David M., 5,007,493, Cl 175-329.000

Nichia Kagaku Kogyo K K *See—*
Arai, Kiyotaka, Sumoto, Hirofumi, and Ichinomiya, Keizi, 5,008,789, Cl 362-255.000

Nichols, Carl S., to Hoechst Celanese Corporation Catalyst for preparing high clarity, colorless polyethylene terephthalate 5,008,230, Cl 502-170.000

Nickel, Dwight E., O'Halloran, Michael L., and Case, Cecil L., to Hay & Forage Industries Tine tube bearing assembly for a harvesting reel 5,007,235, Cl 56-12.400

Nickl, Josef *See—*
Heckel, Armin, Nickl, Josef, Muller, Erich, Narr, Berthold, Weisenberger, Johannes, Ersert, Wolfgang, and Muller, Thomas, 5,008,290, Cl 514-544.000

Nicolas, Pierre, and Pantigny, Philippe, to Commissariat a l'Energie Atomique System for the detection of information in the form of electromagnetic radiation and reading the detected information 5,008,544, Cl. 250-349.000

Niederst, Ken W *See—*
Nugent, Richard M., Jr., Niederst, Ken W., and Seiner, Jerome A., 5,008,137, Cl 428-35.400

Nihon Tokushu Noyaku Seizo K K *See—*
Kume, Toyohiko, Goto, Toshio, Kamochi, Atsumi, Yanagi, Akihiko, Miyauchi, Hiroshi, and Asami, Tadao, 5,007,952, Cl 71-73.000

Nimura, Toshinobu *See—*
Takahashi, Yasuo, Suzuki, Kazuo, Nimura, Toshinobu, and Kano, Tokio, 5,007,995, Cl 204-299.00R

Nizato, Tomonori, Noguchi, Katsumi, and Tsukimura, Kiyoshi, to Honda Giken Kogyo Kabushiki Kaisha Cylinder head structure for multiple cylinder engines, 5,007,392, Cl 123-193.00H

Nikon Corporation *See—*
Hamanishi, Yoshinari, 5,007,720, Cl 350-463.000
Juen, Masahiro, 5,008,759, Cl 358-335.000
Kimura, Keita, and Yamamoto, Tetsuya, 5,008,757, Cl 358-213.130

Nimlock Company *See—*
Evensen, David P., 5,007,473, Cl 160-135.000

Nino, Naohi, to Koito Manufacturing Co., Ltd Headlamp unit 5,008,781, Cl 362-61.000

Ninomiya, Takeshi *See—*
Takayama, Jun, Ninomiya, Takeshi, Fujita, Tadao, and Inaba, Yoshiaki, 5,008,668, Cl 341-83.000

Ninomiya, Yuichi *See—*
Kitaura, Hiromu, Isobe, Mitsuo, Kawahara, Isao, Hirauchi, Yoshio, Ninomiya, Yuichi, Ohtsuka, Yoshimichi, and Izumi, Yoshinori, 5,008,753, Cl 358-171.000

Nippon Carbide Kogyo Kabushiki Kaisha *See—*
Ochi, Katsura, Oonishi, Yasuaki, and Kinsen, Kazuhisa, 5,008,139, Cl 428-40.000

Nippon Colin Company Ltd *See—*
Branstetter, Ronald L., Jaeb, Jonathan P., and Gabelmann, Jeffrey M., 5,007,423, Cl 128-633.000

Nippon Hoso Kyokai *See—*

Olin Corporation. *See*—
Day, Roger W., and Hani, Rahim, 5,008,443, Cl. 560-169.000

Olinger, Harvey A., to Advanced Commercial Products, Inc. Filling device for liquid filled tires. 5,007,448, Cl. 137-223.000

Olney, Robert S. *See*—
Trapp, Richard E., Hansen, Gary L., Clay, Robert B., Dubetsky, Lawrence J., and Olney, Robert S., 5,007,973, Cl. 149-109.600

Olsen, Axel. Casing system for the laying of electrical supply conductors. 5,007,853, Cl. 439-211.000

Olsen, Steven A., Cronin, William J., Jarvis, Ben L., and McMillan, Jeff G., to U.S. Intelco Networks, Inc. Billing system for telephone signaling network. 5,008,929, Cl. 379-112.000

Olson Manufacturing Co. *See*—
Mahaney, John C., 5,007,258, Cl. 70-159.000

Oltz, Eugene M. *See*—
Nakanishi, Koji, Oltz, Eugene M., and Grunberger, Dezider, 5,008,441, Cl. 560-75.000

Olympus Optical Co., Ltd. *See*—
Hasegawa, Akira, 5,007,719, Cl. 350-425.000
Ieoka, Shouichi, 5,007,408, Cl. 128-6.000
Nishigaki, Shinichi, and Bito, Shiro, 5,007,907, Cl. 606-46.000
Takahashi, Yasuo, Suzuki, Kazuo, Nimura, Toshinobu, and Kano Tokio, 5,007,395, Cl. 204-299.00R

Omron Tateisi Electronics Co. *See*—
Nakamura, Arata, 5,008,529, Cl. 250-221.000
Shimamoto, Hiroshi, Suzaki, Hideyuki, Yamaguchi, Yukio, and Kawano, Atsushi, 5,008,862, Cl. 367-105.000
Yonezawa, Tatsushi, and Nozoe, Satosi, 5,008,534, Cl. 250-229.000

Omura, Satoshi, and Itoh, Zen, to Kitasato Kenkyusho. Therapeutic method of stimulating digestive tract contractile motion in mammals. 5,008,249, Cl. 514-29.000

Onco-Pharm Development AG. *See*—
Monti, Sergio, 5,008,287, Cl. 514-492.000

Onda, Kenichi. *See*—
Miyazaki, Hideki, Kanouda, Akihiko, Onda, Kenichi, and Matsuda, Yasuo, 5,008,586, Cl. 323-315.000

Onda, Yoshiro. *See*—
Kokubo, Hiroyasu, Sekigawa, Fujio, Chiba, Tohru, and Onda, Yoshiro, 5,008,113, Cl. 424-480.000

Ono, Kikuo. *See*—
Kawachi, Genshiro; Mimura, Akio; Konishi, Nobutake; Ono, Kikuo; and Suzuki, Takashi, 5,008,218, Cl. 437-201.000

Ono, Masato: *See*—
Karakida, Kenichi; Yagi, Shigeru; Fukuda, Yuzuru; Nishikawa, Masayuki; Roh, Te N., Takahashi, Noriyoshi, Ono, Masato; Yokoi, Masaki; and Komori, Yumiko, 5,008,170, Cl. 430-65.000

Ono, Shoichi; and Kobayashi, Atsuhito, to Chinon Kabushiki Kaisha. Pulsed light identifying system. 5,008,531, Cl. 250-222.100.

Ono, Shoichi; and Kobayashi, Atsuhito, to Chinon Kabushiki Kaisha. Light reception signal circuit for photoelectric switch. 5,008,532, Cl. 250-222.100.

Ono, Takashi: *See*—
Yamazaki, Shuntaro, Ono, Takashi, and Shimizu, Haruhito, 5,007,693, Cl. 350-96.130.

Ono, Takeshi; Sakamoto, Masahiro; and Takano, Tadashi, to Canon Kabushiki Kaisha. Driving system for stepping motor. 5,008,607, Cl. 318-696.000.

Ono, Tomio. *See*—
Tanuma, Chiaki, Itsumi, Kazuhiro, Iwa[illegible], Nobuo, Ono, Tomio; Kondo, Yuu; and Saito, Kazutaka, 5,008,582, Cl. 310-332.000

Onose, Tsukasa; Kikuchi, Yasuo; Ogawa, Toshitaka, and Seino, Minoru, to Hitachi Koki Co., Ltd. Paper cooling apparatus for an electrophotographic printer. 5,008,716, Cl. 355-322.000.

Oonishi, Yasuaki. *See*—
Ochi, Katsura, Oonishi, Yasuaki, and Kinsen, Kazuhisa, 5,008,139, Cl. 428-40.000

Oppedal, Magne. *See*—
Legris, Bernard, Oppedal, Magne, and Traonmilin, Eric, 5,007,769, Cl. 405-195.000

Oppendahl, Carl. Voice-activated radio transceiver. 5,008,954, Cl. 455-79.000

Oprea, John C., to Durakon Industries, Inc. Under the rail liner with tabs. 5,007,671, Cl. 296-39.200.

Orbits, Dave. *See*—
Bhandarkar, Dileep P., Cutler, Dave; Cardoza, Wayne; Witek, Rich, and Orbits, Dave, 5,008,812, Cl. 364-200.000

Orbot Systems Ltd.: *See*—
Katzir, Yigal, and Kochba, Joseph, 5,008,743, Cl. 358-101.000

Orchid One Corporation: *See*—
Crewe, Albert V., 5,008,549, Cl. 250-396.0ML

Ori, Takaaki: *See*—
Kumita, Norio; Yamamoto, Takaaki; Narita, Seiichi; and Ori, Takaaki, 5,008,501, Cl. 200-61.45R.

Originations Limited. *See*—
Kelly, Nigel B., 5,007,268, Cl. 72-76.000.

Orleander S.A.: *See*—
Brunt, Chris, and Carner, Don C., Jr., 5,008,647, Cl. 340-432.000.

Orman, Charles R., Johnson, Paul E., and Adams, Bruce C., to Sunkist Growers, Inc. Apparatus for treating fresh fruit and the like to prevent and retard the growth off fungus. 5,007,335, Cl. 99-487.000.

Orndorff, Roy L., Jr.; and Bono, Mark J., to B. F. Goodrich Company, The. Suspension system. 5,007,660, Cl. 280-715.000.

Ornholmer, Lars. *See*—
Gustafsson, Par; Sobel, Jarl, and Ornholmer, Lars, 5,007,295, Cl. 73-862.690.

Oroskar, Anil R., and Johnson, James L., to UOP. Enhanced membrane separation of monosaccharides utilizing concentration polarization. 5,008,189, Cl. 435-105.000.

Orr, William H. *See*—
Harris, Dawn E., and Orr, William H., 5,007,520, Cl. 194-317.000.

Ortiz, Paul W. *See*—
Ketcham, Stephen O., Ortiz, Paul W., Jarvis, Jamie S., and McCray, Clyde S., 5,007,316, Cl. 83-167.000.

Osanai, Yasuhiro. *See*—
Nakamura, Takashi, Tanaka, Haruhiko, Hyodo, Touru, and Osanai, Yasuhiro, 5,008,601, Cl. 318-268.000

Osborn, Thomas W., III; and Schmitz, Deborah C., to Procter & Gamble Company, The. Decoupled sanitary napkin. 5,007,906, Cl. 604-385.100.

Osborne, Timothy W., to Union Carbide Corporation. Boron nitride coatings. 5,007,962, Cl. 106-38.220

Osentowski, Timothy D.: *See*—
Fletcher, Robert M.; Kuo, Chihping, Osentowski, Timothy D., and Robbins, Virginia M., 5,008,718, Cl. 357-17.000.

Osgood Industries, Inc. *See*—
Mueller, Martin J., Mueller, Martin, and Weingandt, Michael A., 5,007,466, Cl. 141-1.000.

Oshida, Yoshitada: *See*—
Tanaka, Tsutomu, Oshida, Yoshitada, Shiba, Masataka, Nakashima, Naoto; and Funatsu, Ryuichi, 5,008,702, Cl. 355-52.000

Osteonics Corp. *See*—
Sidebotham, Christopher G., McNulty, Donald E., and Lombardo, Alan M., 5,007,933, Cl. 623-20.000

Osther, Kurt B., to Bio-Research Laboratories, Inc. Assay system for detecting antibody and a method of producing non-human immune antibody. 5,008,183, Cl. 435-5.000

Ostrander, Robert J., to Dana Corporation. Bi-directional back stopping clutch. 5,007,511, Cl. 192-8.00R

Otis Engineering Corporation. *See*—
Pleasants, Charles W., and Scott, Keith W., 5,007,479, Cl. 166-178.000.

O'Toole, John R.: *See*—
Lee, Ho C., O'Toole, John R., Shalkey, Alex T., and Zable, Jack L., 5,007,748, Cl. 400-103.000

Otsuka Pharmaceutical Co., Ltd.: *See*—
Nakai, Satoru; Kaneta, Mayumi, Kikumoto, Yoshikazu, Hong, Yeong-Man; Kawai, Kazuyoshi, Takegata, Setsuko, Ishii, Kiyoshi, Yanagihara, Yasuo, and Hirai, Yoshikatsu, 5,008,374, Cl. 530-351.000.
Nishi, Takao, Uno, Tetsuyuki; Koga, Yasuo, and Chu, Gil-Namg, 5,008,274, Cl. 514-312.000.

Otteman, John H. Linear actuator. 5,007,328, Cl. 92-63.000.

Otto, Donald V., to Unisearch Systems Limited. Current sensor. 5,008,612, Cl. 324-117.00R.

Ouchi, Teruo: *See*—
Takahashi, Nagashige; and Ouchi, Teruo, 5,007,406, Cl. 128-4.000.

Ouchi, Yasuhide: *See*—
Nishiyama, Nobumasa; Saito, Makoto, Ouchi, Yasuhide; Katoh, Yasuhiro, Kamo, Yoshihisa, Koizumi, Makoto, Aoi, Hajime, Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000

Ouellet, Wilfred P., to L.K. Goodwin Co., Inc. Inflatable dock seal. 5,007,211, Cl. 52-2.120.

Outboard Marine Corporation. *See*—
Broughton, George L., Breckenfeld, Paul W., Mate, David W., Nettles, James A.; and Rogers, Duane E., 5,007,393, Cl. 123-195.00R.

Overall, Robert E.: *See*—
Myers, Robert I.; Brubaker, Bryce D., and Overall, Robert E., 5,007,236, Cl. 60-256.000.

Oversluizen, Gerrit. *See*—
Huisman, Frederikus R. J.; Oversluizen, Gerrit, and Martens, Jan W. D., 5,008,590, Cl. 313-500.000

Overton, William C., Jr., van Hulsteyn, David B., and Flynn, Edward R., to United States of America, Energy, Superconductive imaging surface magnetometer. 5,008,622, Cl. 324-248.000

Owenby, Daniel B., to Beacon Manufacturing Company. Blanket having improved thermal characteristics in the portion covering the feet. 5,007,125, Cl. 5-486.000

Owens-Corning Fiberglas Corporation. *See*—
Bakhshi, Shiv K., 5,008,131, Cl. 427-209.000

Oxford, Alexander W.: *See*—
Coates, Ian H.; Oxford, Alexander W., and North, Peter C., 5,008,272, Cl. 514-292.000

Oxford Gene Systems Limited. *See*—
Kingsman, Alan J.; Kingsman, Susan M., Adams, Sally E., Mellor, Elizabeth J. C.; and Malim, Michael H., 5,008,373, Cl. 530-350.000.

Oy Partek AB. *See*—
Unkuri, Matti, and Nurmi, Tom, 5,007,623, Cl. 270-39.000

Oy Santasalo-Sohlberg AB. *See*—
Wutzler, Peter; Mucke, Horst, and Santasalo, Lauri, 5,008,079, Cl. 422-28.000

Oy Tampella AB. *See*—
Uppstu, Erik, 5,007,354, Cl. 110-238.000

Oy Wartsila AB. *See*—
Oldfelt, Sven, and Stahl, Gary L., 5,007,117, Cl. 4-432.000

Ozaki, Nozomu. *See*—
Miida, Takashi, Ozaki, Nozomu, Baba, Shigenori, and Kousaka, Kunimitsu, 5,008,696, Cl. 354-408.000

Ozaki, Seishiro; Asahi, Nobuo, and Ebisawa, Tsuneo, to Fuji Electric Co., Ltd. Switching mechanism in circuit breaker. 5,008,504, Cl. 200-401.000

Ozawa, Kunitaka. *See*—
Kawakami, Eigo, Ozawa, Kunitaka, Uda, Koji, Shimoda, Isamu, and Uzawa, Shunichi, 5,008,703, Cl. 355-53.000

Ozawa, Makoto, Hirama, Yasuo, and Mizuno, Shyuzi, to Ikeda Bussan Co., Ltd.; and Nissan Shatai Company, Limited. Vehicular seat lumbar support device. 5,007,677, Cl. 297-284.000

Ozawa, Michihiro. *See*—
Aoyama, Motoo, Koyama, Junichi, Uchikawa, Sadao; Bessho, Yasunori; Ozawa, Michihiro, Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000

Ozawa, Mituharu. *See*—
Kamata, Yoshiharu, Nagatsuma, Nobuyoshi, Ozawa, Mituharu, and Yoshioka, Hiroshi, 5,007,154, Cl. 29-430.000

Ozawa, Takashi, and Nada, Minoru, to Canon Kabushiki Kaisha. Sheet conveying apparatus and sheet conveying method. 5,008,713, Cl. 355-319.000.

Ozeki, Hiroshi: *See*—
Okumura, Kin-ichi, Chono, Koji, Ozeki, Hiroshi, and Hamada, Tadao, 5,008,065, Cl. 264-328.600

Ozin, Geoffrey A.; Huber, Helmut X., Prokopowicz, Richard A., and Godber, John, to Canada, Her Majesty the Queen in the right of, as represented by the Minister of Energy Mines and Resources. Process for the preparation of catalytic metal clusters. 5,008,234, Cl. 502-326.000.

Paar, Willibald, to Vianova Kunstharz, A G. Reacting epoxy resin and substituted urea or biuret with blocked isocyanate group dicarboxylic anhydride compound product. 5,008,351, Cl. 525-528.000

Pace, Sang H. L. Permanent magnet motor having diverting magnets. 5,008,578, Cl. 310-256.000.

Pacific Scientific Company. *See*—
Marshall, James W., Gotchy, David, Uffelman, Bradley L., Leimbach, Wendell B.; and Wilhelmi, Albert A., 5,008,572, Cl. 310-45.000.
Sommer, Holger T., 5,007,297, Cl. 73-865.500

Paciullo, Francis P., to Colgate-Palmolive Co. Litter box envelopes. 5,007,375, Cl. 119-170.000.

Pagani, David A. Game apparatus. 5,007,636, Cl. 273-448.000

Painter, Michael A. Vehicle wheel mounting apparatus. 5,007,789, Cl. 414-427.000.

Palara, Sergio, to SGS-Thomson Microelectronics S r l. Diagnostic circuit for units providing current control and protection against excessive heat dissipation for semiconductor power devices. 5,008,771, Cl. 361-103.000.

Palinkas, John M., to Electronic Research Associates, Inc. Multi-color illumination apparatus. 5,008,788, Cl. 362-231.000.

Palladini, Mario. *See*—
Bovisio, Cipriano, Foglieni, Carlo, Fumagalli, Fulgenzio, Morlotti, Norberto, and Palladini, Mario, 5,007,665, Cl. 285-334.000

Palladino, Gaetano, MacDonald, Peter, and Bigatti, Ettore, to Sicor Societa 'Italiana Corticosteroidi S p A. Process for the conversion of daunorubicin into doxorubicin. 5,008,380, Cl. 536-6.400

Palm, Bernhard, to Milwaukee Electric Tool Corporation. Quick change guide shoe. 5,007,172, Cl. 30-377.000.

Palmer, James T., to Marion Laboratories, Inc. 2-hydroxy-3-(4-methoxyphenyl)-3-(2-aminophenylthio)propionic acid, 8'-phenylmenthyl ester, especially for diltiazem. 5,008,433, Cl. 560-17.000.

Palmer, Larry R., Collins, Joseph M., and Holloway, Gary M. Safety system for boats in dry storage. 5,008,667, Cl. 340-984.000.

Pan, Alfred I-Tsung, Hanson, Eric G., Schantz, Christopher A., and Childers, Winthrop D., to Hewlett-Packard Company. Plastic substrate for thermal ink jet printer. 5,008,689, Cl. 346-140.00R.

Pansari, Frank, Jr. *See*—
Quinn, Robert L., and Pansari, Frank, Jr., 5,007,280, Cl. 72-402.000.

Pantigny, Philippe. *See*—
Nicolas, Pierre, and Pantigny, Philippe, 5,008,544, Cl. 250-349.000.

Pantzar, Glenn G. E., to Sandvik AB. Cutting insert for chip removing machining. 5,007,775, Cl. 407-113.000.

Paolo, Bizzarri, to Gordon S.n.C. di Bizzarri Paolo e C. Hydrobrush with speed-reducer of the epicyclic type. 5,007,127, Cl. 15-29.000.

Paramount Bed Co., Ltd. *See*—
Shinozuka, Tokihito, 5,008,141, Cl. 428-182.000.

Parekh, Dilip J. *See*—
Weiss, Lawrence D., Caruthers, Douglas W., Inatomi, Charles T., Kawan, Joseph C., Lee, Shan, Marks, Harvey, Meguerdijan, Sarkis A., Parekh, Dilip J., Samulon, Alfred S., Takata, Melvin M., Tucci, Morris L., and Vollmer, Jim R., 5,008,927, Cl. 379-98.000.

Parekh, Ebrahim. *See*—
Jensen, Jack E., and Parekh, Ebrahim, 5,007,781, Cl. 411-337.000.

Parent, Donald G. *See*—
Swanson, Ralph W., Gagnon, Daniel F., and Parent, Donald G., 5,008,594, Cl. 315-111.810.

Brandstetter, Robert W., Pernick, Benjamin J., Fonneland, Nils J., and Caputi, Stephen J., 5,008,851, Cl. 364-807.000.

Perricone, Alphonse C.: *See*—
Enright, Dorothy P.; Dye, William M., Smith, F. Martin, and Perricone, Alphonse C., 5,007,489, Cl. 175-65.000.

Persson, Hans. *See*—
Reist, Marc; Persson, Hans, and Poggi, Daniel, 5,007,959, Cl. 75-645.000.

Pescador, Rodolfo. *See*—
Casu, Benito, Torri, Giangiacomo; Naggi, Annamaria, Mantovani, Marisa, Pescador, Rodolfo, Porta, Roberto, and Prino, Giuseppe, 5,008,253, Cl. 514-54.000.

Pesheck, Peter S., Atwell, William A.; Krawiecki, Madonna M., and Anderson, George R., to Pillsbury Company, The. Microwave food products and method of their manufacture. 5,008,507, Cl. 219-10.55E.

Peterson, John C., Chow, Edward; and Madan, Herb S., to California Institute of Technology. Method and apparatus for eliminating unsuccessful tries in a search tree. 5,008,882, Cl. 370-94.300.

Petigara, Ramesh B., and Sharp, Douglas N., to Rohm and Haas Company. Purification of isothiazolones. 5,008,395, Cl. 548-213.000.

Petitcollin, Jean-Marc. *See*—
Mathivat, Denis; and Petitcollin, Jean-Marc, 5,007,949, Cl. 65-160.000.

Petrolite Corporation: *See*—
Baker, Timothy J., and Woods, John H., 5,008,144, Cl. 428-211.000.

Petronio, Carlo F., to ABB Power T & D Company, Inc. Current monitoring circuit error compensation. 5,008,525, Cl. 250-214.00C.

Pettersson, Rune L.: *See*—
Engstrand, Per O., Hammar, Lars-Ake, Htun, Myat T., and Pettersson, Rune L., 5,007,985, Cl. 162-26.000.

Pettit, Paul H., Jr., to PPG Industries, Inc. Powder coating compositions of polyepoxides, acrylic copolymers and aliphatic or polyester dibasic acids. 5,008,335, Cl. 525-111.000.

Petzold, Werner P., to Borg-Warner Automotive, Inc. Technique for clutch control in continuously variable transmission systems. 5,007,512, Cl. 192-3.510.

Peuckert, Marcellus. *See*—
Gerdau, Thomas, Kleiner, Hans-Jerg, Peuckert, Marcellus; Bruck, Martin, and Aldinger, Fritz, 5,008,423, Cl. 556-412.000.

Peukert, Eberhard. *See*—
Bremus, Norbert; Gutsche, Bernhard; Jeromin, Lutz; Peukert, Eberhard; and Schleper, Bernard, 5,008,046, Cl. 260-410.600.

Peuzin, Jean C. *See*—
Audaire, Luc, Peuzin, Jean C.; and Schaub, Bernard, 5,008,541, Cl. 250-338.300.

Peyerl, Gerhard, to U.S. Philips Corporation. Accommodation device with shielded circuit boards. 5,008,778, Cl. 361-415.000.

Peyre, Henri. *See*—
Bogner, Martin, Harsanyi, Otto, and Peyre, Henri, 5,007,657, Cl. 280-626.000.

Pfaff, Susan E. *See*—
Kadis, Paul M., and Pfaff, Susan E., 5,007,276, Cl. 72-351.000.

Pfizer Inc. *See*—
Blackburn, Warren D., Jr., and Loose, Leland D., 5,008,283, Cl. 514-414.000.
Cooper, Kelvin, and Fray, Michael J., 5,008,263, Cl. 514-220.000.
Murtiashaw, Charles W., 5,008,384, Cl. 536-23.000.

Pfluger, Hubert. *See*—
Greiner, Peter; and Pfluger, Hubert, 5,007,331, Cl. 92-165.00R.

Phaal, Cornelius. Abrasive product. 5,007,207, Cl. 51-204.000.

Phadke, Shrikant V. Epoxy containing impact modifiers for thermoplastic resins. 5,008,342, Cl. 525-263.000.

Phillips, Larry G., Meyer, Edwin R.; and Greene, David C., to North American Philips Corp. Apparatus and method for creating digitally remodulated video from digitls components. 5,008,740, Cl. 358-23.000.

Phillips Petroleum Company. *See*—
Nesheiwat, Afif M., 5,008,368, Cl. 528-388.000.
Roberts, John S., 5,008,432, Cl. 558-436.000.

Phipps, Richard D. *See*—
Groswith, Charles T., III, Phipps, Richard D.; Lathrop, Robert L., Jr., Stewart, John F., and Kaufmann, Rick J., 5,007,782, Cl. 412-40.000.

Phywe Systeme GmbH. *See*—
Hermsdorffer, Joachim, Galfe, Gunther; Lautenbacher, Stefan; Korte, Reinhard; Krause, Hans-Joachim; Krull, Frans; May, Arno, Oberdorfer, Dietmar, and Pluquett, Ulrich, 5,007,433, Cl. 128-742.000.

Picha, George J.; and Secrest, Dean J., to Applied Medical Technology, Inc. Percutaneous endoscopic gastrostomy device. 5,007,900, Cl. 604-106.000.

Picker International, Inc. *See*—
Brunnett, Carl J., Zachary, Allen B., and Heiple, Holly C., 5,008,822, Cl. 364-413.210.
Vanek, Denis W., and Holland, G. Neil, 5,007,425, Cl. 128-653.00A.

Piehler, Martin. *See*—
Schuster, Johann; Piehler, Martin, Muller, Horst; and Schneider, Otto, 5,008,229, Cl. 502-167.000.

Pillsbury Company, The. *See*—
Pesheck, Peter S., Atwell, William A., Krawiecki, Madonna M.; and Anderson, George R., 5,008,507, Cl. 219-10.55E.

Pinard, Jean C., Jacquard, Bernard, and Besancon, Andre, to Societe Somab S.A. Tool lathe provided with improved control means. 5,008,828, Cl. 364-474.280.

Pinnau, Ingo; and Wind, Jan, to GKSS Forschungszentrum Geesthacht GmbH. Process for increasing the selectivity of asymmetric membranes. 5,007,944, Cl. 55-16.000.

Pinson, George T., to Boeing Company, The. Spherical projectile for electromagnetic acceleration. 5,007,348, Cl. 102-501.000.

Pioneer Electronic Corporation: *See*—
Endoh, Fumio, 5,008,934, Cl. 380-15.000.
Kikuchi, Ikuya; and Sato, Ryo, 5,007,712, Cl. 350-255.000.
Murayama, Fumio, and Ando, Tomiaki, 5,008,945, Cl. 381-194.000.

Pireh, Ali, to Motorola, Inc. Cellular telephone responsive to service availability for operating on different cellular telephone systems. 5,008,925, Cl. 379-60.000.

Pirelli Coordinamento Pneumatici S.p.A.: *See*—
Maiocchi, Luigi, 5,007,471, Cl. 152-540.000.

Pissiotas, Georg; Moser, Hans; and Brunner, Hans-Georg, to Ciba-Geigy Corporation. 5-(N-3,4,5,6-tetrahydrophthalimido)benzoic acid thiol esters as selective herbicides. 5,007,951, Cl. 71-72.000.

Pitman-Moore, Inc.. *See*—
Miller, Lindy F., and Thomford, Peter J., 5,008,244, Cl. 514-12.000.

Pitney Bowes Inc.: *See*—
O'Dea, Kevin J., Bergman, Norman J.; Digiulio, Peter C., Dolan, Donald T.; and Vanderpool, James L., 5,007,371, Cl. 118-680.000.
Sansone, Ronald P.; Schumacher, Karl H., Keating, Raymond; Wall, Joseph W.; and Joshi, Uday W., 5,008,827, Cl. 364-464.020.

Plasmon Limited. *See*—
Longman, Robert J.; Helfet, Peter R., and Abrams, Michael J., 5,008,687, Cl. 346-135.100.

Plastro-Gvat. *See*—
Cohen, Amir, 5,007,586, Cl. 239-222.170.

Platzer, Stephan J. W., to Hoechst Celanese Corporation. Color proofing system having a graduated layer of resins with different solubilities. 5,008,174, Cl. 430-143.000.

Pleasants, Charles W.; and Scott, Keith W., to Otis Engineering Corporation. Hydraulic up-down well jar and method of operating same. 5,007,479, Cl. 166-178.000.

Pless, Benjamin; Sweeney, Michael, Winkle, Roger; and Nathan, Anthony, to Ventritex, Inc. Method for combiner cardiac pacing and defibrillation. 5,007,422, Cl. 28-419.0PG.

PLM AB. *See*—
Ingemann, Ole, 5,007,231, Cl. 53-412.000.

Plochocka, Krystyna. *See*—
Dandreaux, Gary, Login, Robert B.; Merianos, John J.; Garelick, Paul, Plochocka, Krystyna, Negrin, Max; and Shih, Jenn S., 5,008,367, Cl. 528-326.000.
Tazi, Mohammed; and Plochocka, Krystyna, 5,008,355, Cl. 526-271.000.

Ploeger, Cornelius. *See*—
Liedtke, Heinz, Ploeger, Cornelius; and Gorner, Wilmut, 5,008,792, Cl. 362-374.000.

Plummer, Ernest L., to FMC Corporation. N-[(alpha-perhaloalkylbenzyloxy)pyridyl]N'-benzoylurea insecticides. 5,008,277, Cl. 514-337.000.

Pluquett, Ulrich. *See*—
Hermsdorffer, Joachim, Galfe, Gunther; Lautenbacher, Stefan; Korte, Reinhard; Krause, Hans-Joachim, Krull, Frans; May, Arno; Oberdorfer, Dietmar, and Pluquett, Ulrich, 5,007,433, Cl. 128-742.000.

Podhorsky, Miroslan, to Balckeurr Aktiengesellschaft. Method of producing a cam shaft. 5,007,165, Cl. 29-888.100.

Podszun, Wolfgang. *See*—
Muller, Michael; Podszun, Wolfgang, and Winkel, Jens, 5,008,436, Cl. 560-26.000.

Poelsler, Wolf-Dieter; and Baumann, Bernd, to Dr. Ing. h.c.F. Porsche AG. Sensor having an answerback device. 5,008,843, Cl. 364-571.020.

Poggi, Daniel. *See*—
Reist, Marc; Persson, Hans, and Poggi, Daniel, 5,007,959, Cl. 75-645.000.

Polan, Alvin F. Game apparatus. 5,007,648, Cl. 273-236.000.

Polypure, Inc.. *See*—
Chiang, William G.; Jobbins, Richard M., and Populc, Michael P., 5,008,444, Cl. 560-222.000.
Highsmith, Ronald E.; and Larson, Eric H., 5,008,319, Cl. 524-321.000.

Pomerleau, Kevin L. Leveraged security door lock. 5,007,669, Cl. 292-262.000.

Poncy, George W. Disposable peppermill. 5,007,592, Cl. 241-169.100.

Ponderosa Corporation. *See*—
Sage, Daniel E.; and Patrick, James C., Jr., 5,007,552, Cl. 220-23.830.

Pontynen, Esko. Insulated trafficked surface. 5,007,764, Cl. 404-70.000.

Poostpasand, Hamid. *See*—
Carlomagno, Michael, Poostpasand, Hamid, and James, Steven, 5,007,574, Cl. 228-20.000.

Pope, Keith R.; and Schrottke, Gustav, to International Business Machines Corporation. Non-destructure method of performing electrical burn-in testing of semiconductor chips. 5,007,163, Cl. 29-840.000.

Pope, Susan G. Medical speculum blade sheath. 5,007,409, Cl. 128-17.000.

Poprawe, Reinhart: *See*—
Klein, Rolf M.; Poprawe, Reinhart, and Herziger, Gerd W., 5,007,686, Cl. 300-21.000.

Populc, Michael P.: *See*—
Chiang, William G.; Jobbins, Richard M., and Populc, Michael P., 5,008,444, Cl. 560-222.000.

Port, Erich. *See*—
Ahmadi, Hamid; Beha, Johannes G., Denzel, Wolfgang E.; Engbersen, Antonius P.; Luijten, Ronald P.; Murphy, Charles A.; and Port, Erich, 5,008,878, Cl. 370-60.000.

Porta, Roberto. *See*—
Casu, Benito; Torri, Giangiacomo; Naggi, Annamaria; Mantovani, Marisa; Pescador, Rodolfo, Porta, Roberto, and Prino, Giuseppe, 5,008,253, Cl. 514-54.000.

Porta Systems Corp.: *See*—
Neuwirth, Helmuth, Meyerhoefer, Carl; Carney, William V.; and Visconti, Peter, 5,008,772, Cl. 361-119.000.

Poskitt, Geoffrey. *See*—
Crane, David P., Cole, Terence M., and Poskitt, Geoffrey, 5,008,813, Cl. 364-200.000.

Post, Martin F. M.: *See*—
Keijsper, Johannes J.; Mackay, Munro; and Post, Martin F. M., 5,008,094, Cl. 423-328.000.

Powell, Joseph B.; and Uzelmeier, Christopher W., to Shell Oil Company. Process for preparing a bisphenol. 5,008,470, Cl. 568-727.000.

Powell, Robert, to Dr. Ing. h.c.F. Porsche AG. Combined steering and control head for a floor conveyor vehicle. 5,007,301, Cl. 74-557.000.

Powell, Robert F.. *See*—
Blechschmidt, James L.; Johnson, Robert D.; and Powell, Robert F., 5,007,658, Cl. 280-661.000.

Power Integrations, Inc.. *See*—
Leman, Brooks R., 5,008,794, Cl. 363-21.000.

PPG Industries, Inc.: *See*—
Hayes, Deborah E., 5,008,153, Cl. 428-429.000.
Krushinski, Bert K.; Lawhon, Robert A.; Radecki, Francis A.; and Schwenninger, Ronald L., 5,007,950, Cl. 65-182.500.
Nugent, Richard M., Jr.; Niederst, Ken W.; and Seiner, Jerome A., 5,008,137, Cl. 428-35.400.
Pettit, Paul H., Jr., 5,008,335, Cl. 525-111.000.

Pradipasena, Pasawadee: *See*—
Rha, ChoKyun; Pradipasena, Pasawadee; Nakamura, TetsuHisa; Easson, Donald D., Jr.; and Sinskey, Anthony J., 5,008,108, Cl. 424-401.000.

Pragt, Henrikus J. H., to U.S. Philips Corporation. Halogen incandescent lamp and method of manufacturing a halogen incandescent lamp. 5,008,592, Cl. 313-623.000.

Prahl, Gregor M., to IPOS GmbH & Co. KG. Artificial foot for a leg prosthesis. 5,007,938, Cl. 623-55.000.

Prather, Charles W.: *See*—
Goodley, George R.; Harman, Phillip R.; and Prather, Charles W., 5,007,193, Cl. 43-42.280.

Pratt, William C.; and McKillip, William D., to Micro Chemical, Inc. Computerized process and system for assigning and delivering feed to animals in a feedlot. 5,008,821, Cl. 364-413.010.

Pray, Larry A.: *See—*
Rosnack, Ellen M.; Pray, Larry A.; Marable, Alger C.; and Zekert, Gerry C., 5,008,122, Cl. 426-417.000.
Precor Incorporated: *See—*
Real, Kenneth G., and Bang, Gary M., 5,007,630, Cl. 272-69.000.
Press Engineering Pty. Ltd.: *See—*
Blumberg, Murray B., 5,007,758, Cl. 402-75.000.
Presswood, J. Kenneth: *See—*
Nalepa, Christopher J.; Presswood, J. Kenneth; and Knapp, Gordon G., 5,008,453, Cl. 564-271.000.
Presti, Frederick J., to Presti Rubber Products, Inc. Apparatus for tire retreading. 5,007,978, Cl. 156-394.100.
Presti Rubber Products, Inc.: *See—*
Presti, Frederick J., 5,007,978, Cl. 156-394.100.
Pridgen, Lendon N.: *See—*
Bender, Paul E.; Lantos, Ivan; McGuire, Michael A.; Pridgen, Lendon N.; and Winicov, Herbert B., 5,008,390, Cl. 546-199.000

Rushforth, Christine A.: *See*—
Moody, Gillian M.; and Rushforth, Christine A., 5,008,089, Cl. 423-121.000.

Russay, Thomas, and Stacy, Carl W., to Zenith Electronics Corporation Domed light housing for back-lit LCD display 5,008,658, Cl. 340-784.000.

Russell, John N.: *See*—
Hale, Peter G., and Russell, John N., 5,007,703, Cl. 350-96.230.

Ruter, Hans-Werner, to U.S. Philips Corporation Package and packing body for small components. 5,007,539, Cl. 206-524.000.

Rutschle, Eugen: *See*—
Winkler, Hans-Henning; and Rutschle, Eugen, 5,007,157, Cl. 29-568.000.

Ryan, Robert C.: *See*—
Smegal, John A., Ryan, Robert C.; and Nash, Richard M., 5,008,003, Cl. 208-254.00H.

Ryan, Wayne L., to Streck Laboratories, Inc. Simulated human platelets from red blood cells. 5,008,201, Cl. 436-10.000.

Rydell, Mark A., to Everest Medical Corporation Electrosurgical instrument having needle cutting electrode and spot-coag electrode 5,007,908, Cl. 606-47.000.

Ryder, Steven L. Position insensitive aspirator 5,008,048, Cl. 261-78.200.

Ryobi Ltd.: *See*—
Emura, Masaharu; and Kobayashi, Takehiro, 5,007,601, Cl. 242-223.000.
Ishii, Koji, 5,007,338, Cl. 101-142.000.

Ryoke, Katsumi, Takahashi, Masatoshi; Hashimoto, Akihiro; and Hasumi, Kazuo, to Fuji Photo Film Co., Ltd. Magnetic recording medium 5,008,147, Cl. 428-323.000.

Ryomei Engineering Co., Ltd.: *See*—
Nakano, Takafumi, Seo, Akikazu, Soeda, Hiromitsu, and Sueoka, Kazufumi, 5,007,341, Cl. 101-349.000.

S. A. Manufacture Belge de Gembloux: *See*—
Vincent, Andre, and Munting, Evrard, 5,007,935, Cl. 623-22.000.

S&C Electric Company: *See*—
Scherer, Henry W., 5,007,759, Cl. 403-13.000.

Saab Missiles Aktiebolag: *See*—
Lundin, Jan-Erik, 5,008,522, Cl. 250-203.600.

Saenz, Hillary: *See*—
Henry, Mark, and Saenz, Hillary, 5,007,642, Cl. 273-148.00R.

Safford, Sarah E.: *See*—
Brown, William E., III, Safford, Sarah E., and Clemens, John M., 5,008,080, Cl. 422-56.000.

Sage, Daniel E., and Patrick, James C., Jr., to Ponderosa Corporation Serving bar and container for food 5,007,552, Cl. 220-23.830.

Sager, Peter, to HGZ Maschinenbau AG Automatic coffee machine. 5,007,333, Cl. 99-286.000.

Saint-Gobain Vitrage International: *See*—
Mathivat, Denis, and Petitcollin, Jean-Marc, 5,007,949, Cl. 65-160.000.

Saito, Hiromitsu: *See*—
Kanda, Yutaka, Yasuzawa, Tohru, Saito, Hiromitsu; Sano, Hiroshi, Kobayashi, Eiji, and Morimoto, Makoto, 5,008,271, Cl. 514-292.000.

Saito, Hiroshi, to Canon Kabushiki Kaisha Optical scanning device for scanning a predetermined surface with a plurality of light beams 5,008,686, Cl. 346-108.000.

Saito, Isao: *See*—
Yamauchi, Hiroshi, Sugiyama, Isao, Saito, Isao, Nomoto, Seiichiro, Kamiya, Takashi, Machida, Yoshimasa; and Negi, Shigeto, 5,008,260, Cl. 514-202.000.

Saito, Kazuharu; Matsukura, Hiroyasu; Komase, Hiroshi, Tsuneda, Haruhiro, Watanabe, Junji, Saito, Tadao, Doy, Toshiroh, and Matsunaga, Kazuo, to K K. Sankyo Seiki Seisakusho, and Nippon T&T Corp. Optical fiber connector polishing apparatus and method 5,007,209, Cl. 51-283.00R.

Saito, Kazutaka: *See*—
Tanuma, Chiaki, Itsumi, Kazuhiro, Iwase, Nobuo, Ono, Tomio, Kondo, Yuu, and Saito, Kazutaka, 5,008,582, Cl. 310-332.000.

Saito, Makoto: *See*—
Nishiyama, Nobumasa; Saito, Makoto; Ouchi, Yasuhide; Katoh, Yasuhiro; Kamo, Yoshihisa, Koizumi, Makoto, Aoi, Hajime; Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000.

Saito, Noriaki; Kanagawa, Shuichi, and Sakamoto, Hideshi, to Sumitomo Chemical Company, Limited Glycidyl ethers of phenolic compounds and process for producing the same. 5,008,350, Cl. 525-507.000.

Saito, Tadao: *See*—
Saito, Kazuharu, Matsukura, Hiroyasu; Komase, Hiroshi; Tsuneda, Haruhiro, Watanabe, Junji, Saito, Tadao, Doy, Toshiroh, and Matsunaga, Kazuo, 5,007,209, Cl. 51-283.00R.

Saitou, Norikazu: *See*—
Kuramochi, Wataru, Tsuruoka, Yoshiaki; Saitou, Norikazu, Shibuya, Akira, and Yamashita, Shuichi, 5,008,552, Cl. 235-483.000.

Saitou, Yutaka. Kinetic energy recovery device of liquid and gas. 5,007,241, Cl. 60-698.000.

Sakai, Akira: *See*—
Nakagawa, Katsumi, Ishihara, Shunichi; Kanai, Masahiro, Murakami, Tsutomu, Arao, Kozo, Fujioka, Yasushi; and Sakai, Akira, 5,008,726, Cl. 357-30.000.

Sakai, Norio: *See*—
Tamaki, Kuniaki; Sakai, Norio, and Minowa, Kenji, 5,007,534, Cl. 206-329.000.

Sakai, Toshifumi: *See*—
Yamamoto, Masaji; Tanooka, Shigeo, and Sakai, Toshifumi, 5,007,885, Cl. 475-231.000.

Sakakibara, Hiroshi: *See*—
Aoshima, Syozo, Hirota, Kunio; Sakakibara, Hiroshi; Sawai, Naoyuki, and Sato, Takeaki, 5,007,281, Cl. 72-406.000.

Sakamoto, Fumio: *See*—
Kondo, Hirosato; Taguchi, Masahiro; Inoue, Yoshimasa; and Sakamoto, Fumio, 5,008,389, Cl. 544-343.000.

Sakamoto, Hideshi: *See*—
Saito, Noriaki; Kanagawa, Shuichi, and Sakamoto, Hideshi, 5,008,350, Cl. 525-507.000.

Sakamoto, Hiroshi: *See*—
Kobayashi, Hitoshi; Takano, Akira, Narusawa, Naoharu; Tsukada, Yukihiko; Sakamoto, Hiroshi, Hirano, Masaki, and Ando, Masao, 5,008,710, Cl. 355-202.000.

Sakamoto, Koji, Tanzawa, Misao; Iwata, Nobuo; Murayama, Hisao, Takahashi, Susumu, and Komada, Kenya, to Ricoh Company, Ltd. Image forming apparatus. 5,008,711, Cl. 355-206.000.

Sakamoto, Masahiro: *See*—
Ono, Takeshi, Sakamoto, Masahiro; and Takano, Tadashi, 5,008,607, Cl. 318-696.000.

Sakuramoto, Takahumi: *See*—
Tominaga, Takashi; Nishiyama, Souji; Sakuramoto, Takahumi; and Honda, Makoto, 5,008,151, Cl. 428-343.000.

Salmet Gesellschaft mit beschrankter Haftung & Co., Kommanditgesellschaft: *See*—
Lackner, Karl H., 5,007,379, Cl. 119-17.000.

Salmon, Garland R., to Newton Instrument Company Shelf assembly having infinitely vertically adjustable top surface 5,008,779, Cl. 361-415.000.

Salomon S.A.: *See*—
Girault, Eric; and Arnulf, Paul, 5,007,656, Cl. 280-615.000.

Saltzman, Jeremy: *See*—
Jachmann, Emil F.; Saltzman, Jeremy, Chamberlin, David B., D'Agosto, Nicholas A., Harris, Mark, and Su, Jy-hong, 5,008,835, Cl. 364-513.500.

Salutar, Inc.: *See*—
Quay, Steven C., Rocklage, Scott M., and Miller, Warren K., 5,008,099, Cl. 424-1.100.

Salyards, Donald M., to Comfortex, Inc. Flexible covering for reducing moisture/vapor/bacteria transmission 5,007,123, Cl. 5-448.000.

Samdi, Azzdddine; Paris, Rene, and Roubin, Marc, to Rhone-Poulenc Chimie Homogeneous powders of yttrium-stabilized quadratic zirconia. 5,008,092, Cl. 423-263.000.

SamSung Electronics Co., Ltd.: *See*—
Kim, Tae Y., 5,007,607, Cl. 248-188.900.
Sung, Song G., 5,008,762, Cl. 360-61.000.

Samukawa, Koji: *See*—
Seki, Masaki; Samukawa, Koji, and Hanaoka, Osamu, 5,008,806, Cl. 364-191.000.

Samulon, Alfred S.: *See*—
Weiss, Lawrence D.; Caruthers, Douglas W., Inatomi, Charles T., Kawan, Joseph C., Lee, Shan, Marks, Harvey, Meguerdijan, Sarkis A.; Parekh, Dilip J., Samulon, Alfred S., Takata, Melvin M., Tucci, Morris L., and Vollmer, Jim R., 5,008,927, Cl. 379-98.000.

Samus, Marsha A.: *See*—
Killgoar, Paul C., Jr., Samus, Marsha A.; Koller, Robert D., Sr., and Hemenway, Carl P., 5,008,324, Cl. 524-504.000.

Sanders, Mildred P. Zipper stitching guide. 5,007,359, Cl. 112-265.200.

Sandoz Ltd.: *See*—
Holliger, Herbert, 5,008,379, Cl. 534-684.000.

Sandvik AB: *See*—
Pantzar, Glenn G. E., 5,007,775, Cl. 407-113.000.

Sangregory, Jude A., and DiRisio, Anthony, to Eastman Kodak Company Battery-containing apparatus 5,007,859, Cl. 439-500.000.

Sankrithi, Mithra M. K. V.: *See*—
Nadkarni, Arun A.; and Sankrithi, Mithra M. K. V., 5,008,825, Cl. 364-434.000.

Sankyo Company Limited: *See*—
Okazaki, Takao; Takahashi, Shuji, Iwado, Seigo, Tanaka, Keiji, Yanai, Toshiaki; and Kajino, Hisaki, 5,008,191, Cl. 435-124.000.

Sannohe, Kunio: *See*—
Katakami, Tsutomu; Yokoyama, Tatsuro, Miyamoto, Michihiko, Mori, Haruki; Kawauchi, Nobuya, Nobori, Tadahito, Sannohe, Kunio, Kamiya, Joji, Ishii, Masaaki, and Yoshihara, Kanji, 5,008,267, Cl. 514-269.000.

Sano, Atuhiro: *See*—
Shimano, Masami, and Sano, Atuhiro, 5,007,739, Cl. 356-383.000.

Sano, Hironari, and Ohno, Kenyu, to Mitsubishi Petrochemical Co., Ltd. Thermoplastic resin composition 5,008,332, Cl. 525-92.000.

Sano, Hiroshi: *See*—
Kanda, Yutaka; Yasuzawa, Tohru; Saito, Hiromitsu; Sano, Hiroshi, Kobayashi, Eiji; and Morimoto, Makoto, 5,008,271, Cl. 514-292.000.

Sano, Masahiro: *See*—
Honda, Norimasa; and Sano, Masahiro, 5,008,042, Cl. 252-518.000.

Sanshin Industries Co., Ltd.: *See*—
Okita, Ryozo, 5,007,866, Cl. 440-61.000.

Sanshin Kogyo Kabushiki Kaisha: *See*—
Tanaka, Seiichi; and Suzuki, Tamotsu, 5,007,390, Cl. 123-180.00T.

Sansone, Ronald P.; Schumacher, Karl H.; Keating, Raymond, Wall, Joseph W., and Joshi, Uday W., to Pitney Bowes Inc. Central postage data communication network. 5,008,827, Cl. 364-464.020.

Santasalo, Lauri: *See*—
Wutzler, Peter; Mucke, Horst, and Santasalo, Lauri, 5,008,079, Cl. 422-28.000.

Santilli, Donald S.: *See*—
Zones, Stacy I.; Santilli, Donald S., Ziemer, James; Holtermann, Dennis L., Pecoraro, Theresa A., and Innes, Robert A., 5,007,997, Cl. 208-46.000.

Sanwa Kagaku Kenkyusho Co., Ltd.: *See*—
Kurono, Masayasu; Kondo, Yasuaki, Mitani, Takahiko; Baba, Yutaka, and Sawai, Kiichi, 5,008,416, Cl. 556-89.000.
Natori, Shunji, 5,008,371, Cl. 530-324.000.

Sanyo Electric Co., Ltd.: *See*—
Furukawa, Nobuhiro; Inoue, Kenji, Nogami, Mitsuzo; Kameoka, Seiji; and Tadokoro, Motoo, 5,008,164, Cl. 429-59.000.
Ino, Kazuo; Shimizu, Yoshiaki; Okuda, Hiroyuki; Ishihara, Kousou; and Ogura, Takashi, 5,007,158, Cl. 29-603.000.

Saotome, Yoshimi; Kuchiki, Kiyotsuna, and Hayashi, Norihiko, to Kabushiki Kaisha Kobe Seiko Sho Mechanism for suppressing displacement of travelling crane. 5,007,544, Cl. 212-265.000.

Sarosi, Lajos: *See*—
Bakos, Jozsef; Heil, Balint; Toth, Imre; Edes, Bela, Gebhardt, Tstvan, Bihari, Ferenc; Durko nee Ponacz, Anna, Eifert, Gyula, Kiraly, Jeno; Konok nee Horvath, Eva, Lukacs, Laszlo, Meszaros nee Szekrenyesi, Agnes, Radvany, Bela, and Sarosi, Lajos, 5,008,440, Cl. 560-65.000.

Sasae, Taiichio, and Taguchi, Yoshio, to Kansai Engineering Co., Ltd. Material for treating heavy metals and metal ions 5,007,965, Cl. 106-800.000.

Sasaki, Kazuya; Yoshizawa, Sakae; Inagaki, Shinya, and Takeda, Keiko, to Fujitsu Limited. Optical fiber amplifier/multiplexer. 5,007,698, Cl. 350-96.150.

Sasaki, Kazuyuki; and Kataoka, Ichiro, to Yazaki Corporation. Heat-radiation type level sensor. 5,007,288, Cl. 73-295.000.

Sasaki, Yoshio. *See*—
Souketani, Koichi, Ito, Yukio; Sasaki, Yoshio; Kurita, Teiji, and Tamiya, Jun, 5,007,773, Cl. 407-27.000.

Sasaki, Yutaka. *See*—
Okubo, Susumu; and Sasaki, Yutaka, 5,007,870, Cl. 440-89.000.

Sassak, John J. Beer dispensing and monitoring method and apparatus. 5,007,560, Cl. 222-1.000.

Sasse, Klaus. *See*—
Kruger, Bernd-Wieland; Sasse, Klaus; Hoever, Franz-Peter, Nentwig, Gunther; and Behrenz, Wolfgang, 5,008,261, Cl. 514-212.000.

Sat(Societe Anonyme de Telecommunications. *See*—
Bertrand, Michel P., Bucher, Michel B., and Delclaux, Andre R., 5,008,543, Cl. 250-342.000.

Satake, Yoshikatsu. *See*—
Kashiwadate, Ken, Satake, Yoshikatsu, Kaneko, Takashi, Tada, Masahiro, and Katto, Takayuki, 5,008,370, Cl. 528-481.000.

Satchell, Donald P., Jr. *See*—
Ramachandran, Ramakrishnan; MacLean, Donald L.; and Satchell, Donald P., Jr., 5,008,412, Cl. 549-523.000.
Ramachandran, Ramakrishnan, MacLean, Donald L., Satchell, Donald P., Jr., and Malik, Virginia A., 5,008,414, Cl. 549-538.000.

Sato, Hiroshi. *See*—
Yasumi, Yoshiyuki; and Sato, Hiroshi, 5,007,752, Cl. 400-636.000.

Sato, Katsuhiro. *See*—
Akasaki, Yutaka, Nukada, Katsumi; and Sato, Katsuhiro, 5,008,431, Cl. 558-402.000.

Sato, Kazuhiro, to Sony Corporation. Receivers with microcomputer controlled tuning. 5,008,955, Cl. 455-181.000.

Sato, Koji. *See*—
Nagaoka, Shinji; Sato, Koji; and Kawai, Michio, 5,008,695, Cl. 354-403.000.

Sato, Masakatsu. *See*—
Eguchi, Hisao; Kubo, Masashige, Kunimoto, Koji; Shimizu, Sadami, Sato, Masakatsu, and Tamabayashi, Hanzo, 5,008,469, Cl. 568-722.000.

Sato, Naoki. *See*—
Nishiyama, Nobumasa; Saito, Makoto; Ouchi, Yasuhide, Katoh, Yasuhiro; Kamo, Yoshihisa, Koizumi, Makoto, Aoi, Hajime, Sato, Naoki; and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000.

Sato, Ryo. *See*—
Kikuchi, Ikuya; and Sato, Ryo, 5,007,712, Cl. 350-255.000.

Sato, Shuichi. *See*—
Kawakubo, Kiyoshi; and Sato, Shuichi, 5,007,358, Cl. 112-235.000.

Sato, Susumu. *See*—
Yokoi, Koichi; Irinoda, Kazuhiko; Kohya, Hidehiko; Sato, Susumu; and Katori, Tatsuhiko, 5,008,419, Cl. 556-137.000.

Sato, Takeaki. *See*—
Aoshima, Syozo; Hirota, Kunio; Sakakibara, Hiroshi, Sawai, Naoyuki; and Sato, Takeaki, 5,007,281, Cl. 72-406.000.

Sato, Yoshiaki. *See*—
Kawasaki, Yoshinao; Kawahara, Hironobu; Sato, Yoshiaki; Fukuyama, Ryooji; Nojiri, Kazuo; and Torii, Yoshimi, 5,007,981, Cl. 156-643.000.

Satoru Yagi. *See*—
Mochizuki, Shigetoshi, 5,007,252, Cl. 63-3.000.

Satterfield, Marshall G., Steinke, David M., and Blankenship, Michael, to Process Bonding, Inc. Method of making a headliner. 5,007,976, Cl. 156-222.000.

Sauber, Charles J. Truck step. 5,007,654, Cl. 280-166.000.

Saunders, Anne L.; and Fields, John G. Insect guard system and method of use. 5,007,196, Cl. 43-112.000.

Saunders, Raymond L., and Forrestal, Joseph M. Device for separating and closing a split mold having two halves. 5,007,814, Cl. 425-3.000.

Sauter, Hubert. *See*—
Schuetz, Franz; Brand, Siegbert; Wenderoth, Bernd; Sauter, Hubert, Ammermann, Eberhard; and Lorenz, Cisela, 5,008,438, Cl. 560-55.000.
Schulz, Guenter; and Sauter, Hubert, 5,008,446, Cl. 560-254.000.

Savastano, Stefano G. *See*—
Halloran, Daniel J., Kasprzak, Kenneth A.; Savastano, Stefano G.; and Swihart, Terence J., 5,008,424, Cl. 556-419.000.

Sawai, Kuchi. *See*—
Kurono, Masayasu; Kondo, Yasuaki; Mitani, Takahiko; Baba, Yutaka; and Sawai, Kuchi, 5,008,416, Cl. 556-89.000.

Sawai, Naoyuki. *See*—
Aoshima, Syozo; Hirota, Kunio; Sakakibara, Hiroshi; Sawai, Naoyuki; and Sato, Takeaki, 5,007,281, Cl. 72-406.000.

Sawaki, Mikio. *See*—
Nakajima, Masashi; Tomita, Nobuo; Suzaki, Kenji; Kaneko, Akira; and Sawaki, Mikio, 5,008,455, Cl. 564-300.000.

Sawamoto, Takeyuki; Nomura, Masashi; and Tarumi, Niro, to Hoya Corporation. Contact lens. 5,008,354, Cl. 526-246.000.

Sayer, Bertram, to 501 Thermal Profiles, Inc. Round top window. 5,007,219, Cl. 52-204.000.

Scalzi, Casper A.; and Schmalz, Richard J., to International Business Machines Corp. Control mechanism for zero-origin data spaces. 5,008,811, Cl. 364-200.000.

Scan Systems, Inc.: *See*—
Walters, William T.; and Thompson, Carroll R., 5,007,291, Cl. 73-640.000.

Scarberry, Paul W.; Kazemba, Rodney L., and Hestekin, Ralph A., to Sharp Packaging, Inc. Strips of interconnected pre-opened reclosable bags. 5,007,744, Cl. 383-37.000.

Scarpino, Kelvin M. Carpet stretching tool. 5,007,616, Cl. 254-212.000.

Schade, Nicholas. *See*—
Dixon, David S.; and Schade, Nicholas, 5,007,847, Cl. 439-100.000.

Schaefer, Daniel J. *See*—
Raburn, Richard W.; and Schaefer, Daniel J., 5,007,124, Cl. 5-481.000.

Schantz, Christopher A. *See*—
Pan, Alfred I-Tsung, Hanson, Eric G.; Schantz, Christopher A., and Childers, Winthrop D., 5,008,689, Cl. 346-140.00R.

Schaub, Bernard. *See*—
Audaire, Luc, Peuzin, Jean C.; and Schaub, Bernard, 5,008,541, Cl. 250-338.300.

Schedele, Helmut, to Siemens Aktiengesellschaft. Polarized armature contact relay. 5,008,641, Cl. 335-80.000.

Scheef, Hans-Volker. *See*—
Schleppinghoff, Bernhard, Kohler, Hans-Dieter; Gabel, Christian, and Scheef, Hans-Volker, 5,008,466, Cl. 568-697.000.

Scheerer, William E. *See*—
Matzelle, Albert J., and Scheerer, William E., 5,007,746, Cl. 384-420.000.

Schelde-Delta. *See*—
Martens, Laurent, 5,008,047, Cl. 260-424.000.

Scherenberg, Dieter, to Daimler-Benz AG. Intake system for a mixture-compressing internal-combustion engine. 5,007,402, Cl. 123-549.000.

Scherer, Dieter, and Strasser, William E., to Hewlett-Packard Company. Pulse analyzer with gain compression. 5,008,631, Cl. 330-51.000.

Scherer, Henry W., to S&C Electric Company. Arrangement for associating an electrical device with a mounting therefor. 5,007,759, Cl. 403-13.000.

Schering Corporation: *See*—
Bodor, Nicholas, 5,008,111, Cl. 424-449.000
Chackalamannil, Samuel, 5,008,404, Cl. 549-215.000.

Schilling, Peter, and Schreuders, Hans G., to Westvaco Corporation. Cationic aqueous bituminous emulsion-aggregate slurries preparation. 5,008,382, Cl. 536-11.000.

Schindler, Juergen; and Heinen, Hartwig, to Honeywell Regelsysteme GmbH. Sensor and control module with improved sensor isolation. 5,008,775, Cl. 361-383.000.

Schleper, Bernard. *See*—
Bremus, Norbert, Gutsche, Bernhard; Jeromin, Lutz; Peukert, Eberhard; and Schleper, Bernard, 5,008,046, Cl. 260-410.600.

Schleppinghoff, Bernhard, Kohler, Hans-Dieter, Gabel, Christian, and Scheef, Hans-Volker, to EC Erdolchemie GmbH. Process for the isomerization of alkenes having a terminal double bond to give alkenes having an internal double bond. 5,008,466, Cl. 568-697.000.

Schlesinger, Robert A., Hill, Kimuel L.; Ali, Hamid S., and Watson, Mark E. Visual alarm device interconnectable to existing monitoring circuitry. 5,008,655, Cl. 340-691.000.

Schlie, LaVerne A., and Rathge, Robert D., to United States of America, Air Force. Coaxial liquid cooling of high power microwave excited plasma UV lamps. 5,008,593, Cl. 315-39.000.

Schlumberger Technology Corporation: *See*—
Chen, Min-Yi, 5,008,625, Cl. 324-351.000.
Gaston, Didier, 5,007,230, Cl. 53-397.000.

Schmalz, Richard J. *See*—
Scalzi, Casper A.; and Schmalz, Richard J., 5,008,811, Cl. 364-200.000.

Schmertz, John C. Biaxially corrugated flexible sheet material. 5,008,140, Cl. 428-179.000.

Schmidt, Hans-Fr., Rauchmaul, Siegfried; and Bednarz, Juergen, to Siemens Aktiengesellschaft. Three-dimensional printed circuit board. 5,008,496, Cl. 174-254.000.

Schmidt, Harald H., to Mold-Masters Limited. Injection molding manifold having a pair of cooling bores on opposite sides of the melt passage. 5,007,821, Cl. 425-548.000.

Schmidt'sche Heissdampf GmbH. *See*—
Herrmann, Hellmut A.; and Hubeler, Wolfgang, 5,007,970, Cl. 134-42.000.

Schmitt Industries, Inc.: *See*—
Linder, Rene, 5,007,305, Cl. 74-573.00R.

Schmitz, Ambrose J.: *See*—
Rodgers, Joel E., Sr., Schmitz, Ambrose J.; and Romig, Alton D., 5,007,179, Cl. 34-22.000.

Schmitz, Deborah C.: *See*—
Osborn, Thomas W., III; and Schmitz, Deborah C., 5,007,906, Cl. 604-385.100.

Schmode, Hans-Peter, to Accumulatorenwerke Hoppecke Carl Zoeliner & Sohn GmbH & Co. KG. Electrochemical cell. 5,008,165, Cl. 429-94.000.

Schnabel, Werner, to Siemens Aktiengesellschaft. Method for manufacturing a solid electrolyte capacitor in a chip structure. 5,007,149, Cl. 29-25.030.

Schnader, Llewellyn R., to Ford New Holland, Inc. Bag clamping device for waste material debagging apparatus. 5,007,787, Cl. 414-412.000.

Schneeberger, Ruedi. *See*—
Busenhart, Peter; Schneeberger, Ruedi; Holbein, Erwin; Wirz, Armin; Flueli, Adolf; and Maier, Hansueli, 5,007,595, Cl. 242-46.400.

Schneider, Otto: *See*—
Schuster, Johann; Piehler, Martin; Muller, Horst; and Schneider, Otto, 5,008,229, Cl. 502-167.000.

Schnorrenberg, Gerd, Roos, Otto; Losel, Walter; Wiedemann, Ingrid; Gaida, Wolfram; Hoefke, Wolfgang, Arndts, Dietrich, and Streller, Ilse, to Boehringer Ingelheim GmbH. Amino acid derivatives and their pharmaceutical use. 5,008,273, Cl. 514-301.000.

Schoettle, Klaus. *See*—
Huebner, Dietmar, Nagel, Peter; Hirschberg, Ekkehard; Schoettle, Klaus; and Pavelka, Bozidar, 5,007,536, Cl. 206-394.000.

Scholten, James R.. *See*—
Dahlen, John M.; Chhabra, Narender K.; Araujo, Richard K.; Scholten, James R., Reid, Robert W.; and Soikkeli, Matti, 5,007,285, Cl. 73-170.00A.

Schon, Istvan; Nyeki, Olga; Kisfaludy, Lajos, deceased (by Kisfaludy, Maria, Marta Kisfaludy, Andras Kisfaludy, legal heirs); Denes, Laszlo; Hajos, Gyorgy, and Szporny, Laszlo, to Richter Gedeon Vegyeszeti Gyar R. T. Novel peptides suppressing the function of the immune system, pharmaceutical compositions containing them and process for preparing same. 5,008,246, Cl. 514-18.000.

Schonenbrecher, Paul-Erich. *See*—
Wiese, Helmut; and Schonenbrecher, Paul-Erich, 5,007,498, Cl. 280-248.000.

Schrader, Lutz. *See*—
Thurm, Siegfried; Holm, Reimer; Leuschke, Christian; Rathmann, Dietrich; and Schrader, Lutz, 5,008,148, Cl. 428-336.000.

Schramm, Matthias. *See*—
Franckowiak, Gerhard, Stoltefuss, Jurgen; Bechem, Martin; Gross, Rainer, Kayser, Michael, Hebisch, Siegbert; and Schramm, Matthias, 5,008,279, Cl. 514-354.000.

Schrantz, Gregory A., to Harris Corporation. Dual layer surface gate JFET having enhanced gate-channel breakdown voltage. 5,008,719, Cl. 357-22.000.

Schreuders, Hans G.: *See*—
Schilling, Peter; and Schreuders, Hans G., 5,008,382, Cl. 536-11.000.

Schrottke, Gustav: *See*—
Pope, Keith R.; and Schrottke, Gustav, 5,007,163, Cl. 29-840.000.

Schubert & Salzer Maschinenfabrik Aktiengesellschaft: *See*—
Artzt, Peter, and Mueller, Heinz, 5,007,136, Cl. 19-65.00A.

Schuetz, Franz; Brand, Siegbert; Wenderoth, Bernd; Sauter, Hubert; Ammermann, Eberhard; and Lorenz, Cisela, to BASF Aktiengesellschaft. Ortho-substituted phenol ethers and fungicides which contain these compounds. 5,008,438, Cl. 560-55.000.

Schulte, Burkart; Sterner, Hakan; Wetzka, Gerhard; and Hardt, Norbert, to Deutsche Gesellschaft fur Wiederaufarbeitung von Kernbrennstoffen mbH. Lock system for passing objects from a radioactively contaminated chamber into a container. 5,007,213, Cl. 52-29.000.

Schulz, Guenter; and Sauter, Hubert, to BASF Aktiengesellschaft. Preparation of phenoxy-substituted esters and intermediates therefor. 5,008,446, Cl. 560-254.000.

Schulz, Paul; and Schwadtke, Karl, to Henkel Kommanditgesellschaft auf Aktien. Liquid detergent. 5,008,031, Cl. 252-168.000.

Schulze-Froehlich, D-F. *See*—
Steinel, Heinrich-Wolfgang; Armonier, Ulrich; and Schulze-Froehlich, D-F, 5,008,613, Cl. 324-133.000.

Schumacher, Karl H.: *See*—
Sansone, Ronald P.; Schumacher, Karl H.; Keating, Raymond; Wall, Joseph W.; and Joshi, Uday W., 5,008,827, Cl. 364-464.020.

Schumacher, Thomas H.: *See*—
Alverth, Ronald W., Schumacher, Thomas H.; and Przybylowski, Thaddeus M., 5,007,890, Cl. 493-434.000.

Schuster, Johann; Piehler, Martin; Muller, Horst; and Schneider, Otto, to Wacker-Chemie GmbH. Compositions containing phosphonitrile chlorides. 5,008,229, Cl. 502-167.000.

Schuster, Michael. *See*—
Markinson, Scott; Schuster, Michael; and Hogan, Thomas, 5,008,636, Cl. 331-2.000.

Schutz, Ronald J.. *See*—
Case, Christopher J.; Cheung, Kin P.; Liu, Ruichen; Schutz, Ronald J., and Wagner, Richard S., 5,008,217, Cl. 437-195.000.

Schwab, Wilhelm; and Muller, Gerhard, to Werner & Pfleiderer, GmbH. Machine for kneading dough portions into a round shape. 5,007,820, Cl. 425-333.000.

Schwadtke, Karl: *See*—
Schulz, Paul; and Schwadtke, Karl, 5,008,031, Cl. 252-168.000.

Schwaiger, Max. *See*—
Rieder, Heinz; and Schwaiger, Max, 5,007,177, Cl. 33-706.000.

Schwartz, Alan. *See*—
Coffen, David L.; Madan, Pradeep B.; and Schwartz, Alan, 5,008,411, Cl. 549-519.000.

Schwartz, Thomas W.: *See*—
Englund, Richard L.; and Schwartz, Thomas W., 5,007,128, Cl. 15-230.160.

Schwarz, Anton, to A. Schwarz & Co. Device for accomodating expansion in fluid circulation systems. 5,007,583, Cl. 237-66.000.

Schwarz, Jean-Claude, to Aerospatiale Societe Nationale Industrielle. System for materializing a point in space, applications thereof and a tooling assembly for said system. 5,007,175, Cl. 33-286.000.

Schwarzer, Paul: *See*—
Kircher, Dieter; and Schwarzer, Paul, 5,007,687, Cl. 303-113.000.

Schweigerling, Paul E. Catheter-insertion device. 5,007,914, Cl. 606-108.000.

Schweitzer, Edmund O., Jr. Battery-powered fault indicator. 5,008,651, Cl. 340-664.000.

Schwenninger, Ronald L.: *See*—
Krushinski, Bert K.; Lawhon, Robert A.; Radecki, Francis A.; and Schwenninger, Ronald L., 5,007,950, Cl. 65-182.500.

Science Research Laboratory, Inc.. *See*—
Klinkowstein, Robert W., 5,008,800, Cl. 363-61.000.

Scientific Design Company, Inc.: *See*—
Liu, Kintoken H., 5,008,413, Cl. 549-534.000.

Scimone, Anthony: *See*—
Klemann, Lawrence P.; Finley, John W.; and Scimone, Anthony, 5,008,126, Cl. 426-611.000.

Scobie, William B.; and Frenzel, Robert A., to Keystone International Holdings Corp. Rotary actuator and seal assembly for use therein. 5,007,330, Cl. 92-120.000.

Scott Fetzer Company, The: *See*—
Lackner, John R.; Grzywna, Stanley E.; Weber, Ralph A.; and Baird, Thomas E., 5,007,133, Cl. 15-351.000.

Scott, Keith W.: *See*—
Pleasants, Charles W.; and Scott, Keith W., 5,007,479, Cl. 166-178.000.

Scott, Kieran F.: *See*—
Rolfe, Barry G.; Shine, John; Scott, Kieran F.; and Hennecke, Hauke, 5,008,194, Cl. 435-172.300.

Scott, Norman H.: *See*—
Vora, Bipin V.; and Scott, Norman H., 5,008,467, Cl. 568-697.000.

Scripps Clinic and Research Foundation: *See*—
Reese, Robert T.; and Stanley, Harold A., 5,008,198, Cl. 435-240.270.

Scriven, Clare E.: *See*—
Anderson, Larry; Batts, Gregory N.; Purbrick, Malcolm D.; Scriven, Clare E.; and Jones, Stephen A., 5,008,358, Cl. 526-292.300.

Seals, Victoria E.: *See*—
Huang, Kevin C.; Kutz, Karl H.; McNamara, Timothy J.; Seals, Victoria E.; and Still, Gregory S., 5,008,885, Cl. 371-3.000.

Seaquist Closures: *See*—
Imbery, Leo R., Jr., 5,007,545, Cl. 215-14.000.
Mueller, Bruce M., 5,008,066, Cl. 264-537.000.

Sears, Roebuck & Co.: *See*—
Dewire, Robert J.; and Kozlowski, Walter A., 5,007,178, Cl. 33-767.000.

Sebag, Henri: *See*—
Vanlerberghe, Guy; Zysman, Alexandre; and Sebag, Henri, 5,008,406, Cl. 549-378.000.

Secrest, Dean J.: *See*—
Picha, George J.; and Secrest, Dean J., 5,007,900, Cl. 604-106.000.

Secrist, John A., III; Montgomery, John A.; Ealick, Steve E.; Erion, Mark D.; and Guida, Wayne C., to BioCryst, Inc. 2-amino-7-(alicyclomethyl)-3H,5H,-pyrrolo[3,2-d]pyrimidin-4-ones and pharmaceutical uses and compositions containing the same. 5,008,265, Cl. 514-258.000.

Secrist, John A., III; Montgomery, John A.; Ealick, Steve E.; Erion, Mark D.; and Guida, Wayne C., to BioCryst, Inc. 2-amino-7-(heterocyclomethyl)-3H,5H-pyrrolo[3,2-d]pyrimidin-4-ones and pharmaceutical uses and compositions containing the same. 5,008,270, Cl. 514-258.000.

Sedergran, Thomas C., to E. R. Squibb & Sons, Inc. Diastereoselective preparation of phosphinate esters. 5,008,399, Cl. 548-413.000.

Sedigh, Mohammad: *See*—
Edmond, John A.; Waltz, Douglas G.; Mitchell, Muni M.; Sedigh, Mohammad; and Hamerski, Roman, 5,008,735, Cl. 357-74.000.

Seeger, Josef: *See*—
Rothfuss, Hans; Bruckner, Raimund; Keutgen, Peter; Seeger, Josef; Winkelmann, Manfred; and Metzger, Herbert, 5,007,621, Cl. 266-220.000.

Segerson, Eugene E. Fiber optic cable retainer. 5,007,702, Cl. 350-96.200.

Segneri, Carl L. Tool and method for installing roof gutters on buildings. 5,007,224, Cl. 52-741.000.

Seibring, Joachim: *See*—
Ittemann, Peter; Simon, Georg N.; Heinz, Gerhard; Zeiner, Hartmut; Buchert, Hermann; and Seibring, Joachim, 5,008,364, Cl. 528-172.000.

Seidman, Charles B., to Take One Marketing Group, Inc. Gaming method. 5,007,641, Cl. 273-138.00A.

Seiko Epson Corporation: *See*—
Ikegami, Toshimasa, 5,008,868, Cl. 368-88.000.

Seiko Instruments Inc.: *See*—

Sommer, Holger T., to Pacific Scientific Company. Particle size measuring system with automatic dilution of sample. 5,007,297, Cl 73-865.500

Sonabat-Chantal *See—*
Avot, Jean-Pierre, 5,007,550, Cl 220-8.000

Sonegawa, Motoharu *See—*
Tomiyama, Tsuyoshi, Tomiyama, Akira; Shirai, Tadashi; Wakabayashi, Shuuichi; Kawai, Tomoyuki, Ueyama, Naoto, and Sonegawa, Motoharu, 5,008,282, Cl 514-393.000.

Sonegawa, Shigehisa *See—*
Suzuki, Akio; Kishita, Hirofumi, Sonegawa, Shigehisa; Matumura, Masaaki; and Hoashimoto, Takeshi, 5,007,726, Cl 351-41.000.

Soni, Inderjit S. *See—*
Crompton, Charles E.; Kazi, Abdulla M. Z.; and Soni, Inderjit S., 5,008,036, Cl. 252-313.100

Soni, Pravin *See—*
Guerra, Robert, and Soni, Pravin, 5,008,340, Cl 525-193.000.

Sony Corporation *See—*
Chigasaki, Hiroyuki, 5,008,766, Cl 360-96.500
Hirumi, Yasushi, 5,008,837, Cl 364-519.000.
Iwahashi, Yuji, 5,007,596, Cl 242-71.800
Ohki, Hiroshi, Kobayashi, Shoei, and Wada, Takuya, 5,008,521, Cl 235-454.000
Sato, Kazuhiro, 5,008,955, Cl 455-181.000
Takayama, Jun; Ninomiya, Takeshi; Fujita, Tadao; and Inaba, Yoshiaki, 5,008,668, Cl 341-83.000.

Sorensen, Jens O., to Primtec. Injection-molding dimension-control and clamp-reduction. 5,008,064, Cl. 264-308.000.

Soto, Jorge, Anand, Joginder N., and Peffley, Richard D., to Dow Chemical Company. The Polyurethane-urea resins with incorporated hydrophobic microparticle fillers. 5,008,325, Cl. 524-504.000.

Soto, Vicente *See—*
Congleton, Helen; Slaton, Carol L.; Koudounaris, Angelo; Smith, Gerald B.; and Soto, Vicente, 5,007,576, Cl 228-103.000.

Souketani, Koichi, Ito, Yukio, Sasaki, Yoshio; Kurita, Teiji, and Tamiya, Jun, to Nachi-Fujikoshi Corporation. Shaving cutter. 5,007,773, Cl 407-27.000.

Spacesaver Corporation *See—*
Muth, James C., 5,007,351, Cl. 105-101.000

Spahni, Milton D., Jr. *See—*
Gunn, Charles L.; Davis, Harold; Spahni, Milton D., Jr.; and Wanless, Ronald H., 5,007,541, Cl 206-611.000.

Span-America Medical Systems, Inc *See—*
Raburn, Richard W.; and Schaefer, Daniel J., 5,007,124, Cl 5-481.000.

Spang, Peter, Neumann, Peter; Wagenblast, Gerhard, and Trauth, Hubert, to BASF Aktiengesellschaft. N-substituted benzimidazole-2-carboxanilides. 5,008,397, Cl 548-331.000

Spear, Kenneth J.; and Fowler, Ronald R., to O. Ames Co. Hose reel assembly. 5,007,598, Cl 242-86.200

Spector, Donald. Microwave-heatable air-freshener package. 5,007,529, Cl 206-0.500

Spectra-Physics, Inc *See—*
Bobba, Mohan L.; and Nojiri, Howard H., 5,007,691, Cl 350-6.700
Taussig, Andrew P.; and Isaacs, Blake L., 5,008,518, Cl 235-383.000

Speer, Dietrich, Kiss, Akos, Kleinschmit, Peter, and Hanich, Juergen, to Degussa Aktiengesellschaft. Grayish-black encapsulated pigments and method of their production. 5,008,223, Cl. 106-450.000

Spence, James. Spill container with unfolding flexible compartment. 5,007,557, Cl. 220-571.000

Spencer, James R., and Mullendore, James A., to GTE Products Corporation. Method for producing improved tungsten nickel iron alloys. 5,008,071, Cl. 419-28.000.

Spencer, Mary E. *See—*
Bassi, Pawan K.; Eastwell, Kenneth C.; Goudey, James S.; and Spencer, Mary E., 5,008,091, Cl. 423-245.100

Spielmann, Jurgen. *See—*
Maathuis, Antonnis G.; Spielmann, Jurgen; Beer, Klaus; and Oare, Thomas R., 5,007,974, Cl 156-117.000.

Spletter, Phillip J.; and MacKay, Colin A., to Microelectronics and Computer Technology Corporation. Method of laser bonding electrical members. 5,008,512, Cl. 219-121.640.

Spolek, Graig A. *See—*
Hall, Robert E.; Spolek, Graig A.; Wasser, John H.; and Butts, Nelson L., 5,007,404, Cl 126-77.000.

Sport Maska Inc.: *See—*
Laberge, Raymond; and Beauregard, Robert, 5,007,108, Cl 2-2.000.

Sports Glow, Inc.: *See—*
Gulick, James D., 5,007,647, Cl. 273-213.000.

Square D Company *See—*
Ulmer, Edward A., Jr., 5,008,611, Cl. 324-96.000.

SRI International *See—*
Blum, Yigal D.; and Laine, Richard M., 5,008,422, Cl. 556-412.000.

SS Pharmaceutical Co., Ltd *See—*
Yokoi, Koichi; Innoda, Kazuhiko; Kohya, Hidehiko; Sato, Susumu; and Katori, Tatsuhiko, 5,008,419, Cl. 556-137.000.

SSMC Inc.: *See—*
Hiratsuka, Katsuo; Odaka, Yoshiyuki; and Yoshida, Takeshi, 5,007,356, Cl. 112-68.000.
Kawakubo, Kiyoshi; and Sato, Shuichi, 5,007,358, Cl. 112-235.000

Staalkat B. V.: *See—*
van der Schoot, Jelle, 5,007,785, Cl 414-331.000

Stabifix Brauerei-Technik GmbH & Co. OHG. *See—*
Raible, Karl, 5,008,018, Cl. 210-717.000.

Stack, Dennis P., to Union Oil Company of California. Process for preparing a fast cure, zero formaldehyde binder for cellulose. 5,008,326, Cl. 524-519.000.

Stacy, Carl W.: *See—*
Russay, Thomas; and Stacy, Carl W., 5,008,658, Cl. 340-784.000

Stafford, Trevor G., to British Gas Corporation. Method for joining polyolefin pipes by fusion. 5,007,767, Cl 405-154.000.

Stahl, Gary L.: *See—*
Oldfelt, Sven; and Stahl, Gary L., 5,007,117, Cl. 4-432.000.

Stahlhofen, Paul: *See—*
Hsieh, Shane; and Stahlhofen, Paul, 5,008,175, Cl. 430-155.000

Stahly, G. Patrick, to Ethyl Corporation. Haloalkylation process. 5,008,417, Cl. 556-104.000.

Stahly, G. Patrick, to Ethyl Corporation. Trifluoromethylation of carbonyl compounds. 5,008,425, Cl 556-436.000

Standard Elektrik Lorenz Aktiengesellschaft *See—*
Hopfensperger, Reinhold; and Eichhorn, Werner, 5,007,801, Cl 416-223.00R.

Standard Oil Company, The: *See—*
Brazdil, James F., Jr.; Toft, Mark A.; and Glaeser, Linda C., 5,008,427, Cl. 558-319.000
Giordano, Paul J.; and Smierciak, Richard C., 5,008,135, Cl 427-386.000

Stanford, Ferdinand G. Removable hinge at specific angular orientation. 5,007,134, Cl. 16-266.000

Stanley, Harold A.: *See—*
Reese, Robert T.; and Stanley, Harold A., 5,008,198, Cl 435-240.270

Stauber, Hans-Ulrich: *See—*
Eberle, Jurg; and Stauber, Hans-Ulrich, 5,007,629, Cl 271-277.000

Staudinger, Alfons, and Bux, Hermann, to A. Rohe GmbH. Method and apparatus for balancing a wheel of a vehicle or the like. 5,008,826, Cl 364-463.000

STC plc: *See—*
Hale, Peter G.; and Russell, John N., 5,007,703, Cl 350-96.230

Steelcase Inc.: *See—*
DeKraker, Larry, 5,007,678, Cl. 297-353.000.

Steer, John E., to Allied-Signal Inc. Master cylinder with sandwiched communication interfaces. 5,007,239, Cl 60-562.000.

Stehling, Ferdinand C., to Exxon Chemical Patents Inc. Method for determining the compositional distribution of a crystalline copolymer. 5,008,204, Cl 436-85.000.

Steinel, Heinrich-Wolfgang, Armonier, Ulrich; and Schulze-Froehlich, D-F. to Siemens Aktiengesellschaft. Voltage tester for graduated optical display of a voltage and method for its manufacture. 5,008,613, Cl 324-133.000

Steiner, Eginhard: *See—*
Husler, Rinaldo, Klingert, Bernd, Rembold, Manfred, and Steiner, Eginhard, 5,008,302, Cl 522-14.000

Steiner, Klaus. *See—*
Gunther, Bernd-Rainer; Losch, Rainer, and Steiner, Klaus, 5,008,394, Cl 548-121.000

Steinke, David M *See—*
Satterfield, Marshall G.; Steinke, David M.; and Blankenship, Michael, 5,007,976, Cl 156-222.000

Steinmeyer, Peter A., to United States of America, Energy. Diffractometer data collecting method and apparatus. 5,008,909, Cl 378-71.000

Stengel, Fred *See—*
Blau, David A.; Meadows, John, Sherlock, Thomas M.; Stengel, Fred, Studholme, Robert M.; Wada, Kenneth R.; and Kepner, Christopher J., 5,008,081, Cl 422-64.000

Sterner, Hakan *See—*
Schulte, Burkart, Sterner, Hakan, Wetzka, Gerhard, and Hardt, Norbert, 5,007,213, Cl 52-29.000

Sterzer, Fred, to MMTC, Inc. Catheters for treating prostate disease. 5,007,437, Cl. 428-786.000.

Steurer, Andrew M *See—*
Wadhwa, Lachhman; and Steurer, Andrew M., 5,008,316, Cl. 524-230.000.

Stevens, Eugene H., and Utlaut, Mark W., to Hughes Aircraft Company. Signal generator for use in industrial positioning systems. 5,008,602, Cl. 318-561.000

Stewart, Charles L. Billet pre-piercer apparatus and method. 5,007,274, Cl. 72-254.000.

Stewart, John F.: *See—*
Groswith, Charles T., III, Phipps, Richard D.; Lathrop, Robert L., Jr.; Stewart, John F.; and Kaufmann, Rick J., 5,007,782, Cl 412-40.000

Stewart, John S. S. Breathing apparatus. 5,007,421, Cl. 128-204.180

Stewart, Ray F.: *See—*
Nyberg, Eric D.; Klingman, Ken A.; Curtis, Jeff; and Stewart, Ray F., 5,007,989, Cl. 204-1.110

Stewart, Robert E.; and Fersht, Samuel N., to Litton Systems, Inc. Three axis inertial measurement unit with counterbalanced, low inertia mechanical oscillator. 5,007,289, Cl. 73-510.000

STFI *See—*
Engstrand, Per O.; Hammar, Lars-Ake; Htun, Myat T.; and Pettersson, Rune L., 5,007,985, Cl 162-26.000

Stucht, Walter. Handling system for workpieces. 5,007,796, Cl 414-751.000.

Stiehler, Wayne E.: *See—*
Diehl, Conrad; Smart, David C.; and Stiehler, Wayne E., 5,008,692, Cl. 354-173.100.

Still, Gregory S.: *See—*
Huang, Kevin C.; Kutz, Karl H.; McNamara, Timothy J.; Seals, Victoria E.; and Still, Gregory S., 5,008,885, Cl. 371-3.000.

Stirling, Albert, to Stirling Connectors Inc. Crimpless coaxial cable connector with pull back cable engagement. 5,007,861, Cl. 439-578.000.

Stirling Connectors Inc.: *See—*
Stirling, Albert, 5,007,861, Cl 439-578.000.

Stober & Morlock Warmekraft Gesellschaft mbH *See*—
von Erichsen, Volker, 5,007,456, Cl. 137-601.000.

Stoltefuss, Jurgen *See*—
Franckowiak, Gerhard; Stoltefuss, Jurgen; Bechem, Martin; Gross, Rainer; Kayser, Michael; Hebisch, Siegbert; and Schramm, Matthias, 5,008,279, Cl. 514-354.000.

Stone, Kevin R., to ReGen Corporation Prosthetic meniscus. 5,007,934, Cl. 623-20.000.

Storage Technology Corporation: *See*—
Fries, William J.; Kleinschnitz, Donald; and Nelson, T. Craig, 5,008,808, Cl. 364-200.000.

Storz Instrument Company *See*—
Kleinberg, Larry K., 5,007,723, Cl. 350-508.000.

Stout, James C., to Honeywell Inc. Fiber optic reflective tree architecture. 5,007,699, Cl. 350-96.160.

Stracher, Alfred; and Kesner, Leo Carnitine directed pharmaceutical agents. 5,008,288, Cl. 514-535.000.

Straeter, Joseph G *See*—
Weder, Donald E.; Straeter, William F.; Straeter, Joseph G.; Craig, Franklin J.; Donnelly, Wilma M.; and Redditt, Jack W., 5,007,229, Cl. 53-397.000.

Straeter, William F *See*—
Weder, Donald E.; Straeter, William F.; Straeter, Joseph G.; Craig, Franklin J.; Donnelly, Wilma M.; and Redditt, Jack W., 5,007,229, Cl. 53-397.000.

Strasser, William E. *See*—
Scherer, Dieter; and Strasser, William E., 5,008,631, Cl. 330-51.000.

Straub, Hermann, to Sulzer Brothers Limited Plant comprising a nuclear reactor, more particularly a control rod system for nuclear reactor plant. 5,008,068, Cl. 376-230.000.

Strauss, Richard F.; Fiacco, Richard A.; Bordbar, Hosrow T.; Chen, Caesar C.; and Quiroz, David, to Thomas & Betts Corporation. Strippable electrically shielded cable. 5,008,490, Cl. 174-36.000.

Streck Laboratories, Inc. *See*—
Ryan, Wayne L., 5,008,201, Cl. 436-10.000.

Streicher, Gunter *See*—
Martinelli, Bruno; Ghezzi, Markus; and Streicher, Gunter, 5,007,941, Cl. 8-436.000.

Streller, Ilse *See*—
Schnorrenberg, Gerd; Roos, Otto; Losel, Walter; Wiedemann, Ingrid; Gaida, Wolfram; Hoefke, Wolfgang; Arndts, Dietrich; and Streller, Ilse, 5,008,273, Cl. 514-301.000.

Stryker Corporation *See*—
Evans, James A., 5,007,917, Cl. 606-170.000.

Stuart Jacobson Associates, Inc *See*—
Beasley, John C.; and Dinand, Pierre F., 5,007,540, Cl. 206-581.000.

Studholme, Robert M *See*—
Blau, David A.; Meadows, John; Sherlock, Thomas M.; Stengel, Fred; Studholme, Robert M.; Wada, Kenneth R.; and Kepner, Christopher J., 5,008,081, Cl. 422-64.000.

Studiengesellschaft Kohle mbH *See*—
Lehmkuhl, Herbert; and Mehler, Klaus-Dieter, 5,007,991, Cl. 204-58.500.

Stuhlmacher, John A., to McGill Manufacturing Company, Inc Switch with colored indicator cap 5,008,503, Cl. 200-308.000.

Sturdivant, Linda D. *See*—
Wang, Dou-Mei; Sturdivant, Linda D.; Biemer, Thomas A.; and Mink, Ronald, 5,008,199, Cl. 435-240.270.

Sturm, Walter Ladder levelling device with locking means 5,007,503, Cl. 182-202.000.

Stutz, William H., Jr., to Siemens-Pacesetter, Inc. Device for adapting a pacemaker lead to a pacemaker 5,007,864, Cl. 439-651.000.

Su, Jow-Lih *See*—
Sherwin, Martin B.; and Su, Jow-Lih, 5,008,428, Cl. 558-346.000.

Su, Jy-hong *See*—
Jachmann, Emil F.; Saltzman, Jeremy; Chamberlin, David B.; D'Agosto, Nicholas A.; Harris, Mark; and Su, Jy-hong, 5,008,835, Cl. 364-513.500.

Sueddeutsche Kuehlerfabrik Julius Fr. Behr GmbH & Co. KG *See*—
Christ, Michael; and Teichmann, Wolfgang, 5,007,180, Cl. 34-32.000.

Sueoka, Kazufumi *See*—
Nakano, Takafumi; Seo, Akikazu; Soeda, Hiromitsu; and Sueoka, Kazufumi, 5,007,341, Cl. 101-349.000.

Suffern, Robert C. *See*—
Wallach, Clifford H.; Suffern, Robert C.; and Walsh, Dale M., 5,008,901, Cl. 375-8.000.

Sugihara, Junichi *See*—
Hashimoto, Ryusuke; Iwata, Mitsuru; Sugihara, Junichi; and Iwase, Minoru, 5,008,053, Cl. 264-60.000.

Sugimoto, Kazuaki; Nishijima, Tomio; Inoue, Teruhisa; Sugimoto, Yoshihiko; Suzuki, Masashi; and Matsushita, Izumi, to Tokyo Electric Co., Ltd. Printer with sheet feeding apparatus. 5,007,340, Cl. 101-227.000.

Sugimoto, Tadao *See*—
Ikegawa, Akihiko; Okazaki, Masaki; and Sugimoto, Tadao, 5,008,181, Cl. 430-572.000.

Sugimoto, Yoshihiko *See*—
Sugimoto, Kazuaki; Nishijima, Tomio; Inoue, Teruhisa; Sugimoto, Yoshihiko; Suzuki, Masashi; and Matsushita, Izumi, 5,007,340, Cl. 101-227.000.

Sugino, Yasuyuki *See*—
Kaneko, Koji; and Sugino, Yasuyuki, 5,008,769, Cl. 360-130.240.

Sugiyama, Isao *See*—
Yamauchi, Hiroshi; Sugiyama, Isao; Saito, Isao; Nomoto, Seiichiro; Kamiya, Takashi; Machida, Yoshimasa; and Negi, Shigeto, 5,008,260, Cl. 514-202.000.

Suk, Eugene J. Electrical outlet boxes and covers therefor. 5,007,549, Cl. 220-3.800.

Sulzer Brothers Limited: *See*—
Gorris, Joannes J. H. M., 5,007,464, Cl. 139-455.000.
Straub, Hermann, 5,008,068, Cl. 376-230.000.

Sumino, Fumio *See*—
Nakagawa, Masaru; Sumino, Fumio; Hiro, Masaaki; Kashimura, Noboru; and Nagahara, Shin, 5,008,168, Cl. 430-56.000.

Sumitomo Chemical Company, Limited *See*—
Saito, Noriaki; Kanagawa, Shuichi; and Sakamoto, Hideshi, 5,008,350, Cl. 525-507.000.
Tashiro, Kazuo; and Tanaka, Kunihiko, 5,008,410, Cl. 549-497.000.

Sumitomo Heavy Industries, Ltd *See*—
Hara, Hitoshi, and Inoue, Katsutoshi, 5,007,822, Cl. 425-575.000.
Ishimoto, Noriyuki; and Iida, Hirofumi, 5,008,575, Cl. 310-89.000.

Sumitomo Metal Industries Ltd. *See*—
Nakasuji, Kazuyuki; Hayashi, Chihiro; and Suzushima, Yoshiyuki, 5,007,577, Cl. 228-265.000.
Tomizawa, Atsushi; Inoue, Susumu; and Masui, Takeshi, 5,007,152, Cl. 29-116.200.

Sumitomo Special Metals Co., Ltd *See*—
Nakasuji, Kazuyuki; Hayashi, Chihiro; and Suzushima, Yoshiyuki, 5,007,577, Cl. 228-265.000.

Sumoto, Hirofumi *See*—
Arai, Kiyotaka; Sumoto, Hirofumi, and Ichinomiya, Keizi, 5,008,789, Cl. 362-255.000.

Sun Microsystems, Inc. *See*—
Jensen, Eric H., 5,008,850, Cl. 364-760.000.

Sunbelt Automated Systems, Inc *See*—
Bingman, John W., 5,007,786, Cl. 414-409.000.

Sunden, Gunnel E *See*—
Brandstrom, Arne E.; Lindberg, Per L.; and Sunden, Gunnel E., 5,008,278, Cl. 514-338.000.

Sundholm, Goran Apparatus for flushing small-diameter hydraulic pipe systems and the like 5,007,444, Cl. 134-102.000.

Sundstrand Corporation. *See*—
Defenbaugh, John F., and Markunas, Albert L., 5,007,245, Cl. 62-117.000.
Glennon, Timothy F., 5,008,801, Cl. 363-132.000.
Patel, Sunil; Ligon, Robert; and Dhyanchand, P. John, 5,008,797, Cl. 363-43.000.

Sundwiger Eisenhutte Maschinenfabrik Grah & Co. *See*—
Kummerhoff, Gerhard, 5,007,273, Cl. 72-242.200.

Sung, Song G., to SamSung Electronics Co., Ltd Parallel and continuous playback circuit for an audio cassette deck of the double-deck type 5,008,762, Cl. 360-61.000.

Sunkist Growers, Inc *See*—
Orman, Charles R.; Johnson, Paul E.; and Adams, Bruce C., 5,007,335, Cl. 99-487.000.

Superlite Builders Supply, Inc *See*—
Bengtson, Fred G.; and LoPiccolo, Donald V., 5,007,218, Cl. 52-204.000.

Surash, Robert G and Kiehl, Gary G., to Eastman Kodak Company Treatment of domestic and industrial waste waters 5,008,020, Cl. 210-751.000.

Surash, Robert G *See*—
Kiehl, Gary G.; and Surash, Robert G., 5,008,017, Cl. 210-710.000.

Surgical Systems & Instruments, Inc *See*—
Shiber, Samuel, 5,007,896, Cl. 604-22.000.

Surnamer, Andrew D *See*—
Tien, Chao-Fong; and Surnamer, Andrew D., 5,007,945, Cl. 55-16.000.

Sussmann, Ricardo S *See*—
Burnham, Robert D.; and Sussmann, Ricardo S., 5,008,737, Cl. 357-81.000.

Sutherland, James K. *See*—
Bullock, John D.; Sutherland, James K.; and Donnelly, Michael J., 5,008,383, Cl. 536-4.100.

Sutterlin, Philip H., to International Business Machines Corporation Temperature compensated feedback circuit for setting and stabilizing amplifier DC bias points. 5,008,632, Cl. 330-256.000.

Suya, Yoshiaki *See*—
Yazawa, Shigehiko; Ogawa, Toru; Moritomo, Haruo; Suya, Yoshiaki; and Nakayama, Mikio, 5,008,884, Cl. 370-110.100.

Suzaki, Hideyuki *See*—
Shimamoto, Hiroshi; Suzaki, Hideyuki; Yamaguchi, Yukio; and Kawano, Atsushi, 5,008,862, Cl. 367-105.000.

Suzaki, Kenji *See*—
Nakajima, Masashi; Tomita, Nobuo; Suzaki, Kenji; Kaneko, Akira; and Sawaki, Mikio, 5,008,455, Cl. 564-300.000.

Suzuki, Akio; Kishita, Hirofumi; Sonegawa, Shigehisa; Matumura, Masaaki; and Hoashimoto, Takeshi, to Shin-Etsu Chemical Co., Ltd Coated eyeglasses frame member 5,007,726, Cl. 351-41.000.

Suzuki, Akira *See*—
Shimizu, Katsuichi, Shibata, Takehiko, Yokomizo, Yoshikazu; Suzuki, Akira; Murakami, Koichi; Yoshida, Tadashi; Tsukada, Masaharu; Nagashima, Nao; and Miyagi, Ken, 5,008,760, Cl. 358-451.000.

Suzuki, Arata; Tyberg, William T.; Banks, George; and Suzuki, Marcia, to Capintec, Inc Ambulatory physiological evaluation system including cardiac monitoring. 5,007,427, Cl. 128-659.000.

Suzuki, Hiroshi *See*—
Yamamoto, Ryoichi; and Suzuki, Hiroshi, 5,008,450, Cl. 562-485.000.

Suzuki Jidosha Kogyo Kabushiki Kaisha *See*—
Okubo, Susumu; and Sasaki, Yutaka, 5,007,870, Cl. 440-89.000.

Suzuki, Kazuo *See*—
Takahashi, Yasuo; Suzuki, Kazuo; Niimura, Toshinobu; and Kano, Tokio, 5,007,995, Cl. 204-299.00R.

Suzuki, Kenzi *See*—
Watanabe, Eiji; Horio, Nasakazu; and Suzuki, Kenzi, 5,008,224, Cl. 502-63.000.

Suzuki, Marcia *See*—
Suzuki, Arata; Tyberg, William T.; Banks, George; and Suzuki, Marcia, 5,007,427, Cl. 128-659.000.

Suzuki, Masashi *See*—
Sugimoto, Kazuaki; Nishijima, Tomio; Inoue, Teruhisa; Sugimoto, Yoshihiko; Suzuki, Masashi; and Matsushita, Izumi, 5,007,340, Cl. 101-227.000.

Suzuki, Shigehiko; and Tachino, Kenzo, to Mitsubishi Denki Kabushiki Kaisha. Elevator remote-control method. 5,007,506, Cl. 187-101.000.

Suzuki, Takashi *See*—
Kawachi, Genshiro; Mimura, Akio; Konishi, Nobutake; Ono, Kikuo; and Suzuki, Takashi, 5,008,218, Cl. 437-201.000.

Suzuki, Takayuki, to Canon Kabushiki Kaisha. Thermal transfer recording method 5,008,683, Cl. 346-1.100.

Suzuki, Tamotsu *See*—
Tanaka, Seiichi; and Suzuki, Tamotsu, 5,007,390, Cl. 123-180.00T.

Suzuki, Toshihiko *See*—
Kuze, Tetsuya; Yamashita, Takashi; and Suzuki, Toshihiko, 5,007,472, Cl. 152-546.000.

Suzuki, Yasuyuki *See*—
Kimura, Tadashi; Matsugi, Tetsuzo; and Suzuki, Yasuyuki, 5,007,809, Cl. 417-371.000.

Suzuki, Yoshikuni *See*—
Takahashi, Toshihiro; Horaguchi, Tatsuo, Nakamaru, Koichi; and Suzuki, Yoshikuni, 5,008,266, Cl. 514-259.000.

Suzushima, Yoshiyuki *See*—
Nakasuji, Kazuyuki; Hayashi, Chihiro; and Suzushima, Yoshiyuki, 5,007,577, Cl. 228-265.000.

Suzzi, Robert J. *See*—
Mouille, Rene L.; and Suzzi, Robert J., 5,007,799, Cl. 416-104.000.

Sved, Robert *See*—
Kahaney, Alan; and Sved, Robert, 5,007,727, Cl. 351-47.000.

Swanson, Ralph W., Gagnon, Daniel F., and Parent, Donald G., to Chapman Corporation Self-balancing circuit for convection air ionizers. 5,008,594, Cl. 315-111.810.

Swanstrom, Thomas M. Boom-mast coupler for windsurfer. 5,007,361, Cl. 114-98.000.

Swedo, Susan E.; Rapoport, Judith L.; and Leonard, Henrietta L., to United States of America, Health and Human Services Method of treating trichotillomania and onchyphagia. 5,008,262, Cl. 514-217.000.

Sweeney, Michael *See*—
Pless, Benjamin, Sweeney, Michael; Winkle, Roger; and Nathan, Anthony, 5,007,422, Cl. 28-419.0PG.

Swiggard, Edward M., to SFA, Inc Liquid encapsulated zone melting crystal growth method and apparatus. 5,007,980, Cl. 156-620.700.

Swihart, Terence J. *See*—
Halloran, Daniel J.; Kasprzak, Kenneth A.; Savastano, Stefano G.; and Swihart, Terence J., 5,008,424, Cl. 556-419.000.
Kosal, Jeffrey A.; and Swihart, Terence J., 5,008,349, Cl. 525-477.000.

Swindal, James L. *See*—
Bullis, Robert H.; and Swindal, James L., 5,008,774, Cl. 361-283.000.

Swinford, Carson B. *See*—
Lewis, Milton A., Jr.; Mason, Jeffrey S.; Swinford, Carson B.; and Wiseman, Timothy R., Sr., 5,007,112, Cl. 2-79.000.

Synrad, Incorporated *See*—
Laakmann, Peter, 5,008,894, Cl. 372-38.000.

Synthelabo: *See*—
Rossey, Guy; Ugolini, Antonio; Chekroun, Isaac; Vartanian, Abkar; and Wick, Alexander, 5,008,434, Cl. 560-17.000.

Synthetic Industries, Inc. *See*—
Freed, W. Wayne; and Smith, Robert M., 5,007,766, Cl. 405-24.000.

Szabo, Tibor; Institoris, Laszlo; Szejtli, Jozsef, Szente, Lajos; and Jodal, Ildiko, to Chinoin Gyogyszer es Vegyeszeti Termekek Gyara R.T. Methylated cyclodextrin type compounds and process for preparing same. 5,008,386, Cl. 536-103.000.

Szaniszlo, Steve R. *See*—
Kurtz, Stuart J.; and Szaniszlo, Steve R., 5,008,056, Cl. 264-130.000.

Szejtli, Jozsef *See*—
Szabo, Tibor; Institoris, Laszlo; Szejtli, Jozsef; Szente, Lajos; and Jodal, Ildiko, 5,008,386, Cl. 536-103.000.

Szente, Lajos *See*—
Szabo, Tibor, Institoris, Laszlo, Szejtli, Jozsef; Szente, Lajos; and Jodal, Ildiko, 5,008,386, Cl. 536-103.000.

Szinnyei, Eva *See*—
Ecsery, Zoltan; Knoll, Jozsef; Somfai, Eva; Torok, Zoltan; Szinnyei, Eva, and Mozsolits, Karoly, 5,008,292, Cl. 514-654.000.

Szporny, Laszlo *See*—
Schon, Istvan; Nyeki, Olga; Kisfaludy, Lajos, deceased; Denes, Laszlo; Hajos, Gyorgy, and Szporny, Laszlo, 5,008,246, Cl. 514-18.000.

T. G. & Watson, Inc.: *See*—
Watson, Dean R.; and Gallagher, Thomas E., IV, 5,007,639, Cl. 273-60.00R.

T. T. Boughton & Sons Ltd.. *See*—
Boughton, T. Trafford, 5,007,791, Cl. 414-494.000.

Tachi-S Co. Ltd.: *See*—
Kanai, Shigeru, 5,007,611, Cl. 248-422.000.

Tachibana, Shunro; and Shibata, Uichi, to Tachibana, Shunro; and Meiji Seika Kaisha, Ltd. Endermic application kits for external medicines. 5,007,438, Cl. 128-798.000.

Tachino, Kenzo *See*—
Suzuki, Shigehiko; and Tachino, Kenzo, 5,007,506, Cl. 187-101.000.

Tada, Masahiro: *See*—
Kashiwadate, Ken; Satake, Yoshikatsu; Kaneko, Takashi; Tada, Masahiro; and Katto, Takayuki, 5,008,370, Cl. 528-481.000.

Tadokoro, Motoo: *See*—
Furukawa, Nobuhiro; Inoue, Kenji; Nogami, Mitsuzo; Kameoka, Seiji; and Tadokoro, Motoo, 5,008,164, Cl. 429-59.000.

Taga, Yasunori; Yamadera, Hideya; Aoki, Keiji; and Hattori, Tadashi, to Kabushiki Kaisha Toyota Chuo Kenkyusho; and Nippon Soken Inc. Ceramic substrate having a metallic layer thereon and a process for manufacturing the same. 5,008,149, Cl. 428-336.000.

Taguchi, Masahiro: *See*—
Kondo, Hirosato; Taguchi, Masahiro; Inoue, Yoshimasa; and Sakamoto, Fumio, 5,008,389, Cl. 544-343.000.

Taguchi, Yoshio: *See*—
Sasae, Taiichio; and Taguchi, Yoshio, 5,007,965, Cl. 106-800.000.

Tajima, Kenji; Kushima, Hiroshi; and Yamada, Sadami, to Fuji Photo Film Co., Ltd. Film package and device for loading films. 5,008,694, Cl. 354-277.000.

Tajimi, Michiko: *See*—
Kitamura, Youichi; and Tajimi, Michiko, 5,008,923, Cl. 379-3.000.

Takagi, Shigeyuki *See*—
Kamimura, Toshio; and Takagi, Shigeyuki, 5,007,327, Cl. 91-422.000.

Takagi, Shinichi: *See*—
Masuda, Takashi; Hashimoto, Kengiro; Takagi, Shinichi, and Tanaka, Masayuki, 5,007,884, Cl. 474-242.000.

Takagi, Yoshiyuki: *See*—
Katsura, Joji; Takagi, Yoshiyuki; and Watari, Shigeru, 5,008,727, Cl. 357-40.000.

Takahagi, Takayuki: *See*—
Hattori, Shintarou; Takahagi, Takayuki; and Ishitani, Akira, 5,007,372, Cl. 118-715.000.

Takahahi, Shigeyuki: *See*—
Minoura, Jun; Takahahi, Shigeyuki; Kato, Hisaki; Ito, Toshiyasu, Mori, Takaaki; Kato, Mamoru; Shimada, Junichi; and Okabayashi, Katsuaki, 5,007,718, Cl. 350-357.000.

Takahashi, Akio: *See*—
Tsukamoto, Jun; and Takahashi, Akio, 5,008,040, Cl. 252-500.000.

Takahashi, Akira, to Fuji Jukogyo Kabushiki Kaisha. Method and apparatus for determining failure of vehicle steering sensing device. 5,008,823, Cl. 364-424.030.

Takahashi, Masaki *See*—
Wakabayashi, Shigeru; Shimokawa, Masao, and Takahashi, Masaki, 5,007,889, Cl. 493-316.000.

Takahashi, Masatoshi: *See*—
Ryoke, Katsumi; Takahashi, Masatoshi; Hashimoto, Akihiro; and Hasumi, Kazuo, 5,008,147, Cl. 428-323.000.

Takahashi, Nagashige; and Ouchi, Teruo, to Asahi Kogaku Kogyo Kabushiki Kaisha. Bending control device of endoscope. 5,007,406, Cl. 128-4.000.

Takahashi, Noriyoshi: *See*—
Karakida, Kenichi; Yagi, Shigeru; Fukuda, Yuzuru; Nishikawa, Masayuki, Roh, Te N., Takahashi, Noriyoshi; Ono, Masato; Yokoi, Masaki; and Komori, Yumiko, 5,008,170, Cl. 430-65.000.

Takahashi, Shintaro: *See*—
Siga, Masao; Fukui, Yutaka; Kuriyama, Mitsuo; Kurosawa, Soichi; Iijima, Katsumi; Iizuka, Nobuyuki, Maeno, Yosimi, Takahashi, Shintaro; Watanabe, Yasuo; and Hiraga, Ryo, 5,008,072, Cl. 420-69.000.

Takahashi, Shuji: *See*—
Okazaki, Takao; Takahashi, Shuji, Iwado, Seigo, Tanaka, Keiji; Yanai, Toshiaki; and Kajino, Hisaki, 5,008,191, Cl. 435-124.000.

Takahashi, Susumu: *See*—
Sakamoto, Koji; Tanzawa, Misao; Iwata, Nobuo; Murayama, Hisao; Takahashi, Susumu; and Komada, Kenya, 5,008,711, Cl. 355-206.000.

Takahashi, Teruyuki; and Kohno, Mitsuru, to Kawasaki Steel Corp. Thermal adhesive coating composition based on epoxy resin, high Tg polymer, amine curing agent and film forming agent. 5,008,308, Cl. 523-406.000.

Takahashi, Toshihiro; Horaguchi, Tatsuo; Nakamaru, Koichi; and Suzuki, Yoshikuni, to Nisshin Flour Milling Co., Ltd. 4(3H)-quinazolinone derivatives and pharmaceutical compositions. 5,008,266, Cl. 514-259.000.

Takahashi, Tsunenori: *See*—
Abe, Tadashi; Aoki, Masahiro; Takahashi, Tsunenori; and Awata, Takeshi, 5,008,329, Cl. 524-798.000.

Takahashi, Yasuo; Suzuki, Kazuo; Niimura, Toshinobu; and Kano, Tokio, to Olympus Optical Co., Ltd. Device for electrofusion of cells. 5,007,995, Cl. 204-299.00R.

Takahashi, Yoshiyuki; Toyofuku, Kunitaka; and Iwasaki, Akiko, to Oji Paper Co., Ltd. Heat-sensitive recording material. 5,008,236, Cl. 503-209.000.

Takamizawa, Minoru: *See—*
Takeda, Yoshihumi, Takamizawa, Minoru; and Hayashida, Akira, 5,008,348, Cl. 525-474.000.

Takano, Akira *See—*
Kobayashi, Hitoshi; Takano, Akira; Narusawa, Naoharu; Tsukada, Yukihiko; Sakamoto, Hiroshi, Hirano, Masaki, and Ando, Masao, 5,008,710, Cl. 355-202.000.

Takano, Isao, legal representative: *See—*
Mimura, Yoshikazu; Takano, Keiichi, deceased; and Gotou, Tomohisa, 5,008,173, Cl. 430-78.000.

Takano, Keiichi, deceased: *See—*
Mimura, Yoshikazu; Takano, Keiichi, deceased; and Gotou, Tomohisa, 5,008,173, Cl. 430-78.000.

Takano, Tadashi *See—*
Ono, Takeshi; Sakamoto, Masahiro; and Takano, Tadashi, 5,008,607, Cl. 318-696.000

Takano, Tsunesuke; and Shinzawa, Kouichi, to Daiichi Denso Buhin Co., Ltd. Self-resetting push switch. 5,008,505, Cl. 200-531.000

Takano, Yoshiaki *See—*
Imazumi, Masaru; and Takano, Yoshiaki, 5,008,715, Cl. 355-313.000.

Takanobu, Hiroshi, to Hitachi, Ltd. Electron gun and method for manufacturing the same. 5,008,589, Cl 313-456.000.

Takata, Melvin M. *See—*
Weiss, Lawrence D.; Caruthers, Douglas W.; Inatomi, Charles T.; Kawan, Joseph C., Lee, Shan, Marks, Harvey, Meguerdijan, Sarkis A.; Parekh, Dilip J., Samulon, Alfred S., Takata, Melvin M., Tucci, Morris L., and Vollmer, Jim R., 5,008,927, Cl. 379-98.000.

Takayama, Jun, Ninomiya, Takeshi; Fujita, Tadao; and Inaba, Yoshiaki, to Sony Corporation. Method and apparatus for encoding and decoding data in residue number system. 5,008,668, Cl. 341-83.000

Take One Marketing Group, Inc : *See—*
Seidman, Charles B., 5,007,641, Cl. 273-138.00A.

Takeda Chemical Industries, Ltd *See—*
Hatanaka, Chitoshi; and Oi, Satoru, 5,008,405, Cl. 549-315.000
Inoue, Keizo; Nomura, Hiroaki, and Tasaka, Akihiro, 5,008,454, Cl 564-294.000.

Takeda, Keiko. *See—*
Sasaki, Kazuya, Yoshizawa, Sakae, Inagaki, Shinya, and Takeda, Keiko, 5,007,698, Cl 350-96.150

Takeda, Yoshihumi, Takamizawa, Minoru, and Hayashida, Akira, to Shin-Etsu Chemical Co., Ltd. Infusibilization of organic silazane polymers. 5,008,348, Cl. 525-474.000

Takegata, Setsuko *See—*
Nakai, Satoru; Kaneta, Mayumi; Kikumoto, Yoshikazu, Hong, Yeong-Man; Kawai, Kazuyoshi, Takegata, Setsuko, Ishii, Kiyoshi, Yanagihara, Yasuo; and Hirai, Yoshikatsu, 5,008,374, Cl 530-351.000

Takeguchi, Shunsuke: *See—*
Fujita, Yoshiaki, Kawai, Satoshi, and Takeguchi, Shunsuke, 5,007,956, Cl. 75-238.000.

Takemoto, Takeshi *See—*
Shibata, Masabumi, Ishiyama, Akira; and Takemoto, Takeshi, 5,008,817, Cl. 364-200.000

Takenoya, Hideaki; and Ebata, Yoshikazu, to Janome Sewing Machine Co., Ltd. Embroidering device for a sewing machine. 5,007,357, Cl 112-103.000

Takeuchi, Hajime: *See—*
Wakatsuki, Yoshio, Okuyama, Toshiharu, Takeuchi, Hajime; Shimizu, Misao, and Shimizu, Giichiro, 5,008,665, Cl. 340-870.260.

Takeuchi, Masamichi; and Asai, Yasuo, to Koyo Seiko Co., Ltd. Radial roller bearing. 5,007,747, Cl. 384-450.000.

Talandic Research Corporation *See—*
Landesman, Barbara T., 5,008,892, Cl. 372-45.000.

Tallan, Michael L. *See—*
Bly, Sara A.; Farrand, A. Brady; Hodges, Jeffery D., Kupfer, Michael D.; Lewis, Brian T., Maybury, William J., Tallan, Michael L., and Tom, Stephen B., 5,008,853, Cl. 364-900.000.

Tamabayashi, Hanzo. *See—*
Eguchi, Hisao; Kubo, Masashige; Kunimoto, Koji; Shimizu, Sadami, Sato, Masakatsu; and Tamabayashi, Hanzo, 5,008,469, Cl. 568-722.000.

Tamaki, Kuniaki; Sakai, Norio; and Minowa, Kenji, to Murata Manufacturing Co., Ltd. Retainer for chip-type electronic parts. 5,007,534, Cl. 206-329.000

Tamazawa, Tsuyoshi; and Hayashi, Yoshimasa, to Nissan Motor Co., Ltd. Power plant for vehicles. 5,007,307, Cl. 74-606.00R

Tamiya, Jun. *See—*
Souketani, Koichi; Ito, Yukio; Sasaki, Yoshio; Kurita, Teiji; and Tamiya, Jun, 5,007,773, Cl. 407-27.000.

Tamura, Hifumi *See—*
Toita, Hiroshi; Tamura, Hifumi; Tobita, Issei, and Iwamoto, Hiroshi, 5,008,537, Cl. 250-309.000.

Tamura, Takashi: *See—*
Hosoda, Takuya; Morishita, Mitsuhiro; and Tamura, Takashi, 5,008,562, Cl. 307-265.000.

Tanabe, Satoru. *See—*
Ohmura, Hiroshi; Tanabe, Satoru; Yoshioka, Junji, and Kanazawa, Hirotaka, 5,007,494, Cl. 180-79.100.

Tanaka, Haruhiko· *See—*
Nakamura, Takashi; Tanaka, Haruhiko; Hyodo, Touru; and Osanai, Yasuhiro, 5,008,601, Cl. 318-268.000.

Tanaka, Hisami: *See—*
Ohmori, Hiroyuki; Tanaka, Hisami; and Okunuki, Masami, 5,008,706, Cl. 355-219.000.

Tanaka, Hitoshi· *See—*
Koshinaka, Masao; Akiyama, Minoru; Tanaka, Hitoshi, and Tomoda, Toshimasa, 5,008,558, Cl. 250-563.000

Tanaka, Keiji *See—*
Okazaki, Takao, Takahashi, Shuji; Iwado, Seigo; Tanaka, Keiji, Yanai, Toshiaki; and Kajino, Hisaki, 5,008,191, Cl. 435-124.000

Tanaka, Kiyoaki *See—*
Atsumi, Morihiro; and Tanaka, Kiyoaki, 5,008,584, Cl 313-136.000

Tanaka, Kunihiko *See—*
Tashiro, Kazuo; and Tanaka, Kunihiko, 5,008,410, Cl. 549-497.000

Tanaka, Maki, Tojima, Teiichi, Dousako, Shun-ichi, and Tatsumi, Kiyoshi, to Snow Brand Milk Products Co., Ltd. Method of preparing iron-fortified beverage. 5,008,120, Cl. 426-74.000

Tanaka, Masayuki *See—*
Masuda, Takashi, Hashimoto, Kengiro; Takagi, Shinichi; and Tanaka, Masayuki, 5,007,884, Cl 474-242.000

Tanaka, Mitsugu, and Kubodera, Seiiti, to Fuji Photo Film Co. Thermal transfer dye donating material. 5,008,232, Cl. 503-227.000

Tanaka, Nobuhiro, to Kao Corporation. Method for merging goods and apparatus therefor. 5,007,521, Cl. 198-347.400

Tanaka, Seiichi, and Suzuki, Tamotsu, to Sanshin Kogyo Kabushiki Kaisha. Starting fuel supplying device for internal combustion engine. 5,007,390, Cl 123-180.00T.

Tanaka, Shinichi *See—*
Ishibashi, Hiromichi; and Tanaka, Shinichi, 5,008,669, Cl 341-102.000

Tanaka, Toshiyuki, and Minami, Etsuji, to Sharp Kabushiki Kaisha. Tilt adjustment mechanism for object lens driving device. 5,008,873, Cl 369-44.140.

Tanaka, Tsutomu; Oshida, Yoshitada; Shiba, Masataka; Nakashima, Naoto; and Funatsu, Ryuichi, to Hitachi, Ltd. Exposure method and apparatus. 5,008,702, Cl. 355-52.000.

Tandy, John S *See—*
Kratky, Zdenek, and Tandy, John S., 5,008,381, Cl 536-8.000.

Tang, Sang T., to Babcock Display Products, Inc. Screened interconnect system. 5,007,872, Cl. 445-25.000.

Tani, Yoshiki *See—*
Yamada, Hideaki, Tani, Yoshiki; Shimizu, Sakayu, and Shiozaki, Shozo, 5,008,188, Cl. 435-88.000.

Tanioka, Hiroshi *See—*
Koizumi, Norihiko, Tanioka, Hiroshi, Toyama, Noboru, Arahara, Kozo, and Yuasa, Toshiya, 5,008,690, Cl 346-140.00R

Taniuchi, Akira, Kataoka, Hironori, and Ito, Etsuo, to Dai-Ichi Kogyo Seiyaku Co., Ltd. Cationic herbicides. 5,007,955, Cl. 71-103.000

Tanooka, Shigeo. *See—*
Yamamoto, Masaji; Tanooka, Shigeo; and Sakai, Toshifumi, 5,007,885, Cl 475-231.000

Tanuma, Chiaki, Itsumi, Kazuhiro; Iwase, Nobuo, Ono, Tomio; Kondo, Yuu, and Saito, Kazutaka, to Kabushiki Kaisha Toshiba. Electronic device having a cooling element. 5,008,582, Cl. 310-332.000.

Tanzawa, Misao: *See—*
Sakamoto, Koji; Tanzawa, Misao; Iwata, Nobuo; Murayama, Hisao, Takahashi, Susumu, and Komada, Kenya, 5,008,711, Cl 355-206.000

Tarazaga, JoseF *See—*
Badia, Antonio R.; and Tarazaga, JoseF., 5,007,380, Cl. 119-53.000

Tarhay, Leo *See—*
Haluska, Loren A.; Michael, Keith W.; and Tarhay, Leo, 5,008,320, Cl 524-361.000.

Tarumi, Niro *See—*
Sawamoto, Takeyuki, Nomura, Masashi, and Tarumi, Niro, 5,008,354, Cl 526-246.000.

Tasaka, Akihiro· *See—*
Inoue, Keizo, Nomura, Hiroaki, and Tasaka, Akihiro, 5,008,454, Cl 564-294.000

Tashiro, Kazuo, and Tanaka, Kunihiko, to Sumitomo Chemical Company, Limited. Method for producing furfuryl alcohols. 5,008,410, Cl. 549-497.000.

Tatsumi, Kiyoshi: *See—*
Tanaka, Maki, Tojima, Teiichi, Dousako, Shun-ichi, and Tatsumi, Kiyoshi, 5,008,120, Cl. 426-74.000.

Taubitz, Christof *See—*
Koehler, Hermann; Ebel, Klaus, Karn, Helmut; and Taubitz, Christof, 5,008,398, Cl 548-342.000.

Taurus Tetraconcepts, Inc.: *See—*
Groswith, Charles T., III; Phipps, Richard D., Lathrop, Robert L., Jr., Stewart, John F.; and Kaufmann, Rick J., 5,007,782, Cl. 412-40.000.

Taussig, Andrew P.; and Isaacs, Blake L., to Spectra-Physics, Inc. Data gathering system interface. 5,008,518, Cl. 235-383.000.

Taylor, Arthur· *See—*
Chen, Chao; and Taylor, Arthur, 5,007,922, Cl. 606-228.000.

Taylor, Bryan V. Security device. 5,007,263, Cl 70-416.000.

Taylor, Dennis R., and Ungermann, Charles B., to Engelhard Corporation. Process for making acid activated bleaching earth using high susceptibility source clay and novel bleaching earth product. 5,008,226, Cl 502-81.000.

Taylor, Dennis R.; and Ungermann, Charles B., to Engelhard Corporation. Process for making acid activated bleaching earth using high susceptibility source clay and novel bleaching earth product. 5,008,227, Cl 502-83.000.

Taylor, Patrick D., to Itex Enterprises, Inc. Apparatus and method for mixing solid or semi-solid wastes with additives. 5,007,590, Cl 241-25.000

Taylor, Stewart S., to TriQuint Semiconductor, Inc. High-impedance FET circuit. 5,008,565, Cl. 307-296.700

Taylor, Tim C., and McAllister, John A. Method and apparatus for measuring vision blockage resulting from glare. 5,007,730, Cl 351-243.000

Tazi, Mohammed; and Plochocka, Krystyna, to GAF Chemicals Corporation. Slurry polymerization of maleic anhydride and acrylic acid in a cosolvent system of ethyl acetate and cyclohexane. 5,008,355, Cl 526-271.000.

Teasdale, James A., to British Shipbuilders. Construction of large sandwich structures. 5,007,225, Cl 52-799.000

Tecnica e Innovationes Ganaderas, S A *See—*
Badia, Antonio R., and Tarazaga, JoseF., 5,007,380, Cl 119-53.000.

Tecumseh Products Company *See—*

Thompson, Charles E Safety shield for double-lock handcuffs. 5,007,257, Cl 70-16.000

Thompson, Harold R., to Gillette Company, The. Cosmetic product. 5,007,755, Cl 401-175.000

Thomson-CSF. *See—*
Daniel, Jean-Pierre, and Fauchard, Jean-Pierre, 5,007,736, Cl 356-152.000
Trigon, Roland, Drabowitch, Serge, and Roger, Joseph, 5,008,677, Cl 342-17.000.

Thuez, Jean-Luc, and Dehausse, Robert, to A R M I N E S Installation for air-conditioning by absorption. 5,007,251, Cl 62-476.000

Thulke, Wolfgang *See—*
Amann, Markus-Christian; Baumann, Gerhard, Heinen, Jochen, and Thulke, Wolfgang, 5,008,893, Cl 372-50.000

Thurm, Siegfried; Holm, Reimer, Leuschke, Christian; Rathmann, Dietrich, and Schrader, Lutz, to Bayer Aktiengesellschaft. Process for the production of plastic moulded articles with improved weathering resistance. 5,008,148, Cl 428-336.000

Tiearney, Thomas C., Jr *See—*
Lee, David S.; and Tiearney, Thomas C., Jr., 5,008,918, Cl 378-144.000

Tien, Chao-Fong; and Surnamer, Andrew D., to Air Products and Chemicals, Inc. Membranes formed from aromatic polyarylates. 5,007,945, Cl. 55-16.000.

Tiller, Ralph. Exercise device. 5,007,635, Cl 272-117.000

Timex Corporation. *See—*
Thinesen, Tom, 5,008,866, Cl 368-21.000

Tin, George W., to Vestar, Inc. Vesicle stabilization. 5,008,109, Cl 424-422.000.

TLV Company, Limited. *See—*
Mori, Takayuki; and Yumoto, Hideaki, 5,007,582, Cl 236-40.000

Tobita, Issei: *See—*
Toita, Hiroshi; Tamura, Hifumi; Tobita, Issei; and Iwamoto, Hiroshi, 5,008,537, Cl. 250-309.000

Tochigifujisangyo Kabushiki Kaisha *See—*
Shimizu, Minoru, 5,007,515, Cl 192-58.00A

Toepperwien, Bernd, to Alfred Teves GmbH. Working piston, in particular for a brake booster. 5,007,329, Cl. 92-98.00D.

Toerner, Ludger *See—*
Beth, Matthias; Binz, Hansgeorg; and Toerner, Ludger, 5,007,564, Cl. 222-217.000.

Toft, Mark A.: *See—*
Brazdil, James F., Jr., Toft, Mark A., and Glaeser, Linda C., 5,008,427, Cl. 558-319.000.

Toita, Hiroshi; Tamura, Hifumi; Tobita, Issei; and Iwamoto, Hiroshi, to Hitachi, Ltd.; and Hitachi Instrument Engineering Co., Ltd Composite apparatus with secondary ion mass spectrometry instrument and scanning electron microscope. 5,008,537, Cl 250-309.000.

Tojima, Teiichi: *See—*
Tanaka, Maki, Tojima, Teiichi, Dousako, Shun-ichi, and Tatsumi, Kiyoshi, 5,008,120, Cl 426-74.000.

Tokizane, Toshiaki; Ito, Yoshiharu, Yamada, Osamu; Masuda, Toshiyuki; and Kuroda, Mitsunobu, to Matsushita Electric Works, Ltd

Remote supervisory and controlling machine 5,008,662, Cl. 340-825.060.

Tokola, Reino O.: *See—*
Ingberg, Grels D., Penttila, Ritva L. A., Tokola, Reino O.; and Tenhunen, Raimo, 5,008,388, Cl. 540-145.000

Tokuda, Kanji, to Fuji Photo Film Co., Ltd. Photographic printer. 5,008,701, Cl. 355-35.000.

Tokyo Electric Co., Ltd.: *See—*
Sugimoto, Kazuaki; Nishijima, Tomio; Inoue, Teruhisa, Sugimoto, Yoshihiko, Suzuki, Masashi; and Matsushita, Izumi, 5,007,340, Cl. 101-227.000

Tokyo Keiki Co., Ltd: *See—*
Terakawa, Takashige; and Kusakabe, Wataru, 5,008,486, Cl. 174-35.0MS.

Toland, William G.: *See—*
Lapporte, Seymour J.; and Toland, William G., 5,008,451, Cl. 562-891.000.

Tom, Stephen B.: *See—*
Bly, Sara A.; Farrand, A. Brady, Hodges, Jeffery D.; Kupfer, Michael D.; Lewis, Brian T., Maybury, William J., Tallan, Michael L.; and Tom, Stephen B., 5,008,853, Cl. 364-900.000

Tomantschger, Klaus; and Soltys, Josef. Test cell structure. 5,008,162, Cl. 429-34.000

Tomihashi, Nobuyuki: *See—*
Shirai, Shinji, Negishi, Hiroyuki; Tomihashi, Nobuyuki; and Yamane, Masayuki, 5,008,327, Cl. 524-544.000

Tominaga, Shinji, and Hashimoto, Takeshi, to Minolta Camera Kabushiki Kaisha. Device for driving shutter. 5,008,699, Cl. 354-457.000

Tominaga, Takashi, Nishiyama, Souji, Sakuramoto, Takahumi, and Honda, Makoto, to Nitto Denko Corporation. Glass powder adhesive sheet. 5,008,151, Cl. 428-343.000.

Tomita, Nobuo: *See—*
Nakajima, Masashi; Tomita, Nobuo, Suzaki, Kenji; Kaneko, Akira; and Sawaki, Mikio, 5,008,455, Cl. 564-300.000.

Tomiyama, Akira: *See—*
Tomiyama, Tsuyoshi; Tomiyama, Akira, Shirai, Tadashi, Wakabayashi, Shuuichi; Kawai, Tomoyuki; Ueyama, Naoto, and Sonegawa, Motoharu, 5,008,282, Cl. 514-393.000

Tomiyama, Tsuyoshi, Tomiyama, Akira, Shirai, Tadashi, Wakabayashi, Shuuichi, Kawai, Tomoyuki; Ueyama, Naoto; and Sonegawa, Motoharu, to Kotobuki Seiyaku Co. Ltd. Cyclic guanidine derivatives, anti-ulceratives and methods of manufacturing the same. 5,008,282, Cl. 514-393.000.

Tomizawa, Atsushi; Inoue, Susumu; and Masui, Takeshi, to Sumitomo Metal Industries, Ltd. Variable-crown roll. 5,007,152, Cl. 29-116.200

Tomoda, Haruhisa, and Shimada, Yasuomi, to Matsushita Electric Industrial Co., Ltd. Optical disc reproduction apparatus which detects maximum audio signal level recorded on an optical disk. 5,008,872, Cl. 369-32.000.

Tomoda, Haruhisa; and Shimada, Yasuomi, to Matsushita Electric Industrial Co., Ltd. Optical disc reproducing apparatus having display indicating program status. 5,008,875, Cl. 369-85.000.

Tomoda, Toshimasa: *See—*
Koshinaka, Masao; Akiyama, Minoru, Tanaka, Hitoshi, and Tomoda, Toshimasa, 5,008,558, Cl. 250-563.000.

Tomosada, Masahiro: *See—*
Inuzuka, Tsuneki; Maeshima, Katsuyoshi; and Tomosada, Masahiro, 5,008,712, Cl. 355-206.000.

Tonkiss, David W., to Joslyn Corporation. Hand operated band bending tool. 5,007,465, Cl. 140-150.000.

Toray Silicone Company, Limited *See—*
Mine, Katsutoshi, Morita, Yoshitsugu, and Miyamae, Satoshi, 5,008,733, Cl. 357-72.000.

Torii, Katura: *See—*
Nagai, Tetsuji; Torii, Katura; and Ohno, Yoshio, 5,008,842, Cl. 364-551.010.

Torii, Nobutoshi, Mizuno, Hitoshi, and Muraki, Katsuyuki, to Fanuc Ltd. Industrial robot able to set motion conditions depending on posture of installation thereof. 5,008,832, Cl. 364-513.000.

Torii, Yoshimi: *See—*
Kawasaki, Yoshinao; Kawahara, Hironobu; Sato, Yoshiaki; Fukuyama, Ryooji; Nojiri, Kazuo; and Torii, Yoshimi, 5,007,981, Cl. 156-643.000

Toro Company, The: *See—*
O'Brien, Steven T.; and Kakuk, Jay J., 5,007,855, Cl. 439-411.000.

Torok, Zoltan: *See—*
Ecsery, Zoltan; Knoll, Jozsef; Somfai, Eva, Torok, Zoltan, Szinyei, Eva, and Mozsolits, Karoly, 5,008,292, Cl. 514-654.000

Torre, Randall J. Tendon sectioning support clamp. 5,007,920, Cl. 606-207.000.

Torri, Giangiacomo: *See—*
Casu, Benito; Torri, Giangiacomo; Naggi, Annamaria; Mantovani, Marisa; Pescador, Rodolfo, Porta, Roberto, and Prino, Giuseppe, 5,008,253, Cl. 514-54.000.

Toshiba Machine Co., Ltd: *See—*
Harada, Susumu, 5,008,052, Cl. 264-40.500.

Tosoh Corporation. *See—*
Eguchi, Hisao; Kubo, Masashige; Kunimoto, Koji, Shimizu, Sadami; Sato, Masakatsu; and Tamabayashi, Hanzo, 5,008,469, Cl. 568-722.000.

Total Spectrum Manufacturing Inc *See—*
Gordon, Gary B.; and Gonnelli, Robert R., 5,008,804, Cl. 364-167.010.

Smolley, Robert, 5,007,843, Cl. 439-66.000.

TRW Vehicle Safety Systems Inc *See—*
Lenzen, Reiner, 5,007,661, Cl. 280-735.000.

Tsilibary, Effie C.; and Furcht, Leo T., to University of Minnesota, Regents of the. Prosthetic devices coated with polypeptides with type IV collagen activity. 5,007,925, Cl. 623-1.000.

Tsou, Len-Yan, to North American Philips Corporation. Reactive ion etching of silicon with hydrogen bromide. 5,007,982, Cl. 156-643.000.

Tsuchiya, Mitsunori *See—*
Yamazaki, Shunpei; Imatou, Shinji; Tsuchiya, Mitsunori; Itoh, Kenji; Inushima, Takashi, and Kawano, Atsushi, 5,007,374, Cl. 118-723.000

Tsuchiya, Reijiro: *See—*
Nishiyama, Nobumasa, Saito, Makoto; Ouchi, Yasuhide, Katoh, Yasuhiro, Kamo, Yoshihisa; Koizumi, Makoto; Aoi, Hajime, Sato, Naoki, and Tsuchiya, Reijiro, 5,008,761, Cl. 360-45.000.

Tsukada, Masaharu *See—*
Shimizu, Katsuichi, Shibata, Takehiko; Yokomizo, Yoshikazu, Suzuki, Akira, Murakami, Koichi, Yoshida, Tadashi, Tsukada, Masaharu; Nagashima, Nao; and Miyagi, Ken, 5,008,760, Cl. 358-451.000.

Tsukada, Yukihiko: *See—*
Kobayashi, Hitoshi, Takano, Akira, Narusawa, Naoharu; Tsukada, Yukihiko; Sakamoto, Hiroshi; Hirano, Masaki, and Ando, Masao, 5,008,710, Cl. 355-202.000

Tsukamoto, Jun; and Takahashi, Akio, to Director-General of Agency of Industrial Science and Technology. Process for preparation of polyacetylene film 5,008,040, Cl. 252-500.000.

Tsukawaki, Tomohiro, to Fuji Xerox Co., Ltd. System for recognizing handwritten letters 5,008,948, Cl. 382-13.000.

Tsukimura, Kiyoshi *See—*
Niizato, Tomonori; Noguchi, Katsumi; and Tsukimura, Kiyoshi, 5,007,392, Cl. 123-193.00H.

Tsukisaka, Ryogo; Kondo, Satoshi; Kaneguchi, Toshio; and Deguchi, Takashi, to Shiraishi Central Laboratories Co., Ltd. Calcium carbonate, calcium carbonate pigment, process for preparing same, coating composition for information recording paper and information recording paper 5,007,964, Cl. 106-464.000.

Tsuneda, Haruhiro *See—*
Saito, Kazuharu, Matsukura, Hiroyasu, Komase, Hiroshi, Tsuneda, Haruhiro; Watanabe, Junji, Saito, Tadao; Doy, Toshiroh; and Matsunaga, Kazuo, 5,007,209, Cl. 51-283.00R.

Tsuruoka, Yoshiaki *See—*
Kuramochi, Wataru, Tsuruoka, Yoshiaki; Saitou, Norikazu; Shibuya, Akira, and Yamashita, Shuichi, 5,008,552, Cl. 235-483.000.

Tsutsui, Toshiyuki *See—*
Ishimaru, Naoshi, Tsutsui, Toshiyuki; Toyota, Akinori; and Kashiwa, Norio, 5,008,356, Cl. 526-281.000.

Tsutsumi, Michinari, Endo, Atsushi, and Yada, Toshio, to Mitsubishi Denki Kabushiki Kaisha. Method for etching chromium film formed on substrate. 5,007,984, Cl. 156-656.000.

Tsutsuta, Koji, and Seki, Kiwao, to Hitachi, Ltd. Conductivity detector. 5,008,627, Cl. 324-444.000.

Tsuzuki, Sadachika: *See—*
Noji, Akio, Kamimura, Kenji, and Tsuzuki, Sadachika, 5,008,557, Cl. 250-561.000

Tucci, Morris L.: *See—*
Weiss, Lawrence D., Caruthers, Douglas W.; Inatomi, Charles T.; Kawan, Joseph C., Lee, Shan; Marks, Harvey, Meguerdijan, Sarkis A., Parekh, Dilip J., Samulon, Alfred S., Takata, Melvin M., Tucci, Morris L.; and Vollmer, Jim R., 5,008,927, Cl. 379-98.000.

Tucker, Benjamin W.; and Bhattacharjee, Debkumar, to Dow Chemical Company, The. Rigid polyurethane foams with low thermal conductivities. 5,008,299, Cl. 521-159.000.

Tucker, Richard B. C.; Davis, Jackie L.; and Lewis, Fielding H., Jr., to Wm. T. Burnett & Co., Inc. Lacrosse stick. 5,007,652, Cl. 273-326.000.

Tuthill, Michael G., to Analog Devices, Incorporated. High-speed digital-to-analog converter with BiMOS cell structure. 5,008,671, Cl. 341-136.000.

Tyberg, William T. *See—*
Suzuki, Arata; Tyberg, William T., Banks, George; and Suzuki, Marcia, 5,007,427, Cl. 128-659.000.

Tzeng, Yonhua: *See—*
Legg, Keith O., and Tzeng, Yonhua, 5,007,373, Cl. 118-723.000.

Uchikawa, Sadao: *See—*
Aoyama, Motoo, Koyama, Junichi, Uchikawa, Sadao; Bessho, Yasunori, Ozawa, Michihiro; Nakamura, Mitsunari, Nakajima, Akinobu, and Maruyama, Hiromi, 5,008,070, Cl. 376-419.000

Uchimi, Toshiharu: *See—*
Hanyu, Yukio; and Uchimi, Toshiharu, 5,007,716, Cl. 350-336.000

Uchiyama, Seiji *See—*
Abe, Takafumi, Uchiyama, Seiji, Ojima, Takahiro, and Kida, Koichi, 5,008,479, Cl. 585-320.000

Uda, Koji: *See—*
Kawakami, Eigo; Ozawa, Kunitaka; Uda, Koji, Shimoda, Isamu; and Uzawa, Shunichi, 5,008,703, Cl. 355-53.000

Uehara, Tsukasa, to Canon Kabushiki Kaisha. Recording and/or reproducing apparatus. 5,008,874, Cl. 369-75.200.

Uenishi, Akio, to Mitsubishi Denki Kabushiki Kaisha. Semiconductor device with stepped well. 5,008,720, Cl. 357-23.400

Ueno, Shoji: *See—*
Yoshida, Shiro; Yamada, Yasuhiro; and Ueno, Shoji, 5,008,764, Cl. 360-77.150

Ueyama, Naoto: *See—*
Tomiyama, Tsuyoshi; Tomiyama, Akira; Shirai, Tadashi, Wakabayashi, Shuuichi, Kawai, Tomoyuki; Ueyama, Naoto; and Sonegawa, Motoharu, 5,008,282, Cl. 514-393.000.

Uffelman, Bradley L.: *See—*
Marshall, James W., Gotchy, David; Uffelman, Bradley L.; Leimbach, Wendell B., and Wilhelmi, Albert A., 5,008,572, Cl. 310-45.000.

Ufford, Keith A.: *See—*
Doan, Phong D.; Upton, James E., Hess, Douglas N.; Bass, Wayne R.; and Ufford, Keith A., 5,007,435, Cl. 128-784.000.

Uggetti, Sergio *See—*
Falconieri, Remo; and Uggetti, Sergio, 5,007,749, Cl. 400-208.000

Ugolini, Antonio: *See—*
Rossey, Guy; Ugolini, Antonio; Chekroun, Isaac; Vartanian, Abkar; and Wick, Alexander, 5,008,434, Cl. 560-17.000.

Uhrig, Heinz; Ehl, Klaus, and Deubel, Reinhold, to Hoechst Aktiengesellschaft. Surface-active compounds on the basis of arylated fatty substances and their use. 5,008,442, Cl. 560-149.000.

Ullum, Henrik: *See—*
Fosbol, Peder, Ullum, Henrik, and Korremann, Birgitte, 5,008,375, Cl. 530-357.000.

Ulman, Abraham. *See—*

Mueller, Martin J., Mueller, Martin; and Weingandt, Michael A., 5,007,466, Cl. 141-1.000

Weinstein, Allan, and Weinstein, Robert. Inhaler device. 5,007,419, Cl. 128-200.230

Weinstein, Robert. *See—*
Weinstein, Allan; and Weinstein, Robert, 5,007,419, Cl. 128-200.230

Weisenberger, Johannes *See—*
Heckel, Armin, Nickl, Josef; Muller, Erich; Narr, Berthold; Weisenberger, Johannes, Eisert, Wolfgang; and Muller, Thomas, 5,008,290, Cl. 514-544.000

Weismantel, Donald. Single piece disposable cat litter box. 5,007,530, Cl. 206-45.210

Weiss, Lawrence D.; Caruthers, Douglas W.; Inatomi, Charles T.; Kawan, Joseph C., Lee, Shan; Marks, Harvey; Meguerdijan, Sarkis A., Parekh, Dilip J.; Samulon, Alfred S.; Takata, Melvin M.; Tucci, Morris L.; and Vollmer, Jim R., to Transaction Technology, Inc. Computer and telephone apparatus with user friendly computer interface integrity features. 5,008,927, Cl. 379-98.000.

Weiss, Mark H. *See—*
Fiebig, Carolyn A. B.; Fuqua, Mike R.; Gursahaney, Suresh K.; Margosian, Gregg M., and Weiss, Mark H., 5,008,805, Cl. 364-184.000

Weisse, Joachim *See—*
Wulff, Dietrich, Jager, Hans-Ludwig, and Weisse, Joachim, 5,007,761, Cl. 403-287.000.

Weldon, Mark P. *See—*
Fraser, Howard H., Jr.; and Weldon, Mark P., 5,007,803, Cl. 417-368.000

Wellenkotter, Carl A.; and Counts, David E., to Robertshaw Controls Company. Throttle valve adjustment construction, throttle valve adjustment unit therefor and methods of making the same. 5,007,396, Cl. 123-339.000.

Wellner, Daniel, to Cornell Research Foundation, Inc. Deblocking amino terminal N-acetyl serine and N-acetyl threonine residues in peptides and proteins to allow sequencing. 5,008,372, Cl. 530-345.000.

Wells, William K., Jr. *See—*
Kazar, Dennis M., 5,008,595, Cl. 315-178.000

Wenderoth, Bernd *See—*
Schuetz, Franz, Brand, Siegbert, Wenderoth, Bernd, Sauter, Hubert, Ammermann, Eberhard; and Lorenz, Cisela, 5,008,438, Cl. 560-55.000

Wendling, Michael *See—*
Penitot, Gerard, Cartigny, Marcel; Roynard, Joel; Valdenaire, Bruno; Astier, Marc, Mery, Bernard; and Wendling, Michael, 5,007,447, Cl. 137-102.000.

Wennberg, Stig. *See—*
Albrektsson, Bjorn; and Wennberg, Stig, 5,007,912, Cl. 606-87.000.

Wenteler, George L., Pegel, Karl H., Drews, Siegfried; and Kundig, Hans, to Rooperol (N.A.). Process for the preparation of rooperol. 5,008,471, Cl. 568-729.000

Wergeland, Ivar; Senstad, Ingeborg C.; and Nestaas, Eirik. Process and a device for improved oxygenation of biological cultures. 5,008,197, Cl. 435-240.240

Werly, Marc, to Ellena. Differential photopolymerization process used for filling a dental cavity and a tool intended for its implementation. 5,007,837, Cl. 433-226.000.

Werner, Claude H. *See—*
Goade, James C., and Werner, Claude H., 5,007,805, Cl. 417-216.000.

Werner & Pfleiderer, GmbH: *See—*
Schwab, Wilhelm, and Muller, Gerhard, 5,007,820, Cl. 425-333.000.

Wernicke & Co. GmbH *See—*
Gottschald, Lutz, 5,007,977, Cl. 156-353.000.

Wessale, Jerry L. *See—*
Badylak, Stephen F.; Geddes, Leslie A.; and Wessale, Jerry L., 5,007,927, Cl. 623-3.000.

Westenskow, Dwayne R. *See—*
Silva, Fidel H.; and Westenskow, Dwayne R., 5,007,919, Cl. 606-194.000

Westinghouse Electric Corp. *See—*
Archer, David H.; and Ahmed, Mohammed M., 5,007,988, Cl. 204-153.180
Mrenna, Stephen A., 5,008,645, Cl. 337-70.000.

Westlake, David J. *See—*
Ballantine, James A.; Gregory, Reginald; Purnell, John H.; Thomas, John M., and Westlake, David J., 5,008,465, Cl. 568-697.000.

Westphalen, Karl-Otto: *See—*
Ditrich, Klaus; Hamprecht, Gerhard; Wuerzer, Bruno; Meyer, Norbert; Westphalen, Karl-Otto; and Laatsch, Hartmut, 5,007,954, Cl. 71-90.000.

Westvaco Corporation *See—*
Dimitri, Mitchell S., 5,008,378, Cl. 530-501.000.
Schilling, Peter; and Schreuders, Hans G., 5,008,382, Cl. 536-11.000
Woodward, Fred E., and Hudson, Alice P., 5,008,039, Cl. 252-392.000

Wetzka, Gerhard *See—*
Schulte, Burkart, Sterner, Hakan; Wetzka, Gerhard; and Hardt, Norbert, 5,007,213, Cl. 52-29.000

Wey, Remo C. Ballpoint pen with condom. 5,007,756, Cl. 401-195.000.

Weyer, Hans-Juergen *See—*
Fischer, Rolf, Frank, Juergen; Merger, Franz; and Weyer, Hans-Juergen, 5,008,408, Cl. 549-429.000

Weyerhaeuser Company: *See—*
Hunter, Frank R., 5,008,359, Cl. 527-103.000.

Wheeler, Robert L. Head gear having protective lens. 5,007,109, Cl. 2-10.000.

Whirlpool Corporation *See—*
Holling, Ronald W., 5,008,516, Cl. 219-519.000.
Kruck, Richard W.; Cur, Omer N., Leclear, Douglas D.; Kuehl, Steven J.; and Burin, Ralph R., 5,007,246, Cl. 62-131.000.

White, Richard E.: *See—*
Freeburg, Thomas A.; and White, Richard E., 5,008,938, Cl. 380-50.000.

Whitekettle, Wilson K.: *See—*
Conlan, John T.; and Whitekettle, Wilson K., 5,008,023, Cl. 210-764.000.

Whitten, Brian T.; Veraart, Pierre; Kwasniewski, Andrew, and Vollenwyder, Kurt, to Inco Limited. Automated underground haulage truck. 5,007,496, Cl. 180-131.000.

Wick, Alexander: *See—*
Rossey, Guy; Ugolini, Antonio; Chekroun, Isaac, Vartanian, Abkar; and Wick, Alexander, 5,008,434, Cl. 560-17.000.

Wieck, Henry J.: *See—*
Lauks, Imants R.; Wieck, Henry J., and Bandru, Gregory M., 5,008,616, Cl. 324-158.00F.

Wiedeck, Hans; and Chiesura, Michel. Vehicle-mounted load hoisting device. 5,007,792, Cl. 414-500.000.

Wiedemann, Ingrid: *See—*
Schnorrenberg, Gerd; Roos, Otto; Losel, Walter; Wiedemann, Ingrid; Gaida, Wolfram, Hoefke, Wolfgang; Arndts, Dietrich; and Streller, Ilse, 5,008,273, Cl. 514-301.000.

Wiedrich, Donald E.: *See—*
Ewing, Joan R.; and Wiedrich, Donald E., 5,008,707, Cl. 355-220.000.

Wiener, Robert J.: *See—*
Langensiepen, Ralph A.; Aghajanian, Michael K.; and Wiener, Robert J., 5,007,474, Cl. 164-97.000

Wiese, Helmut; and Schonenbrecher, Paul-Erich, to Viscodrive GmbH. Driving assembly. 5,007,498, Cl. 280-248.000.

Wiesgickl, Gunther: *See—*
Beck, Horst-Philipp; Emig, Gerhard; Wiesgickl, Gunther; Burg, Karlheinz; and Muck, Karl-Friedrich, 5,008,463, Cl. 568-487.000.

Wilder, Paul R.; and Kesterman, James E., to Dover Corporation. Fluid dispensing nozzle construction having a diaphragm subassembly therein and methods of making the same. 5,007,468, Cl. 141-209.000.

Wiley, George A.: *See—*
Critchlow, David N.; Yehushua, Moshe; Avis, Graham M.; Heimbigner, Wade L.; Johnson, Karle J.; and Wiley, George A., 5,008,900, Cl. 375-8.000.

Wilharm, Peter; Buhr, Gerhard; and Fuchs, Juergen, to Hoechst Aktiengesellschaft. Binders soluble in aqueous alkali and containing silanyl groups in the side chain, process for preparing same and also photosensitive mixture containing these compounds. 5,008,362, Cl. 528-28.000.

Wilhelmi, Albert A.: *See—*
Marshall, James W.; Gotchy, David; Uffelman, Bradley L.; Leimbach, Wendell B.; and Wilhelmi, Albert A., 5,008,572, Cl. 310-45.000.

Wilk, Shalom, to Israel Aircraft Industries Ltd. Optical system employing a transmitting solid corner cube. 5,008,527, Cl. 250-216.000

Wilkinson, William T. Combination sit-up, rowing, arm, leg and foot exercise device. 5,007,632, Cl. 272-72.000.

Willand, Craig S.: *See—*
Robello, Douglas R.; Ulman, Abraham, Urankar, Edward J.; and Willand, Craig S., 5,008,043, Cl. 252-582.000.

Willcock, William T.: *See—*
Gawrys, George W., Oberman, Richard A.; and Willcock, William T., 5,008,930, Cl. 379-210.000.

Willey, Jefferson M.; Alter, James J.; and Letellier, Jules P., to United States of America, Navy. Programmable beam transform and beam steering control system for a phased array radar antenna. 5,008,680, Cl. 342-372.000.

Wm. T. Burnett & Co., Inc.: *See—*
Tucker, Richard B. C.; Davis, Jackie L.; and Lewis, Fielding H., Jr., 5,007,652, Cl. 273-326.000.

Williams, Dennis A.; Horton, Roger L.; Newlove, John C.; and Chumley, Robert E., to Exxon Chemical Patents, Inc. Method of treating subterranean formations using a non-damaging fracturing fluid. 5,007,481, Cl. 166-300.000.

Williams, Robert M. Heat reclamation apparatus. 5,007,825, Cl. 432-99.000.

Willoughby, Jon S., to Burle Technologies, Inc. Clock synchronized digital TV motion detector. 5,008,745, Cl. 358-105.000

Wills, Kendall S.; and Rodriguez, Paul A., to Texas Instruments Incorporated. Laser programming of semiconductor devices using diode make-link structure. 5,008,729, Cl. 357-51.000.

Wilms, Karl-Heinz. Apparatus for measuring the refraction characteristics of ophthamological lenses. 5,007,734, Cl. 356-124.000

Wilson, Bruce B.; and Grunzinger, Raymond E., to Minnesota Mining and Manufacturing Company. Embedded lens retroreflective sheeting with flexible, dimensionally stable coating. 5,008,142, Cl. 428-203.000.

Wilson, Keith E. High-accuracy wavelength stabilization of angled-stripe super luminescent laser diode sources. 5,008,889, Cl. 372-32.000.

Wilson, Malcolm E.: *See—*
Trevett, Neil F.; and Wilson, Malcolm E., 5,008,754, Cl. 358-183.000.

Wilson, Mildred N., to Nabisco Brands, Inc. Dry mix for preparation of in-situ sauce for foodstuffs. 5,008,124, Cl. 426-589.000.

Wilson, Thomas M. *See*—
Barnett, Charles J., and Wilson, Thomas M., 5,008,391, Cl 546-243.000.

Wind, Jan. *See*—
Pinnau, Ingo; and Wind, Jan, 5,007,944, Cl. 55-16.000

Windsor Communications, Inc. *See*—
Roberts, Gene, 5,007,701, Cl. 350-96.200.

Wincov, Herbert B. *See*—
Bender, Paul E., Lantos, Ivan, McGuire, Michael A., Pridgen, Lendon N.; and Wincov, Herbert B., 5,008,390, Cl. 546-199.000.

Winkel, Jens: *See*—
Muller, Michael; Podszun, Wolfgang; and Winkel, Jens, 5,008,436, Cl. 560-26.000.

Winkelmann, Manfred: *See*—
Rothfuss, Hans, Bruckner, Raimund; Keutgen, Peter; Seeger, Josef; Winkelmann, Manfred; and Metzger, Herbert, 5,007,621, Cl. 266-220.000.

Winkle, Roger: *See*—
Pless, Benjamin; Sweeney, Michael; Winkle, Roger; and Nathan, Anthony, 5,007,422, Cl. 28-419.0PG.

Winkler, Hans-Henning; and Rutschle, Eugen, to Chiron-Werke GmbH & Co. KG. Machine tool. 5,007,157, Cl. 29-568.000.

Winkler, Winfried: *See*—
Meseke, Curt T., Winkler, Winfried; and Hilbig, Renate, 5,007,535, Cl. 206-366.000.

Winters, Ralph J.: *See*—
Wahl, Richard C.; and Winters, Ralph J., 5,007,561, Cl. 222-55.000.

Wirth, Peter: *See*—
Martinen, Hinrich; Knobbe, Karl-Heinz; Simonsson, Samuel S.; and Wirth, Peter, 5,008,896, Cl. 372-83.000.

Wirz, Armin: *See*—
Busenhart, Peter; Schneeberger, Ruedi; Holbein, Erwin; Wirz, Armin; Flueli, Adolf; and Maier, Hansueli, 5,007,595, Cl. 242-46.400.

Wischermann, Gerhard, to BTS Broadcast Television Systems GmbH. Apparatus system for deriving synchronizing information from a digtial video signal. 5,008,751, Cl. 358-148.000.

Wise, Ronald D. Removable and adjustable fittable vehicle bed liner assembly. 5,007,670, Cl. 296-39.100.

Wiseman, Timothy R., Sr.: *See*—
Lewis, Milton A., Jr., Mason, Jeffrey S.; Swinford, Carson B.; and Wiseman, Timothy R., Sr., 5,007,112, Cl. 2-79.000.

Wisniewski, Karen L.: *See*—
Cook, William J.; Wisniewski, Karen L.; Dixit, Nagaraj S.; and Rao, Nandakumar S., 5,008,030, Cl. 252-106.000.

Witek, Rich: *See*—
Bhandarkar, Dileep P.; Cutler, Dave; Cardoza, Wayne; Witek, Rich; and Orbits, Dave, 5,008,812, Cl. 364-200.000

Withers, Robert W.; and Johnson, Robert H., to Motorola, Inc. Method of recognizing selected objects. 5,008,836, Cl. 364-516.000

Witt, Hans-Hinrich, to B. Braun Melsungen AG. Catheter set for plexus anesthesia. 5,007,902, Cl. 604-117.000.

Wnuk, Andrew J.: *See*—
Benecke, Arnold G.; Kinne, Daniel J.; and Wnuk, Andrew J., 5,008,110, Cl. 424-448.000.

Wohler, Ernst: *See*—
Altorfer, Alfred; Wohler, Ernst; and Wynn, Nicholas P., 5,008,016, Cl. 210-634.000.

Wojcik, Ronald T.: *See*—
Harris, Paul J.; and Wojcik, Ronald T., 5,008,334, Cl. 525-109.000.

Wolf, Fred R., to Zeon Chemical USA, Inc. No-post-cure method of curing polyacrylate polymers. 5,008,345, Cl. 525-340.000.

Wolfe, Robert E.; and Goyette, Ronald A., to Raytheon Company. Additive fluid viewing. 5,007,254, Cl. 68-17.00R.

Wolfer, Dietrich; and Marsch, Wilhelm, to Wacker-Chemie GmbH. Compositions which can be crosslinked to form flame retardant and/or tracking resistant and arc resistant organopolysiloxane elastomers. 5,008,317, Cl. 524-262.000.

Woloszyk, Leonard T., to Electro-Consultants, Inc. Water leak detection apparatus for use in suspended ceilings. 5,008,652, Cl. 340-605.000.

Wolpers, Jurgen: *See*—
Hellermann, Walter; Herrmann, Christoph; Fuchs, Hans-Bernd; Nordsiek, Karl-Heinz; and Wolpers, Jurgen, 5,008,343, Cl. 525-316.000.

Won, Chan H.: *See*—
Lee, Sae Bae; Won, Chan H.; Park, Chung; and Lim, Bun S., 5,008,190, Cl. 435-108.000.

Wong, Stephen S.: *See*—
Garwood, William E.; Le, Quang N.; Shim, Joosup; and Wong, Stephen S., 5,008,460, Cl. 585-11.000.

Wood, Robert S.; and Thomas, Mark A., to Flight Dynamics, Inc. Compact arrangement for head-up display components. 5,007,711, Cl. 350-174.000.

Woods, John H.: *See*—
Baker, Timothy J.; and Woods, John H., 5,008,144, Cl. 428-211.000.

Woodward, Fred E.; and Hudson, Alice P., to Westvaco Corporation. Low foaming rust inhibiting composition. 5,008,039, Cl. 252-392.000.

Woolson, Steven T., to Cemax, Inc. Surgical method for hip joint replacement. 5,007,936, Cl. 623-23.000.

Work, Dale E.: *See*—
Herbet, Albert J.; Hart, Ronald L.; and Work, Dale E., 5,008,133, Cl. 427-333.000.

World Auto Plate Ltd.: *See*—
Mastuoka, Masaaki, 5,008,783, Cl. 362-83.200.

WPC Machinery Corporation. *See*—
Alverth, Ronald W., Schumacher, Thomas H.; and Przybylowski, Thaddeus M., 5,007,890, Cl 493-434.000

Wright, Duane E. Electrical receptacle with power indicator light 5,007,857, Cl. 439-490.000.

Wright, Kenneth W. *See*—
Bewley, David R., Brimelow, Christopher J. B.; and Wright, Kenneth W., 5,008,123, Cl. 426-509.000.

Wrisley, David B., Jr. *See*—
Deak, Frederick R.; and Wrisley, David B., Jr., 5,007,842, Cl. 439-66.000

Wuerzer, Bruno. *See*—
Ditrich, Klaus; Hamprecht, Gerhard; Wuerzer, Bruno; Meyer, Norbert; Westphalen, Karl-Otto; and Laatsch, Hartmut, 5,007,954, Cl. 71-90.000.

Wulff, Dietrich; Jager, Hans-Ludwig; and Weisse, Joachim, to Daimler-Benz. Seal arrangement for connecting seals. 5,007,761, Cl 403-287.000.

Wunning, Joachim. Roller hearth furnace for the heat treating of metal and ceramic parts. 5,007,826, Cl 432-121.000.

Wutzler, Peter; Mucke, Horst, and Santasalo, Lauri, to Oy Santasalo-Sohlberg AB. Apparatus and method for sterilizing or disinfecting objects. 5,008,079, Cl. 422-28.000.

Wydeven, Theodore J., Jr.: *See*—
Lerner, Narcinda R.; and Wydeven, Theodore J., Jr., 5,007,983, Cl. 156-643.000.

Wynn, Nicholas P.: *See*—
Altorfer, Alfred; Wohler, Ernst; and Wynn, Nicholas P., 5,008,016, Cl. 210-634.000

Wyvratt, Matthew J.: *See*—
Fisher, Michael H., Wyvratt, Matthew J.; and Mrozik, Helmut, 5,008,250, Cl. 514-30.000.

Xerox Corporation: *See*—
Bly, Sara A.; Farrand, A. Brady; Hodges, Jeffery D.; Kupfer, Michael D.; Lewis, Brian T.; Maybury, William J.; Tallan, Michael L.; and Tom, Stephen B., 5,008,853, Cl. 364-900.000.
Ewing, Joan R.; and Wiedrich, Donald E., 5,008,707, Cl. 355-220.000.
Kremers, Henry T.; and Rabb, Khalid M., 5,007,625, Cl. 270-53.000.
Yu, Robert C. U., 5,008,167, Cl. 430-56.000.
Yu, Robert C. U.; and Badesha, Santokh S., 5,008,169, Cl. 430-59.000.

Xuan, Jialuo. Module-type multi-function electrical power adapter for automobiles and the like. 5,007,863, Cl. 439-639.000.

Yabuki, Hiroyuki: *See*—
Ohba, Motoi; Yabuki, Hiroyuki; and Makimoto, Mitsuo, 5,008,629, Cl. 328-14.000.

Yada, Toshio: *See*—
Tsutsumi, Michinari; Endo, Atsushi; and Yada, Toshio, 5,007,984, Cl. 156-656.000

Yagi, Shigeru: *See*—
Karakida, Kenichi; Yagi, Shigeru; Fukuda, Yuzuru; Nishikawa, Masayuki; Roh, Te N.; Takahashi, Noriyoshi; Ono, Masato; Yokoi, Masaki; and Komori, Yumiko, 5,008,170, Cl. 430-65.000.

Yagi, Susumu: *See*—
Masuda, Takeshi; Yagi, Susumu; Okabe, Sakiichi; Kamishima, Yoichi; and Kawagoe, Kazuo, 5,008,580, Cl. 310-321.000.

Yaginuma, Nakatsugu, and Arai, Takaki, to Fuji Photo Film Co., Ltd. Integral multi-layer analysis element. 5,008,078, Cl. 422-56.000.

Yajima Kogyo, Inc.: *See*—
Yoshimura, Masahiro, 5,007,795, Cl. 414-737.000.

Yamada, Hideaki; Tani, Yoshiki; Shimizu, Sakayu; and Shiozaki, Shozo, to Nippon Zeon Co., Ltd. Process for producing S-adenosyl-L-homocysteine. 5,008,188, Cl. 435-88.000.

Yamada, Kojiro: *See*—
Ishida, Tetsuyoshi; Kawano, Shigeyoshi; Kohtaka, Ikuo; Yamada, Kojiro; Kaku, Hiroyuki; and Narita, Tsuneo, 5,007,240, Cl. 60-673.000.

Yamada, Naoki, to Kabushiki Kaisha Toshiba. Method and apparatus for correcting extension rates of images. 5,008,947, Cl. 382-6.000.

Yamada, Osamu: *See*—
Tokizane, Toshiaki; Ito, Yoshiharu; Yamada, Osamu; Masuda, Toshiyuki; and Kuroda, Mitsunobu, 5,008,662, Cl. 340-825.060.

Yamada, Sadami: *See*—
Tajima, Kenji; Kushima, Hiroshi; and Yamada, Sadami, 5,008,694, Cl. 354-277.000.

Yamada, Yasuhiro: *See*—
Yoshida, Shiro; Yamada, Yasuhiro; and Ueno, Shoji, 5,008,764, Cl. 360-77.150.

Yamadera, Hideya: *See*—
Taga, Yasunori; Yamadera, Hideya; Aoki, Keiji; and Hattori, Tadashi, 5,008,149, Cl. 428-336.000.

Yamaga, Kenichi: *See*—
Asano, Takanobu; Yamaga, Kenichi; and Ohkase, Wataru, 5,007,788, Cl. 414-417.000.

Yamaguchi, Sumiko, to Yamaguchi, Sumiko; and Shirakawa, Tomohiro. Infant's chair for shampooing. 5,007,119, Cl. 4-523.000.

Yamaguchi, Toru; Inazuki, Yukio; and Nakazawa, Hideo, to IHI Master Metal Ltd.; and Ishikawajima-Harima Heavy Industries Co., Ltd. Vessel for making high-purity fine particles of active metals. 5,007,243, Cl. 62-51.100.

Yamaguchi, Yukio: *See*—
Shimamoto, Hiroshi; Suzaki, Hideyuki; Yamaguchi, Yukio; and Kawano, Atsushi, 5,008,862, Cl. 367-105.000.

Yamaha Corporation. *See*—
Horino, Mamoru, 5,008,763, Cl. 360-70.000.

Yamaha Hatsudoki Kabushiki Kaisha. *See*—
Washizu, Takehiro; and Nagamatsu, Tsutomu, 5,007,386, Cl 123-52.0MC

Yamakawa, Kiyoshi, to Brother Kogyo Kabushiki Kaisha. Printer having carriage zeroing device. 5,007,751, Cl. 400-322.000

Yamakawa, Nobuaki: *See*—
Ishida, Masahiko; Yamakawa, Nobuaki, and Shiida, Masahiro, 5,007,160, Cl. 29-753.000

Yamamoto, Haruo: *See*—
Maeda, Junichi; Yanai, Tsuguo, Yamamoto, Kazuto, Kuriyama, Yuji; and Yamamoto, Haruo, 5,008,854, Cl. 364-900.000.

Yamamoto, Kazuto: *See*—
Maeda, Junichi; Yanai, Tsuguo; Yamamoto, Kazuto; Kuriyama, Yuji; and Yamamoto, Haruo, 5,008,854, Cl. 364-900.000

Yamamoto, Masaji; Tanooka, Shigeo; and Sakai, Toshifumi, to Toyoda Koki Kabushiki Kaisha. Driving torque transmitting device. 5,007,885, Cl. 475-231.000

Yamamoto, Masao, to K. K. Musshu Portable urinal. 5,007,116, Cl. 4-144.200.

Yamamoto, Masashi: *See*—
Enoguchi, Yuji; Natsuhara, Toshiya; and Yamamoto, Masashi, 5,008,708, Cl. 355-259.000.

Yamamoto, Michio, to Futaba Denshi Kogyo Kabushiki Kaisha. Receiver for spectrum spread communication. 5,008,899, Cl. 375-1.000

Yamamoto, Osamu; and Yoshida, Toshihiko, to Sharp Kabushiki Kaisha. Light wavelength converter. 5,007,694, Cl. 350-96.140.

Yamamoto, Ryoichi; and Suzuki, Hiroshi, to Mitsui Petrochemical Industries, Ltd. Process for exchanging dispersing medium of terephthalic acid slurry. 5,008,450, Cl 562-485.000.

Yamamoto, Takaaki: *See*—
Kumita, Norio; Yamamoto, Takaaki; Narita, Seiichi; and Ori, Takaaki, 5,008,501, Cl 200-61.45R

Yamamoto, Tetsuya: *See*—
Kimura, Keita; and Yamamoto, Tetsuya, 5,008,757, Cl 358-213.130

Yamamoto, Yasuyoshi; Kaga, Yuzo, Yoshikawa, Toshiharu; and Moribe, Akira, to Menicon Co., Ltd. Ultraviolet-hardenable adhesive and bonding method employing same. 5,007,975, Cl 156-154.000

Yamamura, Takeshi; Endo, Seiji; Kawauchi, Kazuyuki; and Korenaga, Hiroki, to Fujitsu Limited. Semiconductor integrated circuit device having an improved arrangement of power source lines. 5,008,728, Cl. 357-45.000.

Yamamura, Tetsushi: *See*—
Yoshida, Ryuichi; Yamamura, Tetsushi; and Kadota, Koji, 5,007,495, Cl. 180-117.000

Yamamura, Yoshihiro; Ogihara, Takashi; Nakanishi, Yoshinobu; and Nishizono, Tomohiro, to NEC Corporation. Scrambled-communication system using adaptive transversal filters for descrambling received signals. 5,008,937, Cl. 380-50.000.

Yamane, Masayuki: *See*—
Shirai, Shinji; Negishi, Hiroyuki, Tomihashi, Nobuyuki; and Yamane, Masayuki, 5,008,327, Cl 524-544.000

Yamashita, Shoji, to I.B.E. Co., Ltd. Aqueous solution containing a new ferric ferrous salt Fe_2Cl_5 and method of producing same. 5,008,097, Cl. 423-493.000

Yamashita, Shuichi. *See*—
Kuramochi, Wataru; Tsuruoka, Yoshiaki; Saitou, Norikazu; Shibuya, Akira; and Yamashita, Shuichi, 5,008,552, Cl. 235-483.000.

Yamashita, Takashi: *See*—
Kuze, Tetsuya; Yamashita, Takashi, and Suzuki, Toshihiko, 5,007,472, Cl. 152-546.000.

Yamauchi, Hiroshi; Sugiyama, Isao; Saito, Isao; Nomoto, Seiichiro; Kamiya, Takashi; Machida, Yoshimasa; and Negi, Shigeto, to Eisai Co., Ltd. Cephem derivatives. 5,008,260, Cl. 514-202.000.

Yamazaki, Atsuo. Rotary switch. 5,008,498, Cl. 200-11.00R.

Yamazaki, Shunpei; Imatou, Shinji; Tsuchiya, Mitsunori; Itoh, Kenji; Inushima, Takashi; and Kawano, Atsushi, to Semiconductor Energy Laboratory Co., Ltd. Apparatus for forming thin films in quantity. 5,007,374, Cl. 118-723.000

Yamazaki, Shunpei, to Semiconductor Energy Laboratory Co., Ltd. Printing member for electrostatic photocopying. 5,008,171, Cl. 430-67.000.

Yamazaki, Shunpei, to Semiconductor Energy Laboratory Co., Ltd. Method for forming FET with a super lattice channel. 5,008,211, Cl. 437-40.000.

Yamazaki, Shuntaro; Ono, Takashi; and Shimizu, Haruhito, to NEC Corporation. Method for controlling polarizations of signal lights in an optical frequency division multiplex coherent communication system. 5,007,693, Cl. 350-96.130.

Yanagi, Akihiko: *See*—
Kume, Toyohiko; Goto, Toshio, Kamochi, Atsumi, Yanagi, Akihiko; Miyauchi, Hiroshi, and Asami, Tadao, 5,007,952, Cl. 71-73.000

Yanagihara, Yasuo: *See*—
Nakai, Satoru; Kaneta, Mayumi; Kikumoto, Yoshikazu; Hong, Yeong-Man; Kawai, Kazuyoshi; Takegata, Setsuko; Ishii, Kiyoshi; Yanagihara, Yasuo; and Hirai, Yoshikatsu, 5,008,374, Cl 530-351.000.

Yanagisawa, Gennai, to Kabushiki Kaisha Iida. Leather or similar work sewing machine having flat-needle controller and sewing method by use of the sewing machine. 5,007,355, Cl. 112-54.000.

Yanai, Toshiaki: *See*—
Okazaki, Takao; Takahashi, Shuji; Iwado, Seigo; Tanaka, Keiji; Yanai, Toshiaki; and Kajino, Hisaki, 5,008,191, Cl. 435-124.000.

Yanai, Tsuguo: *See*—
Maeda, Junichi; Yanai, Tsuguo; Yamamoto, Kazuto; Kuriyama, Yuji; and Yamamoto, Haruo, 5,008,854, Cl. 364-900.000

Yariv, Amnon. *See*—
Agranat, Aharon J., Neugebauer, Charles F., and Yariv, Amnon, 5,008,833, Cl. 364-513.000

Yasukochi, Yoshimi: *See*—
Nakamura, Takashi; Yasukochi, Yoshimi; Munakata, Tamotsu; and Nakashima, Masaharu, 5,008,756, Cl. 358-210.000

Yasumi, Yoshiyuki; and Sato, Hiroshi, to Alps Electric Co., Ltd. Paper feed roller arrangement for printer. 5,007,752, Cl. 400-636.000

Yasuzawa, Tohru. *See*—
Kanda, Yutaka; Yasuzawa, Tohru, Saito, Hiromitsu; Sano, Hiroshi; Kobayashi, Eiji, and Morimoto, Makoto, 5,008,271, Cl 514-292.000.

Yates, John B., III; and Lee, Gim F., Jr., to General Electric Co. Compatible polyphenylene ether-linear polyester blends having improved impact strength. 5,008,333, Cl. 525-92.000.

Yazaki Corporation: *See*—
Ishida, Masahiko; Yamakawa, Nobuaki, and Shiida, Masahiro, 5,007,160, Cl. 29-753.000.
Kato, Sanae, 5,007,164, Cl. 29-854.000
Sasaki, Kazuyuki; and Kataoka, Ichiro, 5,007,288, Cl 73-295.000

Yazawa, Shigehiko, Ogawa, Toru, Moritomo, Haruo, Suya, Yoshiaki; and Nakayama, Mikio, to Fujitsu Limited. Private automatic branch exchange system with line accessing number adding feature. 5,008,884, Cl. 370-110.100.

Ye, Yi: *See*—
Miller, Jan D.; and Ye, Yi, 5,008,006, Cl. 209-167.000

Yee, Edgar; and Bernier, Richard E., to General Electric Company. Bi-stable interlock arrangement for molded case circuit breakers. 5,008,499, Cl. 200-50.00C.

Yeh, Ying C.: *See*—
Chen, Duen J.; Chi, Guey F., and Yeh, Ying C., 5,008,215, Cl 437-83.000.

Yehushua, Moshe. *See*—
Critchlow, David N.; Yehushua, Moshe, Avis, Graham M.; Heimbigner, Wade L., Johnson, Karle J., and Wiley, George A., 5,008,900, Cl. 375-8.000

Yernaux, Jean-Marie. *See*—
Wairaevens, Rene; Franklin, James, and Yernaux, Jean-Marie, 5,008,474, Cl. 570-168.000.

Yogo, Yuki. *See*—
Nishino, Hoyoku; Iwasaki, Ryozo; Okabe, Akio, and Yogo, Yuki, 5,008,295, Cl. 514-766.000.

Yoko Co., Ltd.. *See*—
Hideharu, Nagahama, 5,007,528, Cl. 198-823.000

Yokohama Rubber Co., Ltd., The. *See*—
Kuze, Tetsuya, Yamashita, Takashi, and Suzuki, Toshihiko, 5,007,472, Cl. 152-546.000
Okumoto, Takaharu; Nishimoto, Tatsuo, and Wakaki, Hideaki, 5,007,643, Cl. 273-167.00R

Yokoi, Koichi; Irinoda, Kazuhiko, Kohya, Hidehiko; Sato, Susumu, and Katori, Tatsuhiko, to SS Pharmaceutical Co., Ltd. Novel platinum complex. 5,008,419, Cl. 556-137.000

Yokoi, Masaki: *See*—
Karakida, Kenichi; Yagi, Shigeru; Fukuda, Yuzuru, Nishikawa, Masayuki; Roh, Te N.; Takahashi, Noriyoshi, Ono, Masato; Yokoi, Masaki, and Komori, Yumiko, 5,008,170, Cl. 430-65.000

Yokomizo, Yoshikazu. *See*—
Shimizu, Katsuichi; Shibata, Takehiko; Yokomizo, Yoshikazu; Suzuki, Akira; Murakami, Koichi, Yoshida, Tadashi, Tsukada, Masaharu; Nagashima, Nao, and Miyagi, Ken, 5,008,760, Cl. 358-451.000

Yokota, Taizo: *See*—
Yoshifusa, Koji; and Yokota, Taizo, 5,007,713, Cl 350-286.000

Yokoyama, Tatsuro. *See*—
Katakami, Tsutomu, Yokoyama, Tatsuro; Miyamoto, Michihiko; Mori, Haruki, Kawauchi, Nobuya, Nobori, Tadahito, Sannohe, Kunio; Kamiya, Joji, Ishii, Masaaki; and Yoshihara, Kanji, 5,008,267, Cl. 514-269.000

Yonehara, Takao: *See*—
Shinohara, Mahito; and Yonehara, Takao, 5,008,206, Cl 437-3.000

Yonezawa, Tatsushi; and Nozoe, Satosi, to Omron Tateisi Electronics Co. Contactless switch having translating focusing/defocusing lens. 5,008,534, Cl. 250-229.000.

Yoon, Hyun-Nam: *See*—
Thackara, John I.; Lipscomb, George F., Yoon, Hyun-Nam, and De Martino, Ronald N., 5,007,696, Cl 350-96.140

York, Kenneth K. Biocompatible intraocular light-screening compositions and methods of intraocular light screening. 5,008,102, Cl 424-59.000.

Yoshida Kogyo K. K.: *See*—
Masuda, Takeshi; Yagi, Susumu; Okabe, Sakiichi, Kamishima, Yoichi; and Kawagoe, Kazuo, 5,008,580, Cl 310-321.000
Matsuda, Yasuhiko, 5,007,161, Cl. 29-769.000.
Terada, Yasuharu; and Ishii, Susumu, 5,007,144, Cl 24-415.000

Yoshida, Ryuichi; Yamamura, Tetsushi; and Kadota, Koji, to Kawasaki Jukogyo Kabushiki Kaisha. Propulsive air stream deflecting apparatus for air cushion vehicle. 5,007,495, Cl. 180-117.000.

Yoshida, Shiro; Yamada, Yasuhiro; and Ueno, Shoji, to Victor Company of Japan, Ltd. Rotary head type digital signal reproducing apparatus with slow tape speed mode and improved tracking control. 5,008,764, Cl. 360-77.150.

Yoshida, Tadashi: *See*—
Shimizu, Katsuichi; Shibata, Takehiko; Yokomizo, Yoshikazu; Suzuki, Akira, Murakami, Koichi; Yoshida, Tadashi; Tsukada, Masaharu; Nagashima, Nao; and Miyagi, Ken, 5,008,760, Cl. 358-451.000.
Yoshida, Tadatoki, to Kabushiki Kaisha Toshiba. Nuclear magnetic resonance imaging apparatus for arbitrary patient posture. 5,008,624, Cl. 324-318.000.
Yoshida, Takao; Ikeda, Toshio; Douke, Takhiro; and Eki, Toshio, to Toto, Ltd. Solenoid valve control circuit. 5,008,773, Cl. 361-187.000.
Yoshida, Takeshi: *See*—
Hiratsuka, Katsuo; Odaka, Yoshiyuki; and Yoshida, Takeshi, 5,007,356, Cl. 112-68.000.
Yoshida, Toshihiko: *See*—
Yamamoto, Osamu; and Yoshida, Toshihiko, 5,007,694, Cl. 350-96.140.
Yoshifusa, Koji; and Yokota, Taizo, to Sharp Kabushiki Kaisha. Beam converting apparatus with a parallel light beam input and output from one prism plane. 5,007,713, Cl. 350-286.000.
Yoshihara, Kanji: *See*—
Katakami, Tsutomu; Yokoyama, Tatsuro; Miyamoto, Michihiko, Mori, Haruki; Kawauchi, Nobuya, Nobori, Tadahito, Sannohe, Kunio; Kamiya, Joji, Ishii, Masaaki; and Yoshihara, Kanji, 5,008,267, Cl. 514-269.000.
Yoshikawa, Toshiharu: *See*—
Yamamoto, Yasuyoshi; Kaga, Yuzo; Yoshikawa, Toshiharu; and Moribe, Akira, 5,007,975, Cl. 156-154.000.
Yoshikumi, Chikao: *See*—
Ikuzawa, Masanori; Oguchi, Yoshiharu; Matsunaga, Kenichi; Toyoda, Noriyuki; Furusho, Takao; Fujii, Takayoshi, and Yoshikumi, Chikao, 5,008,243, Cl. 514-8.000.
Yoshimura, Masahiro, to Yajima Kogyo, Inc. Supply head of nut feeder. 5,007,795, Cl. 414-737.000.
Yoshimura, Susumu: *See*—
Kuwabara, Isao; Watanabe, Yoshio; Yoshimura, Susumu, and Maruyama, Hidekazu, 5,007,682, Cl. 297-452.000.
Yoshino Kogyosho Co., Ltd.: *See*—
Iizuka, Shigeo, 5,007,757, Cl. 401-278.000.
Yoshioka, Hiroshi: *See*—
Kamata, Yoshiharu; Nagatsuma, Nobuyoshi; Ozawa, Mituharu; and Yoshioka, Hiroshi, 5,007,154, Cl. 29-430.000.
Yoshioka, Junji *See*—
Ohmura, Hiroshi; Tanabe, Satoru, Yoshioka, Junji; and Kanazawa, Hirotaka, 5,007,494, Cl. 180-79.100
Yoshitake, Kunitoshi, to Mitsubishi Denki Kabushiki Kaisha. Portable radio telephone device. 5,008,864, Cl. 368-10.000.
Yoshizawa, Katsuaki; and Oeda, Yoshitaka, to Kanzaki Paper Manufacturing Company Limited. Heat sensitive recording material. 5,008,231, Cl. 503-207.000.
Yoshizawa, Sakae: *See*—
Sasaki, Kazuya, Yoshizawa, Sakae; Inagaki, Shinya; and Takeda, Keiko, 5,007,698, Cl. 350-96.150
Young, Cecil B. Method and apparatus for dispensing a particulate material. 5,007,559, Cl. 222-1.000.
Youngquist, Robert J., to Minnesota Mining and Manufacturing Company. Method and apparatus for reading or writing on tape using a servo positioned multiple channel head. 5,008,765, Cl. 360-77.120
Yu, Robert C. U., to Xerox Corporation. Internal metal oxide filled materials for electrophotographic devices. 5,008,167, Cl. 430-56.000.
Yu, Robert C. U.; and Badesha, Santokh S., to Xerox Corporation. Photoconductive imaging members with polyphosphazenes. 5,008,169, Cl. 430-59.000.
Yuasa, Satoshi: *See*—
Nishimura, Yukuo; Haruta, Masahiro; Munakata, Hirohide; Kuwae, Yoko; Miyazaki, Toshihiko, and Yuasa, Satoshi, 5,007,714, Cl. 350-353.000.
Yuasa, Toshiya. *See*—
Koizumi, Norihiko; Tamioka, Hiroshi; Toyama, Noboru; Arahara, Kozo; and Yuasa, Toshiya, 5,008,690, Cl. 346-140.00R.
Yuki, Benjamin. Pitchback device for athletic practice. 5,007,638, Cl. 273-26.00A.
Yumoto, Hideaki. *See*—
Mori, Takayuki; and Yumoto, Hideaki, 5,007,582, Cl. 236-40.000
Yuri, Tadao: *See*—
Itami, Takashi; Yuri, Tadao; and Aoyagi, Toru, 5,007,214, Cl. 52-66.000
Zable, Jack L.: *See*—
Lee, Ho C., O'Toole, John R., Shalkey, Alex T., and Zable, Jack L., 5,007,748, Cl. 400-103.000
Zachary, Allen B.: *See*—
Brunnett, Carl J.; Zachary, Allen B.; and Heiple, Holly C., 5,008,822, Cl. 364-413.210.
Zahner, John C.. *See*—
Fremuth, Dietmar R. A.; Rogers, Alan E.; and Zahner, John C., 5,008,088, Cl. 422-234.000.
Zanmarchi, Giulio: *See*—
Molteni, Roberto; and Zanmarchi, Giulio, 5,008,547, Cl. 250-368.000.
Zarb, Constance K. Backseat storage container apparatus. 5,007,569, Cl 224-275.000.
Zarouri, Mourad: *See*—
Carlson, Carl J.; Zarouri, Mourad; and Coon, Warren, 5,008,768, Cl. 360-104.000.
Zebco Corporation: *See*—
Kelley, Michael P., 5,007,867, Cl. 440-71.000
Zecchino, Julius R.; Krishnaswamy, Natrajan; Clement, Pamela A., and Vargas, Anthony, to Elizabeth Arden Co., Division of Conopco, Inc Oil-in-water emulsions containing polyethylene. 5,008,100, Cl 424-59.000.
Zeiner, Hartmut: *See*—
Ittemann, Peter; Simon, Georg N., Heinz, Gerhard; Zeiner, Hartmut; Buchert, Hermann, and Seibring, Joachim, 5,008,364, Cl 528-172.000.
Zekert, Gerry C.: *See*—
Rosnack, Ellen M., Pray, Larry A.; Marable, Alger C., and Zekert, Gerry C., 5,008,122, Cl 426-417.000.
Zenith Electronics Corporation. *See*—
Russay, Thomas; and Stacy, Carl W., 5,008,658, Cl. 340-784.000
Zentz, Terry L.. *See*—
Crooks, Theodore J.; Zentz, Terry L.; and Morris, Matthew G., , 5,007,518, Cl 194-212.000.
Zeon Chemical USA, Inc.. *See*—
Wolf, Fred R., 5,008,345, Cl. 525-340.000
Zezza, Louis J., and Fiorelli, Frank, to Nuclear Energy Services, Inc Adjustable nozzle dam assembly and method of installing same 5,007,460, Cl. 138-89.000.
Zhizhin, Vladimir V.. *See*—
Bernadiner, Mikhail; and Zhizhin, Vladimir V., 5,008,098, Cl 423-659.000.
Ziemer, James. *See*—
Zones, Stacy I.; Santilli, Donald S.; Ziemer, James, Holtermann, Dennis L.; Pecoraro, Theresa A.; and Innes, Robert A., 5,007,997, Cl. 208-46.000.
Zierhut, Clarence D., to King Imports, Inc. Shoe polish applicator. 5,007,754, Cl 401-174.000.
Zimmer, Manfred, to Licentia Patent Verwaltungs-GmbH. Phase/digital conversion method and arrangements for implementing the method. 5,008,670, Cl. 341-113.000.
Zimmerman, Sheldon B.. *See*—
Chaiet, Louis, Zimmerman, Sheldon B.; Monaghan, Richard L., and Garrity, George M., 5,008,187, Cl. 435-72.000.
Zimmerschied, Klaus *See*—
Engel, Dieter, Mondt, Josef; and Zimmerschied, Klaus, 5,008,155, Cl. 428-463.000
Zoellner, Allen W. Prop-saver (propeller guard device). 5,007,869, Cl 440-71.000.
Zones, Stacy I.; Santilli, Donald S.; Ziemer, James; Holtermann, Dennis L., Pecoraro, Theresa A., and Innes, Robert A., to Chevron Research Company. Zeolite SSZ-26. 5,007,997, Cl. 208-46.000.
Zorea, Abraham *See*—
Maier, Eliahu; Kovesh, Yair; and Zorea, Abraham, 5,007,248, Cl 62-244.000.
Zotto, Anthony A. *See*—
Raleigh, William J., Thimineur, Raymond J., and Zotto, Anthony A., 5,008,103, Cl. 424-66.000.
Zuchtriegel, Anton, to Patent Treuhand Gesellschaft fur elektrische Gluhlampen mbH. Power network supplied high-frequency, low-pressure discharge lamp operating circuit. 5,008,597, Cl 315-209.00R
Zysman, Alexandre *See*—
Vanlerberghe, Guy, Zysman, Alexandre; and Sebag, Henri, 5,008,406, Cl. 549-378.000
31 Research Exploitation Limited *See*—
Bu'lock, John D., Sutherland, James K., and Donnelly, Michael J., 5,008,383, Cl. 536-4.100.
501 Thermal Profiles, Inc *See*—
Sayer, Bertram, 5,007,219, Cl. 52-204.000.
501 Toa Medical Electronics Co., Ltd *See*—
Hukuhara, Takahito, 5,007,296, Cl 73-864.870

LIST OF REISSUE PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 16TH DAY OF APRIL, 1991

NOTE—Arranged in accordance with the first significant character or word of the name (in accordance with city and telephone directory practice)

Ashby, Robert E., to Moore Business Forms, Inc. Continuous filled envelope assembly with non-marginal spaced feed holes. Re. 33,570, Cl. 229-69.000.

Froom, Thomas W. Folding ice-cream carton, carton blank and method. Re. 33,573, Cl. 493-151.000

Hitachi, Ltd.: *See*—
Takahashi, Kenichi, Re. 33,571, Cl. 235-379.000

Meyers, Brad E. Invisible light beam projector and night vision system. Re. 33,572, Cl. 250-504.00R.

Moore Business Forms, Inc.: *See*—
Ashby, Robert E., Re. 33,570, Cl. 229-69.000

Takahashi, Kenichi, to Hitachi, Ltd. System and method for automatic transaction. Re. 33,571, Cl. 235-379.000.

LIST OF REEXAMINATION PATENTEES

TO WHOM

CERTIFICATES WERE ISSUED

Ban, Kunikatsu, to N.P.W. Technical Laboratories. Method of lap welding eventual can blank consisting of metal sheet or the like. B1 4,732,026, 4-16-91, Cl. 72-52.000

Bayne, Jimmy O.; and Wyman, Robert E., to Bayne Machine Works, Inc. Receptacle lift and slim profile power unit therefor. B1 4,773,812, 4-16-91, Cl. 414-408.000

Bayne Machine Works, Inc *See*—
Bayne, Jimmy O.; and Wyman, Robert E., B1 4,773,812, Cl 414-408.000

Deschepper, Pierre. *See*—
Robyn, Pierre, and Deschepper, Pierre, B1 4,489,022, Cl 264-30.000

Fl Industries: *See*—
Sodini, Gregory L., B1 4,480,214, Cl 315-290.000

Glaverbel SA: *See*—
Robyn, Pierre; and Deschepper, Pierre, B1 4,489,022, Cl 264-30.000.

N.P.W. Technical Laboratories: *See*—
Ban, Kunikatsu, B1 4,732,026, Cl. 72-52.000.

Robyn, Pierre; and Deschepper, Pierre, to Glaverbel SA. Forming coherent refractory masses. B1 4,489,022, 4-16-91, Cl. 264-30.000

Sodini, Gregory L., to Fl Industries. Starter circuit for gaseous discharge lamp. B1 4,480,214, 4-16-91, Cl. 315-290.000.

Wyman, Robert E. *See*—
Bayne, Jimmy O., and Wyman, Robert E., B1 4,773,812, Cl 414-408.000.

LIST OF DESIGN PATENTEES

Abbott Laboratories *See*—
Morrow, James D., 316,298, Cl. D24-17.000
ACE Accessories Limited *See*—
Cheang, Chee Keat, 316,318, Cl. D32-42.000.
Acraloc Corporation: *See*—
Ailey, Harrison A., Jr., Sirois, Lester H., and Boody, Lawrence D., 316,220, Cl. D8-66.000.
Adams Hard-Facing Company, Inc *See*—
Edmisson, Delmar D., 316,266, Cl. D15-28.000
Adkins, Pauline, Brashear, Joe M., Gorley, John K., Frazier, Ester R., and Combs, Sondra L. Grandparent doll head. 316,285, 4-16-91, Cl. D21-190.000.
Ailey, Harrison A., Jr., Sirois, Lester H., and Boody, Lawrence D., to Acraloc Corporation. Dehiding device. 316,220, 4-16-91, Cl. D8-66.000.
Albarran, William. *See*—
Harris, Ronald; and Albarran, William, 316,307, Cl. D26-101.000

Printing authorized by Section 11(a)3 of Title 35, U.S. P.T.O.

PATENT AND TRADEMARK OFFICE NOTICES

Patent Cooperation Treaty (PCT) Information

For information concerning the PCT member countries see the notice appearing in the *Official Gazette* at 1120 O.G. 54 on Nov. 27, 1990.

For use of the European Patent Office as an International Searching Authority for international applications filed in the United States Receiving Office, see the notice appearing in the *Official Gazette* at 1022 O.G. 52 on Sept. 28, 1982.

For use of the European Patent Office as an International Preliminary Examining Authority for international applications filed in the United States Receiving Office, see the notices appearing in the *Official Gazette* at 1080 O.G. 2 on July 7, 1987 and at 1091 O.G. 2 on June 7, 1988. There is no longer a limit on the number of such international applications accepted for international preliminary examination by the European Patent Office; see the notice appearing at 1116 O.G. 32, on July 17,1990.

The search fee of the European Patent Office was changed due to a difference in the amount of the fee in German Marks and the exchange rate of the U.S. dollar in relation to the German Mark as of Jan. 3, 1991, and was announced in the *Official Gazette* at 1122 O.G. 564 on Jan 1, 1991.

International fees were changed on March 1, 1991 due to a difference in the exchange rate of the U.S. dollar in relation to the Swiss Franc and were announced in the *Official Gazette* at 1122 O.G. 629 on Jan. 22, 1991.

Certain domestic PCT fees and charges for International Search and Preliminary Examination have been changed effective Apr. 17, 1989 and were announced in the *Official Gazette* at 1100 O.G. 24 on Mar. 7, 1989.

The current schedule of PCT fees (in U.S. dollars) is as follows:

Transmittal fee:	170.00
Search Fee	
U.S. Patent and Trademark Office (USPTO) as International Searching Authority (ISA)	
—No corresponding prior U.S. national application filed	550.00
—Corresponding prior U.S. national application filed	380.00
—Supplemental search fee, per additional invention	150.00
European Patent Office as ISA	1492.00
Preliminary examination fee	
USPTO as International Preliminary Examining Authority (IPEA)	
—Search fee paid to USPTO as ISA	400.00
—Additional examination fee, per additional invention	130.00
—ISA not the USPTO	600.00
—Additional examination fee, per additional invention	200.00
International fees	
Basic fee	559.00
Basic Supplemental fee (for each page over 30)	11.00
Designation fee per country or region for the first 10 national or regional offices	135.00
Designation fee for 11th and subsequent designations	No Charge
Handling fee	171.00

U.S. National Stage fees

	Small Entity	Regular
USPTO was IPEA	165.00	330.00
USPTO was ISA but not IPEA	185.00	370.00
USPTO was neither ISA nor IPEA	250.00	500.00
USPTO was IPEA and all claims presented satisfied provisions of PCT Article 33(2) to (4)	25.00	50.00
—For each independent claim in excess of 3	18.00	36.00
—For each claim in excess of 20	6.00	12.00
—For each application containing a multiple dependent claim	60.00	120.00
—Surcharge for filing national fee or oath or declaration after the time limit applicable under PCT Article 22 or 39(1)	60.00	120.00
—Processing fee for filing English translation after the time limit applicable under PCT Article 22 or 39(1)	30.00	30.00

Dec. 21, 1990

HARRY F. MANBECK, Jr.
Assistant Secretary and Commissioner of Patents and Trademarks.

Notice of Maintenance Fees Payable

Title 37, Code of Federal Regulations, Section 1.362(d), effective Nov. 1, 1984, provides that maintenance fees may be paid without surcharge for a six-month period beginning 3, 7, and 11 years after the date of issue of patents based on application filed on or after Dec. 12, 1980. An additional six-month grace period is provided by 35 U.S.C. 41(b) and 37 CFR 1.362(e) for payment of the maintenance fee with the surcharge set forth in 37 CFR 1.20(k) or (l), as amended effective Apr. 17, 1989. If the maintenance fee is not paid in a patent requiring such payment the patent will expire on the 4th, 8th or 12th anniversary of the patent.

Attention is drawn to the patents which were issued on April 19, 1988 for which maintenance fees due at 3 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,737,994 through 4,739,521
Reissue Patents based on the above identified patents.

Attention is drawn to the patents which were issued on April 17, 1984 for which maintenance fees due at 7 years and six months may now be paid. The patents have patent numbers within the following ranges:

Utility Patents 4,442,551 through 4,443,890
Reissue Patents based on the above identified patents.

No maintenance fees are required for design or plant patents.

Payments of maintenance fees in patents should be directed to "Commissioner of Patents and Trademarks, Box M. Fee, Washington, D.C. 20231."

The current amounts of the maintenance fees due at 3 years and six months and seven years and six months are set forth in 37 CFR 1.20(e), and (f), as amended Nov. 5, 1990, which are reproduced below:

37 CFR § 1.20 Post-issuance fees and surcharges

"(e) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after after Dec. 12, 1980 and before Aug. 27, 1982, in force beyond 4 years; the fee is due by three years and six months after the original grant.....$245.00

"(f) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Dec. 12, 1980 and before Aug. 27, 1982, in force beyond 8 years; the fee is due by seven years and six months after the original grant.....$495.00"

"(h) For maintaining an original or reissue patent except a design or plant patent, based on an application filed on or after Aug. 27,1982, in force beyond 4 years; the fee is due by three years and six months after the original grant:

By a small entity (§1.9(f)).....$415.00
By other than a small entity.....$850.00"

"(i) For maintaining an original or reissue patent, except a design or plant patent, based on an application filed on or after Aug. 27, 1982, in force beyond 8 years; the fee is due by seven years and six months after the original grant:

By a small entity (§1.9(f)).....$835.00
By other than a small entity.....$1670.00"

The amounts of the surcharges for paying the maintenance fee during the grace period or after the expiration of the patent are set forth in 37 CFR 1.20(k), (l) and (m), which are reproduced below:

"(k) Surcharge for paying a maintenance fee during the 6-month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Dec. 12, 1980 and before Aug. 27,1982.....$120.00"

"(l) Surcharge for paying a maintenance fee during the 6-month grace period following the expiration of three years and six months, seven years and six months, and eleven years and six months after the date of the original grant of a patent based on an application filed on or after Aug. 27, 1982:

By a small entity(§1.9(f)).....$60.00
By other than a small entity.....$120.00"

"(m) Surcharge for accepting a maintenance fee after expiration of a patent for non-timely payment of a maintenance fee where the delay is shown to the satisfaction of the Commissioner to have been unavoidable.....$550.00"

Notice of Expiration of Patents Due to Failure to Pay Maintenance Fees

35 U.S.C. 41 and 37 CFR 1.362(g) provide that if the required maintenance fee and any applicable surcharge are not paid in a patent requiring such payment, the patent will expire at the end of the 4th, 8th, or 12th anniversary of the grant of the patent depending on the first maintenance fee which was not paid.

According to the records of the Office, the patents listed below have expired due to failure to pay the required maintenance fee and any applicable surcharge.

PATENTS WHICH EXPIRED FEBRUARY 10, 1991 DUE TO FAILURE TO PAY MAINTENANCE FEES

REISSUE APPLICATIONS FILED

Notice under 37 CFR 1.11(b). The reissue applications listed below are open to inspection by the general public in the indicated Examining Groups and copies may be obtained by paying the fee therefor (37 CFR 1.21(b).

4,771,012, Re. S. N. 07/581,781, Filed Sept. 13, 1990, Cl. 437/29, METHOD OF MAKING SYMMETRICALLY CONTROLLED IMPLANTED REGIONS USING ROTATIONAL ANGLE OF THE SUBSTRATE, Toshiki Yabu, et al., Owner of Record: *Matsushita Electric Industrial Co., Ltd., Osaka, Japan*, Attorney or Agent: V.M. Creedon, Ex. Gp.: 114

4,762,342, Re. S. N. 07/663,728, Filed Mar. 1, 1991, Cl. 282/9, MANIFOLD FORM ASSEMBLY, Gary J. Thompson, Owner of Record: *Inventor*, Attorney or Agent: Andrew S. McConnell, Ex. Gp.: 326

4,779,165, Re. S. N. 07/599,516, Filed Oct. 18, 1990, Cl. 360/97, DISK STORAGE DRIVE, Dieter Elsaesser, et al., Owner of Record: *Pabst-Motoren GmbH & Co. Kg., Black Forest, Germany*, Attorney or Agent: Wilford L. Wisner, Ex. Gp.: 233

4,779,455, Re. S. N. 07/603,008, Filed Oct. 25, 1990, Cl. 73/116, AIR-FUEL RATIO DETECTING SENSOR, Hiroshi Kuroiwa, et al., Owner of Record: *Hitachi, Ltd., Tokyo, Japan*, Attorney or Agent: John R. Mattingly, Ex. Gp.: 265

4,791,631, Re. S. N. 07/627,090, Filed Dec. 13, 1990, Cl. 372/22, WIDE TOLERENCE, MODULATED BLUE LASER SOURCE, Jean-Claude J. E. Baumert, et al., Owner of Record: *International Business Machines Corp., Armonk, N.Y.*, Attorney or Agent: Robert B. Martin, Ex. Gp.: 251

4,798,783, Re. S. N. 07/581,630, Filed Sept. 11, 1990, Cl. 430/372, METHOD OF PROCESSING SIBER HALIDE COLOR PHOTOGRAPHIC MATERIAL AND PHOTOGRAPHIC COLOR DEVELOPING COMPOSITION, Takatoshi Ishikawa, et al., Owner of Record: *Fuji Photo Film Co., Ltd., Kanagawa, Japan*, Attorney or Agent: Joseph J. Ruch, Ex. Gp.: 156

4,800,608, Re. S. N. 07/647,743, Filed Jan. 28, 1991, Cl. 15/167, TOOTHBRUSH, John R. Key, Owner of Record: *Inventor*, Attorney or Agent: Robert C. Shaddox, Ex. Gp.: 242

4,810,691, Re. S. N. 07/664,762, Filed Mar. 5, 1991, Cl. 514/2, POLYPEPTIDE CARTILAGE-INDUCING FACTORS FOUND IN BONE, Saeid Seyedin, et al., Owner of Record: *Celtrix Laboratories, Palo Alto, Calif.*, Attorney or Agent: Kenneth M. Goldman, Ex. Gp.: 189

4,843,063, Re. S. N. 07/664,766, Filed Mar. 5, 1991, Cl. 514/2, POLYPEPTIDE CARTILAGE-INDUCING FACTORS FOUND IN BONE, Saeid Seyedin, et al., Owner of Record: *Celtrix Laboratories, Palo Alto, Calif.*, Attorney or Agent: Kenneth M. Goldman, Ex. Gp.: 189

4,879,982, Re. S. N. 07/666,182, Filed Mar. 7, 1991, Cl. 123/339, METHOD OF AND APPARATUS FOR CONTROLLING ENGINE REVOLUTION SPEED, Tomiya Itakura, et al., Owner of Record: *Hitachi, Ltd. and Hitachi Automotive Engineering Co., Ltd., Tokyo and Katsuta-Shi, Japan*, Attorney or Agent: Donald R. Antonelli, Ex. Gp.: 342

4,896,334, Re. S. N. 07/666,728, Filed Mar. 8, 1991, Cl. 375/020, METHOD AND APPARATUS FOR TIMING RECOVERY, Babak Sayar, Owner of Record: *Northern Telecom Limited, Quebec, Canada*, Attorney or Agent: Arthur Schwartz, Ex. Gp.: 263

4,913,725, Re. S. N. 07/662,307, Filed Feb. 28, 1991, Cl. 71/92, GRANULAR FERTILIZER COMPOSITION, Akira Nishikawa, et al., Owner of Record: *Sumitomo Chemical Company, Ltd., Osaka, Japan*, Attorney or Agent: Marc J. Luddy, Ex. Gp.: 129

REQUESTS FOR REEXAMINATION FILED

Notice under 37 CFR 1.11(c). The requests for reexamination listed below are open to inspection by the general public in the indicated Examining Groups. Copies of the requests and related papers may be obtained by paying the fee therefor established in the Rules (37 CFR 1.19(a).

In the event correspondence to the patent owner is not received, this notice will be considered to be constructive notice to the patent owner and reexamination will proceed (37 CFR 1.248(a)(5) and 1.525(b).

4,473,980, Reexam. No. 90/002,297, Requested Mar. 15, 1991, Cl. 052/202, THERMAL INSULATION STRUCTURE FOR WINDOWS, Kenneth J. Foster, Owner of Record: *Econ, Inc., Boston, Mass.*, Attorney or Agent: Paul J. Cook, Manchester, Mass., Ex. Gp.: 354, Requester: John Wilson James, Pravel, Gambrell, Hewitt, et al., Houston, Tex.

4,809,308, Reexam. No. 90/002,298, Requested Mar. 15, 1991, Cl. 378/099, METHOD AND APPARATUS FOR PERFORMING AUTOMATED CIRCUIT BOARD SOLDIER QUALITY INSPECTIONS, John Adams, et al., Owner of Record: *IRT Corp., San Diego, Calif.*, Attorney or Agent: Neil F. Martin, Brown, Martin, Haller & McClain, San Diego, Calif., Ex. Gp.: 256, Requester: Owner

4,893,422, Reexam. No. 90/002,299, Requested Mar. 15, 1991, Cl. 038/077.3, STEAM IRON WITH WATER SOFTENING FACILITY, Gotthard C. Mahlich, et al., Owner of Record: *Robert Krups, Stufting & Co. KG, Solingen, Fed'l. Republic of Germany*, Attorney or Agent: Peter K. Kontler, Stamford, Conn., Ex. Gp.: 247, Requester: Ralston, Ltd., Amsterdam, The Netherlands

Correction

On February 26, 1991, a notice appeared in the Official Gazette concerning In Vitro International Inc., an international depositary authority under the terms of the Budapest Treaty on International Recognition of the Deposit of Microorganisms for the Purposes of Patent Procedure. 1123 O.G. 59. The notice quoted a letter from the United States to the World Intellectual Property Organization stating that "it can no longer assure that IVI is able to continue to comply with the requirements of Article 6(2) of the Budapest Treaty with respect to any new deposits." This sentence should have read "with respect to any original deposits." The date of that letter should be March 4, 1991.

March 4, 1991

HARRY F. MANBECK, Jr.
Assistant Secretary and Commisssioner of Patents and Trademarks

Errata

"All reference to Patent No. 5,002,947 to Masayuki, et al., of Tokyo, Japan, for `4-OXOQQUINOLINE-3-CARBOXYLIC ACID DERIVATIVES AND THEIR USE' appearing in the Offical Gazette of Mar. 26, 1991 should be deleted since no patent was granted."

"All reference to Patent No. 5,003,071 to Udo Mayer of Federal Republic of Germany for `QUINOLINE COMPOUNDS' appearing in the Official Gazette of Mar. 26, 1991 should be deleted since no patent was granted."

In the list of patents which expired on Dec. 16, 1990, due to failure to pay maintenance fees, in the O.G. of Feb. 26, 1991, the following patent should not have appeared:

Patent No.	Serial No.	Issue Date	Filing Date
4,628,942	06/659,823	12/16/86	10/11/84

In the list of patents which expired on Dec. 2, 1990, due to failure to pay maintenance fees, in the O.G. of Feb. 12, 1991, the following patent should not have appeared:

Patent No.	Serial No.	Issue Date	Filing Date
Re. 32,639 (D. 287,060)	07/032,726 (06/582,780)	4/12/88 (12/02/86)	4/12/87 (2/23/87)

In the list of patents which expired on Apr. 1, 1990, due to failure to pay maintenance fees, in the O.G. of June 12, 1990, the following patent should not have appeared:

Patent No.	Serial No.	Issue Date	Filing Date
Re. 32,662 (4,322,080)	06/580,447 (06/132,092)	5/03/88 (3/30/82)	2/15/84 (3/20/80)

In the list of Patents in the NOTIFICATION OF ACCEPTANCE OF MAINTENANCE FEE (35 U.S.C. 41(c); 37 CFR 1.378) in the O.G. of Nov. 27, 1990 the following correction should be made:

Patent No. "4,355,166" should be —4,335,166—.

SPECIAL BOXES FOR MAIL

Special PTO mail box numbers should be used to allow forwarding of particular types of mail to the appropriate areas as quickly as possible. Such mail is forwarded directly to the appropriate area without being opened. Only the specified type of document should be placed in an envelope addressed to one of these boxes. If any documents other than the specified type identified for each box are addressed to that box, they will be delayed in reaching the appropriate area for which they are intended.

The following special boxes should be used only for their specified purpose. Address mail as follows:

Box _____
Commissioner of Patents and Trademarks
Washington, D.C. 20231

Box 3	Mail for the Office of personel for NFC
Box 4	Mail for the Assistant Commissioner for External Affairs and the Office of Legislation and Internal Affairs.
Box 5	"No Fee" mail related to trademarks.
Box 6	Mail for the Office of Procurement
Box 7	Reissue applications for patents involved in litigation and subsequently filed related papers.
Box 8	All papers for the Office of the Solicitor *except* communications relating to *pending litigation*; papers relating to pending litigation shall be mailed only to Office of the Solicitor, P.O. Box 15667, Arlington, Va. 22215
Box 9	Coupon orders for U.S. patent and trademark copies.
Box 10	Orders for certified copies of patent and trademark applications.
Box 11	Electronic Ordering Service (EOS).
Box 12	Contributions to the Examiner Education Program.
Box 13	Mail for the Employee and Labor Relations Division.
Box 14	Invoices directed to the Office of Finance.
Box 15	Mail for the Advisory Commission on Patent Law Reform.
Box 171	Vacancy Announcement Applications.
Box AF	Expedited procedure for processing amendments and other responses after final rejection.
Box Assignment	All assignment documents except those filed with new applications.
Box EEO	Mail for the Office of Equal Employment Programs.
Box FWC	Requests for File Wrapper Continuation Applications (under 37 CFR 1.62)
Box Interference	Communications relating to interferences and applications and patents involved in interference.
Box Issue Fee	All Communications following the receipt of a PTOL-85, "Notice of Allowance and Issue Fee Due," and prior to the issuance of a patent should be addressed to Box Issue Fee, unless advised to the contrary. Assignments should be submitted in a separate envelope and not be sent to Box Issue Fee.
Box ITU	All intent to use documents, excluding the initial application and amendments to allege use.
Box M. Fee	Correspondence related to a patent that is subject to the payment of a maintenance fee.
Box Non-Fee-Amendment	Non-fee amendments to patent applications. (Use Box AF for responses after final rejection).
Box OED	Mail for the Office of Enrollment and Discipline
Box PATENT APPLICATION	New patent application and associated papers and fees.
Box TRADEMARK	New trademark application and associated papers and APPLICATION fees.
Box Pat. Ext.	Applications for patent term extension.
Box PCT	Mail related to applications filed under the Patent Cooperation Treaty.
Box Reexam	Requests for Reexamination for *original* request papers *only*.
Box Sequence	Submission of diskette for biotechnical application.
Box SN	For fee and petitions under 37 CFR 1.182 to obtain date received and/or serial number for patent applications *prior* to the Office's standard notification (return postcard or the official "Filing Receipt," "Notice to File Missing Parts," or "Notice of Incomplete Application").

Reference Collections of U.S. Patents Available for Public Use in Patent Depository Libraries

The following libraries, designated as Patent Depository Libraries (PDLs), receive current issues of U.S. Patents and maintain collections of earlier-issued patents. The scope of these collections varies from library to library, ranging from patents of only recent years to all or most of the patents issued since 1790.

These patent collections, which are organized in patent number sequence, are available for use by the public free of charge. Each of the PDLs, in addition, offers supplemental reference publications of the U.S. Patent Classification System, including the *Manual of Classification, Index to the U.S. Patent Classification, Classification Definitions*, and provides technical staff assistance in their use to aid the public in gaining effective access to information contained in patents. CASSIS (Classification And Search Support Information System), which provides direct, on-line access to Patent and Trademark Office data, is available at all PDLs. Facilities for making paper copies of patents from either microfilm or paper collections are generally provided for a fee.

Since there are variations in the scope of patent collections among the PDLs and in their hours of service to the public, anyone contemplating use of the patents at a particular library is urged to contact that library, in advance, about its collection and hours in order to avert possible inconvenience.

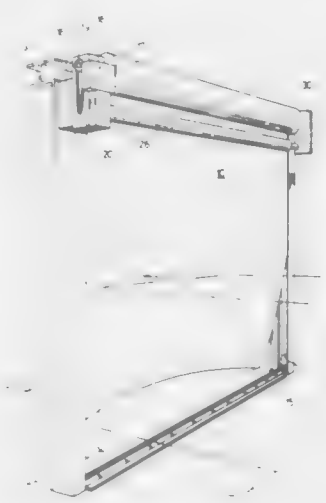
Expiration of patents The patents within the range of numbers indicated below expire during March 1991 except those which may have had their terms curtailed by disclaimer under the provisions of 35 U.S.C. 253. Other patents, issued after the dates of the range of numbers indicated below, may have expired before the full term of 17 years for the same reasons, or have lapsed under the provisions of 35 U.S.C. 151.



Patents ..... Numbers 3,795,014 to 3,800,328 inclusive
Plant Patents ..... 3,501 to 3,534 inclusive

REEXAMINATIONS

APRIL 23, 1991

Matter enclosed in heavy brackets [ ] appears in the patent but forms no part of this reexamination specification, matter printed in italics indicates additions made by reexamination.

B1 4,478,268 (1452nd)
DOOR STRUCTURE
Glenn R. Palmer, Toronto, Canada, assignor to M & I Door Systems Limited
Reexamination Request No. 90/002,028, May 17, 1990.
Reexamination Certificate for Patent No. 4,478,268, issued Oct. 23, 1984, Ser. No. 481,277, Apr. 1, 1983.
Continuation of Ser. No. 220719, Dec. 29, 1980, abandoned
Int. Cl.[5] **E06B** *9/58*
U.S. Cl. 160—310

AS A RESULT OF REEXAMINATION, IT HAS BEEN DETERMINED THAT:

The patentability of claims **1–9** is confirmed.

Claims **10** and **11** are determined to be patentable as amended.

Claims **12–14**, dependent on an amended claim, are determined to be patentable.

New claims **15–18** are added and determined to be patentable.

1. A damage-minimizing door comprising:
a flexible curtain having an upper end and a lower end and side edges;
a curtain winding mechanism;
said upper end of said curtain being secured to said winding mechanism for moving said curtain upwards and downwards;
a pair of parallel spaced apart guide channels, said side edges of said curtain being movable in said guide channels, being sealingly engageable therewith under at least atmospheric pressure and being releasable therefrom at a predetermined impact force on said curtain; and,
a rigid bar secured adjacent the lower end of said curtain, said rigid bar being releasably secured to said curtain and releasing therefrom at said predetermined impact force.

B1 4,645,317 (1453rd)
EYEGLASS LENS MODULES AND METHOD
Philip M. Frieder, Miami, and Edward deRojas, Lauderhill, both of Fla., assignors to Optical Systems International, Inc., Hialeah, Fla.
Reexamination Request No. 90/001,579, Aug. 18, 1988.
Reexamination Certificate for Patent No. 4,645,317, issued Feb. 24, 1987, Ser. No. 468,700, Feb. 22, 1983.
Int. Cl.[5] **G02C** *7/06, 7/08, 7/10*
U.S. Cl. 351—164

AS A RESULT OF REEXAMINATION, IT HAS BEEN DETERMINED THAT:

Claim **7** is cancelled.

Claims **1**, **6** and **9** are determined to be patentable as amended.

Claims **2–5** and **8**, dependent on an amended claim, are determined to be patentable.

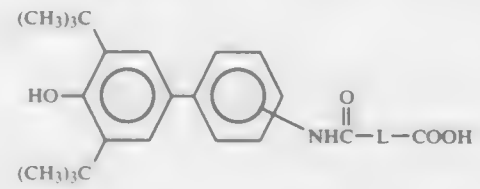
New Claim **10** is added and determined to be patentable.

1. A method for assembling an eyeglass lens having at least two corrections comprising the steps of:
selecting a first prescription lens component having a given [positive or negative diopter correction, and any cylinder correction prescription on the rear ocular surface and a preselected front surface without cylinder corrections,] *ocular side patient total prescription of both spherical and cylindrical power correction except for a presbyopia correction, said first prescription lens component having a front surface to be covered and laminated to a second lens component,*
selecting a second lens component being [essentially] optically plano [but having a performed prescription correction at a] *in the distance portion of the lens and having a preformed presbyopia prescription correction feature at the front* portion of the second lens component and having a preselected rear surface complementary with the front surface of the *first* presciption lens *component,*
and thereafter [optically] *physically* bonding the two lens components to each other, with the second lens component being the exterior portion of the lens, thereby positioning *only* the preformed *presbyopia* prescription correction feature on the *front portion of the* outer second lens component.

Matter enclosed in heavy brackets [ ] appears in the original patent but forms no part of this reissue specification; matter printed in italics indicates additions made by reissue

Re. 33,574

SUBSTITUTED BIPHENYL DERIVATIVES



Alan R. Kirk, Cottage Grove, and Robert A. Scherrer, White Bear Lake, both of Minn., assignors to Riker Laboratories, Inc., St. Paul, Minn.

Original No. 4,710,515, dated Dec. 1, 1987, Ser. No. 26,877, Mar. 17, 1987. Application for reissue Jan. 24, 1990, Ser. No. 469,204

Int. Cl.[5] **A61K** *31/195*

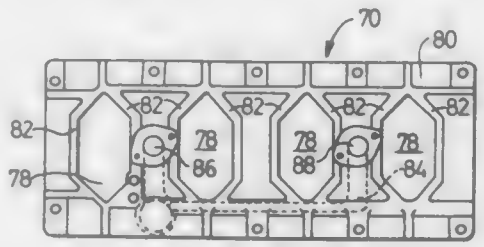
U.S. Cl. 514—563 **13 Claims**

12. An antiallergic pharmaceutical composition comprising a compound of the formula

wherein L is divalent phenyl, straight-chained lower alkylene wherein the alkylene chain may optionally contain an ether or thioether linkage, or divalent cycloalkyl, with the proviso that when L is divalent cycloalkyl and the amide carbonyl and the carboxyl are on adjacent carbons, then the amide carbonyl and the carboxyl are cis to each other; or a carboxylate derivative thereof selected from a lower alkyl ester, a (lower)alkylamino(lower)alkyl ester, a pharmaceutically acceptable (lower)alkylamino(lower)alkyl ester acid addition salt and a pharmaceutically acceptable carboxylate salt,

in a dosage form selected from the group consisting of a tablet, a capsule, an aerosol, a controlled release patch, and a powder, said compound being present in an amount sufficient for providing an antiallergic response.

Re. 33,575



INTERNAL COMBUSTION ENGINE NOISE REDUCTION PLATE

Benny Ballheimer, and Michael K. Stratton, both of Peoria, Ill., assignors to Caterpillar Inc., Peoria, Ill.

Original No. 4,771,747, dated Sep. 20, 1988, Ser. No. 134,421, Dec. 17, 1987. Application for reissue Apr. 30, 1990, Ser. No. 516,885

Int. Cl.[5] **F02B** *77/00;* **F02F** *7/08*

U.S. Cl. 123—198 E **20 Claims**

1. A cylinder block having a pair of elongate, spaced apart sidewalls each defining an outer mounting surface along a lower edge thereof, crankshaft mounting means integral with the block in elevationally upwardly spaced relation to the outer mounting surface and including removable bearing caps the sidewalls further defining inner mounting surfaces elevationally spaced below the bearing caps;

a crankshaft rotatably mounted in the crankshaft mounting means and retained therein by the bearing caps;

an oil pan sealingly and removably connected to the outer mounting surfaces of the sidewalls; and

rigidifying means removably connected to the inner mounting surface, said rigidifying means structurally interconnecting the pair of sidewalls, *said sidewalls having an inner mounting side being in frictional engagement with substantially the entire length of the inner mounting surface* and being free of connection with the bearing caps.

Re. 33,576

COUPLING ASSEMBLY AND FRICTION SHOE THEREFOR

James M. Latako, North Royalton, Ohio, assignor to Eaton Corporation, Cleveland, Ohio

Original No. 4,795,013, dated Jan. 3, 1989, Ser. No. 40,507, Apr. 20, 1987. Application for reissue Jul. 21, 1989, Ser. No. 384,146

Int. Cl.[5] **F16D** *25/04, 13/10, 69/04*

U.S. Cl. 192—88 B **14 Claims**

7. A friction shoe for use in a friction coupling which includes an input member, an output member and a fluid inflatable annular tube element having a portion thereof which moves radially to couple and decouple the input and output members, said friction shoe comprising a backing plate having an opening therein, a pad made of friction material secured to one side of said backing plate, a driving bar made of the friction material and disposed on a side of said backing plate opposite from said pad, said friction material extending through said opening in said backing plate and overlying the side of said backing plate opposite from said pad, said pad, driving bar and friction material extending through said opening in said backing plate being formed as one piece to join together said backing plate, pad and driving bar as a unitary structure, said friction shoe having means for use in attaching said friction shoe to the portion of the tube element which moves radially to enable said friction shoe to be attached to the tube element with said driving bar positioned to facilitate torque transfer between said friction shoe and the tube element.

Re. 33,577

ADVANCED PIEZOCERAMIC POWER SWITCHING DEVICES EMPLOYING PROTECTIVE GASTIGHT ENCLOSURE AND METHOD OF MANUFACTURE

John D. Harnden, Jr., Schenectady; William P. Kornrumpf, Albany, and George A. Farrall, Rexford, all of N.Y., assignors to General Electric Company, Fort Wayne, Ind.

Original No. 4,689,517, dated Aug. 25, 1987, Ser. No. 881,525, Jun. 30, 1986. Division of Ser. No. 685,108, Dec. 21, 1984, Pat. No. 4,714,847. Application for reissue Jul. 20, 1989, Ser. No. 383,315

Int. Cl.[5] **H01L** *41/08*

U.S. Cl. 310—332 **28 Claims**

25. Electrical switching apparatus comprising:

a gastight protective enclosure secured to a base member for supporting the enclosure,

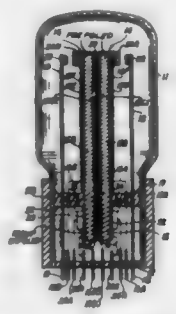
means for sealing the interior of the enclosure in a gastight manner,

at least one piezoelectric bender member having

a bender portion formed by two juxtaposed piezoelectric planar plate elements secured together sandwich fashion, the bender portion having inner and outer conductive surfaces formed on the planar surfaces of the plate elements, and

a non-bending portion adjacent the bender portion, the non-bending portion being electrically isolated from the conductive surfaces,

first terminal means operatively connected to the conductive surfaces for applying electric potentials to the respective plate elements in the bender portion.



means for clamping the bender member within the enclosure by securing the non-bending portion so that the bender member is physically supported cantilever fashion with the bender portion being movable, the non-bending portion being clamped by the clamping means,

first electric switch contact means within the gastight enclosure mechanically connected to the movable end of the bender portion,

second electric switch contact means physically mounted within the gastight enclosure and selectively engageable by the first electric switch contact menas upon the selective application of an electric potential to a respective one of the piezoelectric plate elements for causing the bender member to bend and close the first and second electric switch contact means to allow electric current flow therethrough,

respective electrically conductive lead means connected to the first and second electric switch contact means and extending to respective second terminal means supported by the base member outside the protective gastight enclosure for selectively supplying electric load current to a load outside the enclosure via the first and second electric switch contact means, and

electric circuit components in the form of passive circuit elements and/or active semiconductor devices supported to said non-bending portion of the bender member and electrically connected in circuit relationship with the first terminal means.

PLANT PATENTS

GRANTED APRIL 23, 1991

Illustrations for plant patents are usually in color and therefore it is not practicable to reproduce the drawing.

7,502

CHERRY TREE (AARON GEE)

Norman G. Bradford, 11875 E. Savana Rd., and Lowell G. Bradford, 12439 E. Savana Rd., both of Le Grand, Calif. 95333

Filed Dec. 29, 1989, Ser. No. 459,256

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—37 **1 Claim**

1. A new and distinct variety of cherry tree, substantially as illustrated and described, that is similar to its grandparent, the Bing Cherry (unpatented), by being self-sterile and by producing dark red fruit that is crack resistant, but is distinguished therefrom and an improvement thereon by producing fruit that is larger in size, 3 days earlier in ripening, and less prone to doubling, and that is also similar to the Tulare Cherry (U.S. Plant Pat. No. 6,407) by producing fruit that is dark red in color, resistant to cracking and doubling, but is distinguished therefrom and an improvement thereon by being more vigorous, more productive, and producing fruit that is much larger in size, 5 days later in maturing, and that has a shorter stem.

7,503

PLUM TREE (PURPLE MAJESTY)

Norman G. Bradford, 11875 E. Savana Rd., and Lowell G. Bradford, 12439 E. Savana Rd., both of Le Grand, Calif. 95333

Filed Dec. 26, 1989, Ser. No. 457,183

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—38 **1 Claim**

1. A new and distinct variety of plum tree, substantially as illustrated and described, which matures at nearly the same time as Santa Rosa, unpatented, but is distinguished therefrom and an improvement thereon by producing fruit that is larger in size, much firmer in texture, darker in skin color at shipping ripeness, and axially compressed in shape.

7,504

PLUM TREE (BLACK NOBLE)

Norman G. Bradford, 11875 E. Savana Rd., and Lowell G. Bradford, 12439 E. Savana Rd., both of Le Grand, Calif. 95333

Filed Dec. 28, 1989, Ser. No. 458,408

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—38 **1 Claim**

1. A new and distinct variety of plum tree, substantially as illustrated and described, which is most similar to its selected seed parent, Red Beaut (U.S. Plant Pat. No. 2,539), by being self-sterile and by producing medium size fruit that is very attractive in shape, very shiny in surface appearance, and very firm in texture, but is distinguished therefrom and an improvement thereon by producing fruit that ripens seven days later, that is very dark reddish purple in skin color instead of red, that is red in flesh color instead of yellow, and that is much sweeter in flavor.

7,505

NECTARINE TREE, "LATE RED JIM II"

John W. Tos, Hanford, Calif., assignor to Tos Farms, Inc., Hanford, Calif.

Filed Dec. 26, 1989, Ser. No. 457,159

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—41 **1 Claim**

1. A new and distinct variety of nectarine tree substantially as illustrated and described and which is somewhat remotely similar to the Red Jim nectarine tree (U.S. Plant Pat. No. 4,518) with which it is most closely similar but from which it is distinguished and characterized principally as to novelty by producing fruit which is mature for commercial harvest and shipment approximately August 30 through September 20 in the San Joaquin Valley of California and which further has noteworthy shipping and handling characteristics.

7,506

NECTARINE TREE (SUMMER FIRE)

Norman G. Bradford, 11875 E. Savana Rd., and Lowell G. Bradford, 12439 E. Savana Rd., both of Le Grand, Calif. 95333

Filed Dec. 26, 1989, Ser. No. 457,232

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—41 **1 Claim**

1. A new and distinct variety of mid-seasonal ripening clingstone nectarine tree, substantially as illustrated and described, which most nearly resembles the Summer Bright (U.S. Plant Pat. No. 7,049) nectarine variety by producing fruit that is nearly full red in color, clingstone in type, and exceptionally firm in texture, but is distinguished from and an improvement on that variety by producing fruit that is somewhat larger in size and that ripens nine days later, thus extending those desirable qualities into a later harvesting and marketing season.

7,507

NECTARINE TREE (SPRING BRIGHT)

Norman G. Bradford, 11875 E. Savana Rd., and Lowell G. Bradford, 12439 E. Savana Rd., both of Le Grand, Calif. 95333

Filed Dec. 26, 1988, Ser. No. 457,236

Int. Cl.[5] A01H *5/00*

U.S. Cl. Plt.—41 **1 Claim**

1. A new and distinct variety of clingstone nectarine tree, substantially as illustrated and described, whose fruit matures at nearly the same time as Spring Red (U.S. Plant Pat. No. 3,619), but is distinguished therefrom and an improvement thereon by producing fruit that is darker red in skin color, very much firmer in texture, much sweeter in flavor, and clingstone instead of freestone in type; whose fruit most nearly resembles the May Diamond (U.S. Plant Pat. No. 5,454), the seed parent, by being a full red colored nectarine with excellent firmness, but is distinguished therefrom and an improvement thereon by ripening sixteen days later, by being a clingstone instead of a freestone, and by having a sweeter flavor; and whose tree is distinguished from the May Diamond by producing a large instead of small blossom and by having globose instead of reniform glands.

BULLETPROOF DRESS SHIRT

Edward A. Coppage, Jr., 3031 Borge St., Unit 109, Oakton, Va. 22124, and Richard W. Coppage, 14607 Batavia Dr., Centreville, Va. 22020

Filed Feb. 28, 1990, Ser. No. 486,374

Int. Cl.[5] F41H *1/00;* A41D *13/00, 1/04*

U.S. Cl. 2—2.5 16 Claims

1. A bulletproof shirt comprising: a front panel and a rear panel and connecting means releasably attaching said front panel to said rear panel;

said front panel including:

(a) an outer layer including means incorporated thereon causing said outer layer to resemble a shirt;

(b) a middle layer including a portion of said connecting means;

(c) an inner layer including a first opening bounded by first and second means releasably fastening said opening in a closed configuration;

(d) said outer layer being permanently fastened to said middle layer at one location and said middle layer being permanently fastened to said inner layer to form a front panel containment area between said inner and middle layers accessible through said first opening;

said rear panel including:

(a) an outer layer including a portion of said connecting means and further including third releasable fastening means;

(b) an inner layer including fourth releasable fastening means engageable by said third releasable fastening means;

(c) said inner and outer layers of said rear panel being permanently fastened together so that said third and fourth releasable fastening means engage one another and provide closable access to a rear panel containment area formed between said layers;

said inner layers of said front and rear panel comprising a bi-component fabric having hydrophobic and hydrophilic capabilities;

said shirt further including removable bulletproof pads,

a first said pad being removably inserted into said front panel containment area and a second said pad being removably inserted into said rear panel containment area; said pads each comprising a series of layers of woven and non-woven ultrahigh molecular weight extended chain polyethylene material, said woven layers comprising fibers of from 185 denier to 500 denier and said non-woven layers being unidirectional pads;

said front and rear panels being assembled to one another by engagement of said connecting means in said panels.

NURSING GARMENT

Valda K. Hemming, 13329 Canyon Back Lane, Poway, Calif. 92064

Filed Jun. 15, 1990, Ser. No. 538,553

Int. Cl.[5] A41D *1/20, 1/22*

U.S. Cl. 2—104 1 Claim

1. A nursing garment to cover the breast of a woman while nursing a baby, comprising:

(a) an absorbent upper portion for lying over the shoulder of a nursing woman;

(b) retaining means connected to the upper end of said absorbent portion for retaining same in place over the shoulder of the woman;

(c) an expanded lower portion connected to said upper portion to flair out to cover both the breast of the woman and at least a portion of the nursing baby;

(d) said upper portion and said lower portion being integrally knit, with said upper portion being close-knit and absorbent for burping the baby thereon and said lower portion expanding into a loose, open knit to provide adequate ventilation for the baby;

(e) said retaining means comprising weight means weighing on the order of two ounces sewn into the upper edge of said upper portion and being padded to provide a soft contact for the woman and baby.

5,008,961

SANITARY HEAD COVERING AND METHOD OF MANUFACTURE

Vance M. Hubbard, and Welton K. Brunson, both of Bedford, Tex., assignors to Tecnol, Inc., N. Richland Hills, Tex.

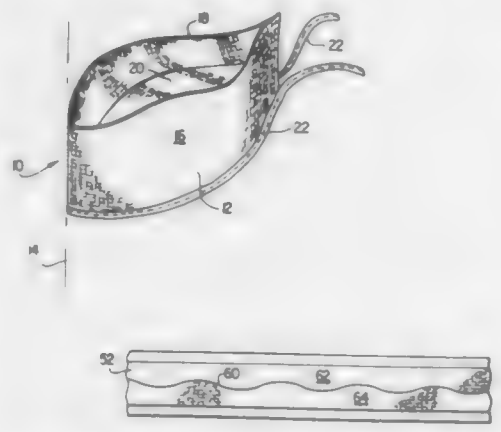
Filed Jul. 20, 1989, Ser. No. 382,259

Int. Cl.[5] A42B *1/02, 1/04*

U.S. Cl. 2—195 11 Claims

1. A method for forming a sanitary head covering, comprising the steps of:

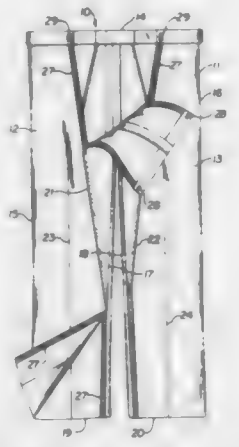
adhering a first upper edge of an expandable crown portion to a second upper edge of an elongated flexible sheet;



securing ties to said elongated sheet to enable attachment of the head covering to the head of a wearer;

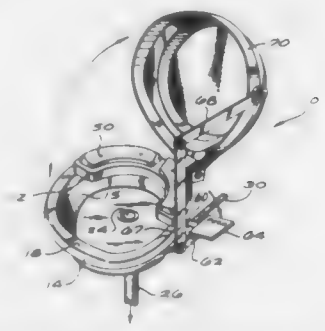
folding said elongated sheet and said crown portion in half about a transverse axis to form a first and a second side portion;

adhering a first lower edge of said crown portion of said first side portion to a second lower edge of said crown portion of said second side portion; and



adhering a first corner on said upper edge of said elongated

sheet which is opposite said transverse axis on said first side portion to a second corner on said upper edge of said

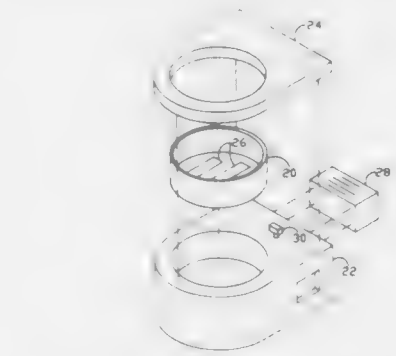


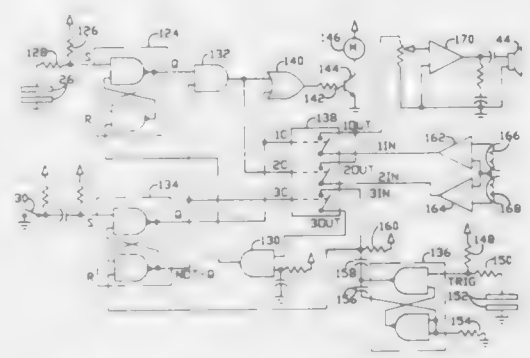
elongated sheet which is opposite said transverse axis on said second side portion to form the headcovering.

5,008,962
EASY TO FASTEN TROUSERS
Lynn U. Smith, 6939 Reynolds St., Pittsburgh, Pa. 15208, and Mario J. Merlino, Moscow, Pa., assignors to Lynn U. Smith, Pittsburgh, Pa.
Filed Feb. 8, 1990, Ser. No. 476,772
Int. Cl.[5] A41D *1/06*
U.S. Cl. 2—234 **9 Claims**

1. In trousers having an upper edge, a pelvic sheath, and two adjacent legs each having an outseam, an inseam and a hem edge, the improvement comprising two selectively openable seams, each of said selectively openable seams extending down the front portion of its own respective trouser leg from said upper edge to one of said hem edges, with each of said selectively openable seams being positioned at said upper edge at a horizontal position between the respective adjacent outseam and respective adjacent inseam of said trouser leg and tapering diagonally away from said outseam and into the area of said respective adjacent inseam.

5,008,963
EMERGENCY WASH STATION
Matthew I. Stein, Truckee, Calif., assignor to Haws Company, Sparks, Nev.
Filed Jul. 3, 1989, Ser. No. 375,121
Int. Cl.[5] A61H *33/00*
U.S. Cl. 4—620 **18 Claims**

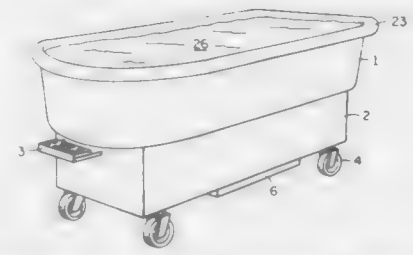




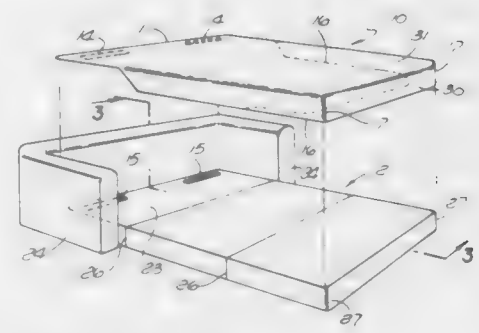
10. An emergency wash station, comprising:
a drain bowl having an upper rim projecting outwardly from a basin, said upper rim having a mounting port formed therein at a position located generally at a rear side of the drain bowl;
a spray manifold having a curved, generally C-shaped geometry and including upper and lower interfitting and generally shell-shaped manifold members cooperatively defining a manifold chamber extending generally in opposite directions from an inlet fitting adapted for passage of water into the manifold chamber, said upper manifold member of said spray manifold further defining a relatively large plurality of generally upwardly open spray ports for passage of water upwardly from said manifold chamber as a plurality of small water streams;
means for mounting said inlet fitting to said upper rim with said inlet fitting projecting through said mounting port and with said spray ports of said spray manifold each located a substantial distance above said upper rim, said spray manifold extending from said inlet fitting to laterally opposite sides of the drain bowl;
means for connecting a water supply pipe to said inlet fitting; and
valve means mounted in-line with said water supply pipe and normally closed to prevent water flow to said manifold chamber, said valve means being movable to an open position to permit water flow to said manifold chamber.

5,008,964
CHILD'S TOILET
Janet C. Dean, R.R. 3, Box 120, Spencer, Iowa 51301, and Terry B. Dean, Mountain View, Calif., assignors to Janet C. Dean, Spencer, Iowa
Filed Feb. 9, 1990, Ser. No. 477,465
Int. Cl.[5] A47K *11/04;* **A61G** *9/00*
U.S. Cl. 4—661 **6 Claims**

1. A music and speech generating potty chair with a removable waste receptor and a seat used to toilet train a child, comprising:
(a) a pressure sensitive switch between the seat and the chair adapted to close when the child sits on the seat;
(b) a waste moisture sensing circuit with a sensor mounted in the bottom of the receptor adapted to generate a detection signal upon sensing bodily waste introduced into the receptor;
(c) a timing and control circuit responsive to the switch being closed and the detection signal adapted to produce control signals and the clock pulses;
(d) a data storage circuit responsive to the control signals and the clock pulses containing musical sound data and speech message data;



(e) a tune generating circuit responsive to the control signals and the clock pulses and being adapted to access the musical sound data from the data storage circuit and convert the musical sound data into musical sounds when the switch is closed by the child sitting on the chair to thereby require less parental supervision and entertain the child while on the chair;
(f) a speech generating circuit responsive to the control signals and clock pulses and being adapted to access the



speech message data from the data storage circuit and convert the speech message data into speech sounds when the detection signal is generated by the child excreting bodily waste into the receptor to thereby congratulate the child when the child excretes bodily waste while on the chair; and
(g) an amplifier circuit with a loudspeaker coupled to the tune generating circuit to amplify and audibly produce the musical sounds and coupled to the speech generating circuit to amplify and audibly produce the speech sounds.

5,008,965
FLUIDIZED BEAD BED
John H. Vrzalik, San Antonio, Tex., assignor to Kinetic Concepts, Inc., San Antonio, Tex.
Filed Jul. 11, 1988, Ser. No. 217,685
Int. Cl.[5] A61G *7/00*
U.S. Cl. 5—61 **47 Claims**

47. A method of supporting a patient on a fluidized patient support apparatus of the type comprising a tank containing a mass of granular material covered by a sheet which serves to support a patient comprising the steps of:
alternately inflating opposed bladders in the granular material to turn the patient from side to side.

5,008,966
SHEET FOR FOAM SOFA BED
Joyce Lepow, 1321A E. Allen Rd., Tucson, Ariz. 85719
Filed Mar. 8, 1990, Ser. No. 490,379
Int. Cl.[5] A47G *9/04*
U.S. Cl. 5—496 **8 Claims**

1. A bed sheet comprising:
a first substantially rectangular piece of fabric said first piece of fabric having top and bottom edges and first and second side edges;
a second piece of fabric coupled to said first piece of fabric only along a portion of said first and second side edges and said bottom edge of said first piece of fabric, sao as to form a peripheral border, only partially surrounding the perimeter of said first piece of fabric;
an elastic member, said elastic member being coupled to an outside edge of said peripheral border;
attachment means coupled to a bottom side of said first piece of fabric and disposed substantially adjacent to said top edge of said first piece of fabric whereby the bed sheet at the area adjacent the top edge of said first sheet of fabric is substantially free of downwardly extending border elements, thereby facilitating the attachment of the attachment means on said first piece of fabric to matting attachment means on a foldable mattress that has one of its end portions and at least a part of its side edges surrounded by the back and arms of a sofa bed.

5,008,967
TRIANGULAR TRUSS WALKOUT CANTILEVER
Richard C. Barrios, and Philip A. Hayes, both of Louisville, Ky., assignors to Modern Industries, Inc., Louisville, Ky.
Filed Jul. 13, 1989, Ser. No. 379,551
Int. Cl.[5] B61L *5/12;* **E04C** *3/02;* **E04H** *12/10*
U.S. Cl. 14—7 **4 Claims**

1. In a railroad warning system, a walkout cantilever comprising:
a base adapted to overlie a supporting pad;
an upright mast having a bottom end fixed to said base;
a horizontally disposed truss arm secured to and extending from said mast and including three longitudinal truss members disposed substantially parallel to one another, said truss members comprising a first bottom truss member, a second bottom truss member and a top truss member presenting a cross sectional triangular pattern having a horizontal base and an upwardly projecting apex;
means interlocking said longitudinal truss members, including a plurality of spaced cross members disposed essentially in the plane of said first and second bottom truss members and joined thereto, a vertical brace attached to and extending from a corresponding cross member to said

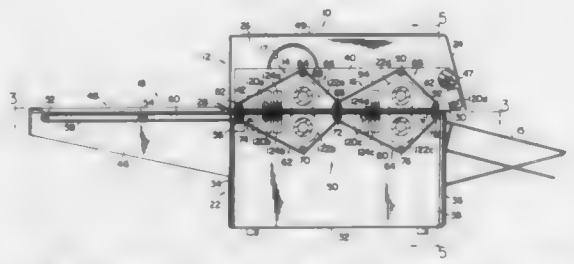
top truss member, and two pairs of side braces spaced from said vertical brace in opposite longitudinal directions and extending to said top truss member from said first and second bottom truss members;

a signal light unit mounted on said vertical brace;

a catwalk extending along said truss arm substantially in the plane of said first and second bottom truss members; and

means securing said catwalk to one of said bottom truss members.

5,008,968



SHEET MATERIAL CLEANING MACHINE

Wallace Preston, West Springfield, Mass., assignor to Markel Industries, Inc., Enfield, Conn. and Julie Associates, Inc., North Billerica, Mass.

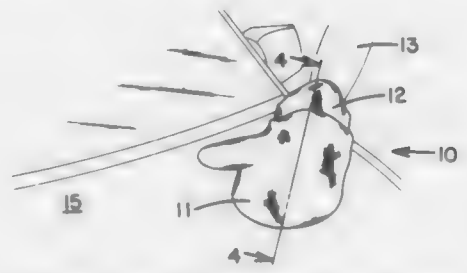
Filed Jul. 27, 1989, Ser. No. 386,429

Int. Cl.[5] B08B *6/00*

U.S. Cl. 15—1.51 **22 Claims**

1. Sheet material cleaning machine comprising cleaning means for removing particulate matter from at least one surface of a sheet to be cleaned and including first and second cleaning stations and cleaning apparatus at each of said cleaning stations, and conveying means for positively driving a sheet such as aforesaid along a predetermined generally longitudinally extending path through said cleaning stations, said conveying means occluding a portion of the one surface of the sheet as the sheet is advanced through said first cleaning station and exposing the previously occluded portion of the one surface of the sheet to said cleaning apparatus at said second cleaning station as the sheet is further advanced through said second cleaning station, said conveying means including a first conveyor section for driving the sheet through said first cleaning station and a second conveyor section generally continuous to said first conveyor section for driving the sheet through said second cleaning station, each of said conveyor sections having a plurality of transversely spaced apart sheet engaging elements including upper sheet engaging elements for engaging the upper surface of the sheet and lower sheet engaging elements for engaging the lower surface of the sheet, said sheet engaging elements of said second conveyor section being transversely offset relative to said sheet engaging elements of said first conveyor section.

5,008,969



SEPARABLE MULTI-LAYERED WIPING MITTEN

Guy R. Jarrett, 2013 College Ave., Modesto, Calif. 95350

Filed Jul. 23, 1990, Ser. No. 556,355

Int. Cl.[5] A47L *13/18*

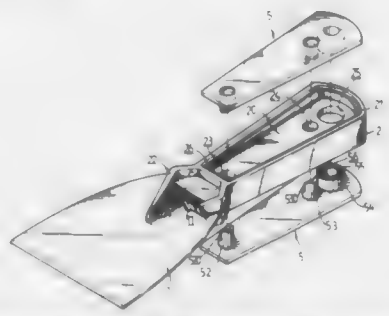
U.S. Cl. 15—227 **3 Claims**

1. A separable multi-layered mitten for wiping surfaces prior to painting, said mitten comprising:

A. at least two concentric fabric layers, the outer said layer removable when soiled from a successive inner layer then itself useable for contineous wiping of said surface;

B. a common center of said concentric fabric layers for insertion of the human hand.

5,008,970



SCRAPER HAVING A HAND GRIP CONSTRUCTION

Su J. Tsai, No. 1, Lane 15-2, Yung Feng Rd., Tai Ping Hsiang, Taichung Hsien, Taiwan

Filed Jan. 22, 1990, Ser. No. 468,159

Int. Cl.[5] A47L *13/022;* **B26B** *3/00*

U.S. Cl. 15—236.01 **3 Claims**

1. A scraper comprising a blade being fixed in a front end of a handle; said handle substantially comprising a plate, an outer perimeter wall being respectively formed on an upper surface and a lower surface of said plate, at least one hole being formed in said plate; an upper cover and a lower cover having a shape corresponding to that of said handle and being respectively provided on an upper surface and a lower surface of said outer perimeter wall of said handle, at least one retainer being formed on one surface of each said cover and being arranged in accordance with said hole of said plate, a semi-circular portion being formed on a free end of each said retainer and being located on one side of a longitudinal axis of each said cover, a plurality of teeth being formed on an end surface of said semi-circular portion of each said retainer, and said semi-circular portion of each said retainer of said upper cover and a corresponding semi-circular portion of each said retainer of said lower cover being inserted into said at least one hole so that said teeth thereof are engaged with one another and so that said covers are clamped together in order to form a smooth outer surface for said handle.

5,008,971

WINDSHIELD WIPER ARM

Kenneth W. Stewart, Sr., Columbus, Miss., assignor to United Technologies Electro Systems, Inc., Columbus, Miss.

Filed Oct. 20, 1989, Ser. No. 424,487

Int. Cl.[5] B60S *1/34*

U.S. Cl. 15—250.2 **5 Claims**

1. A windshield wiper arm for attachment to a wiper arm drive shaft that rotates the arm on a windshield, characterized by:

a wiper arm carrier adapted to fit on the wiper arm drive shaft;

a rod which is rotatably mounted on the carrier and rotatable on the carrier between a first position for causing the wiper to strike the windshield and a second position a fixed distance from the windshield;

resilient means for rotatably holding the rod in tension on the windshield;

detent means on the carrier;

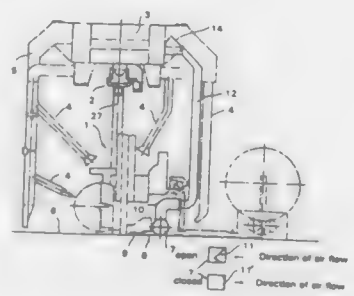
detent engagement means on the rod for engaging the detent means to hold the rod in the second position away from the windshield;

tensioning means engaging the carrier, the rod and the resilient means for adjusting the tension of the rod on the windshield, and

the resilient means forcing the detent engagement means into the detent.

5,008,972

CLEANING DEVICE FOR TEXTILE MACHINES DISPOSED IN A ROW



Ulrich Steinike, Augsburg, Fed. Rep. of Germany, assignor to Ernst Jacobi & Co. KG, Augsburg, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 215,382, Jul. 5, 1988, abandoned. This application Jun. 18, 1990, Ser. No. 539,556

Claims priority, application Fed. Rep. of Germany, Sep. 18, 1987, 3731449

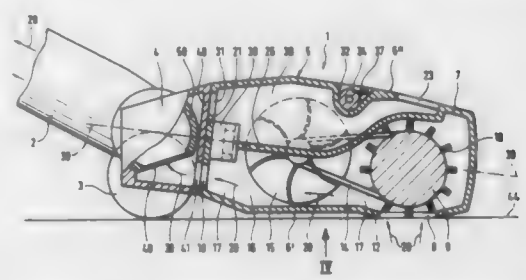
Int. Cl.[5] D01G *15/76*

U.S. Cl. 15—312.2 **22 Claims**

1. A cleaning device for textile machines disposed in a row, comprising a cleaning apparatus for movement back and forth above said machines including blow hoses provided with nozzles for blowing off loose fuzz and at least one suction hose for sucking up the blown off fuzz, at least one stationary blowing means disposed at a side of each machine opposite the suction hose, the blowing means having at least one blast nozzle for blowing air so as to cover the floor below the textile machine, the cleaning apparatus having a vertically extending, substantially rigid air blast duct for docking at the blowing means when the cleaning apparatus is aligned with the blowing means.

5,008,973

MULTI-PURPOSE SUCTION NOZZLE



Peter Wörwag, Romanshorn, Switzerland, assignor to Düpro AG, Romanshorn, Switzerland

Filed Jan. 31, 1990, Ser. No. 473,283

Claims priority, application Fed. Rep. of Germany, Jan. 31, 1989, 3902741; Jan. 9, 1990, 4000374

Int. Cl.[5] A47L *5/36*

U.S. Cl. 15—416 **12 Claims**

1. A multi-purpose suction nozzle, for a vacuum cleaner, for cleaning different types of surfaces, such as hard smooth surfaces, textile floor coverings, and upholstery, whereby said suction nozzle is detachably connected to a suction line of said vacuum cleaner via a pivotably mounted connector, said suction nozzle comprising:

a housing having a first suction opening that communicates with a first flow channel, and a second suction opening about which are provided planar slide surfaces and which communicates with a second flow channel, with said housing essentially comprising a rear nozzle portion that is connected to said connector, and a front nozzle portion that is provided with said first and second suction openings, and in which said housing essentially has a low design with two oppositely disposed sides, each of which is provided with one of said suction openings; a partition is disposed between said first and second flow channels, whereby for said selective use of one of said suction openings, said front nozzle portion is rotatable relative to said rear nozzle portion in such a way that one of said sides of said housing, along with the associated suction opening, comes to rest on the floor surface that is to be cleaned;

a brush that is rotatably mounted in said housing in such a way that bristles of said brush extend through said first suction opening; and

means for selectively connecting either said first flow channel or said second flow channel with said connector.

5,008,974

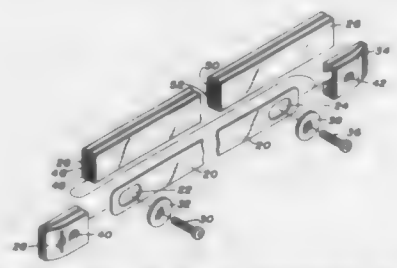
CARRYING HANDLE ASSEMBLY

Randall N. Ellert, Lake Stevens; Robert M. Neel, Woodinville; N. Thatcher Harvey; Wilbur R. Ames, IV, both of Lake Stevens, and Randall D. Lord, Everett, all of Wash., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Apr. 28, 1989, Ser. No. 345,324

Int. Cl.[5] A47B *95/02*

U.S. Cl. 16—114 R **3 Claims**



1. A removable carrying handle comprising:

a strap having a slot formed through each end thereof;

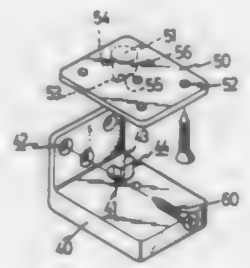
an attachment means associated with each end of the strap, each attachment means comprising

a headed fastener having a shaft;

a spacer member having a first part that retains the fastener head on one side of the strap, and a second part that protrudes through the slot to the other side of the strap, the spacer member being configured to engage the fastener with the fastener shaft extending through the slot; and

a housing configured for locking engagement with the second part of the spacer member on said other side of the strap to secure the housing, spacer member and fastener to the strap.

5,008,975



HINGE DEVICE

Rong W. Wang, and Johnson S. Chang, both of 9F-1, No. 197, Sec. 4, Nan King E. Rd., Taipei, Taiwan

Filed Jun. 8, 1990, Ser. No. 535,064

Int. Cl.[5] E05D *7/10*

U.S. Cl. 16—266 **2 Claims**

1. A hinge device for mounting a door to a door frame comprising:

(a) a first assembly including an upper door frame plate for attachment to a door frame and an upper door plate for attachment to a top surface of a door, the upper door frame plate having an axle hole formed in a corner thereof, the upper door plate having an axle extending outwardly from a top surface thereof, the axle being engageable within the axle hole to define an axis about which the upper door plate pivots relative to the upper door frame plate; and

(b) a second assembly including a lower door frame plate for attachment to the door frame and a lower door plate for attachment to a bottom surface of the door, the lower door plate having a protrusion axle extending outwardly from a bottom surface thereof, the protrusion axle being defined by a shaft, first and second recesses, a flange positioned between the recesses, and the first recess being deeper than the second recess, the lower door frame plate having a third recess formed therein, the third recess being defined by a notched blind hole, an alley extending from the blind hole, a wedge, and a convex protrusion extending outwardly from a bottom surface of the blind hole, the flange of the lower door plate being disposable within the alley and blind hole to position the shaft within the blind hole and define a pivot axis therewith, and the flange being disposable between the wedge and the convex protrusion for stabilizing the door in an open position.

5,008,976

DIGITAL APPARATUS HAVING A DISPLAY SECTION ADJUSTED BY A HINGE ASSEMBLY WITH ROLLING RESISTANCE

John P. Busch, Austin, Tex., assignor to Dell Corporate Services Corporation, Austin, Tex.

Filed Mar. 3, 1989, Ser. No. 318,575

Int. Cl.[5] E05D *11/04; E05C 17/64*

U.S. Cl. 16—276 **19 Claims**

1. A hinge assembly for rotation between a fully closed position and a fully opened position comprising:

(a) a first bracket having an opening therethrough;

(b) a second bracket having an opening therethrough, the opening of the first bracket and the opening of the second bracket being axially aligned;

(c) a shaft extending through the openings in the first and second brackets, respectively, the shaft and the opening in the second bracket being configured to prevent rotation therebetween; and

(d) an elastic roller mechanism surrounding the shaft and having means for engaging one of the first or second brackets to provide any desired fixed position between the first and second brackets when a rotational force is selectively impressed therebetween and selectively removed therefrom, the mechanism including:

a cylindrical retainer having an inner retaining surface and a central opening through which the shaft passes,

a plurality of cylindrical rollers, and

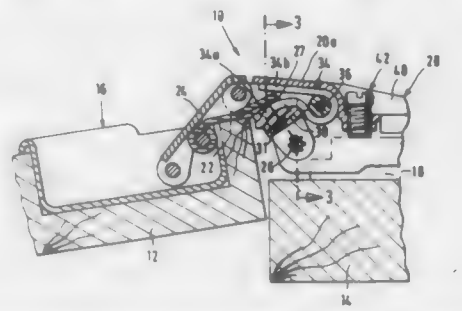
elastic means, retained between the shaft and the inner retaining surface, the plurality of rollers surrounding the shaft and positioned to press into the elastic means.

5,008,977

CABINET HINGE WITH CLOSING MECHANISM

Karl Lautenschläger, Reinheim, and Gerhard W. Lautenschläger, Brensbach, both of Fed. Rep. of Germany, assignors to Karl Lautenschläger GmbH & Co. KG, Reinheim, Fed. Rep. of Germany

Filed Apr. 4, 1990, Ser. No. 504,345



Claims priority, application Fed. Rep. of Germany, Apr. 18, 1989, 3912630

The portion of the term of this patent subsequent to Jan. 23, 2007, has been disclaimed.

Int. Cl.[5] E05F *1/08*

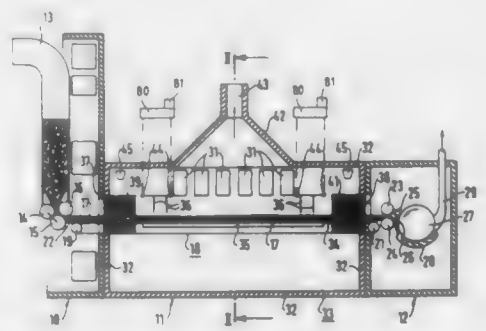
U.S. Cl. 16—278 **9 Claims**

1. A hinge for a cabinet door, comprising: a door-related part configured as a cup to be set in the back of a cabinet door, and a carcass-related part configured as an elongated supporting arm of inverted U-shaped cross section and to be mounted on a cabinet; an inner and an outer hinge link articulating said two parts relative to one another, each link having a first end journaled in the cup and a second end journaled at the supporting arm, said inner hinge link being nearer the cabinet interior when the door has been articulated to the closed position; a closing mechanism having a cam element disposed in an end portion of said inner link adjacent said supporting arm, said cam element having a cam surface; a substantially U-shaped leaf spring having a first, flexible leg lying with bias on said cam surface, having a second leg supported in an interior portion of said supporting arm, and also having a bridging section connecting said two legs; said inner hinge link having

two parallel ears spaced apart from one another at said second end of said inner hinge link; said cam element being disposed between said ears for corotation with said inner hinge link.

5,008,978

APPARATUS FOR TREATING COTTON CONTAMINATED WITH HONEYDEW



René Waeber; Fritz Knabenhans, and Othmar Bachmann, all of Winterthur, Switzerland, assignors to Maschinenfabrik Rieter AG, Winterthur, Switzerland

Division of Ser. No. 359,495, May 31, 1989. This application Apr. 2, 1990, Ser. No. 503,524

Claims priority, application Switzerland, Jun. 3, 1988, 2121/88

Int. Cl.[5] D01G *9/00, 37/00*

U.S. Cl. 19—66 CC **18 Claims**

1. An apparatus for treating cotton flocks contaminated with honeydew, by the supply of heat, comprising:

a housing provided with a roof;

a substantially tunnel-shaped microwave oven arranged in said housing and provided with an inlet and an outlet;

a conveyor belt made of material absorbing at most relatively little energy and provided for conveying a compressed web of cotton flocks through said tunnel-shaped microwave oven in a predetermined direction;

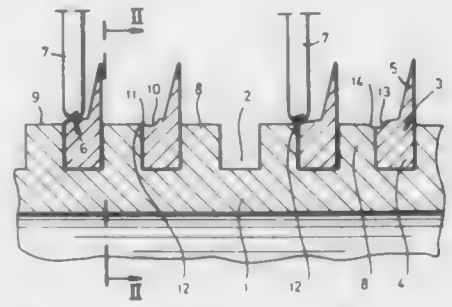
two delivery rolls arranged at said inlet of said tunnel-shaped microwave oven for forming the cotton flocks into said compressed cotton flock web and two delivery rolls at said outlet of said tunnel-shaped microwave oven for supplying said web toward an opening unit;

said conveyor belt being guided around two deflection rolls, one at said inlet and one at said outlet of said tunnel-shaped microwave oven; and

said roof of said housing of said tunnel-shaped microwave oven being structured as an extraction hood.

5,008,979

TEXTILE-FIBER TREATING GROOVED ROLLER AND A WIRE WITH TEETH HAVING A FOOT PORTION INDENTED FOR FORCE-FITTING THE WIRE INTO THE GROOVE AND METHOD OF MAKING SAME



Gangolf Palm, Wegberg; Karl-Heinz Lehmann, and Hans-Joachim Heinemann, both of Mettmann, all of Fed. Rep. of Germany, assignors to Peter Wolters AG, Rendsburg, Fed. Rep. of Germany

Filed Apr. 13, 1989, Ser. No. 337,384

Claims priority, application Fed. Rep. of Germany, Apr. 13, 1988, 3812247

Int. Cl.[5] D01G *15/18, 15/46;* **B21B** *27/02*

U.S. Cl. 19—97 **8 Claims**

1. A roller for the treatment of a textile-fiber mass, the roller comprising:

a steel roller body having a generally cylindrical periphery formed with at least one generally helical outwardly open groove of generally rectangular configuration and having a pair of opposing flanks and a bottom; and

a wire having

a foot portion received in and filling said groove and of generally rectangular cross section, and

a succession of teeth in a sawtooth configuration projecting outward from said foot portion and formed unitarily therewith over substantially the entire length of said wire, said foot portion being indented so as to be deformed to force fit the foot portion in said groove against said flanks.

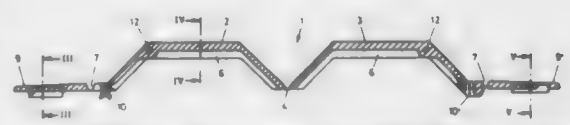
CLOSURE CLIP, ESPECIALLY FOR THE CLOSURE OF BAGS AND A METHOD AND MACHINE FOR APPLYING THE SAME



Arnold Zimmermann, 9, chemin des Chênes, 2072 St.-Blaise, Switzerland

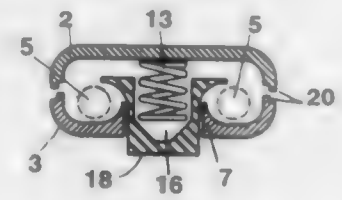
Filed Aug. 24, 1989, Ser. No. 398,223

Claims priority, application Switzerland, Aug. 30, 1988, 3226/88

Int. Cl.[5] B65D *63/00*

U.S. Cl. 24—30.5 R **14 Claims**

1. A closure clip, especially for the closure of bags, comprising a base member with a first and a second leg of plastic material, each of said legs forming a rigid structure having a hinge end and a coupling end portion, said first and second legs being hingedly connected at their hinge ends and provided with first and second snap coupling means, respectively, at their coupling end portions, said coupling end portions with their first and second snap coupling means respectively being integral to said rigid structure of the respective leg whereas



said first and second snap coupling means are manually engageable to each other and manually releasable from each other only by swivelling said legs about their hingedly connected ends, wherein each leg at its coupling end portion is provided with a tongue member extending from said coupling end portion into a direction substantially opposite to said hinge end of the respective leg, each of said tongue members being connected to the respective coupling end portion by means of a web forming a breaking point and wherein said tongue members in a closed state are undetachably connected to each other and are detachable together from said coupling end portions at said breaking point.

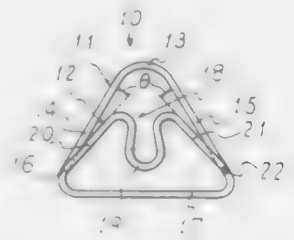
ENCLOSED YOKE CLASP FOR BOLA-STYLE NECKTIE

Joseph P. Smithson, 4020 Douglas St., Farmington, N. Mex. 87401

Filed Dec. 1, 1989, Ser. No. 444,758
Int. Cl.[5] A41D *25/04*
U.S. Cl. 24—49 R **4 Claims**

1. A clasp for holding two cords in generally side-by-side relationship comprising: a hollow shell, a portion of said shell having an integral raised structure defining inside of said raised structure an inner surface forming a central annular opening in said shell portion and having on the outside of said raised structure away from said opening a pair of smooth-surfaced concave channels on opposite sides of the opening, a clamp member having a hollow manually engageable actuating portion extending through said opening, said clamp member having exterior smooth-surfaced splayed cord gripping portions overlying the concave channels, means including a compression spring having one end extending into the hollow actuating portion of the clamp member for resiliently biasing said clamp member to urge said splayed portions toward said channels to grip a cord in each of the channels, and means including a second shell portion overlying said first shell portion for securing both shell portions, said clamp member and said biasing means in an assembled relationship when no cords are in said channels, said shell portions being secured together at their periphery to form a hollow shell, said shell having apertures at the periphery of the shell portions where the cords can enter and leave the clasp, said apertures being located to permit alignment of the cords with said channels, said spring being located between said second shell portion and said clamp member.



5,008,982

CLIP

Tatsusabu Tsukamoto, No.2570 Ohaza Mukaizima, Chiyodamachi, Kanazakigun Saga-Ken, 842, Japan

Continuation of Ser. No. 276,452, filed as PCT JP87/00025 on Jan. 16, 1987, published as WO88/05388 on Jul. 28, 1988, abandoned.
This application Sep. 18, 1990, Ser. No. 584,361
Int. Cl.[5] A44B *1/04*
U.S. Cl. 24—67.9 **20 Claims**

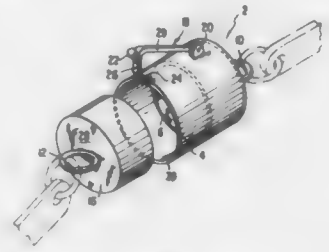
1. A clip comprising:
a first clamping member having a first leg and a second leg, the first leg and the second leg being connected at one end;
a second clamping member having a first leg and a second leg, the first leg and the second leg being connected at one end and diverging therefrom;
said first clamping member and said second clamping member being connected, said second clamping member superposed on said first clamping member to form a clip; and
at least one of the legs of said first clamping member overlapping the respective leg of said second clamping member, said at least one leg terminating short of a respective end of said respective leg of said second clamping member and defining an acute angle therewith for allowing facile superpositioning of the second clamping member on the first clamping member

5,008,983

PORTABLE CLEAT

Ralph C. Heins, 1313 E. Bayview Dr., Tempe, Ariz. 85[illegible]3

Filed Dec. 18, 1989, Ser. No. 451,801
Int. Cl.[5] A44B *1/04*
U.S. Cl. 24—131 C **6 Claims**



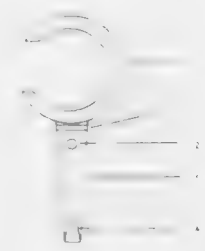
1. A portable cleat adapted for use in rigging and securing objects with a line, said portable cleat comprising in combination:
an elongate primary connector element having a principal axis and opposed ends;
a first secondary connector element rigidly attached to said primary connector element at one of said primary connector element ends at a predetermined location on said first secondary connector element and a second secondary connector element rigidly attached to said primary connector element at the other of said primary connector ends at a predetermined location on said second secondary connector element, said secondary connector elements each including arms extending in generally opposed directions away from the predetermined location thereof and each of said arms of each secondary connector element having a distal end spaced from the distal end of said other arm thereof, said arms being angularly disposed relative to said primary connector element principal axis whereby one of the arms of each secondary connector element defines an acute angle with said principal axis adjacent to said predetermined location and the other of the arms of each secondary connector element defines an obtuse angle with said principal axis adjacent to said predetermined location, one of said secondary connector elements being engageable by said line adjacent the predetermined location thereof and about the arm thereof defining an obtuse angle with said principal axis, said portable cleat and said line cooperable to exert a pulling force at the other of said secondary connector elements when said line is looped about the arm engaged thereby and pulled taut and away from said other secondary connector element, said secondary connector element arms being angularly disposed relative to said primary connector element principal axis with the defined acute angles both being on one side of the primary connector element principal axis and the defined obtuse angles being on an opposed side of the primary connector element principal axis whereby arms generally converge on said one side and generally diverge on said generally opposed side.

5,008,984

MAGNETIC JEWELRY CLOSURE WITH CLIP

Davida Levy, 1340 Biscaya Dr., Surfside, Fla. 33154

Filed Jun. 12, 1990, Ser. No. 536,777
Int. Cl.[5] A44B *11/25*
U.S. Cl. 24—303 **12 Claims**



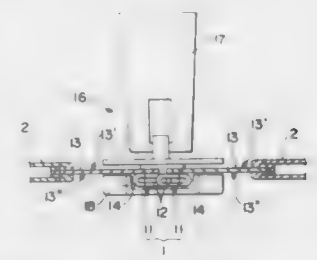
1. A jewelry closure comprising:
first and second closure members for engaging together wherein at least one of said closure members comprises a magnet;
casing means for supporting said first closure member and extending outwardly for supporting said second closure member; and
means located on said casing means for engaging adjacent an outer end surface of said second closure member when said second closure member is held by magnetic attraction to said first closure member, said engaging means comprising an elongated member having a first end hinged to said casing means and a second end which lies adjacent said outer end surface of said second closure member when said jewelry closure is in secured position, wherein said hinged means is engaged with a protrusion on said casing means when said jewelry closure is in secured position;
whereby said closure members cannot be separated from magnetic engagement with each other until after said engaging means is released from its position adjacent said second closure member.

5,008,985

ZIPPER SECURING DEVICE

Allister W. Thompson, #1105-1100 Harwood St., Vancouver, B.C., Canada V6E-1R7

Filed Dec. 15, 1987, Ser. No. 133,871
Int. Cl.[5] A44B *19/26, 13/00*
U.S. Cl. 24—370 **1 Claim**



1. An integral one piece zipper pull tab securing device comprising; a circular clip 1 open at one end thereof which can be sprung around a button as a means of attaching said securing device to the material in which the zipper is fitted and a hook means connected to the other end thereof for engagement with the zipper pull tab for securing the zipper in the closed position, a tapered flat connecting member as a means for joining the circular clip 1 to the hook means, an eyelet means in said connecting member for connecting said member to the material in which the zipper is fitted by sewing and a transverse indentation means extending across the outer surface of said connecting member and located adjacent to the buttton engaging clip 1 providing a weakened area to allow a means of seperation between the circular clip 1 and the connecting member, said connecting member being of sufficient length so that said clip 1 can be engaged with said button when the zipper is in the closed position.

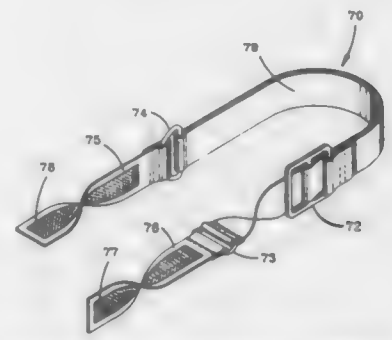
SLIDE FASTENER FOR CLOTHING AND SHOES

Jean-Luc Laudet, Poisy, and Pierre Rullier, Annecy, both of France, assignors to Salomon S.A., Annecy Cedex, France

PCT No. PCT/FR89/00302, § 371 Date Feb. 9, 1990, § 102(e) Date Feb. 9, 1990, PCT Pub. No. WO89/12408, PCT Pub. Date Dec. 28, 1989
PCT Filed Jun. 15, 1989, Ser. No. 460,971
Claims priority, application France, May 12, 1989, 89 06753; Jun. 17, 1989, 88 08405
Int. Cl.[5] A44B *19/32*
U.S. Cl. 24—289 **14 Claims**



1. A slide fastener for uniting edges of two elements in a sealing relationship, each said element including an interior and exterior side, said slide fastener comprising:
(a) two support tapes, each support tape being on a respective element, each support tape having an interior and exterior side and a respective border;
(b) two chains of teeth, each chain of teeth being connected only to the interior side of a respective support tape; and
(c) a slide including a linkage tunnel and a tab, said linkage tunnel being positioned on the interior side of said support tapes, said pull tab extending from said linkage tunnel to the exterior side of said support tapes.

5,008,987

MULTI-PURPOSE FASTENING DEVICE

Thomas W. Armour, II, 645 Isle View Dr., Akron, Ohio 44319

Filed Jan. 12, 1990, Ser. No. 464,300
Int. Cl.[5] A44B *18/00*
U.S. Cl. 24—442 **2 Claims**

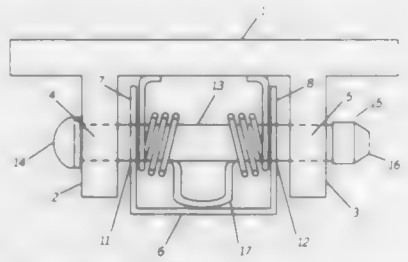
1. A multi-purpose fastening device comprising:
a first and second elongated carrier strip, each strip having a first end and a second end and a first and a second surface;

said first end of each carrier strip defines an aperture through its width and each strip further comprising a ring connected to said strip such that an arc of said ring passes through said aperture,

a web of material having two ends, each end being connected to the first end of one of said elongated carrier strips using a connecting means; and

a means for removably engaging said first elongated strip to said second elongated strip comprising at least a first hook and loop type engaging element affixed to at least one surface of said first carrier strip and at least a second hook and loop type engaging element affixed to at least one surface of said second carrier strip and opposing the surface of the first hook and loop type engaging element affixed to said first carrier strip so that said first and second strips lockably engage upon contact.

5,008,988



CLIP ASSEMBLY

Virgil F. Kuhl, Lauderhill, and Guenter Noll, Ft. Lauderdale, both of Fla., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Sep. 20, 1989, Ser. No. 409,857

Int. Cl.[5] A44B *21/00*

U.S. Cl. 24—510 **6 Claims**

1 A clip assesmbly comprising:

a clip, having at least two resiliently expandable holes therein;

a bracket, having at least two resiliently expandable holes for alignment with said holes in said clip;

a spring for biasing said clip towards said bracket;

a pin positioned through said holes for pivotally securing said bracket to said clip, said pin having a head that is passed through said holes, said head being intergrally connected to said pin and having a diameter that is greater than at least one of said holes for retaining the assembly, said pin having a second head integrally connected to said pin and having a diameter greater than the holes in the clip and bracket.

5,008,989

SAFETY BELT BUCKLE

Peter Wedler, Bütlingen, and Peter Eckmann, Hamburg, both of Fed. Rep. of Germany, assignors to Autoflug GmbH & Co. Fahrzeugtechnik, Rellingen, Fed. Rep. of Germany

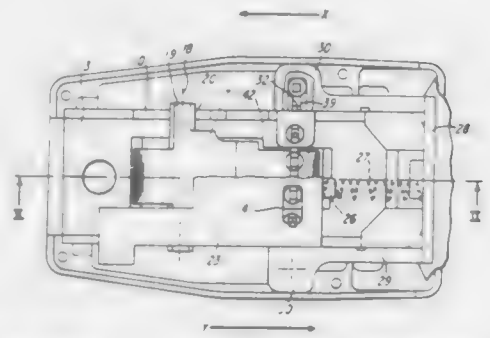
Filed Sep. 29, 1989, Ser. No. 415,026

Claims priority, application Fed. Rep. of Germany, Oct. 1, 1988, 3833483

Int. Cl.[5] A44B *11/26*

U.S. Cl. 24—641 **17 Claims**

1. A buckle for receiving and locking an insertable tongue of a safety belt, comprising:



a housing in which is provided an insertion path for said insertable tongue;

a spring-loaded ejector;

a pivotably mounted locking element that, in a locked position, engages a recess of said tongue;

securing member means movably mounted in said housing and serving for securing said locking element in said locked position thereof; and

a slidable actuator that is guided in said housing transverse to a plane of movement of said locking element and serves to release same, with said locking element, to protect it from acceleration shocks, cooperating with counterweight means guided in said housing, whereby said counterweight means cooperates with said securing member means to prevent release of said locking element in response to acceleration forces that act on buckle parts.

said slidable actuator and said counterweight means being disposed in said housing in such a way that they are spaced from one another and act upon respective portions of said securing member means for urging the same in opposite directions, with said slidable actuator and said counterweight means each being coupled with said securing member means in an interlocking manner.

HARDWARE FOR MOUNTING A CASKET HANDLE BAR

William K. Craft, North Bend, Ohio, assignor to Batesville Casket Company, Inc., Batesville, Ind.

Filed Mar. 29, 1990, Ser. No. 501,015

Int. Cl.[5] A61G *17/00*

U.S. Cl. 27—2 **8 Claims**

1. In a casket having a metal shell, a hardware assembly comprising:

a block fixed to said shell,

a fixed handle bar mount mounted over said block, said bar mount having laterally, horizontally-projecting trunnions,

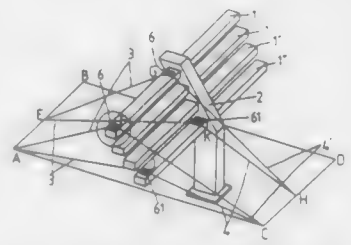
a horizontal bar, a pair of arms slidable on said bar, each said arm having a hole to receive a trunnion,

and means to fix each said arm on said bar after it receives said trunnion.

5,008,991

DEVICE AND PROCESS FOR INTERMINGLING A BUNDLE OF THREADS USING A TURBULENT AIR STREAM

Andreas Lachenmeier, Widnau, Switzerland, assignor to Viscosuisse S.A., Emmenbrucke, Switzerland



PCT No. PCT/CH88/00170, § 371 Date May 24, 1989, § 102(e) Date May 24, 1989, PCT Pub. No. WO89/02942, PCT Pub. Date Apr. 6, 1989

PCT Filed Sep. 23, 1988, Ser. No. 362,388

Claims priority, application Switzerland, Sep. 30, 1987, 3793/87

Int. Cl.[5] D02J *1/08;* **D02G** *1/16*

U.S. Cl. 28—271 **20 Claims**

1 Device for intermingling a wet bundle of threads composed of smooth multifilaments in a turbulent air stream, including a nozzle body with transverse U-shaped thread channels, each thread channel having an inlet part, an outlet part, and a turbulence part therebetween, said turbulence part having a length in the direction of thread movement and a diameter transverse thereto, said length being greater than said diameter, said turbulence part having a centered compressed air inlet, the diameter of the inlet part and the outlet part being smaller than the diameter of the turbulence part.

5,008,992

METHOD OF PRODUCING A BULKED COMPOSITE YARN

Bernd Gehrmann, Schwelm, and Heinz Treptow, Ennepetal-Milspe, both of Fed. Rep. of Germany, assignors to Barmag AG, Remscheid, Fed. Rep. of Germany

Filed Oct. 12, 1989, Ser. No. 420,571

Claims priority, application Fed. Rep. of Germany, Oct. 15, 1988, 3835138; Dec. 10, 1988, 3841740

Int. Cl.[5] D02G *1/20*

U.S. Cl. 28—271 **26 Claims**

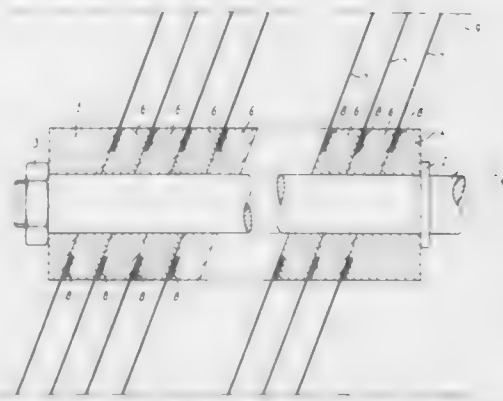
1. A method for combining a relatively elastic yarn component with a relatively inelastic yarn component composed of yarn filaments, and so as to produce a bulked composite yarn, and comprising the steps of,

advancing each of the yarn components along respective paths of travel, and including withdrawing the elastic yarn component from a supply package, while

spreading the filaments of the advancing inelastic yarn component, and then

guiding the advancing components through a jet of high velocity fluid so that the jet impinges on the two components and entangles the filaments and combines the two yarn components to form a composite yarn, and wherein the speed of the resulting composite yarn immediately following its being guided through said jet of high velocity fluid is substantially greater than the speed at which the elastic yarn component is withdrawn from its supply package.

5,008,993



METHOD OF MAKING SURFACE FINISHING ROLLERS AS WELL AS A ROLLER MADE THEREBY

Bent Malherbe, Espergaerde, Denmark, assignor to Sony Corporation, Tokyo, Japan

Filed May 23, 1990, Ser. No. 527,386

Int. Cl.[5] B24B *9/02*

U.S. Cl. 29—125 **7 Claims**

1. A method of making surface finishing or polishing rollers comprising disk-shaped surface finishing elements mounted successively on a spindle rotating in operation, each of said surface finishing elements being formed of a slitted, preferably rectangular sheet which has a portion of material continuous in one direction with lamellae protruding perpendicularly therefrom, characterized in that the slitted sheet is shape-fixed with binder by arranging the portion of material continuous in one direction over an oval mandrel where the periphery of the protruding lamellae therein forms an ellipse, and that a plurality of surface finishing elements, each comprising an oval disk with lamellae, are mounted inclined on the shaft of the spindle so that the contour of the successively mounted surface finishing elements is cylindrical in the axial direction of the spindle.

5,008,994

APPARATUS AND METHOD FOR FITTING A PROTECTIVE BOOT PARTICULARLY FOR ARTICULATED JOINT ASSEMBLIES

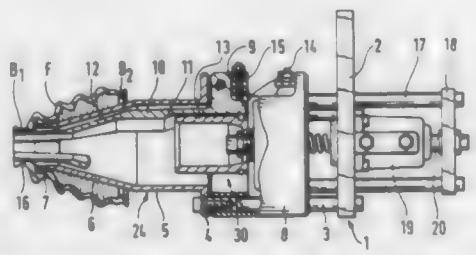
Helmut Rettig; Karl Weiss, both of St. Augustin, and Erich Buss, Cologne, all of Fed. Rep. of Germany, assignors to Uni-Cardan Aktiengesellschaft

Division of Ser. No. 7,784, Jan. 28, 1987, Pat. No. 4,815,187. This application Nov. 18, 1988, Ser. No. 273,665

Claims priority, application Fed. Rep. of Germany, Jan. 31, 1986, 3602867

Int. Cl.[5] B23P *19/04*

U.S. Cl. 29—235 **7 Claims**



1. A device for fitting a protective boot to a shaft member particularly in a universal joint, said boot having a first collar for fitting to said shaft member, and a second collar, said device comprising in combination:

an expanding device for expanding said first collar of said

boot, said expanded device having a receiving region capable of being placed in a first untensioned position and in a second tensioned position, said receiving region, when in said first position, having a circular cross section with a diameter smaller than an inner diameter of said first collar and, when in said second tensioned position, having a circular cross section with a diameter which is larger than an outer diameter of said shaft member, said expanding device being provided with a plurality of levers having receiving regions formed by segments of a cylindrical member, said levers incorporating the receiving region forming a cylinder, a transition area in total forming a cone and a base area which is cylindrical and encloses an expanding member;

a stripping device axially movable relative to said expanding device and having an inner diameter corresponding to an outer diameter of said expanding device in said second tensioned position, said stripping device being movable to a first position at which it leaves said receiving region of said expanding device radially freely accessible and to a second position at which it surrounds at least partially circumferentially said receiving region along the entire length of the receiving region;

a holding device for said shaft member;

a feeding device which effects axial relative movement between said holding device and said expanding device and between said holding device and said stripping device, said feeding device being movable to a first position at which it provides an axial distance between said shaft member and said receiving region to permit mounting of said boot on said receiving region, and to a second position at which it holds said expanding device together with said first collar slipped onto said receiving region in an axial association relative to said shaft member; and

a slide frame connected to an axially movable part of said feeding device, said slide frame receiving said expanding device and said stripping device, said slide frame being provided with a base plate, several stay bolts as well as an annular disc on which the expanding device is firmly supported, wherein a bearing housing for the levers of the expanding device is guided by guiding rods in said base plate, an adjusted cylinder for the stripping device being arranged between a head plate of said guiding rods and said base plate, and said bearing housing for the levers of the expanding device receiving said expanding member for expanding said receiving region of the expanding device.

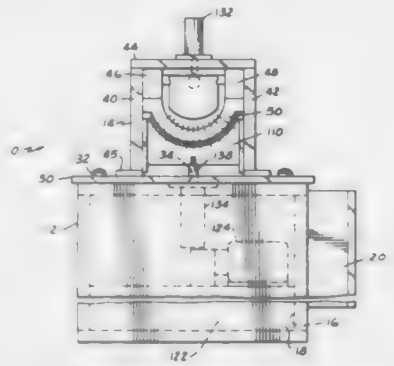
5,008,995

BRAKE SHOE RIVET PRESS

Bruce R. Johnson, Muskegon, Mich., assignor to Muskegon Automation Equipment, Inc., Muskegon Heights, Mich.

Filed Jul. 2, 1990, Ser. No. 547,829
Int. Cl.[5] B23P *19/04*
U.S. Cl. 29—252 **10 Claims**

1. A brake shoe rivet press for removing in a single operation rivets arranged in rows to hold a liner to the base of a brake shoe to thereby permit removal and later replacement of the liner thereon, comprising:



a frame;

a punch holder fixedly carried by said frame and having a plurality of movable punches arranged in rows;

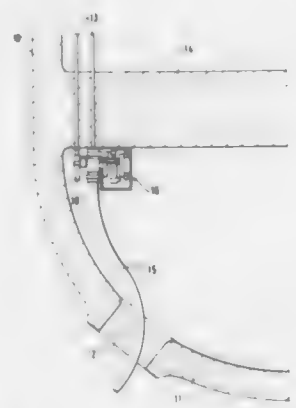
upper and lower rams movably carried by said frame on opposite sides of said punch holder;

said lower ram having a support surface for positioning and supporting the brake shoe and further including a plurality of openings arranged in rows for receiving the spent rivets;

said upper ram having an operating surface, which, when the upper ram is actuated, engages the punches so as to

urge them against the rivets to remove them from the brake shoe in a single operation;

said upper ram includes one or more holes in said operation surface to receive and thereby permit the corresponding punch or punches not to be engaged when said upper ram is activated; and



said upper ram includes a hydraulic cylinder for adjusting the horizontal position of said upper ram with respect to the punch holder to selectively align said holes with said punches.

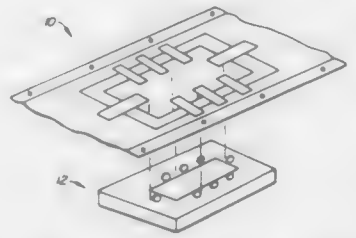
5,008,996

MACHINE FOR REMOTELY LINING THE INSIDE OF A HEAT EXCHANGER TUBE END WITH A SLEEVE

Christian Bonnand, Bachy; Dominique Mascart, Toufflers, and Philippe Druelle, Gournay-sur-Marne, all of France, assignors to Stein Industrie, Velizy-Villacoublay and Electricte de France, Paris, both of, France

Filed Apr. 25, 1989, Ser. No. 342,826
Claims priority, application France, Apr. 25, 1988, 88 05448
Int. Cl.[5] B23P *15/26*
U.S. Cl. 29—727 **15 Claims**

1. A machine for remotely lining the inside of a heat exchanger tube end with a sleeve within a heat exchanger, said heat exchanger comprising a tube plate supporting a plurality of tubes, each tube having a tube end, each said tube end being mounted in said tube plate of said heat exchanger with a water box being disposed beneath the tube plate, the water box being



accessible from the outside via a manhole, the machine operating by a method including inserting a sleeve into each tube end, diametrically expanding the sleeve in a zone inside the tube plate and in a zone beyond the tube plate, then expanding the sleeve by rolling and then welding the sleeve in each of the expansion zones, said machine comprising a push-pull device outside the water box, with a flexible tube connecting the push-pull device to a motorized unit driving sleeve-fixing tools, a tool loader at a head of a cable driven by the push-pull device, and means for bringing an end of the flexible tube level with the tube end of each of said tubes in succession, and wherein the motorized unit for driving the tools comprises two superposed fluted hubs one hub being driven by a low speed electric motor and the other hub being driven by a pneumatic motor having a high speed of rotation.

5,008,997

GOLD/TIN EUTECTIC BONDING FOR TAPE AUTOMATED BONDING PROCESS

William S. Phy, Los Altos Hills, Calif., assignor to National Semiconductor, Santa Clara, Calif.

Continuation of Ser. No. 245,864, Sep. 16, 1988, abandoned. This application Nov. 28, 1989, Ser. No. 443,011
Int. Cl.[5] B23K *31/02*; **H01L** *23/48, 29/54*
U.S. Cl. 29—827 **14 Claims**

1. A tape automated bonding method of bonding copper beam leads of lead frame tape to gold die bumps formed on contract pads of a semiconductor device, wherein the tape includes a plurality of interconnected beam leads defined by at least one opening in the tape such that each beam lead has an inner end and an outer end, the method comprising:

depositing a gold layer on the copper beam leads;

masking a region of each beam lead from further deposition of material such that a predetermined portion of each beam lead is exposed for further deposition of material;

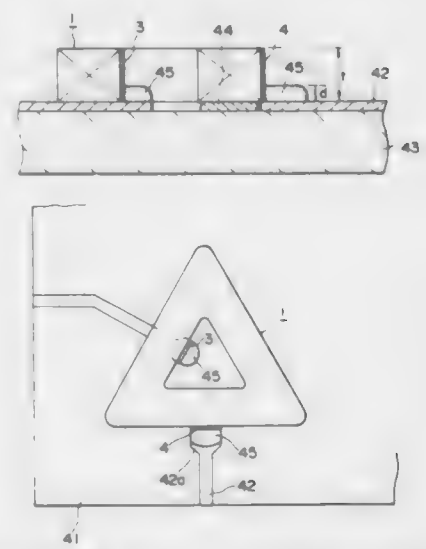
depositing by sputtering or vapor deposition a predetermined amount of tin layer on the gold layer on the exposed portion of each beam lead;

establishing contact between the tin layer on each beam lead and a gold die bump to which each beam lead is to be bonded after the tin layer has been deposited on said beam lead; and

applying to the contact between each lead and die bump a predetermined amount of pressure and heat, thereby forming a bond between each beam lead and the die bump to which the beam lead is to be bonded such that the bond formed includes a primary eutectic of the combination of tin and gold with substantially no pure tin in contact with the copper beam lead.

5,008,998

METHOD OF MOUNTING FLAT COIL



Shigetaka Higuchi; Isao Noguchi, and Tohru Odashima, all of Tochigi, Japan, assignors to Sony Corporation, Tokyo, Japan

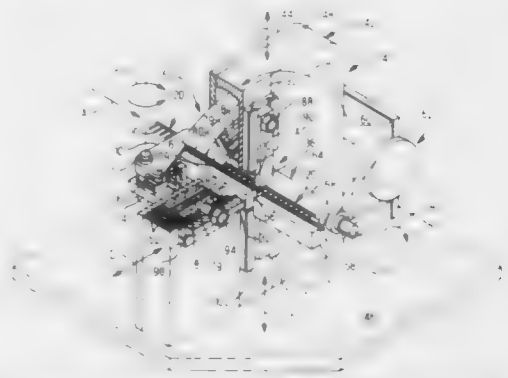
Filed Nov. 22, 1989, Ser. No. 440,251
Claims priority, application Japan, Dec. 5, 1988, 63-307535
Int. Cl.[5] C23C *26/00*
U.S. Cl. 29—840 **5 Claims**

1. A method of mounting a flat coil, comprising the steps of: forming, at a first end portion and a last end portion of a flat coil which is formed by winding an insulator layer and a metal foil sheet in layers, a pair of terminal portions each composed of a layer of solder and extending over the full extent of an axial length of said flat coil;

preparing a circuit board which has formed thereon a conductor pattern which has connecting faces for connection to said terminal portions of said flat coil;

coating solder material on said connecting faces of said conductor pattern;

disposing said flat coil on said circuit board such that said terminal portions thereof are opposed in a perpendicular relationship to said connecting faces of said conductor pattern; and



heat processing said solder material to cause said solder material to adhere to faces of said terminal portions over the entire extent of the axial length of said flat coil to interconnect said connecting faces of said conductor pattern and said terminal portions of said flat coil.

5,008,999

METHOD OF ASSEMBLING COMPONENTS TO ELECTRICAL TERMINALS

Robert S. Correll, Jr., Harrisburg, and David D. Wiltraut, Hershey, both of Pa., assignors to AMP Incorporated, Harrisburg, Pa.

Filed Mar. 29, 1990, Ser. No. 502,082
Int. Cl.[5] H01R *43/04*
U.S. Cl. 29—882 **9 Claims**

1. A method of assembling components to electrical terminals connected together in side by side spaced relationship by means of a carrier strip, the method comprising the steps of:

(a) feeding the carrier strip lengthwise thereof through a

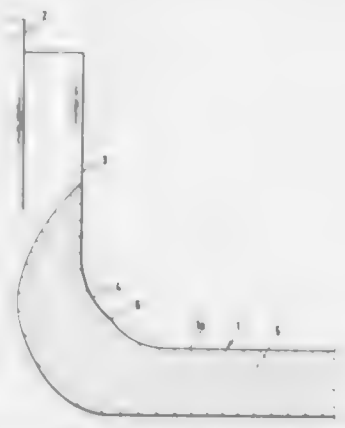
component assembly station along a feed path to position a first terminal of the carrier strip at the assembly station;
(b) advancing a shuttle having a first component located at a first position thereon, to align that component with said first terminal at the assembly station, whilst placing a second component on the shuttle at a second position spaced from said first position;
(c) transferring said first component from the shuttle onto said first terminal to assemble said first component thereto;
(d) feeding the carrier strip lengthwise thereof along said feed path by a second step to position a second terminal of the carrier strip at the assembly station.
(e) retracting the shuttle to align said second component with said second terminal, whilst placing a further component on the shuttle at said first position thereon;
(f) transferring said second component from the shuttle onto the second terminal to assemble the second component thereto; and
(g) repeating steps (a) to (c) in respect of the further component.

5,009,000

METHOD FOR MAKING SUCKER ROD OIL WELL PUMP

Thomas S. Wilmeth, Daingerfield; Steven L. Wilmeth, Longview, and Francis E. Foster, Daingerfield, all of Tex., assignors to Scot Industries, Inc., Lone Star, Tex.

Division of Ser. No. 167,911, Sep. 28, 1988, abandoned. This application Jul. 19, 1989, Ser. No. 383,019
Int. Cl.[5] C21D *1//10*
U.S. Cl. 29—888.02 **7 Claims**



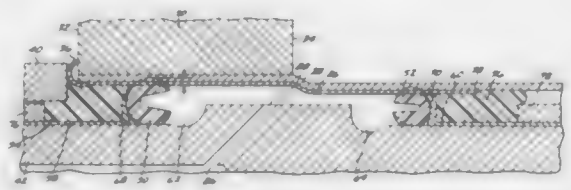
1. A method of constructing portions of a sucker rod pump for a well, comprising in combination:
providing a steel plunger with an exterior cylindrical wall;
forming a plurality of spaced apart circumferential grooves in the exterior cylindrical wall; then
forming a boronized case on the exterior cylindrical wall; then
passing the plunger through an induction heater coil to heat a selected depth of the exterior cylindrical wall for hardening; and
immediately quenching the exterior cylindrical wall by spraying with a liquid to harden a layer of the steel below the boronized case for supporting the boronized case;
providing a barrel with a cylindrical bore; and
forming a chromium case on the bore to a selected depth for receiving the plunger in sliding contact.

5,009,001

METHOD OF INCREASING THE FATIGUE STRENGTH OF CRANKSHAFTS

Gerhard Deachler, Nuremberg, Fed. Rep. of Germany, assignor to MAN Nutzfahrzeuge Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed May 18, 1990, Ser. No. 525,474
Claims priority, application Fed. Rep. of Germany, May 19, 1989, 3916421
Int. Cl.[5] F16C *3/10*
U.S. Cl. 29—888.08 **3 Claims**



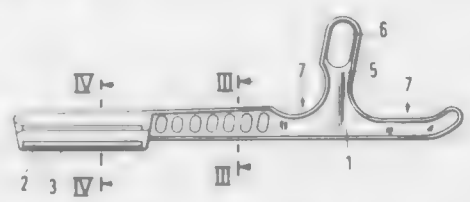
1. In a method of increasing the fatigue strength of crankshafts for reciprocating engines, especially internal combustion engines, including the step of subjecting the transition radii from a crankshaft pin to adjacent crank webs to a special treatment, the improvement comprising the steps of:
finishing the surface, starting from a blend edge, between a bearing point and transition radius, and proceeding to the end of a butting collar, to a peak-to-valley height of greater than 6.3 μm; and
effecting hardening in the region of said transition radii to a hardening zone depth of 2 to 3 mm.

5,009,002

METHOD FOR RADIALLY EXPANDING AND ANCHORING SLEEVES WITHIN TUBES

John W. Kelly, La Canada, Calif., assignor to Haskel, Inc., Burbank, Calif.

Filed Jan. 11, 1990, Ser. No. 463,367
Int. Cl.[5] B23D *15/26*
U.S. Cl. 29—890.031 **18 Claims**



12. A method for radially expanding and anchoring a sleeve within a tube, which is contained within a bore in a surrounding structure having a primary side and a secondary side but extends axially beyond the secondary side of said structure, so as to repair a defective area of said tube and form a tight and substantially leakproof joint between said tube and sleeve, said method comprising the steps of:
inserting said sleeve within said tube from the primary side of said structure so that said sleeve extends axially beyond the secondary side of said structure;
inserting a hydraulic expanding mandrel having an elongated body with two axially separated seals within said sleeve so that said mandrel and said sleeve together define a substantially annular hydraulic pressure zone situated between said sleeve, said body and said seals with a certain portion of said pressure zone being situated beyond said secondary side, said mandrel having a passage for conveying pressurized fluid to said pressure zone;
causing a first pressurized fluid from a fluid source to be supplied to a hydraulic swaging control system, said fluid source further containing a second fluid, said control system including,
a first pump which is linked to said fluid source and to said passage and which pressurizes said second fluid upon being driven by said first fluid,
a second pump which is linked to said fluid source and to said passage and which pressurizes said second fluid upon being driven by said first fluid, and
fluid control means, linked to said fluid source and driven by said first fluid, for selectively activating said second pump and controlling the total volume of said second fluid pressurized by said second pump through application of fluid stroke signals to said second pump, said fluid control means further being responsive to the pressure at which said second fluid is pressurized by said first pump,
activating said first pump;
introducing a first supply of pressurized fluid, which is produced by said first pump, into said pressure zone through said passage until said first supply reaches a predetermined pressure which is above the radial yield point of said sleeve but below the aggregate radial yield point of said sleeve and said tube, whereby said sleeve pre-expands into said tube substantially radially throughout said pressure zone;
activating said second pump by means of said fluid control means when said predetermined pressure of said first supply is above said yield point but below said aggregate yield point; and
introducing a predetermined aggregate volume of a second supply of pressurized fluid, which is produced by said pump, into said pressure zone through said passage at a predetermined maximum pressure which is above said aggregate yield point, whereby said sleeve further expands substantially radially throughout the area of said pressure zone that is situated axially beyond said secondary side and said tube expands substantially radially along with said sleeve.

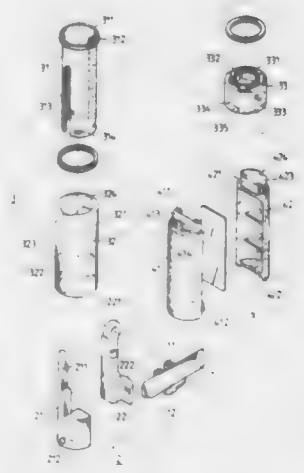
RAZOR

Kenneth Grange, London, England, assignor to Wilkinson Sword Gesellschaft mit beschränkter Haftung, Solingen, Fed. Rep. of Germany

Filed Aug. 31, 1989, Ser. No. 400,660
Claims priority, application Fed. Rep. of Germany, Sep. 3, 1988, 8811140
Int. Cl.[5] B26B *19/00, 21/10*
U.S. Cl. 30—30 **7 Claims**



1. In a razor comprising an elongated handle which has a front end and a rear end, at said front end of which is disposed a razor blade having a cutting edge, and also comprising, on that side of said handle opposite said cutting edge of said razor blade, in the vicinity of but spaced from said rear end of said handle, a projecting handle extension, the improvement wherein:
said handle extension is embodied as a short stub extension that is fixedly disposed on said handle, with said stub extension being integral with said handle and being provided with an opening, whereby depression means that extend in the longitudinal direction of said elongated handle are disposed on at least one side of said stub extension; and
said handle has a double T profile.

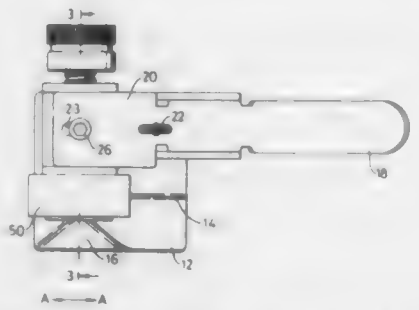
5,009,004

FOLDABLE RAZOR ASSEMBLY

Lung-Wu Yen, No. 28, Ming Cheng Street, San Ming Area, Kao Hsiung City, Taiwan

Filed Aug. 2, 1990, Ser. No. 562,557
Int. Cl.[5] B26B *21/00, 21/14*
U.S. Cl. 30—47 **3 Claims**

1. A foldable razor assembly essentially comprising a blade support (1) substantially T-shaped having a horizontal plate for installing a blade, the rear surface thereof being provided with a protruding element (11) and a guide slot (12) for engagement;
a shaft means (2) consisting of a first mounting element (21) and a second mounting element (22) which are mounted to each other, a pimple (212) being provided at the top end of the first mounting element (21) for engagement with the guide slot (12) of said blade support (1), an aperture (221) being provided at the top end of the second mounting element (22) for the engagement with the protruded element (11) of the blade support (1), the bottom end of the shaft means (2) being circular and used for the engagement with a handle means (3), a pair of pimples (212) (222) being provided oppositely along the lower end of said shaft means (3);
said handle means (3) consisting of an inner cylinder (31), an outer cylinder (32) and a cylinder recess (33), said inner cylinder (31) having a hollow center which can be used to adapt said shaft means (2), the upper end thereof being provided with a round edge (311), along the surface of said inner cylinder (31), a low vertical slot (313) and a high vertical slot (312) in opposite position being provided, at the bottom end of said inner cylinder (31), a plurality of fixing holes (314) being provided for engagement, the outer cylinder (32) having a hollow center which is be used to adapt said inner cylinder (31), the interior wall of the external cylinder (32) being provided with a high spiral slot (321) and a low spiral slot (322), at the top end of said high spiral slot (321), a short horizontal slot (323) being provided and a long horizontal slot (324) being provided at the top end of said low spiral slot (322), the difference in distance between the two horizontal slots (324) (323) being equal to the tangent of the difference in distance between the height of the two spiral slots (321) (322),
the cylinder recess (33) being mounted at the bottom of said



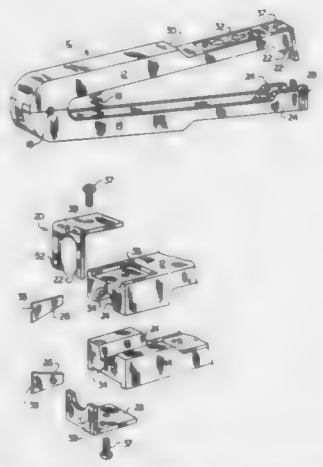
handle means (3) with arch shaped structure (331) mounted along the top section of said cylinder recess (33), a depression being formed by the arch shape structure (331) and the interior wall of said cylinder recess (33) for the insertion of said inner cylinder (31), the external wall of the arch-shaped structure being provided with a plurality of fixing protrusions (332) for engagement.

5,009,005

CABLE STRIPPER

Zdzislaw Bieganski, "Brushwood", Kinsbourne Green, Harpenden Hertfordshire, United Kingdom

Filed Dec. 14, 1989, Ser. No. 451,114
Int. Cl.[5] B26B *27/00*; B21F *13/00*; B23D *21/06*; H02G *1/12*
U.S. Cl. 30—90.6 8 Claims



1 A cable stripping tool comprising a pair of jaws; means coupling said jaws for rocking movements about a pivot axis, one of said jaws having therein a cable-receiving groove having a longitudinal axis parallel to said pivot axis; a cutter having a cutting point; and means mounting said cutter on the other of said jaws for adjustment to a position in which said cutting point lies in a single plane coincident with said longitudinal axis and parallel to said pivot axis in any selected pivotally adjusted position of said jaws.

5,009,006

CABLE STRIPPING TOOL

Alan G. Sawyer, 6346 Beulah Church Rd., Liberty, N.C. 27298; Dale L. Hughes, 1505 McCuiston Dr., Burlington, N.C. 27215, and Edwyn H. Petree, Burlington, N.C., assignors to Alan G. Sawyer, Liberty and Dale L. Hughes, Burlington, both of, N.C.

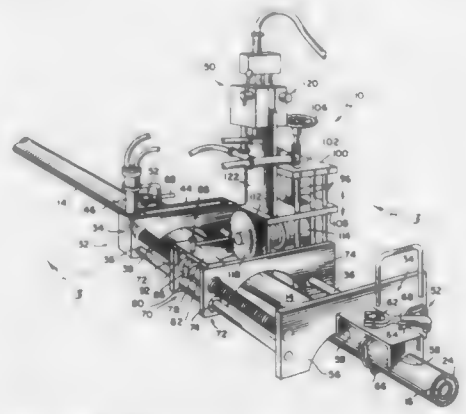
Filed Aug. 28, 1989, Ser. No. 399,744
Int. Cl.[5] H02G *1/12*
U.S. Cl. 30—90.6 17 Claims

1. A hand tool for stripping insulation or sheathing from a cable having at least one conductor, comprising:

(a) a pair of jaws adapted to move from an open position to a closed position;

(b) a pair of oppositely mounted cutting blades, said blades being mounted to said jaws along the longitudinal axis of the cable and adjacent to the cable, said blades being adapted to make longitudinal cuts in the insulation or sheathing of the cable when said pair of jaws are in said closed position;

(c) a pair of opposed, substantially rigidly mounted cutting blades, said blades being mounted at a predetermined distance with respect to one another; and



(d) means for moving said pair of opposed, substantially rigidly mounted cutting blades from an open position to a position where said blades are moved in a tangential path, contacting opposite sides of the cable, continuing through at least a portion thereof of the insulation or sheathing, and passing clear of the cable, thereby scoring the insulation or sheathing on opposite sides; whereby the insulation or sheathing can be removed from the cable.

5,009,007

WINDOW CUTTER FOR GAS SERVICE TIE OVERS

Luther W. Martin, 1221 Julie Dr., Champaign, Ill. 61821, and Richard L. Smith, R.R. 2 - Box 82A, Edwardsville, Ill. 62025

Filed Oct. 23, 1989, Ser. No. 425,101
Int. Cl.[5] B22B *5/00*
U.S. Cl. 30—92 10 Claims

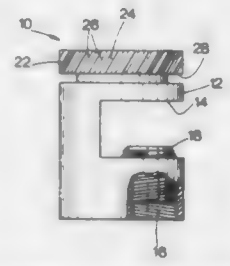
1. A pipe slitter comprising a base for fixing the slitter to a pipe to be slit thereby, the base comprising a pair of end plates for mounting transversely of the pipe and a pair of connecting rods for coupling the end plates to each other, the connecting rods extending longitudinally of the pipe, a carriage for supporting a slitter blade, means for movably supporting the carriage on the base for movement longitudinally of the pipe, and means for movably supporting the slitter blade on the carriage for movement transversely of the pipe.

5,009,008

THUMB ACTUATOR FOR FOLDING KNIFE

Max Yablonovitch, Dollard-des-Ormeaux, Canada, assignor to Y.B. Technology, Canada

Filed Oct. 16, 1989, Ser. No. 421,647
Int. Cl.[5] B26B *3/06, 13/00, 1/00*
U.S. Cl. 30—158 11 Claims



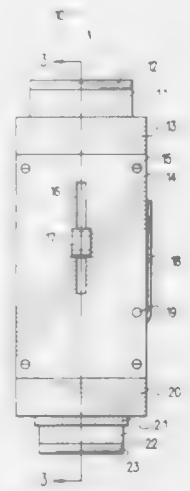
1. An attachment for a folding knife of the type comprising a blade pivotally mounted to a handle for movement between opened and closed positions, said attachment comprising:

a body;

a recess in said body for receiving therein an edge of said blade;

a screw threadedly engaged in said body capable of protruding in said recess for engaging said blade to lock said body to said blade; and

a curved finger engaging surface on said body allowing said blade to pivot from said closed position to said open position with one hand by exerting finger pressure on said finger engaging surface while holding said handle.



5,009,009

SCRAPING TOOL

Robert A. Stinson, Box 107 Greenbriar Acres, Wise, Va. 24293

Filed Jul. 19, 1989, Ser. No. 381,802
Int. Cl.[5] B26B *3/00*
U.S. Cl. 30—172 15 Claims

11. A scraping tool, comprising:

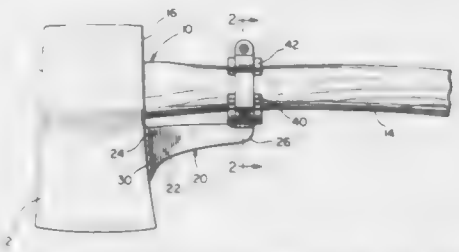
an elongated housing having first and second opposite ends;

a first scraping blade mounted for selective extension and retraction through said first housing end;

a second scraping blade mounted for selective extension and retraction through said second housing end;

locking means for securing said first and second blades in a selected adjusted position; and

a paint can opening bar mounted for pivotal movement between open and closed positions in an elongated recess formed in a side wall portion of said housing.



5,009,010

AXE HEAD MOUNTED HANDLE PROTECTOR

Gary L. Burlison, 31909 S.E. Green River Gorge Rd., Black Diamond, Wash. 98010-7529

Filed May 18, 1990, Ser. No. 524,987
Int. Cl.[5] B26B *23/00*; B25G *3/20*
U.S. Cl. 30—308.1 11 Claims

1. A wood splitting implement for splitting log sections into firewood, said implement including an elongated horizontal handle having front and rear ends, a downwardly facing splitting head mounted on said front end, said head including a rear side projecting above and below said handle, a rigid arm rigidly supported from said rear side of said head, at an elevation spaced below said handle, against upward displacement relative to said head and projecting rearwardly from said rear side beneath said handle in closely spaced relation relative thereto, and resilient spacing and bracing body means spaced rearward of said rear side and interposed between the rear end of said arm and the opposing underside portion of said handle.

5,009,011

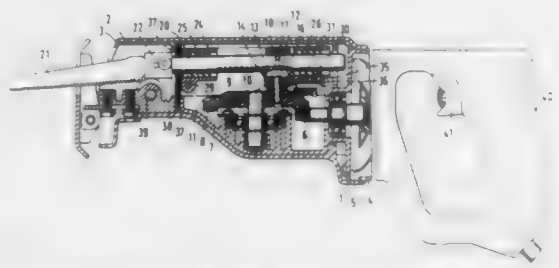
ANNULAR SAW BLADE AND ANNULAR SAW WITH DRIVING MEANS FOR A SAW BLADE

Mats Johansson, Forshaga, Sweden, assignor to Diaglobe Aktiebolag, Forshaga, Sweden

Filed Jun. 4, 1990, Ser. No. 531,401
Claims priority, application Sweden, Jun. 2, 1989, 8902009
Int. Cl.[5] B27B *5/14*
U.S. Cl. 30—389 7 Claims

1. Annular saw blade comprising an outer periphery provided with cutting or tearing members (15), an inner periphery, and an annular web portion (16) between said inner and outer peripheries, characterized in that the saw blade (8) is provided with at least one annular drive surface of a flexible, polymeric, solid material (14), and that a rotatable drive member (30) can be pressed against said annular drive surface to effect rotation of the saw blade about its center of rotation.

5,009,012



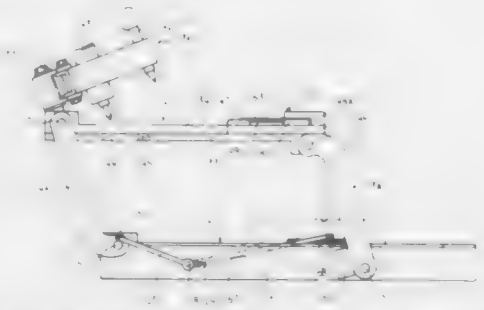
SABER SAW

David M. Martinez, New Bern, N.C., and Gordon C. Campbell, Exton, Pa., assignors to Robert Bosch Power Tool Corporation, New Bern, N.C.

Continuation of Ser. No. 238,037, Aug. 29, 1988, Pat. No. 4,884,344. This application Sep. 1, 1989, Ser. No. 402,333
The portion of the term of this patent subsequent to Dec. 5, 2006, has been disclaimed.
Int. Cl.[5] B23D *49/04*
U.S. Cl. 30—394 6 Claims

1. A saber saw, comprising an elongated displacing rod which supports a saw blade and is reciprocable in a displacement direction extending along its elongation and also swingable in a swinging direction which is transverse to said displacement direction; and means for moving said displacement rod in said swinging direction and including a driveable control element having a cam surface and a sensing element which is connected with said displacement rod and is controlled by said control element, said control element being rotatable

about an axis of rotation, said cam surface of said control element being formed as a symmetrical conical surface which



is eccentrical relative to said axis of rotation of said control element.

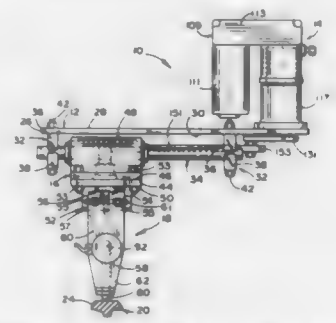
5,009,013

DEVICE IN MACHINES FOR THE MARKING OF WORKPIECES

Henry W. Wiklund, Backvagen 1,S-820 10, Arbra, Sweden

Filed Nov. 17, 1989, Ser. No. 438,676
Claims priority, application Sweden, Nov. 30, 1988, 8804333
Int. Cl.[5] B43L *13/10*
U.S. Cl. 33—25.1 **15 Claims**

1. A device for machines adapted for marking a workpiece with characters or other symbols during a marking operation, said machines being of the type comprising a marking tool which applies the symbols to the workpiece and means for the selection of symbols and control of the movements of the tool in order to obtain a predetermined shape and size of the symbols, said device characterized by a lower frame part (**1**) for receiving said workpiece (**7**), an upper frame part (**2**) arranged on said lower frame part and means (*3a, 3b, 4a, 4b*) for connecting said frame parts for raising and lowering said upper frame part relative to said lower frame part (**1**), said upper frame part supporting the marking tool (**43**) and the symbol selection and control devices (**36–42, 47–52, 69–74**) and being arranged, during the marking operation, to rest on the workpiece (7) and clamp said workpiece (7) against the lower frame part (**1**), said upper frame part (**2**) having an opening (**44**) through which the marking tool works on the workpiece (7).



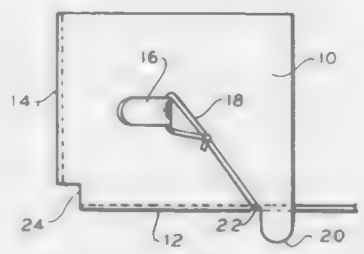
5,009,014

RAILROAD RAIL PROFILE MEASURING SYSTEM

David J. Leach, Ludington, Mich., assignor to Pandrol Jackson, Inc., Ludington, Mich.

Filed Feb. 7, 1989, Ser. No. 307,847
Int. Cl.[5] B61K *9/00*; **G01B** *5/20*
U.S. Cl. 33—287 **24 Claims**

1. A rail profile measuring apparatus for measuring the profile of a rail head, said apparatus comprising:
- carriage means for supporting said apparatus for longitudinal movement along the rail head;
- sensing means supported by said carriage means for sensing the position of a point on the rail head; and
- moving means for laterally translating said sensing means across the rail head while said carriage means moves said sensing means longitudinally along the rail head, whereby said sensing means moves both longitudinally and laterally



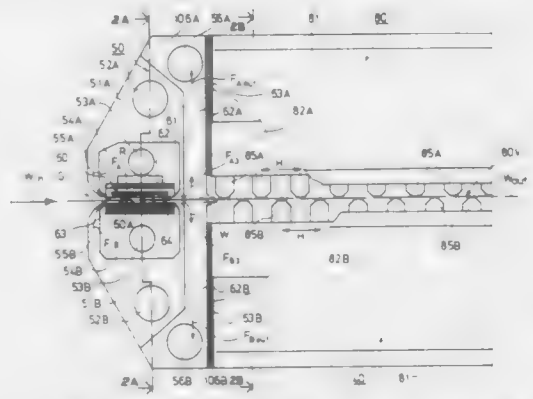
with respect to the rail head to acquire information at a plurality of spaced locations along longitudinal lines on the rail head.

5,009,015

BRICK LINE TOOL

Robert F. Redl, Midland Park, N.J., assignor to Louis J. Volpe, Jr., Wayne; Steven E. Wagner and Daniel L. Kurpick, both of Prospect Park, all of, N.J.

Filed Jun. 20, 1989, Ser. No. 369,080
Int. Cl.[5] E04G *21/18*
U.S. Cl. 33—409 **6 Claims**



1. A tool for aligning bricks comprising:
- a first flat top plate having a front wall and a side wall extending downwardly at right angles from said plate for engaging the top face, the front face and one side face of a brick;
- a finger extending forwardly from a front edge at the inner corner of said top plate adjacent the inner end of said front wall and including a notch in said top plate front edge between said finger and adjacent end of said front wall for holding a guideline;
- a raised tab cut from a portion of said top plate and extending outwardly along said plate, said tab providing a narrow space above said top plate to receive and hold one end of said guideline therein; and
- the outer end of said front wall being spaced from said side wall and the front end of said side wall being spaced from said front wall including a cutout section in the outer corner of said top plate and in said front and side walls for receiving and exposing the outer corner of said brick, said tool being positionable over the outer corner of said brick so that said corner of said brick extends into said cutout section.

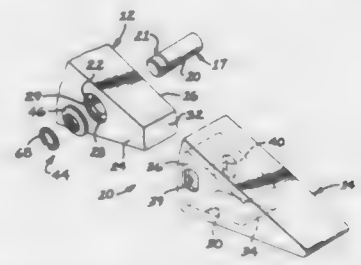
5,009,016

METHOD FOR ON-MACHINE COATING-DRYING OF A PAPER WEB OR THE LIKE

Matti LePisto, Turku; Reijo Ilmanen, Piikkio; Markku Karlsson, Parainen, and Sauli Laakso, Masku, all of Finland, assignors to Valmet Oy, Helsinki, Finland

PCT No. PCT/FI87/00159, § 371 Date Jul. 14, 1989, § 102(e) Date Jul. 14, 1989, PCT Pub. No. WO89/04890, PCT Pub. Date Jun. 1, 1989
PCT Filed Nov. 26, 1987, Ser. No. 381,674
Int. Cl.[5] F26B *3/32*
U.S. Cl. 34—41 **8 Claims**

1. A method of contact-free drying a paper or board web (W) wherein both infrared radiation (R) and drying air jets are used for drying, said drying air jets carrying said web (W) free of contact as said web moves through said dryer, and wherein after said infrared drying step said web is substantially immediately moved into an airborne web-dryer wherein said web is supported by and dried with air jets, the method comprising:
- passing said moving web into an infrared drying gap of an infrared dryer (**50**);
- directing a short duration drying energy pulse at said web, the power of said energy pulse being substantially higher than the average drying power of the dryer per unit of area;
- introducing an unheated air flow (F_{Ain}, F_{Bin}) into said infrared dryer (**50**);
- heating said air in said infrared dryer; and
- substantially immediately passing said heated air from said infrared dryer to said airborne web dryer (**80, 90**) for use as replacement air and/or drying air therein.



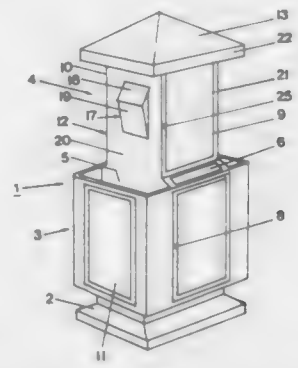
5,009,017

RETAINING PIN HAVING A POSITIVE KEEPER MEANS

Mark S. Diekevers, and Jerry D. Fidler, both of East Peoria, Ill., assignors to Caterpillar Inc., Peoria, Ill.

Division of Ser. No. 105,469, Sep. 30, 1987, Pat. No. 4,823,486, which is a continuation of Ser. No. 4,515, Jan. 20, 1987, abandoned. This application Dec. 8, 1988, Ser. No. 281,361
The portion of the term of this patent subsequent to Apr. 25, 2006, has been disclaimed.
Int. Cl.[5] E02F *9/28*
U.S. Cl. 37—142 A **14 Claims**

1. A retaining pin and a keeper means for use in an earth-working device, comprising:
- the retaining pin having an outer peripheral surface with an annular groove defined in the outer peripheral surface; and
- the keeper means including a metallic washer and a resilient retaining ring, the metallic washer having a frusto-conical side surface and an and an inside surface defining a bore with an annular groove opening in the bore, the pin being slidably disposed within the bore, and the resilient retaining ring having a cross-section with a predetermined radial thickness and when assembled is disposed in locking engagement within the groove on the pin and the groove in the washer, the depth and configuration of the grooves being sufficient to prevent camming of the resilient ring out of the grooves, the retaining ring, in use, is operative in conjunction with the grooves in the pin and the washer

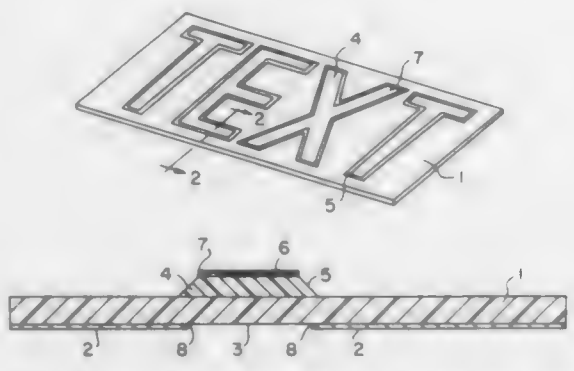


to prohibit disassembly of the pin from the washer without an external force being applied to the pin sufficient to shear the retaining ring or to fracture the washer, and the frusto-conical side surface of the washer is effective to concentrate the force close to the interface of the grooves.

5,009,018

CONTAINER WITH MULTIPLE FUNCTIONS

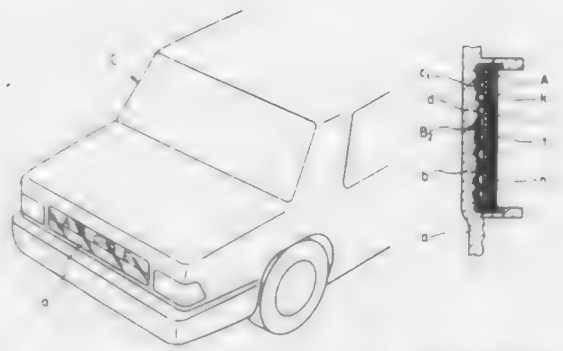
Alain F. Sebag, 1, rue d'Alesia, F-93000 Bobigny, France



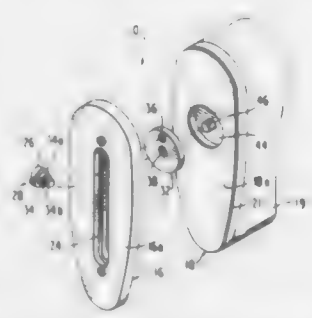
PCT No. PCT/FR86/00429, § 371 Date Sep. 18, 1987, § 102(e) Date Sep. 18, 1987, PCT Pub. No. WO87/03564, PCT Pub. Date Jun. 18, 1987
PCT Filed Dec. 9, 1986, Ser. No. 95,156
Claims priority, application France, Dec. 13, 1985, 85 18477; Dec. 20, 1985, 85 18908
Int. Cl.[5] G09F *3/00*
U.S. Cl. 40—306 **7 Claims**

1. A container with multiple functions, comprising
- dual bodies seated one atop the other with a main prism type body resting on a bearing base, said main prism type body having at least four lateral walls and a top surface, at least one receptacle situated within the main body, said top surface having at least one opening for introducing objects into said at least one receptacle, said receptacle being accessible through an access door provided in one of said lateral walls, an upper body of smaller dimension being located centrally on said main body, said upper body defined by at least two side faces extending substantially upwardly from said top surface and separated by a space, so that the opening of the top surface is situated within said space and between said two side faces of the upper body, a roof with at least two inclined surfaces extending between and being supported by said side faces of the upper body, a container being positioned within said upper body spaced between said roof and said top surface of the main body, at least one flower stand is situated at a place of junction between said main and upper bodies and extending from said top surface in the direction of said bearing base, peripheral walls of said flower stand being defined by at least three said lateral walls of the main

body, whereby objects can be placed in the container through said space separating said side faces.



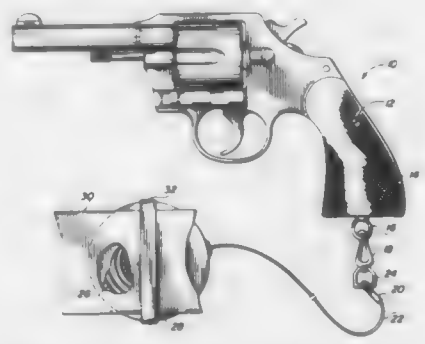
5,009,019
SIGN PLATE FOR ILLUMINATED SIGN
Gudni Eriendsson, Graves Strand, and Thorgeir D. Hjaltason, Copenhagen, both of Denmark, assignors to Rite Lite Partnership, Chicago, Ill.
Filed Dec. 21, 1989, Ser. No. 454,746
Claims priority, application Denmark, Dec. 21, 1988, 7136
Int. Cl.[5] G09F *13/00*
U.S. Cl. 40—541 **7 Claims**



1. A sign plate for an illuminated sign having a light source and visual communication matter illuminated thereby, the sign plate comprising:
- a sheet of ultraviolet-transmitting material having a front face for attracting a viewer's eye and a rear face for receiving rays from the light source;
- an opaque reflective layer applied to one face of the sheet, the integrity of the layer being broken by zones forming a configuration that defines the matter to be communicated,
- a fluorescent material for activation by the light source, the fluorescent material having front and rear surfaces with edges joining these surfaces, the edges forming the outline of the configuration that defines the matter to be communicated, the rear surface of the fluorescent material being affixed to the front face of the sheet such that the fluorescent material is in register with and fully covering the zones forming the configuration in the opaque layer; and
- an opaque light reflective layer applied to the front surface of the fluorescent material without completely covering the zones, the light reflective layer (1) creating a core area in the midst of the outline, which, when subjected to the light source is unilluminated from the viewer's perspective by the light source and (2) causing an aura around the configuration when subjected to the light source resulting in an enhancement of the illuminated outline from the viewer's perspective.

5,009,020
LIGHT-PASSING DECORATIVE OBJECT
Toshiharu Watanabe, Minokamo, Japan, assignor to Sakae Riken Kogyo Co., Ltd., Japan
Filed Nov. 21, 1988, Ser. No. 273,607
Claims priority, application Japan, Nov. 25, 1987, 62-179158[U]
Int. Cl.[5] G09F *13/00*
U.S. Cl. 40—547 **8 Claims**

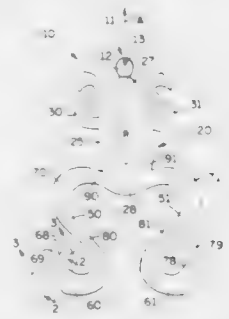
1. A light-passing decorative object comprising:
- a light-passing decorative member made of a light-passing synthetic resin, said decorative member including a notch-cut back side;
- a film piece having indicia which is viewable through the film piece, the film piece being bonded to the notch-cut back side of the decorative member; and a face brightening device which illuminates the film piece, the brightening device including (a) a plurality of optical fibers having a bundled end, (b) a coupler for coupling the bundled end of the optical fibers to a light source, and (c) an illuminating surface attached to the decorative member with the film piece between the illuminating surface and the back side of the decorative member, the illuminating surface being formed by the optical fibers which are arranged in parallel relation and provided with notched portions through which light conducted through the optical fiber passes and illuminates the film piece, the indicia being formed by openings in a no-light-passing layer applied on the film piece and wherein a light-passing metallic layer is attached to the film piece.



5,009,021
ADJUSTABLE GUN BUTT
Jerry T. Nelson, Rte. 2, Box 116, Cherokee, Ala. 35616
Filed Mar. 21, 1990, Ser. No. 496,713
Int. Cl.[5] F41A *23/20*
U.S. Cl. 42—73 **4 Claims**

1. An adjustable gun butt assembly comprising:
- first and second face abutting plates having respective front and rear faces, said first plate adaptable to be fixed via said front face to a rear face of a gun stock,
- a slot in said first face of said first plate adapted to receive and slidably retain the head of a shoulder bolt therein,
- a circular recess within said front face of said second plate,
- a rotatable cam disk of a diameter slightly smaller than said circular recess and positioned therein for rotation about coincident axes of the cam disk and circular recess,
- a first tapped hole within the center of said rotatable cam disk,
- a second tapped hole within said rotatable cam disk eccentric to said first tapped hole,
- a hole extending through said second plate coaxial with said circular recess,
- a resilient shoulder pad having a front face affixed to said rear face of said second plate, and having a hole passing from a rear face of said pad to said pad front face, therethrough parallel to and positionable in line with said hole extending through said second plate, and
- an adjusting set screw having a head and a threaded shank with said threaded shank sized to and threaded into said first tapped hole in said rotatable cam disk,
- said shoulder bolt having a threaded shank of predetermined length, and being threaded into said eccentric second tapped hole of said rotatable cam disk such that said shoulder bolt slides freely within said slot of said first plate when said set screw is loosened, and
- wherein the thickness of said rotatable cam disk is less than the depth of said circular recess receiving the same whereby, with said set screw threaded shank backed out of said first tapped hole, said second plate and said shoulder pad are free to move relative to said first plate and gun stock orthogonally by rotation of said shoulder bolt eccentrically about the axis of said rotatable cam disk as the disk rotates within said circular recess of said second plate and by movement said shoulder bolt independently over the length of said elongated slot, and
- wherein upon tightening down said set screw, said rotatable cam disk is pulled deeper into said circular recess, causing the shoulder bolt head to drive said first plate into frictional engagement with said second plate to lock said plates together.

5,009,022
GUN SAFETY ASSEMBLY
Fred McCoy, 7050 N. Hwy. 1247, Science Hill, Ky. 42553
Filed Mar. 9, 1990, Ser. No. 490,884
Int. Cl.[5] F41A *35/00*
U.S. Cl. 42—094 **8 Claims**



8. An improved method of providing a brace for a person using a gun to steady the gun, comprising:
- (a) providing a reel bearing an elongated cord and spring means biasing said cord towards said reel wherein the length of said cord is just sufficient to extend said gun at arms length from said casing when on said gun belt and wherein the bias of said spring on said cord and gun is sufficient so as to help brace and steady said gun to assist accurate shooting thereof;
- (b) providing means for releasably connecting said reel to a belt of the person; and,
- (c) interconnecting the weapon to said cord;
- (d) whereby said cord serves as a brace to steady the gun when being prepared for firing.

5,009,023
HIGH SPEED FISHING LURE
Donald A. Hoyt, Fulton, N.Y., assignor to Attacher Lures, Fulton, N.Y.
Filed Nov. 20, 1989, Ser. No. 438,864
Int. Cl.[5] A01K *85/00*
U.S. Cl. 43—42.5 **8 Claims**

1. A high-speed spoon-type fishing lure for use at high trolling or retrieval speeds up to at least about 7 knots comprising a rounded, elongated metal plate having a trailing end and a leading end and which is narrower at the leading end and broader at the trailing end, and wherein the metal plate is of tapered thickness from front to back such that the trailing end is substantially thicker than the leading end to concentrate the weight of the metal plate at the thicker, broader trailing end to inhibit rotation or spinning of the lure at said high trolling or retrieval speeds; a hook attached onto said metal plate; and means of said leading end for attaching to a fishing line.

5,009,024
ARTIFICIAL LURE SIMULATING FROG MOVEMENTS
Steven E. Parman, 223 Roy St., Kerrville, Tex. 78028
Filed Aug. 31, 1989, Ser. No. 401,051
Int. Cl.[5] A01K *85/00*
U.S. Cl. 43—42.3 **8 Claims**

7. A flexible lure member for use in an artificial lure to simulate the swimming motion of a frog comprising:
- a body which is adaptable to be connected to a fishing line for drawing said body through water in a direction of travel forward relative to said body;
- a pair of elastically flexible appendages attached to the rear of said body, each of said appendages having an S-shape and having a foot member at the distal end thereof, wherein:
- said foot member is biased transversely relative to said forward direction; and
- said foot member has a leading edge which is biased to face said forward direction of travel, the profile height of the leading edge being biased perpendicular to said forward direction of travel and said profile height of the leading edge is at least fifty percent greater than the average thickness of said foot member.

QUICK TIE DEVICE

Grover R. Austad, 101 Riverview C, Great Falls, Mont. 59404

Continuation-in-part of Ser. No. 190,345, May 5, 1988, abandoned. This application Aug. 21, 1989, Ser. No. 396,801

Int. Cl.[5] A01K *91/00*

U.S. Cl. 43—44.83 1 Claim

1. A quick tie link and fishing device for providing a knotless non-slip wrapping for a flexible line on said fishing device comprising,

an elongated form made from a single piece of wire material having a helix at one end of said elongate form connected to a closed "U" snubbing post that is formed at a substantially 90 degree angle to said elongate form; said snubbing post being located a distance from the helix approximately equal to the height of said snubbing post, the diameter of said helix being approximately equal to the height of said snubbing post; a first straight shank portion which extends from said snubbing post to a loop;

a second shank connected to said loop, said second shank being substantially parallel to said first shank portion and second shank extends from said loop to said snubbing post where said second shank terminates in a post which is perpendicular to said second shank.

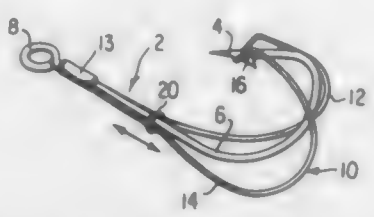
FISH HOOK INCLUDING AN IMPROVED BAIT GUARD WITH A SLIDER



Newsome E. Corbitt, III., 3724 Beauclerc Rd., Jacksonville, Fla. 32217

Filed Oct. 10, 1989, Ser. No. 418,875

The portion of the term of this patent subsequent to Dec. 22, 2004, has been disclaimed.

Int. Cl.[5] A01K *83/06*

U.S. Cl. 43—44.8 17 Claims

1. A fish hook including a bait guard, said fish hook comprising a rearward eye portion, an intermediate shank portion, and a forward hook portion, said bait guard comprising means for keeping bait on the hook, comprising:

an elongated flexible member secured to the eye portion, extending forwardly along a side of the shank portion, following the curve of the hook portion and extending rearwardly to and in releasable engagement with a barbed point on the end of the hook portion, and

means for sliding encircling the flexible member and the shank portion of the fish hook movable along the hook between the eye portion and the hook portion,

whereby said sliding means is positioned adjacent bait held on the hook to secure said bait on the hook.

FISHING ROD HOLDER

Guo-Shin Lee, No. 26, Chien-Te Street, Taichung City, Taiwan

Filed Jan. 12, 1990, Ser. No. 464,376

Int. Cl.[5] A01K *87/00*

U.S. Cl. 43—21.2 2 Claims

1. A fishing rod holder comprising:

A pivot member including a cylindrical portion having an axially directed through opening and a bolt hole wherein a plurality of steel balls are positionally located within the cylindrical portion through opening, and a bolt threadedly fixed to the cylindrical portion within the bolt hole;

a holster member including a bracket, an adjustable support and a ball head,said ball head insertable within said pivot member through opening and pivoted to a first end of said pivot member with a first ball head holder and a first C-ring; and,
